Two canoes with rice reached the shore, from the sterns of which stepped Mrs. Gopher and Mrs. Crow, the former aged and wrinkled, with deep-set, piercing eyes, the other much younger, thin as a shadow and noseless. They talked agreeably together while the rice was being emptied by their husbands. When the canoes had started, side by side, I sought the cause of Mrs. Crow's loss, and learned that years ago Mrs. Gopher was jealous, and to get revenge, at a favorable opportunity downed the Crow and with a knife cut cleanly off her nasal organ. No legal proceedings were resorted to. Peace and confidence were restored between the families. The "hatchet" is buried, and as they passed out of view the "pipe of peace" from the mouths of all four was sending forth the evidence of a lasting reconciliation.

We had a most enjoyable day or two with the bass. This fish, taken in these waters, is delicious—no muddy flavor—and cooked as my friend cooks it is fit for a prince. He takes off the skin, deprives it of the entrails and bones, puts the pan on the coals, fries some sweet strips of fat bacon and then puts in the fish, constantly turning and shaking the boiling fat over it until well cooked and nicely browned, and then—and then—my mouth waters as I write, doesn't yours? R. P. J.

PICTOU, Ont., Aug. 20.

BEAR TRAPPING.

Editor Forest and Stream:

Will you kindly allow space to one who has trapped bear "a little bit," to reply to some points made by "Special" in the article headed as above. Bears are not considered as game up in the backwoods of Maine, but noxious vermin to be destroyed at all times, and bounties are paid to insure extermination. Bears are the *bête noir* of settlers in the backwoods, and but for the use of traps, crops and flocks would be oftener destroyed. The settler's lot while the country is new is a hard one at best. Whether those Boston sportsmen were unduly elated or not at their success in trapping the brute, they did a good job. No one, I trust, desires even noxious animals to suffer needless pain in their taking off, but had the bear been shot at by the whole crowd, even, he might have got away to "suffer untold agonies." But why waste sympathy on such a brute? Is it because he got both feet in the trap? Rather pity the deer, caribou and moose that are in countless numbers every year mangled by firearms. It is greater sport to shoot bear than to trap them; that goes. But not every settlement has its French and Tom. Yes, "bear-trapping is dangerous." I know of several casualties from bear traps besides those mentioned; but such casualties compared with those from firearms are not as a drop in the bucket. "Special" must not expect that settlers and trappers will let up on the use of traps so that outsiders may find better shooting. Don't claim the earth.

Anent the subject of bears aborting, referred to some time ago by one of your correspondents, I have dissected bears taken in steel traps and never found fetus in utero, but have often found the cavities that appeared to have been quite recently evacuated. It is the opinion of all bear hunters that I have met that bears abort if taken in a trap or hard-pressed by hunters or dogs. WARFIELD.

MAINE.

LOS ANGELES, Aug. 13.—A large number of representative sportsmen assembled at No. 8 Court street last evening for the purpose of forming a club. The meeting was a very enthusiastic one, and the Los Angeles Rod and Gun Club was organized with the following officers: President, Eugene Maxwell; vice-president, T. E. Walker; secretary and treasurer, John Morton. The club starts out with a good list of members. Among others who have joined are: Messrs. H. Slotterbeck, Jr., J. B. Winston, E. Unger, A. West, R. W. Kinney, J. G. Holbrow and Mr. Holton. The constitution and by-laws for the new club were adopted. The initiation fee is $25 and the monthly dues $1. This club was formed for the benefit and pleasure as well as the advancement of its members in the art of wing-shooting, and for the protection of game and fish by the enforcing of all the game laws.

WESTERN PENNSYLVANIA.—Pittsburgh, Aug. 27.—The prospects for a reasonable amount of the various species of game common to western Pennsylvania is promising for fall shooting and the hunter still has use for his old reliable. A remarkable fact, as well as favorable one, is that the English sparrows here are disappearing, whether or not they will reappear with their number strengthened remains to be seen.—C. A. R.

INDIAN ELEPHANT CAPTURE.

MENTION was made in the FOREST AND STREAM, Aug. 11, of a steam yacht building by Messrs. Bowdish & Co., of Skaneateles, N.Y., for Mr. L. P. Sanderson, of India. The yacht is to be used by Mr. Sanderson in his work, which is the capture of wild elephants for use in the Government service. The following account of the methods employed by Mr. Sanderson is copied from *The Englishman:*

An invitation from Mr. Sanderson, Superintendent of Elephant Kheddahs, to spend a short time with him during the elephant hunting season, has recently enabled me to indulge a long cherished wish to see the method of working the well known Kheddahs, and an account of my visit to the Garo Hills may be of some general interest. Before relating how elephants are captured, I may state that the Kheddah, or elephant catching establishment, is a branch of the Commissariat Department and is under the Military Department of the Government of India. The object of the Kheddah is the capturing and training for service of the elephants required for military purposes. The depot or headquarters of the Kheddahs is at Dakka, which, from its vicinity to the the hunting grounds and to abundant fodder supply, is a peculiarly suitable place for the purpose. The Superintendent of Kheddahs has at his disposal two Commissariat sergeants, a large staff of native hunters and from 150 to 200 trained elephants. The hunting operations are carried on only during the months of December, January and February, when the jungles are comparatively healthy and there is little or no rain to interfere with the work. By March the grass in the forests has become so dry that the use of fire, which is largely employed in the operations, might result in disastrous conflagrations. The water supply of the country also becomes contracted, while large flies and other insect pests spring into life, making the wild elephants restless and uncertain in their movements. A little later, when the rains commence, the forests become pestilential; hence the necessity for closing hunting season before the middle of March. The first move in the hunting season is to send the tame elephants to a base camp close to the forest, selected for hunting. Each has two attendants and carries its share of the tents, ropes, tools, etc., required in hunting. Meanwhile about 700 hunters trained to the work are collected, generally in Chittagong, where the craft chiefly flourishes. These are marched to the rendezvous, where the tame elephants and stores have been already collected. Muskets and tools are here distributed, and after certain religious ceremonies of a curious kind, the hunters enter the forest.

A hunting party usually consists of 350 men. Some of these, acting as trackers, go in advance to examine the country, and to mark down the herds. A herd having been found the hunters proceed with great circumspection, and are led by the trackers to within a mile or so of the elephants' position, when the men divide into two parties, and, running rapidly in Indian file, under the leadership of the trackers, one party to the right, the other to the left, and dropping a man at every 30 or 40yds. as they go, they seek to fetch a circuit round the elephants, and to meet on the far side of them. If this movement, the execution of which demands much skill and experience, be properly executed, the elephants will be surrounded by men in a ring of six or seven miles in circumference. Each man so posted lights a fire at his station, connects his position with those of his neigbors by clearing a pathway, and takes every precaution to prevent the elephants breaking through his portion of the surround. Musketeers are stationed whenever the elephants show a disposition to break through the circle of guards, and special men go round the circle every quarter of an hour both day and night to see that every one is on the alert. Mr. Sanderson and the sergeants make unexpected night circuits, and the surround is rarely broken through. If the elephants ap-

proach the men they are driven back by shots, shouts and fire brands. The elephants usually give trouble on the first and second nights only; after that, if the surround has been well chosen, and there be in it plenty of fodder and water, they rarely make any decided attempts to break out. Moreover, they are generally active only between sunset and 11 at night, and again from 2 A. M. until daylight, so that during the daytime the hunters are able by turn to take some rest.

Within the surround, and on one of the elephants' chief runs, a stockade composed of stout timbers is now commenced. This inclosure is circular in form, and is rarely more than 25yds. in diameter, that area being found sufficient to admit 60 or 80 elephants. It consists of a ring of posts sunk deep into the ground and well supported by transverse timbers, and backed up by forked props securely lashed with ropes, canvas, or tough creepers. This palisade is 10ft. high. Over the entrance, which is 12ft. wide, is hung a massive log gate, which is dropped and secured directly the herd has been driven in. On each side of the gateway for about 100yds. a timber barricade is carried, forming a funnel-shaped approach. Across the mouth of this V-shaped passage (generally a width of 60 or 70yds. or so) is arranged a line of dry grass and combustible jungle material. When the herd has crossed this line, and thus got well between the guiding barricades, it is fired behind them. Simultaneously with the sudden blaze so produced, the hunters, who have patiently and skilfully worked the elephants along to this critical point, close in and rush shouting after the started herd. Mr. Sanderson, who up to this stage of the proceedings has probably been perched high in some commanding tree, to direct the movements of the hunters, who from their inability to see each other are best directed from some central point, now rapidly descends and takes his place with the hurrying line of hunters. His presence and formidable heavy rifles impart confidence to the men, who, giving the alarmed elephants no time for reflection, rush them along the narrowing approach to the gate. This is the point where the greatest danger occurs, as, if the elephants' fears are aroused by anything ahead, they often turn in a body and break back, when fatal accidents are likely to happen. I saw a charge of this kind which was, however, checked by Mr. Sanderson's dropping the leading elephant—an old female—dead, and the men showed such pluck and determination when the elephants were thus thrown into confusion that they turned, and were soon in the stockade. Generally, in a few minutes after the lighting of the fire line, the huge beasts have crushed through the jungle into the stockade, when down comes the ponderous gate, and the bewildered monsters are impounded.

But this outline conveys no adequate idea of the skill exhibited in selecting the ground, of the organization and discipline requisite to insure a sustained performance of tedious and dangerous duty by hundreds of men, any one of whom might, by disobedience, carelessness or cowardice, imperil the success of the whole undertaking, like the snapping of a single link in a chain; or of the intrepidity displayed in the many dangerous situations often occurring in the undertaking. During the erection of the stockade within the surround, a laborious piece of work that occupies about three days, no one would suspect that several hundred men were at work. No voice is heard above a whisper. Few orders are necessary, every gang of men being divided and sub-divided, and all so drilled that each knows his work and does it. Occasionally a soft whistle and a rapid gesture are used to convey instructions to a distant workman. Everything is done rapidly and silently. Then the pluck of the men in driving the elephants is very conspicuous. They have the confidence in the determination and skill of their leader which insures success, and it is a fine sight to see them following Mr. Sanderson, or skirmishing with the elephants while under the protection of his heavy rifles in a manner that seems perfectly reckless.

On the day after a herd has been impounded there follows the less exciting but even more deeply interesting business of securing each individual elephant. The gate of the stockade is raised under cover of guns, and men mounted on tame elephants ride into the inclosure. The wild ones generally huddle together, and watch this fresh maneuver with apprehension, or some of them charge down among the tame ones. When the gate has been closed and made fast, the work of securing the wild ones begins. The position of the tame elephants' mahouts looks very dangerous; but although the wild elephants occasionally battle with the tame, they never attack the riders. The work is, however, sufficiently perilous. I saw a tame elephant receive, unexpectedly, a charge from a powerful wild one that made her stagger, and, the ground being slippery, she fell on her side. The mahout must have had a perplexing view of gigantic legs all around him, but being cool and experienced he quickly got under one of the tame elephants of the party, and thence was helped out of danger by ready hands.

The tame ones are all experienced fighters, and when some captives show a disposition to be mischievous, one or more are set on to give it a pounding, and inculcate respect. When three or four tame elephants have wedged a wild one in among them, an active fellow slips down and ties its hindlegs together, afterward making them fast to the stockade, or to trees growing in the inclosure, or to strong posts previously planted for the purpose. A large, soft cable is then got round its neck. When all have been tied in the manner described, the gate is reopened and they are led to water and picketed in the forest near. When separated thus and first left to themselves and the tame elephants, their struggles are violent and protracted, and I saw many tall trees shaken to their topmast branches under the strain put on them. Every branch within reach is wrenched off; the bark is often stripped from the trunks, while the tuskers drive their long white ivories into the ground and plough every square foot within reach. The calves usually keep up an incessant roaring, as their mothers often temporarily lose their supply of milk from their agitation and struggles against coercion. In a surprisingly short time, however, all get accustomed to the presence of their attendants, and in the course of a few days they are marched down to the low country in tow of their tame friends. They are then put into systematic training. Within two months they can generally be ridden alone. Several of the elephants employed in carrying baggage, and one of Mr. Sanderson's special riding elephants, this season, were pointed out to me as having been captured last year. They were now working in the very forests where they were themselves wild ten months before.

Occasionally an escaped elephant is recaptured after it has enjoyed a prolonged holiday of a few years in the forest. Among the last herd that I saw caught was such a one, a female, followed by a big calf about five years old. She bore on her neck and legs the usual rope marks, and exhibited other signs of having been in service some time or other. Judging from the age of her calf she must have been at liberty not less than seven or eight years, but when pressed on the neck with a spear and ordered to kneel down she obeyed at once. This speaks much more for the docility of the elephant than for its intelligence, which latter quality Mr. Sanderson considers it markedly wanting in, popular impressions notwithstanding. She was promptly mounted by a bold mahout, and two or three days afterward I saw her piping to ropes with her trunk, passing them to her mahout, helping to tie and tow in her own some of her fellow-captives, and behaving as though she had been on continuous duty in the kheddahs all her life. Her calf was, of course, an uneducated young savage.

Directly a "catch" has been concluded the trackers go off to find and mark down another herd. When "kubber" arrives that another herd has been found, perhaps ten or fifteen miles away, off go Mr. Sanderson and his men to the new ground, while a sergeant or a native jemadar remains in charge of the last captures and marches them down to the open country. Again follow the surrounding and guarding of more elephants, and selecting the site of the stockade and building it; the wary working up of the unsuspecting animals, which develops into the maddening final rush with a blazing fireline and sudden uproar ending in another catch. It is very worthy of remark that the operations rarely fail to end successfully. The certainty with which this may be counted on is clearly indicative of excelleuce in all the arrangements to the smallest details. There appears to be no such thing as building a stockade and failing to get elephants into it. Unquestionably it is hard work, the very hardest work, both for tame elephants and men, yet the former are in excellent hard condition, and among the latter the proportions of sickness and accident has been greatly reduced of late years. The elephants are, of course, fed solely on green fodder, as Mr. Sanderson is a well known advocate for the abolition of grain, and they are a living proof of the accuracy of his views on the subject.

In elephant hunting the risk to life, and of course to limb and health, is generally very considerable. While I was with the camp two men were killed, one at his post on the surround at night, and the other during driving; and Sergeant Watson, a steady, soldier-like young fellow, succumbed in a few hours to jungle fever. This was also the fate of Mr. Nuthall and Captain Hood. Mr. Sanderson's immediate predecessors, and I should think a life insurance company would hesitate about accepting Mr. Sanderson's life on the ordinary, or on any terms, especially if aware of the headlong manner of his coming down 40ft. of ricketty bamboo ladder from a machan, and tearing along close behind the herd that, having crossed the fatal fire line, has to be "rushed" into the stockade!

Regarding the belief that wild elephants are decreasing in India, and many other matters concerning these interesting pachyderms, Mr. Sanderson gave me much interesting information in our chats by the camp-fire. The impression adverted to above probably originated in the fact of laws having been made in recent years for their protection, and from their disappearance from certain small and isolated localities before the advance of cultivation. But Mr. Sanderson says there is good ground for believing that wild elephants are now at least as numerous as they have ever been within historic times, and that there is every reason why this should be the case. They are not now liable to be shot for their ivory or for sport, nor to be caught by the cruel and wasteful methods of taking them in salt licks and pitfalls, from which not more than 20 per cent. were taken alive, while their haunts are preserved to a great extent from jungle fires and from intrusion by the regulations of the Forest Department. Some idea of the numbers of wild elephants in certain tracts may be gained from the fact that, during the eight years ending March, 1885, the Kheddah Department captured 1,288 wild elephants in a portion of the Garo Hills, some 50 miles by 20, and this area is only a small percentage of the large tracts of elephant country equally well stocked. Under present regulations there is no danger of the Asiatic wild elephant becoming even scarce, much less extinct.

I was also surprised to learn that the demand for elephants is so considerable. Though good roads and railways have greatly facilitated communication in India, and though Government has largely reduced the number of elephants it formerly maintained for military and civil purposes, the animal is still as great a favorite as ever among natives, and instead of it being, as formerly, almost exclusively a possession of royalty, it is now found extensively among small landed proprietors in Bengal and elsewhere; men who, before the peaceful times of British rule, would not have ventured on such a show of wealth even had they possessed it.

When I left Mr. Sanderson he had captured the large number of 220* elephants, and he contemplated further operations against them, as the season had not far advanced.

*Since raised to the extraordinary total of 402.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

"A BASTER."

IT ALL happened in the Old Granite State. My brother-in-law and myself started to explore a trout brook that we had never fished before, but which we had heard many a fish story about. It was ten miles from home, and its sourse was among the Blue Hills of Strafford county.

On our way we called on an old-time fisherman who, in years before, had taken many a fine string of beauties from the stream, and from him obtained information about the location of the brook. "I'll tell you how to find it, boys," the old man said, "but keep it kind of quiet and don't tell everybody, because it will be of no use to give it away." We promised and were told to follow the main road about a mile, then turn to the right and follow on across the ridge, then to take a log road through the woods as far as we could go with our team, after which we must follow a blind trail through the woods to the brook. "You'll strike the brook where there are lots of big boulders, but it will do no good to fish there, for nobody ever caught a trout there; but foller the brook up stream about half a mile till you come to an old dam, and above the dam is a meadow; probably you won't git a bite in the medder, but if you do it will be a baster." With visions of "basters" we left the old man, followed by the parting injunction not to waste time in the meadow but to fish the brook thoroughly through the woods above.

We found the brook at the point where the big boulders were, and following it up to the old dam, used all our skill in trying to beguile one of those "basters" from the brook in the meadow; every bend and pool were cautiously approached, but not a fin did we see. We had reached the shadow of the woods, when I came to a bend in the brook, over which hung a thick clump of bushes, shading the water and making just such a lurking place as a trout loves. I made several ineffectual attempts to drop my hook into the water, but each time it caught on the bush, until, disgusted at my poor success, I moved on up stream. Chancing to look back I could see the deep, shaded pool under the bush, and thought what a place for a "baster." Walking quietly back, reeling in the line on the way until but a few inches remained hanging from the tip of the rod, I carefully insinuated the tip between and under the bushes, and dropped the baited hook lightly in the water. In an instant bait, line and tip of rod were pulled under the hollow bank. No chance to play the fish there, and an attempt to lift it out only convinced me that instead of catching a trout I had probably lost my hook, as from indications I supposed it was fast to a snag under water. But a quick, heavy tug, and a trembling sensation along the rod that sent a thrill through me as from an electric battery, told me more plainly than words that there was life at the other end of the tackle, and that the trout—if trout it were—must be ignominiously yanked out by main strength, and, as one hauls a codfish hand over hand, I pulled from under that bush and bank a two-pound trout, almost long enough to reach across the little meadow brook.

That was the one I caught; the one I lost was near the same spot later in the day.

On our return, after fishing with varying success to the source of the brook, we reached the meadow again just as the sun was disappearing behind the mountains. Trials and tribulations had attended us through the woods; hooks caught on snags below, and on branches of the trees overhead; leaders were broken, and hooks innumerable were lost, and when I reached the scene of my first catch, I had not a single hook on gut snell left; but being anxious to try for a mate to my "baster," I hastily gauged a small hook found in my pocket to my leaderless line, and tried to induce another trout to come out of the shadowy depths of the hole under the bush. But I had no success. Then I slowly fished down stream a few rods; when near another turn in the brook, a swirl and a tug greeted me, and after a few moments' play, having no landing net, I lifted from the water a trout that seemed a giant beside the two-pounder already in my creel. The improvised tackle gave way as soon as the trout was lifted from the water, the hook slipped through the gauging, and the fish dropped to the ground a foot from the water's edge. With one jump I landed in the brook, and tried to catch the trout in my hands before he could reach the water. It was of no use. One stroke of his tail fin, a jump, a splash, and down stream darted the lost fish.

So good an authority as the lamented Izaak Walton has said that "one can never lose that which he never possessed," so I suppose I didn't lose that trout, simply because he never was in my possession; but I felt then as if I had sustained a loss; and the recollection of the beauty of his glistening sides, as for one short moment he hung there before my eyes, and for one instant lay stretched when he fell on the bank of that little brook, remains vividly in my mind.

That ended my fishing for the day, it was growing dusk in the shadow of the Blue Hills, and I had no inclination to fish longer. I never had an opportunity to fish in that brook again. Perhaps some more skillful fisherman has long since been successful in beguiling that trout, or a mink or an otter may have enjoyed a feast. But some day I hope again to follow that little mountain stream down to the meadow, and through the meadow to the old dam, and whether I catch a "baster" or a fingerling, matters not, though I'll try and coax a "baster" from some bush-shaded hole under the bank.

On our way home we called upon our friend and informant, who greeted us with "Well, boys, what luck?" We showed our catch and I related the story of my mishap. There was a sympathetic look on the old man's face, and I fancied visions of similar mishaps rose before him—from his own experience. We bade him good-night, and as we drove away heard him repeat his prediction of the morning, "I thought if you got a bite in the medder 'twould be a 'baster'." NOINOE.

MINNEAPOLIS, Minn.

BASS FISHING EXTRAORDINARY.

BY A VERACIOUS AMATEUR.

IT will be observed that the adjective qualifying the noun amateur is made use of in this instance in a very peculiar relation, and while it might perhaps be regarded as superfluous, I have chosen to employ it because I have known amateurs who lied. Candor and a due regard for truth compels me to go even further and say, that as a general thing an amateur fisherman, when on the subject of his own exploits, is a merciless and undeviating liar. I say this advisedly and after ample consideration of the probable consequences.

Truth in the abstract is opposod to error, and although of an amateurish disposition myself and with a decided inclination to angle for the festive grayling and agile black bass, I can affirm without danger of being successfully controverted that I never told a fishing lie but once in my long and eventful, not to say brilliant, career, and on that occasion I was appropriately and justly perhaps rebuked by a stranger present, who immediately, without any apparent effort, told a lie so elephantine in its proportions that I have never since attempted anything in that line. I have often wished, when listening to fishermen's hyperbole (that lets 'em down easy, doesn't it? that Eli Perkins would drop in. I don't know whether Eli is specially gifted in the matter of piscatorial prevarication, but he is a good general equivocator, and I feel that if he would only half try he could easily distance any competitor. Perhaps my unfortunate experience has made me misanthropical and that in consequence I am allowing my innate love of justice to become warped thereby. Be this as it may, I don't feel like sending any money to help convert the heathen in Central Africa or Canada, while there is so much missionary work to be done right here in Michigan among this class of depraved persons. Feeling the necessity for an example of what a fishing narrative should be I have decided to prepare one on an entirely new model. No patent, caveat, trademark or copyright need prevent any one from using it. No rights of any kind are reserved, except that I don't want it used without due credit to this paper.

It was a charming June day, in the summer of 1876; to be more exact, it was Friday and the wind was in the south—Friday is not regarded as a lucky day to go fishing, but I was reassured by the old couplet:

"When the wind is in the south
The hook is blown in the fish's mouth,"

and this, it occurred to me, would save lots of trouble. So I procured the most approved bait, a seaworthy boat, the services of a boatman, and resorted to the expedient (to guard against accidents) of taking along my trusty hammerless breechloader. This is not a fishing rod, nor a case of medicine, nor a bottle "with something in it," but a shotgun, and as I said, was to guard against accidents. That sounds paradoxical at first, but when you get a little further on, and see the size of the fish, and the danger attended taking them, you will admire the sagacity which prompted me to take it along.

The boat was 11ft. long, drawing 8½in. of water; my fish-rod was 12ft. long, in three sections, and the reel was supplied with 350ft. of silk line. The oars were of ash, made in the usual form, and the color of the boat was Indian red, with a dark green stripe running from bow to stern. The bait for fishing was contained in a large tin box with a hinged cover, so arranged that the movable lid could be quickly closed to prevent the escape of any of the worms should they be so disposed. A pail of shiners (a species of minnows) a box of 19 ham sandwiches, 23 pickles, and a bottle of cold coffee completed the commissary department. There was about a quart of the cold coffee. I want to be exact about these things so that there may be no caviling over alleged loose statements. It conveys a comfortable feeling of confidence to the reader. We reached a point on Lake Erie, three-quarters of a marine mile from the shore. I know just exactly how far it was, for the Frenchman said "tree-quarter mile too soon for feesh, better go leetle furder." We proceeded along over the blue waters of the lake, now and then a gull or two swooping past us, and almost within reach; a little distance beyond quite a flock of these birds were circling around a space of an acre or more, then dropping suddenly and swiftly into the lake.

"What are those lunatics acting in that fashion for?" I asked of my boatman.

"Dey dive for feesh; plenty feesh where de seagull drap. S'pose you see gull some place, find plenty feesh dat way; plenty, sackry-mogee!"

"Do you mean to tell me that if we should row over there where those absurd-acting birds are thrashing around that we would, to the best of your knowledge and belief, succeed in getting them to believe that our intentions were honorable and inducing them to consent to a closer atquaintance?"

"W'as dat you mean? No 'dstan'. Of you mean by dat eef we ketch feesh—sure, sure, my fren, sure."

"Then why, in the name of Izaak Walton, don't you get there without delay?"

"Oui, oui, me git dare; plenty feesh dare, my fren."

Arrived at the spot where the gulls had been most industrious, I supplied my tackle with the most killing bait and quietly dropped the same into the gently rippling waters, within sight of the memorable spot where Perry's fleet made it sultry for the enemy, though this fact has no direct bearing on this narrative. I played the bait in the most approved manner, and rather congratulated myself on the superior style with which it was done. The fish apparently were lost in admiration, for they didn't disturb the operation. This proceeded for fifty-seven minutes by the watch, and was becoming somewhat monotonous, when I observed to François:

"Do you think that there is any possibility of being mistaken about the gull business?" for I had a suspicion that I had been gulled.

"Meestake from ze gull! Oh no, my fren, not meestake—plenty feesh—s'pose you put string a leetle lower down, ze feesh dey stay sometimes not on top de lak."

This looked very reasonable, thereupon I paid out more line, estimated at 9ft., the Frenchman meanwhile taking his bamboo pole, 7ft. 3in. long, with a cotton line 15ft. long and a rusty hook, the like of which it seemed to me would disgust if not terrify any fish having any self-respect whatever. Frenchy put on two big worms, spit on them (he chewed plug tobacco at that) and heaved this heathenish contrivance over the opposite side of the boat. Exactly five minutes and forty-one seconds elapsed when I observed a disturbance in the neighborhood of Frenchy's line. The hubbub increased and was in a fair way to become a riot, when hauling in the line a huge black bass came struggling into view. He was turning handsprings and somersets and performing all sorts of gymnastics, but Frenchy yanked him into the boat. He was as big as a codfish (I was going to say skark). I admit I was conscious of a mean creeping feeling of envy. I didn't even let on but what I was in the habit of killing bigger fish every day in the week.

"Dat's good feesh, eh, my fren? dat's beeg feesh. Sackrymogee! affaire flambée pour le poisson n'ware?

"Pretty fair, pretty fair fish, François, but after all we should get much larger ones here—"

Swish! whiz! went the line from the reel, as if hitched to the stick of a rocket, provided rockets ever took a notion to navigating the water instead of the atmosphere; away went the 345ft. of it, and I was just calculating the chances of retaining possession of the rod, when the thing on the other end of the line appeared to set the air brake and come to a sudden halt. I thereupon began reeling in the line, and it seemed so very slack that I reluctantly concluded that the fish or whatever it was had taken a fancy to hook and bait and decided to take it home.

I had reeled in and recovered 246ft. of the line, 104ft. being still out, when, without previous warning, or any indication whatever of such an intention, the fish (it was, practically, a fish doing all this) darted off at an angle of forty-five degrees from its previous course, and at the rate of three miles a minute. This was the exact speed, as I learned from François, who exclaimed, throwing down his rod:

"Mon Dieu! parbleu! golly but she's fast feesh! My! she go more fast as ze bote on ze glace!"

Comparison was made, obviously, to the ice yacht, the best speed known being two and three quarter miles in a minute. "Do you really think so, François, that this fish goes more rapidly than the ice boat? What species do you think it is?"

"What kind she is? Mebby muskalonge, mebby catfeesh—can't tell; if she's black bass must be two, tree of it."

"What! two or three black bass on one hook! François, what sort of romancing is this?"

"You not never hear 'bout ketch two, t'ree feesh on one hook? My! My! las' fall I ketch one pike and one black bass bose to oncet, at de same time on mai hook, and de bass she weigh seven pound t'ree ounce by de stillyed."

I realized at once that it would be useless and vexatious to get into any controversy over this stupendous fable, so I treated it with silence. In fact, the fish was now engrossing my attention. Away whizzed the line, 287½ft. of it, when the fish suddenly changed direction again and went like lightning for 62ft., and stopped to take breath. I improved this interval of inaction on his part by reeling in the line and recovering 342ft., bringing the game within 8ft. I cautiously brought him 8ft. nearer, then 4ft. Finally the dorsal fin protruded above the water, and his black, shining back next appeared. "Now, François, with your landing net! In with him."

"Ma fois! W'at a feesh! She beeg like a hog! Quarante livres sure, mai fren, sure!"

"There! that is what one might call a fish. Some sense in that."

I had no more than got the words out of my mouth than the fish made a spring and landed square across the Frenchman's mouth, knocking him flat on his back in the bottom of the boat, yelling like a Sioux warrior: "I am kill! Mai head! mai head! Tek ze gun, shoot queek! It mus' be ze—what you call—devil fish!"

Without hesitating to reflect upon the unsportsmanlike method of procedure I snatched up the gun and blazed away. I killed the fish, and came within an inch and a half of killing the Frenchman also; as it was he got eleven shot in his right leg below the knee, but it being a wooden one the damage was not so serious as it might have been. The fish was a black bass which weighed 18lbs. 7oz.; that is, François weighed it on the "stillyed" and reported these figures. We stayed in that vicinity for two hours and twenty-two minutes, and caught black bass, pickerel and pike until our boat settled into the water at an alarming rate, when, fortunately, our bait gave out, and we were obliged to leave. It was a pretty fair catch for two rods, 639lbs. 11oz. I was obliged to use the gun but twice in addition to the instance already noticed.

We returned to the boat house at 5:45 P. M. I have been careful to give exact figures in connection with the facts narrated, because the custom of using the words "about," "approximately," "nearly" and so on by fishermen has had the effect of unsettling the confidence of people in all fish stories. It is a very tempting way of easing the conscience of the narrators, but it is too indefinite, too suggestive. I like good round facts and figures; give me the pounds and ounces; the day, hour and minute; the exact distances, that gives one assurance of reality. If a thing is so, say so. ASA SPADES.

SUMMER ANGLING AND CAMPING.

WORCESTER, Mass.—*Editor Forest and Stream:* It strikes me that the article by "Special" in your issue of Aug. 4, was a well written and interesting clear statement of facts.

A person fishing in the summer months must be contented to catch a small amount of fish generally, and a person must make his surroundings a part of his fishing. I have in mind a party of boys who went to a New Hampshire lake, expecting to do a lot of fishing, rowing and so forth. The result was that one of them overworked and permanently injured himself, and the party left with a poor opinion of one of the most attractive lakes in New England.

They did not go at it right. Camp life is made up not of fishing alone. It takes fishing, rowing and a love of nature, a fair amount of each, to make a perfect camp life. When the fishing is poor, one should be contented with a catch of twenty-five trout a day, and not call his summer a failure because he did not have an enormous record to show his friends. It takes considerable cultivation to get your mind into this state, but it makes your life pleasanter than to be eternally longing for the unattainable.

It is the most foolish and at the same time disheartening thing to do, this going into the woods quite a novice, with the latest improved tackle, a nice rod and a splendid assortment of flies, expecting to make a phenomenal catch. It is very seldom done. That is where the rustic youth gets his opinion that he, with an alder rod, can beat the man with all his "fixin's." The rustic generally can beat the "greeny;" but take the man who knows how to use good tackle, and where is the country representative? It takes patient, careful practice to cast a fly for trout. That one catches no trout when he first casts a fly is no reason that, with plenty of practice, he can accomplish a like feat. PEMIGEWASSET.

SEPTEMBER CAMPS.

BOSTON, Mass.—September is upon us, and with that month comes the autumn weather and the desire to again go a-fishing before the winter and the close season has locked the waters to line and rod for another seven months. The number of Boston merchants who will go to the Maine waters this fall rather increases as the time draws near. Mr. Wilson, of the dry goods jobbing house of Norse, Wilson & Co., although very busy in the fall trade, intends to catch ten days or a couple of weeks for a visit to the Seven Ponds. Like every devotee of the sport with *Salmo fontinalis*, he is "getting his rods ready." He is a busy merchant and the head of a large house, but all the same there is no other vacation to him like that one to the woods and the waters, where dry goods cannot find him. Mr. O. H. Smith, of O. H. Smith & Co., lumber dealers, is getting ready for his annual trip to Camp Stewart, Richardson Lake. He will take the last week in September and the first week in October, in order to use the rod and line till the close time on trout begins, Oct. 1, and then to try for a deer, the open season beginning on that day. Mr. Smith is an expert with the rifle. Mr. Mark Hollingsworth, the artist, has been suffering with a carbuncle, and that has kept him at home a part of the time this season. He is a regular visitor to the Upper Dam, and occasionally to Parmacheene. Mr. J. P. Whitney is at his elegant camp at Musquito Brook, Richardson Lake, with his family, as usual at this season. Mr. S. Betton is at Camp Belleview, on the same lake. Mr. W. J. Reynolds, of Boston, will visit his camp—Camp Prospect—on the same lake, in September. The rumor that Birch Lodge, the celebrated Whittier Camp, at the head of Richardson Lake, had been sold to a syndicate of New York sportsmen proves to be incorrect. That handsome lodge is still for sale, as is also Camp Prospect. Mr. E. B. Haskell, one of the proprietors of the Boston *Herald*, has registered at the club house of the Oquossoc Angling Association, with some of his family. Mr. Haskell is a member of this association, and, also with his business partners, an owner in Allerton Lodge. He is an earnest worker for the editorial columns of his paper, but none the less does he appreciate his annual outing in the wilds of Maine. Mr. George Follett, of the wool firm of Geo. Follett & Co., New York and Boston, is meditating a trip to the Maine woods this month, but is yet undecided where it shall be.

C. H. Johnson, superintendent of Miller Bros.' manufactory of undertakers' supplies, at Somerville, will take his annual vacation at Camp Stewart, commencing about Sept. 16. Mr. Johnson is one of the owners of this camp. He has visited Richardson Lake every season for the past seven years. Mr. Johnson was the author of a practical joke that will not soon be forgotten by those who heard it. On Farrar's steamer there ran that season a curious genius under the cognomen of Captain. He was remarkably fond of finding out the business of every sportsman who went up or down the lake on the boat he commanded. Indeed if the occupation of a passenger did not crop out easily, why the Captain would flatly ask for the desired information, and then he would quietly remark that he should be in Boston or New York, as the case might be, the coming winter and would call, and perhaps the proprietor might help him in the direction of a business situation or something that he desired to purchase. Mr. Johnson's business was rather slow about coming out, although the Captain had already found out the occupation of one or two other gentlemen. The Captain could stand it no longer, but boldly asked, "Mr. Johnson, what is your business in Boston?" The answer was ready in a moment, "A manufacturer of clothing, both wholesale and retail, but the curious part is that we never make more than one suit for an individual." The Captain thought that he was quick to see a point, but he was a little bothered that time. "Don't you?" said he, "that's curious. Then you ought to give that person a good bargain. I am coming up to Boston this winter, and as your folks have never sold me anything I think that you might give me a bargain on a winter suit." Much to the amusement of his friends Mr. Johnson answered with a quiet smile, "Be sure to call on us. I have no doubt but what we can fit you."

Mr. John C. Paige, one of Boston's best known insurance agents, is spending a couple of weeks at Moosehead, at the Kineo House. Mr. Paige, together with his friend J. E. Graves, will try the fly-fishing. Mr. Shepard, of the iron trade, promises himself a much needed vacation at the Androscoggin lakes in September. Mr. Litchfield, of the fishing tackle firm of Appleton & Litchfield, will start on Thursday for a month's outing in the wilds of Maine and New Hampshire. He will first go to the Great Diamonds in the Magallaway region. Afterward he will visit other regions; probably Parmacheene, and perhaps further over in the wilds of Maine and Canada toward the east. Mr. Litchfield has spent a very busy season. He has given much time and thought to his new "tension reel," and has at last reached a stage of completion on this new idea in trout, bass and salmon reels where he can afford to take a vacation. SPECIAL.

LAKES CALUMET AND GOGEBIC.

FORTY-SEVEN years ago I first visited Lake Pullman, then called Calumet Lake, fifteen miles south of Chicago. It was then a solitary sheet of water, two or three miles long, in a dense swamp, with a deep border of reeds and rushes around it, accessible only through a winding creek from the Calumet River; so blind an entrance that it was necessary to put a flag or other signal to mark it, or one might wander over these miles of lake and water plants for hours or days without getting back to the river. Calumet River itself, now flowing through the suburb known as South Chicago, and a great artery of commerce, was at that time "remote, unfriended, melancholy, slow," with only two houses upon or near it for ten miles from its mouth. The river and lake were in spring and fall populous with swans, geese and ducks. In my collection of stuffed birds were three species of geese and twenty of ducks, shot on the Calumet River. All the waders were there, from the great whooping crane to the beautiful little phalarope, known as Wilson's, which used to breed in these marshes. A bag of fifty ducks per day to the gun was not unusual at that day, and half of them would be mallards, which were found in great numbers along the river bank, and were shot from the bows of a boat pushed along the margin of the reeds, as the big fowls flew straight up with loud quacks from their feeding grounds.

As to fish, pike and black bass, they so filled these waters that two of us in a boat with rod and reel, have often taken in half a day from 100lbs. to 200lbs. of them, from 3 to 6lbs. in weight. Also an occasional muskalonge, pike-perch, and big catfish. The region also abounded with deer, grouse, quail, woodcock, and snipe, and for variety and abundance of game, I have never seen its equal.

Now, in place of these *feræ naturæ*, we have at Calumet Lake a new, handsome city of brick, with immense work shops, a big hotel, a public library, lecture hall, gas, sewerage, and all the comforts of life, inhabited by 5,000 of perhaps the best housed, fed, paid, and generally cared for people on the globe. They ride to the city by 15 or 20 trains a day in half an hour, instead of toiling through sand and mud for three hours, as in 1840. It is said by some, that the amiable autocrat whose money and enterprise has created these marvels, governs too much; that his methods are too European and paternal, but as I looked at the long streets of comfortable and pretty houses inhabited by his subjects, I concluded that their lot was not unhappy.

I also visited Lake Gogebic, a beautiful mountain lake lying twenty miles south of Lake Superior in the woods, 2,000ft. above sea level and far from the abodes of men, except those in the excellent hotel built on its shore for sportsmen by the Milwaukee, Lake Shore & Western Railway. The lake is some fifteen miles long and two wide, with deep, pure and cool water. For the first two years after being opened to the public it swarmed with black bass, so that catches of fifty to the boat per day were common. The streams flowing into the lake were full of good-sized trout, so that one hundred per day have been taken to the rod by pot-fishermen. These good gifts have been, as usual, abused. Thirty boats, each with two fishermen and a guide, all fishing for count, have often brought in 1,500 to 2,000 bass a day; and, of course, most of the fish were wasted and were buried or burned by the wagon load. No waters could stand such depletion, and this summer when I was there ten bass to the rod per day was the usual catch. As to trout, the largest string I saw was a dozen, and I fished the best stream one afternoon without a rise.

Another source of danger to the fish of Gogebic is that valuable iron deposits have been lately found along its northern and western shores, and large numbers of prospectors are on the ground and in some places large gangs of miners are at work. Probably these men will soon be using dynamite on the fish of Gogebic, as in other lakes.

The moral of my story is, that as the fishing of Calumet Lake now is, so shall that of Gogebic be in a few years if not well protected. S. C. CLARKE.

MARIETTA, Ga., Aug. 24.

FISH DYING BY THE MILLION.—A press dispatch from Galena, Ill., Aug. 26, says that within the past two or three days the fish in many of the streams in this section have died by the million and the few that are left are rapidly following suit. The banks of the Galena River branches are lined with dead fish of all sizes and varieties, from the tiny minnow to the mammoth cat and sturgeon. At Buncombe, Wis., a few miles from this place, dead fish are so numerous on the banks that the stench arising from them is almost unbearable. At Lancaster, Wis., the scene on the river bank beggars description, over fifty wagonloads of dead fish being in sight. There are numerous theories afloat as to the cause. One is that the recent rains have roiled the water with mud, so that the fish have been unable to breathe, and struggling to the surface for air, have died. Another is that during the dry hot summer the valleys and marshes above were filled with some poisonous growth that with the recent floods was carried into the streams and poisoned the water.

THE LANDLORDS SERVE FINGERLINGS.—*Editor Forest and Stream:* I have just returned from a visit to the Sagamore Hotel, on Long Lake, where I had, among other meals, a breakfast at which trout measuring about 4 and 5in. were served. They may have shrunk from the legal length of 6in., but considering the number of guests who partook of the breakfast, somewhere near 100, I have come to the conclusion that the fish had been netted, which, I believe, is also against the law. Cannot something be done to stop this wanton destruction of this delight of fishermen? I am not given to whip the waters for hours with the prospect of a fish at the end of my line, but I like the woods too much to see the pleasures of others destroyed.—B, F,

LANDLOCKED ROCKFISH.

Editor Forest and Stream:

I notice that one of your contributors speaks of rockfish (*Roccus lineatus*) being abundant in Chipola Lake, Calhoun county, Florida. This rockfish is the striped bass of Northern waters. Until quite recently its presence in fluvial and inland waters of the South was not admitted by most ichthyologists, some of the best authorities within the present decade even expressing doubts thereof. Hence any authentic testimony regarding its habitat and breeding habits is of scientific as well as economic value.

Chipola Lake, your readers have been informed, is about twenty miles long, and from two to four miles wide, running parallel with the Apalachicola River. This river and its tributaries, at as great a distance as 200 miles from the Gulf of Mexico, are known to contain rockfish, some of which attain 30lbs. and upward in weight, and compare very favorably with the monster striped bass of Cuttyhunk and Pasque Island, off the Massachusetts coast. But those waters are by no means exceptional in this respect, for striped bass are "constantly seen in rivers of fresh water at great distances from the ocean," and are "common in all the rivers of the Southern States." [See Hallock's "Sportsman's Gazetteer," 1877, page 401.]

The anadromous character of the striped bass has long been known, though observers were not decided as respects their spawning grounds and seasons. At present, however, under increased light, they are believed to have habits much like those of the shad, passing the greater part of their time in salt water, without especial regard to latitude, and running up the tributaries of rivers in spring to spawn. The young remain up stream one year and return to salt water at varying periods in the spring following their birth, according to the temperature of the water where hybernating. Reservoirs which do not freeze to the bottom are their chosen winter quarters.

In the Gulf States, whose rivers are subject to periodical overflows and to freshets which submerge immense areas of land, large bodies of water are left standing after each subsidence, some of which partake of a permanent character, becoming reservoirs for inflowing streams and harboring a remarkable variety of edible fishes of the better grades, such as black bass, sturgeon, trout, perch, bream, suckers, pickerel, catfish and turtles, as well as rockfish, all of which are mentioned by your correspondent "Viator" as inhabiting the Wewahitchka or Chipola Lake. Included in the collection are several varieties which are habitués or frequenters of salt water, but they all thrive well in spite of their restriction, and in a brief space of time become strictly landlocked varieties.

In like manner, and by like process of nature and adaptation, we are presented with the landlocked salmon, smelt, shad, herring, etc. And thus we leave the landlocked rockfish, equal to its marine brother in edible and game qualities though differing by force of circumstances greatly in its breeding habits. Structurally the two are identical. Besides these we have the *chrysops* and the *interruptus*, which are modifications of the *lineatus* though classified as different species, the anatomical characteristics being sufficient to so determine them. But these specific differences we may suppose have been accomplished in course of time by specific causes directly referable to their differences of habit, character and quality of food, and temperature of water.

The enumeration of fishes inhabiting both salt and fresh water is already large, and it may prove eventually that a great number of the marine species have their representatives or co-ordinates in inland waters. Of these the salmon and the striped bass are at present the most important. CHARLES HALLOCK.

CUSK.—Manchester, N. H.—I have been much interested in the discussions in the FOREST AND STREAM regarding the fresh-water fish called cusk. I have talked with a number who profess to have caught them, and they seem to differ greatly in the description of the fish, also as to the edible qualities of what they called cusk. While some extol them highly for the frying pan, others say "No cusk in mine, please." Last January a friend sent me a half dozen fish he said were cusk, caught on set lines through the ice in the night, hooks baited with shiners. The fish would weigh 1½lbs. each. Head something like a horn pout, body tapering, tail round, more like an eel than most fishes. Tasted something like horn pout, but quite inferior. These fish were taken in a very deep water pond a short distance from Lake Winnipasaukee, in this State, on 60ft. of line set for lake trout. It seems from the different ideas about them that there must be several different species of them.—I. I. A.

Fishculture.

FISH COMMISSIONER GOODE.

THE newly appointed United States Commissioner of Fish and Fisheries is so well known as a fishery expert that his succession to the place made vacant by the death of Prof. Baird is heartily approved.

G. Brown Goode was born in New Albany, Ind., in 1851. He is a graduate of Wesleyan University at Middletown, Conn. His scientific bent was manifested at an early age, and while a student at Middletown he took so much interest in the development of a museum of natural history that the college authorities recognized his work and employed him, after graduation, to pursue certain ichthyological investigations.

In 1871, when the United States Fish Commission was established, Prof. Goode was appointed an assistant of Prof. Baird, and he has been connected with the Commission, doing most efficient work in it, ever since. In 1875 he was employed in connection with the Government Fishery Board for the Centennial Exhibition; in 1877 as statistical expert in behalf of the State Department at Halifax; in 1878 in behalf of the National Museum at Gloucester he was one of the party at the coast stations taking part in the marine explorations. From 1879 to the beginning of 1881 he was in the employ of the Superintendent of the Tenth Census in charge of the division of fishery statistics. Since 1875 the Commissioner of Fisheries has from time to time intrusted him with the conduct of special investigations, the results of which have been published in the official reports. In 1880, at the International Fisheries Exhibition at Berlin, and in 1883, upon a similar occasion at London, he was appointed by the President to represent, in the capacity of United States Commissioner, the fishery interests of the Nation, including the work of the United States Fish Commission and the fish commissions of the several States.

At the London Exhibition Prof. Huxley, in the course of an address, paid a tribute to Prof. Goode and the United States Commission, in these words: "The great moral of the United States contribution to this exhibition, and especially of the contribution which Mr. Brown Goode has just made to the conferences, was that if this country or any society which could be formed of sufficient extent to take up the question, was going to deal seriously with the sea fisheries and not let them take care of themselves, as they had done for the last thousand years or so, they had a very considerable job before them, for he did not think, speaking with

G. BROWN GOODE.

all respect to the efforts made by Sweden, Germany, Holland, and so forth, that any nation at the present time had comprehended the question of dealing with fish in so thorough, excellent and scientific a spirit as that of the United States."

Prof. Goode is an indefatigable worker, as the printed monuments of his labors give ample proof. He is the author of an extensive "History of the Menhaden," the text of "The Game Fishes of the United States," which accompanied Kilbourne's plates; "The Fishery Industries of the United States," "Materials for a History of the Swordfish," and numerous monographs, papers and reports of special studies and investigations. At the time of his appointment Prof. Goode held, and will still hold, the position of Assistant Secretary of the Smithsonian Institution, the same position held by Prof. Baird when he was appointed Commissioner.

The portrait here given is from a photograph.

THE NEW YORK FISH COMMISSION.

WE have the Fifteenth Report of the Commissioners of Fisheries of New York, transmitted to the Legislature Feb. 28, 1887, and covering the work of the season of 1885-6. This Commission has always been behind in its reports and there seems to be no effort to bring them up to date. The last Legislature adjourned many months before this report saw the light and only had the Fourteenth Report to refer to when the question of appropriations came up. The Commissioners, in short, apologize for this state of things by saying that the Fourteenth Report of the Board, under date of May 10, 1886, for the two years ended Dec. 31, 1885, was not published until October, owing to delay in the printer's hands. No doubt that is where the delay occurred in the present case, but it would seem that it should be the duty of some person to see that the report was timely.

This department of the work of the Commission has been prosecuted to the extent of the facilities of obtaining spawn. These, for the reason mentioned in our last and in nearly all our preceding reports, are very much restricted. The blockade of the fishing grounds by the netters in the lower part of the Hudson River is a barrier to the passage of the shad to their natural spawning grounds above, which are at and above the junction of tide with fresh water. Few shad comparatively, for the reason stated, now reach the spawning grounds, and countless millions of spawn which might, for a trifling expenditure, be turned into valuable fish, are now altogether lost. To remedy this waste it has been proposed to require by statutory enactment all nets to be taken and kept up from Saturday night till Monday morning, which would give the fish free passage up the stream for thirty-six hours in each week, and would, it is believed, increase the spawn supply many fold. Not only is such a measure called for in the interest of artificial production, but it is due in fairness to netters up the stream who, by the virtual monopoly of the fishing at the mouth, are cut off from their proper share. A bill to meet this case was introduced in the Senate at the last session by Senator Pitts, and passed that body, but it failed of final action in the House, not so much, it is believed, from any doubt of its merit, as from the lack of the friendly nursing which is so often the cause of the failure of salutary measures of legislation.

The following statistics of the catch of shad in the season of 1886 we received through the courtesy of Prof. Spencer F. Baird, of the United States Commission of Fish and Fisheries, he having obtained the same and paid the expenses incurred, the work being done under the direction of Commissioner Blackford:

Total catch on the upper Hudson, fish that were not sent to New York markets	356,976
Total catch on the lower Hudson, fish that were not sent to New York markets	89,050
Total number of shad received on the west side of New York city from the Hudson River	282,169
Total number of shad received on the east side of New York city from the Hudson River	572,754
	1,300,949

The following table gives a comparative statement of the shad catch and the shad hatch in the two seasons of 1885 and 1886:

Catch, 1885.	
In the Upper Hudson	276,273
In the Lower Hudson	102,750
Received and sold in New York markets	796,312
	1,174,835
Catch, 1886.	
Upper Hudson	356,976
Lower Hudson and not sent to New York markets	89,050
Received on west side from the Hudson River	282,169
Received on east side	572,754
	1,300,949
Hatch, 1885.	
Spawn taken	1,575,000
Fry deposited	1,467,000
Hatch, 1886.	
Spawn taken	2,510,000
Fry deposited	2,279,000

The catch in the season of 1886 was one of the best that has been made since artificial hatching was established. The proportion of large fish was marked, and the supply was so abundant that prices rated lower than in many previous years.

To the frequenters of the great fishing resorts on the St. Lawrence River, the Thousand Islands region, there is no attraction so great as the capture of the monarch of these waters, the *Esox nobilior*, or muscalonge, as he is commonly called. His great size, vigorous game spirit, and superior table qualities, combine to make him a rare prize. No ambitious angler is content to leave these waters till he has put at least one of these fine fishes to his score. The capture of one of large size is an event of such interest to the tourist community that flags are raised, steamboat bells rung and guns fired in commemoration; and the lucky captor when he reaches the shore with his prize is the lion of the day. And the fish is worthy the distinction given to it. To say nothing of the pleasurable excitement of the capture, the prize has a gastronomic value not excelled by any other large fish of our fresh waters. Indeed, it properly ranks in quality next to the salt-water salmon. If the worthless pickerel, *Esox lucius*, could be exterminated in the St. Lawrence waters and its place supplied by the muscalonge, it would be a boon to the public of sufficient value to compensate for all that has been expended in artificial fishculture. What now is especially needed in this work is the multiplication of useful food fish which can be furnished to consumers at moderate cost. The amateur fisherman has been well dealt with in the supply that has been put within his reach, of the finer sorts of game fish, as trout and bass. The muscalonge is what is wanted to furnish consumers as well as sportsmen with first-class fish.

Looking, among other useful means to this end, the Commissioners have authorized Mr. M. B. Hill, of Clayton, Jefferson county, who has for some years conducted hatching operations at his own expense, to make experiments in their interest, with the muscalonge. What has been done thus far is promising, and it is believed that by continuing the moderate pecuniary aid needed, completely satisfactory results will be obtained.

Mr. Hill reports to the Commissioners on this subject as follows:

"I desire, in brief, to give you my views in regard to the artificial propagation of the muscalonge; how it may be accomplished, etc. First, it is necessary to have a suitable number of breeding fish, taken in proper condition or kept until they are in such condition. I am of the opinion that they will have to be taken alive and placed in proper ponds and kept there until the eggs are ripe. The breeding fish should be kept from year to year the same as trout are kept at the hatcheries. There should be a large deep pond or ponds provided, so constructed that the water can be drawn off and the fish stripped at the proper time. The young to be retained for breeding should be kept by themselves, as the muscalonge will prey on his own family sometimes. I have one noble fish of the St. Lawrence species, which is 3ft. long, and from present appearance is filling with spawn. have also 100 of the Indian River species, each from 5in. to 7in. long. Theresa experts say they are the genuine stock. To prove this, however, time must be taken, but I do not know they are not the common pickerel. They are noble feeders and are growing nicely and seem very hardy. I have one pond situated thirty rods below the hatchery that covers one and one half acres. It has thirteen boiling springs, besides the large stream from the spring that feeds the hatchery flows through it. It has also a quarter of an acre of marshy sides, and a mud bottom where coarse wild grass grows in the water. I think this would be the exact place to grow muscalonge for breeding purposes. There is quite a range of temperature in the water, because of the surface exposed to the sun. The water at the boiling springs never freezes, although the main surface of the pond is mostly covered with ice in the winter time. I have grown pickerel, bass and pike-perch in this pond, and it is surprising what a growth they make there in two years' time. I am certain the muscalonge will do equally well in this pond, and by removing all other large fish and stocking it with chubs and shiners they would get abundance of natural food. The chubs and shiners are plenty in the neighboring waters and are easy to obtain. The pond I speak of can be drawn off readily and it has gravel and sand as well as mud bottom, so that it will not be difficult to discover what sort of bottom the fish selects for spawning beds. As regards the hatching artificially, I do not entertain a doubt it can be done if the spawn can be got in proper condition, as I believe it may be by the means I have indicated. I would like the advice of the Commissioners in regard to clearing this pond of other fish and preparing it for the muscalonge, which is so well adapted to the many lakes and rivers in the State, where, on account of the high temperature and other causes, trout will not thrive.

"M. B. HILL."

The report is illustrated with pictures of the hatcheries at Caledonia and Cold Spring Harbor, and, as a frontispiece, has alleged likenesses of the Commissioners and one of the superintendents. Perhaps it may be well that the Legislature adjourned before they saw this very unflattering picture of the good-looking men composing the State Board of Fish Commissioners.

The details of work done at the different hatcheries will be recorded in a future article.

ANSWERS TO CORRESPONDENTS.

F. M. R., Providence.—The lines of these yachts have never been published.

W. S. W., Richmond, Va.—See our advertising columns for addresses of builders.

J. L., Brooklyn.—Robin shooting in New York State is permitted on Long Island and Staten Island only, between Nov. 1 and Jan 1.

MARTIN, Camden, N. J.—The Pearl and Nautilus have carried 100ft. in main and 35 to 50ft. in mizzen, balance lugs, with 60ft. spinaker.

E. A. M., Brooklyn.—We know of no regular Model Yacht Club near about New York or Brooklyn. A few races are sailed at times on Bowery Bay, but the sport is not followed very keenly now.

A. S. G., Philadelphia, and others.—There are patented compositions for canvas boats, but their manufacture is a secret. Use boiled linseed oil and a good dryer. Nothing will tighten canvas when once it has stretched.

H. K., Wisconsin.—1. While out shooting I dropped my gun, and not being able to clean it for some time I found the wood work had come away from the metal; how can I fix it? 2. Where is the nearest good woodcock ground? Ans. 1. Take it to a gunsmith. 2. Inquire at the local gun store.

LAKESIDE, Geneva, N.Y.—Please give me your decision on the following: In a shoot there were prizes given for best average, second best average, third best average, fourth best average and fifth best average. A and B tie on highest score and claim first and second prizes. Are they right or should the tie be shot off as in the regular shoot? Ans. A and B should take first and second.

The Kennel.

FIXTURES.

DOG SHOWS.

Aug. 30 to Sept. 2.—Hornell Kennel Club Show, Hornellsville, N. Y. J. Otis Fellows, Superintendent.

Sept. 7 and 8.—Second Show of the Fox-Terrier Club, Newport, R. I. Entries close Aug. 27. F. Hoey, Sec., Long Branch, N. J.

Sept. 13 to 16.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary; Chas. Weil, Superintendent.

Sept. 20 to 23.—Fourth Show of the New Jersey Kennel Club, Waverly, N. J. Percy C. Ohl, Secretary, 44 Broadway, N. Y.

Sept. 20 to 23.—Wisconsin Kennel Club's Annual Show, Milwaukee, Wis. A. M. Grau, Secretary, 552 East Water street.

Sept. 27 to 30.—Annual Show of the Southern Ohio Fair Association, at Dayton, O. M. A. Nipgen, Secretary.

Oct. 12 and 13.—Third Annual Show of the Stafford Kennel Club, Stafford Springs, Conn. R. S. Hicks, Secretary.

Feb. 21 to 24.—Twelfth Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Sept. 6.—Manitoba Field Trials Club Field Trials. Derby entries will close July 1; all-aged entries Aug. 1. Secretary, Hubert Galt, Winnipeg, Manitoba.

Oct. 17 to 22.—Second Annual Meeting of the American Coursing Club, at Great Bend, Kan. G. I. Royce, Secretary, Topeka, Kan.

Oct. 31.—First Annual Field Trials of the Indiana Kennel Club at Bicknel, Ind. Open to dogs owned in Indiana. P. T. Madison, Secretary, Lock Box 4, Indianapolis, Ind.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

Jan. 10, 1888.—Second Annual Field Trials of the Texas Field Trials Club, at Marshall, Tex. W. L. Thomas, Secretary, Marshall, Tex.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5296.**

BARNEY.

HOW many years since I first made Barney's acquaintance I cannot tell without consulting mouldy records. I do not even remember the exact place or manner of the introduction, but I have an indistinct idea that he was still in the company of his mother and brothers and sisters. That his mother was proud of him goes without saying, but the size of her family was such, and the consequent drain upon her resources so great, that she readily consented to the separation. That she was resigned to it and never repented I have always believed, for to the contrary I have never received an intimation; nor was there any ground for repentance. Happy the mother whose high-spirited son, in the battle of life, achieves such reputation as Barney gained.

I am not good at drawing portraits, and fear I shall fail in drawing that of the hero of this sketch. Tall for his age and in his adolescence lanky, there was from the beginning promise of that great strength and utter impossibility of weariness, which were among his distinctions through life. Large hazel eyes, well set in a more than usually expansive forehead, looked at you from under dark chestnut hair with that calm confidence, inseparable from the high courage that knows no fear. The resolute expression of his face was only heightened when his open mouth displayed its admirable garniture of strong white teeth. Of his manner in early life I cannot speak too high. With a naturally affectionate disposition he had the reserve which good descent and breeding confer, and was never prodigal of his favors. To those to whom he gave his esteem and confidence he had nothing to refuse. To those to whom in after life he gave his protection he was staunchness itself; and if before he passed from sight stories were told of fierce outbreaks of violence on his part I have never fully believed them. I have always felt that each story had two sides and waited to hear from that of Barney; but whether it was pride or whatever other reason prevented, he never stooped to say a word in his own defense. I only know that when, owing to the repeated assaults upon his character brought to me by the person with whom he resided, I had consented to a change of domicile, that same person—after a copious dinner, duly lubricated and incensed—admitted that he had received $400 for consenting to the change, and that the new guardian of the alleged terror of Milford reported that Barney was the best tempered dog in Binghamton. I do not presume to say that Binghamton dogs are especially peculiar in temper, but if the Milford man's tales were true, then Barney must have been converted when he changed his domicile. Perhaps with his extraordinary intelligence he recognized the fact that there was an asylum there in which the mad were confined, and having no taste for close quarters, changed.

Of course I mentioned it before, but if I did not, say now that Barney was the best red Irish setter that I ever possessed. Barney may get closer to my heart, for no one can help loving Barney, nor respecting him, but there was something about Barney that commanded admiration, and insured deference.

Recognizing that the city with its dissipations and dangers was no place to bring him up in the way he should go, I confided his education to a friend in Pike county. I had no intention of parting with him, however, and watched his progress with affectionate interest. It was soon noticed that he was more than ordinarily intelligent; that few things escaped his notice. His instructor informed me that one sleety night, when the fence-rails were coated, he took off his new gloves to save them from being wet on his seeking support; that on reaching home with but one, he showed that one to Barney and that he immediately went out and brought home the other. Of course Barney saw at once that a single glove was of little use, and with his early appreciation of the benefits of coupling, took the necessary steps to perfect the pair. In addition to this, Barney had a very clear idea of property and the duty of preserving it, for one dubious evening, when his instructor was returning from a county fair, full—of thought, several times the dog interrupted his revery by pressing against his leg. Undiscouraged by rebuffs he continued unsuccessfully his attempts to attract his master's attention to his neglect, and it was only when the pair reached home that it was discovered that the presence of a well-filled wallet in his mouth had prevented the utterance of an oral rebuke to human carelessness.

To the young and supposedly weak he grew to be a friend and protector. To the children that rolled on the floor with him in puppyhood, in his more rapid maturity he was a most vigilant guardian, and even their father found household discipline checked by his interposition, a paw on each shoulder and the exhibition of his strong white teeth being Barney's mode of remonstrance against corporeal punishment of his comrades.

In the field his sense of title to property was not as clear as at home. Not that he ever allowed any one to take anything belonging to his master, but knowing that animals and birds *feræ naturæ* belonged to him that reduced them within his dominion, he invariably retrieved and brought to his master any that were shot within his hearing. In fact, he failed to recognize the first step in the reduction as having any influence upon the title. That this occasionally led to disputes, may be imagined, but the result was always as above stated. A dog that would hunt all day on the rocky ridges of Pike county, and on the road home at night jump into a rapidly moving wagon over the back seat and then, at a word, over the dashboard and fore wheel, as Barney would do at command, had wonderful powers of persuasion.

Nor was he at all deficient in the qualities that give value to his race; but for want of space one instance of his nicety of discrimination must suffice. It was after a hard day's work on the ridges, and also after an excellent dinner, that our party was smoking in the barroom of the Sportsmen's Retreat, when the boy brought in a plate of apples and put it on the bar. No one wishing to eat them, Barney's instructor rested his finger on the topmost one and then caused my companion to mark that one with the point of a knife. A gentleman from New York city was then delegated to take the plate of apples and leave it anywhere at any distance. Having done this he returned and said that he had left it on a house porch some twenty rods distant.

During all this Barney had been tied up in the stable, and only after my New York friend returned from his errand was he untied and brought into the barroom. Jumping upon the settee beside his instructor, he received a whispered command, and immediately going to the door pawed down the latch and darted out into the night. In ten minutes he returned bringing the marked apple in his mouth, and a messenger sent for the plate reported that he found it with the other apples undisturbed. I have no doubt that you have numbers among your readers who have heard of this feat, and some, perhaps, who have witnessed it. There are many in "Pike" who have and have bet on its performance.

But Barney is gone from the pleasant places that once knew him; gone, too, are many of those who made them pleasant to Barney's owner; and I know that none of them would take offense at my thus coupling, in this brief allusion, their memories with that of Barney. H. B.

NEW YORK, July 30.

BEAGLES FOR BENCH AND FIELD.

Editor Forest and Stream:

Having seen so much of late in FOREST AND STREAM concerning beagles I thought I would contribute my mite. I shall not speak of beagles as show dogs as I have never shown a beagle, but have been fairly successful in showing some other breed considering the number of times I have exhibited. At present I have eleven of the little hounds, and I dare say some are fit to compete in any company, but I am a hunter and love the beagle, providing he is a hunter. I readily see the advantage a breeder would have in making sales, providing his kennel (not his pack) contained two or more crack show dogs, no matter whether they had any inclination to hunt or not, but when a sportsman visited you for the express purpose of seeing your pack in the woods, there is where the hunters come in play, and where every good nose, good voice, and good looker counts. I believe hunters can be bred and those that will stay all day, and all night, too, if required, that will not exceed 15in. in height, more than that I know they can. My pack of eleven measure between 12½ and 15in., only one in the pack being 15in. tall. I have known one (a Ringwood bitch) this summer in our warmest weather, and only two weeks before whelping her litter, to start out alone and run a rabbit thirty-six hours in succession. I then went after her and caught and carried her home in my arms, and she is a 12½in. dog. I know beagles can be kept small (under 15in.) and still be the best of hunters providing breeders pay more attention to breeding from hunters no matter if they (the best hunters) do have a half dozen more ticks or small spots than our judges like to see on the bench. For me I want dogs not to exceed 15in., and I want workers or none, and I know they can be bred and I shall breed this kind. Other breeders have their ideas and I shall endeavor to be liberal and give them the privilege of breeding theirs as they choose, and whenever or wherever I see a pack of beagles that are good hunters I shall praise them and their owners and breeders. But show me a beagle that is only fit for the bench and not a hunter, providing he has had the chance to make one, and I would not accept him as a gift and be under obligations to keep him. ZIM.

SPRINGFIELD, Mass.

AMERICAN KENNEL CLUB.

FOLLOWING is a complete list of the members of the American Kennel Club:

American Field Trial Club.
American Fox-Terrier Club.
Cincinnati Sportsman's Club.
Cleveland Bench Show Association.
Hartford Kennel Club.
Hornell Kennel Club.
Michigan Kennel Club.
National Poultry Association.
New England Kennel Club.
New Haven Kennel Club.
New Jersey Kennel Club.
Pacific Kennel Club.
Philadelphia Kennel Club.
Rhode Island Kennel Club.
St. Paul and Minnesota Kennel Club.
Westminster Kennel Club.
Western Pennsylvania Poultry Society.
Wisconsin Kennel Club.

HE FOLLOWED THE TRAIL.—Kootenai Lakes, N. W. T., —I think it was in Long's "American Wild Fowl Shooting" that I saw it written that a dog might be a good one though of no particular breed. This I can fully indorse as I own one who is rather a nondescript but yet is hard to beat. He is a first-class retriever and will hunt anything from a muskrat to a grizzly. Many a lynx and fisher has he treed. Many a mountain sheep and goat has he held at bay on the tall cliffs of our grand old mountains. Last winter at Kootenai Lakes, North West Territory, Canada, when the snow was about six inches deep, a hunting companion of mine left here to visit a village (Pincher Creek), distant about thirty miles. He was on horseback and started about 8 A. M. over a wild country, no road nor trail and full of horse and cattle tracks. Fearing Dash might follow I tied him up, and he remained so till 4 P. M. An hour afterward I missed him, and it was not till the return of my companion in four more days that I saw him again. My companion said that he had arrived at Pincher Creek late, and went to bed at 11 P. M. Shortly afterward he was awakened by a scratching at the door, and opening it in came the old dog. It had been drifting and snowing nearly all day, and the dog had never been to Pincher Creek in his life. I need hardly say he is not for sale.—KOOTENAI.

FOX-TERRIER SHOW.—New York, Aug. 29.—*Editor Forest and Stream:* Through an error, the old rules and regulations of the American Kennel Club were published in the premium list of the Americam Fox-Terrier Club for their show to be held at Newport on Sept. 7 and 8. In accordance with the new regulations of the American Kennel Club, the show will be held under their new rules, a copy of which will be found in the back of our catalogue.—FRED HOEY, Sec. and Treas.

A CHASE FOR ANTELOPE.

BROOKVILLE, Kan.—Looking over my old letters I came across one that read as follows: "Friend ——, how would it suit you to have three or four of the boys and myself come up next Thursday and have a hunt after antelope? I have a new dog that I wish to try, as I think he is very fast." Of course I told them to come at once and as often as they liked, for I am always ready for such sport. Thursday brought the boys, and with them a couple of fine looking greyhounds.

Friday morning before daylight we were in the saddle and ready for the fray, and as soon as it was light enough to see the road we started, and by the time the sun rose we were on the range. It was exciting to see nine horsemen and about twenty-five as fine looking greyhounds as one could wish to see; and all on the alert for game. I knew where a herd of antelope ranged, and knew that we could not be far from them. Some of the boys were discussing how it was best to cook the meat, so sure were they of catching the game, and one wanted to know if we could not catch the whole herd. I confess that I could taste the fine juicy steaks (in my mind), and thought of the bushels of fun in store for us. Two of us rode ahead to the top of a divide, and looking ahead about half a mile espied our game quietly feeding from us. Going back to where the rest of the party were we planned our chase. We were to divide into three parties, three to take half of the dogs and go to the right of the antelope, three to take the rest of the dogs and go to the left, and the remaining three to stay where they were until we gave them a signal to start, and then they were to move up on the herd and try to run them in between the other two parties with the greyhounds, and we were sure to catch five or six at least. Alas, there is many a slip. How easy it is to make a fortune in wheat or stock raising, and catch game by the wagon load on paper, but when we try it it does not always pan out quite so fine; and this hunt was no exception to the general rule, as you will see.

The party that went to the right had just got to the point agreed upon when up jumped a big jack rabbit and started off in the opposite direction, and the greyhounds in full chase after it. After a hard chase they caught it. Tying the jack on the saddle, the party started for water with the dogs, but before reaching the pond another jack skipped away in front of them and away went the hounds again. But this time the result was worse than before, for the rabbit ran over a slight rise and right on to an old buck antelope; and the dogs, preferring him to the jack, gave chase after him, but he had such a start that they could not make him turn, and he got into the hills and escaped. The dogs had run hard to overtake him, and had no water; so it was useless to try to run them until they had water and rest.

Now for the other flanking party, of which your humble servant counted for one. After getting in position, we waited and waited for the other party to put in an appearance; but after waiting for more than half an hour we got impatient, and, thinking that something not on the programme had happened, concluded to signal the rear party up and give the dogs a race. I raised my hat and waved it slowly over my head, the signal agreed upon for an advance; but it did not seem to be noticed by them. I pulled out my handkerchief and waved that; but this did not attract their attention. I tried to play circus and stand up in the saddle. Alas! he was one of those never-to-be-broken Texas mustangs, and no sooner did I stand erect in the saddle and wave the signal than he gave a spring that brought me down behind the saddle. I closed my legs under his flanks and tried to get hold of the reins and back into the saddle. Talk of bucking mules! I would like to see a mule that could jump as high or come down as stiff as this brute. I seemed to go twenty feet in the air at every bound, and when he came down I thought his aerial flight had turned him into ice, but the instant he touched the ground the illusion was dispelled; up he would go again, and it seemed to me that each leap was higher than the preceding one, and each time he touched the ground he came down harder. The last time he struck I thought I was on a Baldwin locomotive and had run over a precipice and struck on a solid rock. This was too much for my equilibrium, so I rolled off and under him, and received both heels in the short ribs. I thought my whole side was knocked in; but when I looked up and saw the pony going straight for the herd of antelope, I braced up and told the boys to let me go and keep the pony away from the herd, or he would scare them off and we would not get a run at them with the dogs. But it was no go, for he ran right straight toward them; and away they dashed and the pony kept on to town. So that was the end of party No. 2.

Now for the remaining party, the ones we left behind to start the game up. They had become tired of waiting so long, and seeing a couple of antelope there, under the inspiration of the moment thought they could catch them. They had no greyhounds with them, nothing in the shape of a dog but a little setter pup, but away they went, helter skelter, pell mell. One of them was thrown from his horse the first mile of the chase, and the other two got separated, and when we came to look for the missing, two could not be found.

The worst part of it was one of the missing ones was in charge of our commissary department with a haversack full of ham sandwiches. If we had had the grub we should not have worried so much about the man, but after our hard ride we felt light-waisted. We deployed skirmishers to look for the lost. I started out to look for the ham sandwiches. After hunting around about an hour I heard a dog barking; and riding down into a valley I saw the commissary's horse, but could not see anything of him. I saw the setter pup. He stuck to the grub, our commissary lying on the ground dead I at first thought, but on examination I found that he was sleeping as sweetly as if in a bed of swan's down instead of a hard rough spot on the prairie. The pup had interviewed the haversack (without as much as by your permission) and I found the sandwiches scattered around the ground minus the ham, and the butter had been licked off as clean as could be; he did not eat the bread, he was too high-toned for that. We started for home with only a few jack rabbits, but no antelope nor wolves.

ST. PAUL DOG SHOW.—St. Paul, Minn., Aug. 20.—*Editor Forest and Stream:* Our coming bench show promises to be a great success, and judging from the interest taken therein by breeders and exhibitors from all over the country, bids fair to turn out one of the largest shows ever held in the Northwest. Entries are coming in very lively, and the demands for additional entry blanks are very large. We have added a class for greyhound puppies and for wire-haired fox-terriers, and have also received from 10 to 15 fine specials in addition to those already published, among which we mention a fine medal donated by Mr. Grau, secretary of the Wisconsin Kennel Club, for the best pointer dog or bitch in the show. The show being held during the State fair, the attendance no doubt will be a good one, and chances for selling stock will be splendid for those coming here. Our hall is the largest in the city, well ventilated and on the ground floor, and we also have a fine lawn exercising ground situated near the hall. Exhibitors wishing to visit the Milwaukee show from here, can leave their dogs in our hall until the Monday following the close of our show, and thus be relieved of a good deal of trouble and expense, which might occur otherwise.—CHAS. WEIL, Supt.

NEW YORK DOG SHOW.—Babylon, L. I., Aug. 26.—*Editor Forest and Stream:* The Westminster Kennel Club will hold its twelfth annual dog show at Madison Square Garden on Feb. 21, 22, 23 and 24, 1888.—JAS. MORTIMER, Supt.

NEWCASTLE DOG SHOW.

ON the 12th of July one of the largest and most important dog shows that has ever been in the north was opened at Newcastle. It will be remembered that Newcastle was the scene of the first dog show ever held, and that Mr. J. Shorthose was one of the promoters, as he was of the one under notice. On the present occasion a special building was erected by the committee in the Haymarket, with wooden sides and a canvas roof. The benching and feeding was carried out by Spratts Patent in their usual style, under the dual supervision of Messrs. C. Cruft and J. Wright. It being the Royal Agricultural show week "the gate," we understand, was very good. The judging was got through in good time, and the secretary, manager and committee all worked hard.

The following is a list of the judges in the various departments: Bloodhounds, mastiffs, St. Bernards, Newfoundlands, Great Danes, Mr. J. F. Smith; deerhounds, greyhounds, beagles, Bedlington terriers, any variety selling class, Mr. James Hedley; sheepdogs, Mr. H. P. Gordon; pointers, Mr. R. B. Summerson; setters, retrievers, any variety, Mr. T. B. Bowers; spaniels, any variety selling class, Mr. F. E. Schofield; dachshunde, bulldogs, bull-terriers, Airedale terriers, black and tan terriers, pugs, Prince Charles or Blenheim spaniels, toy terriers, Yorkshire terriers, Mr. George Raper; fox-terriers (rough and smooth), Mr. G. J. Monson; Irish terriers, Mr. C. A. R. Hoare; Scotch terriers: Dandie Dinmonts, Skye terriers, Mr. D. J. Thomson Gray; Welsh terriers, Mr. F. H. Colmore.

In challenge mastiffs, Albert Victor had a walk-over. Napoleon, in nice form, won well in the next class; he is very good in formation of head, with capital limbs, and one of the best movers we have seen. Sultan shows plenty of quality, and is characteristic, but a trifle weak below the eye. Rudolph errs in the ears, but is otherwise good. Duke of Edinburgh was dead out of form. Queen of Scots was again successful in bitches; she owns a grand head, but her ears are against her, being too big; in body and hind-quarters she is good. Zillah III. might have won; she is very characteristic, with good body and bone. Gerda is typical, but far too small. Lady Hulliana, unnoticed, should have been well up, and her great qualities are many. Macgregor had a walk-over in the St. Bernard challenge class. In the open class there was some mistake on the exhibitor's part in taking Lord Carlisle out of the ring, or he would undoubtedly have been in the money; he certainly does carry his stern too gaily, but his typical head and good proportions always entitle him to recognition. Home Ruler, a good-sized dog, with capital legs and feet and a nicely moulded head, won; he is perhaps a little full in eye and deficient in shadings. Montharn is thin in face, but correct on his legs, and we should think that when in coat it is good. Sir George, third prize, is on the small side; he is a well-made dog, with capital head and small ears, fairly nice in markings, and a good coat. Bitches, with the exception of the winner, were only poor. The winner is distinctly a good one, resembling her sire Bayard very much in expression. Hesba is not quite nice in face, but otherwise good, especially so in size, legs, and feet. Sybil May has a fair head, and is well marked; but she might have been in better trim. In puppies, Edgar was found to be a few days over age, so was disqualified; he is a big all-round puppy, and would have won easily; his ears are perhaps a little big, but his coat and markings are excellent. Jumbo IX. is long in face, but has straight legs and a fair coat. Selby is a big puppy, and is well off for bone, but his head is hardly the thing, and his ears are large. Champion Courtier is well known; he had a walk-over. Blackwatch has a good coat, but is wrong in shape of head. Alliance, despite his light eye, won easily; his grand coat and size will always make him a dangerous opponent. Bismark is a trifle weak in muzzle, and small all over; but his coat is good, and also his character and expression. Princess Nell possesses a capital coat, and is well off for bone; her head, however, hardly pleases us, and therefore we should have gone for the giantess Meg o' Meldon II., although her ears are too big.

Great Danes did not come up to what we have seen lately. Madge was certainly the best all round.

Harkaway, the winning bloodhound, is now well known, and so is Hector II., who took second. The former no doubt is the leaner in head, but the latter shows quite as much character, and in bone and substance behind the saddle he is certainly the most workmanlike dog. Alchymist, also a liver and tan, is very typical in head, but he falls away in body; and King Lear is not quite right in front. Bitches were not a very taking collection. Beeswing, the winner, is rather plain in skull, otherwise she is passable. The second prize was rightly withheld.

In the challenge class for deerhounds, Robin Gray was all alone, and in the open class his kennel companion, Ben Bolt, who is a somewhat coarser dog, won, and rightly, for Donavourd Ossian is coarser in skull, and not so well matured in body as the winner. Newton Graham, vhc., is full of character, but he is not so good in hindquarters as is desirable. The bitches were not a very commendable lot. The winning bitch, Brora, was certainly the best of an otherwise moderate lot. Loch, the winner of the second prize, is both small and generally wanting in substance.

Lemon Squash and Jester competed for the challenge prize in greyhounds, the latter winning easily, for he is much the truer-built hound, and his qualifications as a sire are well known. His kennel mate, London, a well known performer in the field, is no doubt a very grandly built dog; his neck is just a trifle short, and behind the saddle it is hard to find any fault with him, for he has plenty of heart room, a strong, muscular loin, and deep and strong hind-quarters. The second dog, Poppinstone, is a very showy brindle, built on correct lines, but he gave us the idea of lacking in stamina, from the fact that he is neither quite deep nor capacious enough in chest and body. Kurrant Koin has grown a bit loaded in shoulders, otherwise he is a sterling representative, and his condition was excellent. Dunmail, vhc., has marvellously fine hind-quarters, but his front, which is wide, sadly handicaps him. Paris Plaster, h.c., a brindle of commendable merit, is rather let down by having long and thin feet, and he is just a bit too long in loin. Age served Bit of Fashion, consequently the decision of Mr. Hadley was right when he placed her before our old favorite Mabel II., who moved in a very gingerly fashion, and, further, she was not in her usual high condition. Kate Cornelia, vhc., a very fair white bitch, is too upright in shoulders, but in depth of rib and powerful loin and quarters we have little fault to find with her. Chambermaid, shown in splendid condition, was awarded third money; she is a very useful bitch, but her faults are in her hind-quarters, where she is rather light, and she droops too much from loin to set-on of stern. Our Boys had a very easy win in saplings; he is at present rather leggy, and too big for our fancy for the field, otherwise, judging him from a show point of view, he will when matured be a hard nut to crack. Sea Breach II., although admirably shown, did not impress us favorably, for he stands on too little ground, and gave us the impression that he will grow into a cloddy, cumbersome dog; Gresswell Lad, on the other hand, is raw, and requires further time to develop his latent qualities.

Aldin Belle, exhibited in faultless condition, won the challenge prize in pointers. She is an all-around good bitch, but she might with advantage be firmer in feet; and so also should Duchess of Huntroyd, who held the reserve. In open dogs, Cornish Don rightly won, notwithstanding that he was in lower condition than when we reviewed him at Barn Elms. Aldin Roy II. was properly selected for second honors, he being superior in shoulders and hindquarters to any of his opponents; he is just a bit short in face, and not quite so true in mould as the winner Aldin Ben, a very useful and workmanlike white and lemon dog, was selected for third honors. He is no doubt a little strong in skull, and not so clean in shoulders as his kennel companion, but otherwise a true and powerfully-built dog; and much after the same type is Aldin Rap, vhc. Fluke, vhc., is a rare old sort, he being full of character; but age handicaps him. In bitches, Cornish Belle, noticed in our Barn Elms report, and at which show she was purchased by her present owner, won well from Festal, who owns a very typical head, and although very fair in body, she has not the quality and substance possessed by the winner. Another very good bitch we much fancied is Arizona, but we must say she was not exhibited in the best condition, a remark equally applicable to her kennel companion Thirsk Nell; nevertheless, the latter shows considerable quality, and it was a mistake to pass her over without notice. Of the quartet that competed in the light-weight class there was nothing better than Wolsingham Bob, once a good dog, but now deteriorated; but the head of Aldin Sam, who was second, won't do, hence Mr. Summerson's decision was perfectly correct, and he made no mistake in placing Isabel at the head of the small-weighted bitch class. She is well known; her most prominent defect is her too upright shoulders, still, in substance and legs and feet she was fairly in front of the smart-looking Fling. Auckland Bella, a liver and white ticked bitch, not now in high condition, no doubt possesses considerable merit; her ears, set on a little high, somewhat detract from her character. In the puppy class pointers and setters competed together, and the best brace, without doubt, were selected for the money. The contest was a close affair between the setter Lady Rockingham and the pointer Aldin Rake, a rare made one, but too heavy in head, and we suppose on this account the setter was placed in front.

In setters, Queen Elsie secured the challenge prize, her kennel companion, Count Bouard, being the only competitor, Mr. Wilson's brace of Irish setters, Nellie and Mountaineer, being absent. In open dogs, Monk of Furness, exhibited in grand form, was selected for premier honors, bearing out what was said of him at Barn Elms, where he was one of the very first ordered out of the ring. King Mac, not so good in head properties, came next, but had Major Domo been in form we think the awards would have been reversed. The latter is a grand-headed dog, and he only requires time, and then we feel asssured he will grow into a most useful animal. Prince Fred was shown in too obese condition, and Young Dash III. is broad in skull. A good made one is Young Royal, and shown in nice feather and coat, but his ears are placed by far too high on the skull. The winning bitch, Madam Rachel, could not have been benched in finer form, and here she won rightly from the typical but rather small Queen Kate; here, again, Mr. Bowers so far bearing out the remarks we have previously made respecting this bitch. Jess of Wetheral shows considerable quality, but she would be improved had she more substance. Bridesmaid's head is not improved by her ears being placed so high, and Pandora at present is entirely out of coat. Lune Belle, a good stamp of bitch, perhaps a trifle masculine in head, was looking thin in coat, and light, and under such circumstances could not well have been higher. Ruby Junior, whom we have frequently noticed, won in the Irish class; he is beginning to show age, and consequently had little in hand from that grand moulded bitch, Irish Kate, who is slightly handicapped in head. Kitty IV., a useful bullt bitch, is certainly short of quality and character, and Pat VII. was not in form. The black and tan setters were a very nice group, Bellmont repeating her Belle Vue performance; and undoubtedly the next best was Heather Don, who only succeeded in taking the reserved number. Both Bang IV. and Heather Blossom, who were placed second and third in the order written, are too well known to need criticism here.

The challenge class for retrievers received a compliment of four entries, but the brunt of the battle rested between the curly-coated Jessica and the smooth Miner II., the latter being awarded the prize. In the open class, Antley Sultan, a rare useful-looking dog, with nice sort of coat, won comfortably from Black Prince II., a rather plain-headed dog, and not so even and close in coat as the dog placed above him. The wavy division was headed by Benvolio, just a trifle plain in head, but this was more than counterbalanced by his great bone, well-knit body, and splendid coat. Moral, placed next, has not perfect ears, and she is certainly on the small side, otherwise more typical than Magnet, who is too settery in appearance and type. Solus, looking well, sustained his reputation here, for he won in a small but meritorious lot of spaniels, including the clumbers Fairy II. and Damper, the former a very grand bitch. Open dogs: Glencairn, the winner, was noticed by us at Barn Elms. A very good lengthy dog is Darkie, placed second; his coat is correct in texture; he might, however, with advantage be lower on the leg. Sterling, vhc., is too strong in skull, and Newton Abbot Victor, the recipient of third money, has oftentimes been described by us. Furse, a typical specimen, was not in good form. In the bitch division the first and second prize winners are too well known to require any criticism here. Alva Nett, third, a lengthy good-coated bitch, is just fair in head, but rather bronzy in color. Clumbers were quite a fair class, no doubt owing to the Duke of Portland sending his grand team here; the winners were all long, lengthy, good-coated and powerful dogs, the prevailing faults being in their muzzles, where they are all inclined to be rather snipy and lacking in substance. Sussex and livers made a good show, but we hardly followed the judge in this class. Certainly Don Giovanni, well known, and Millie, a really good-headed and very lengthy and low liver bitch, were too harshly treated. The winning brace are Sussex, fairly true in color, but deficient in head properties, and the winner has by far too much topknot. There was nothing very special in dachshunde. Zampa, a low, good-boned and lengthy-bodied one, had a comparatively easy win, second going to Mona II., who, although rather small, was true in type, and showed more character than Lucy, who is rather defective in shull and bad in color of eyes. Beagles were only a very small collection, but we considered the prizes were rightly distributed. Forrester, who won, has much the best legs and feet, and he beat Bridesmaid also in hindquarters and style.

Fox-terriers were fairly numerous, but the quality was by no means of a high order. The challenge class for smooth-coated dogs was won by Lucifer, and the wire-haired one by Jack's Yarn; but in the latter section Tack might, without any injustice being done, have received prior recognition, for he beats Jack's Yarn in every particular, being without much doubt one of the best wire-haired terriers ever exhibited. In open dogs the American kennel secured the two leading positions, the order being Valet first and Bacchanal second. The former is entirely out of coat, and his stern we do not admire; consequently, notwithstanding the defective mouth of the last named dog, we should have placed him first, as we hold the opinion he is the truer stamp terrier. Dandy Duke we have often written of lately; he was third here, but did better in the puppy class, where he should have won outright. There was nothing new in bitches, Prickle winning; she is a rare bodied one, but plain in head. Blemton Tiara is quite a useful sort, but Rogue is not up to Mr. Clarke's usual form. In the wire-haired division Tees Tack had quite an easy win; but we question whether Take Care, in his unmatured condition, should have held so high a berth here. Without doubt Darkie Broom, who is more developed and in much better coat, should not have been beaten by him. The competitors in the bitch class have so recently been criticised by us that a repetition here would be superfluous. In the puppy and novice classes there were very few new faces; certainly none deserving of special notice.

In bulldogs, Royal Rogue, who does not get into very good condition of coat, won here, and rightly so; his face, skull and general build fully compensated for his several failings, and he also took the special over Mr. Pearce's bitch, Vixen II., who won in her class, not that she was in brilliant form, but being vastly superior in head properties, and equally as well formed in body, justified her being in the position she occupied. Harking back to the dog class, Tempest, an improved dog, was given second prize, he being much better in body than the fair-headed Young Baron. The winner of second prize in bitches is a rare-bodied one, but she is a trifle long in face, and she certainly beats Titania altogether in character and formation of body.

Metchley Surprise, in grand form, beat Monteith in challenge sheepdogs. Herdsman, the winning smooth dog, did not impress us very favorably; he certainly has a good-shaped head, with straight legs and good feet, but he might be fitly described as "common." Herd Laddie has good head and ears, and is typical. Cowboy and Hawthorn struck us as being as good as anything in the class. In bitches, a sad mistake was made in leaving Semiramis and Winsome out without a card; in fact, had the latter won, with Semiramis second, no one could have found fault. Young Trim, like the winning dogs, is common-looking and lacks character, although her head and ears are in good shape. Wearside Gem has much over-sized ears; Trim also errs in that respect. In rough dogs, the well-known Brighton simply walked home. Flockmaster was third, with his son second; the latter resembles his sire very much, and we are inclined to think beats him in head; his ears are, however, a shade larger than his sire's; he owns a capital coat, and stands on the best of legs and feet, while his general outline is good. Princess Shiela is a very typical bitch, with good coat, head and brush. Metchley Sable has a good coat, but is thick in head and bad in front. Syringa owns a fair head, and is good in coat, legs and feet. Tynemouth Queen is a fair bitch, but surely Goldie II., out of coat, should have been in the money. In the novice class, Brighton and Metchley Sable were first and second, with Blue Flunkey third—thick in skull but fair in shape and coat.

Bull-terriers were a small lot, the winner Neville being well known, but we preferred Murderer II. In Airedales, Young Tanner won easily in the challenge class. Wharfedale Rush and Bradford Rover, both well known, had little difficulty in the next class. Newbold Olive is a symmetrical animal, good in bone, with grand head and ears; she won rightly enough. It was a near thing between Twilight and Lucy for second place. Twilight, being in pup, was no doubt handicapped. Black and tan terriers were only a small lot. Halifax General, in grand form, won. Heaton Jack is a nice youngster, but hardly matured yet. Meersbrook Maiden will with time be a red-hot one; she won easily. Loris, the winning pug, is a very level-made dog throughout, and was bigger in skull than the second, a beautifully shaped animal, being handicapped by the loss of an eye. The bitches were only fair, Queen Rose certainly being the pick of the basket, No. 2 being on the large side. Earl of Chester shows age, but was decidedly the best of the lot in toy spaniels. Lustrum Beauty, a very typical and pretty little dog, came next, and a fair Blenheim reserve. Challenge classes were provided for toys and Yorkshire terriers, Little Wonder walking over in both classes. Daisy II. is better in color than Ted, and also beats him in size. Mrs. Foster was again the only competitor in Yorkshire terriers, and of course won.

Irish terriers were one of the best classes in the show. In the unavoidable absence of Mr. Hoare, the judging was done by Mr. Maxwell. In the challenge class, Norah Tatters, in grand condition, easily disposed of B. A. Poppy was absent. Open dogs: Michael, looking well, won, but we rather fancied St. George or Breda Rattle for premier honors; taking the three dogs all round, there is not much to choose between them. Breda Rattle, second, only an eleven-months' puppy, is a grand young dog, bar his feet, which are not good, and his light-colored eye. St. George only got third, while at the Barn Elms show he won all before him, the winner now there being but fourth. Breda Ben, vhc., badly cropped, softish in coat, and might possess a little more bone. Breda Ford, a niceish dog, might have been placed before his kennel companion; Springwell Tory is good in bone and front. In bitches, Mr. Graham swept the board with Graceful, first, soft in coat, otherwise a nice bitch. Breda Tiney must have run her close for first place. Breda Minnie has a grand coat, but we do not like her head. Banford might have been a step higher here. Mizpah Nell has gone thick in skull. Erin III. is too fine in muzzle, and has bad feet. Breda Belle is not up to Mr. Graham's standard. In puppies, Breda Rattle won easily, followed well up by a grand young puppy of Mr. Wiener's out of Norah Tatters. If this puppy, who is only six months, goes on the right way, he will take care of himself in the best of company; he later on won the special for the best uncropped Irish terrier in the open or puppy classes, presented by Mr. Backhouse, beating St. George; also the special presented by the club for the best uncropped bred by a member. Third went to Breda Bell. Mr. Graham won Mr. Wiener's cup for the best team of Irish terriers, with perhaps the finest group ever shown by one exhibitor. Michael won the club special for the best Irish terrier in the show, and also Mr. Hoare's special for the best dog in the open or puppy classes. Graceful winning the corresponding special for bitches. We must congratulate the Newcastle committee for having one of the finest exhibitions of Irish terriers we ever saw. There were only five Scotch terriers entered, Flegg Tambour winning easily; but we fail to see the good qualities that placed Rab second. Flegg Thalia should have occupied this position, and Tatters, despite her soft coat, might have had vhc.

In the challenge class for Bedlington terriers, The Bishop beat Minnie Clyde. In blue dogs, the Barn Elms decision was reversed, Toothpick winning and Newton Lad next in order. Nailor III. was looking well. Crutch, v.h.c., too cloddy, is good in head, Lady Colin, first in bitches, was, we thought, decidedly lucky, as she is far from good in head, though in body and stern she excels. Flower Girl pleased us better. Creole, third, is a sweet little bitch. Wansbeck Maid might have won. Tyne Lass did not look so well as usual, and Bridget is always worthy of a notice. The liver-colored dogs were a good lot, a grand youngster, with capital head and the best of legs and feet, winning easily. Tick Tack had been badly bitten about the face, so did not look well, and had Inner Farne occupied his place, little fault could have been found. In the corresponding class for bitches, Grace Darling was in better coat than Stonehouse Vixen, or else their positions might have been reversed. The next two classes were repetitions of previous ones. The local class should undoubtedly have been won by Hotspur II., a grand dark blue dog puppy. Bendigo is a good all-round dog.

Welsh terriers were all well known, until we come to Our Billy, a new face; this is a very nice little dog, with capital head and ears, and good expression, but he is wide in front, and somewhat lacking in liberty. Tees Tip is another new face; he owns a capital head and ears, and very nice front. Dogs were an excellent lot right through. Mawddwy Daisy's mouth will always keep her back in good company; she is also long in back and big in ear. Fernyhurst Nectar is weedy all through, while Rowtan Rattle is far too coarse. Fernyhurst Welsher is one of the best bitches we have yet seen; she is very good in head, ears, straight on her legs, with thick feet and coat. Humbledon Boozer and Mawddwy Jack are both fair all-round dogs. Border King had a walk over in Dandies. In open dogs, Percy beat Border Bill in eye and texture of coat. Bitches were well placed. The winners in the variety class are well known.—*London Field.*

A HARD EXPERIENCE WITH DISTEMPER.—Athens Ga., Aug. 25.—I have just passed through an experience, the like of which I hope no brother sportsman may ever realize, with distemper. Belle Boyd had just weaned a beautiful litter by Count Noble. They all died. Two others six months old died also, and last, but by no means least, my two best Derbies, Alf and Boyd Noble, the most promising brace I ever saw of their age. I lost nine out of ten cases, and the surviving one is left with a very stubborn case of chorea, which is yielding very slowly to treatment. The disease was the most virulent type it has ever been my misfortune to encounter, being contracted from a relapsed case.—R. I. HAMPTON.

THE BEAUFORT—PATTI M. CASE.—The American Kennel Club, after voting to reconsider the decision in the Beaufort—Patti M. case, refused to lay the matter on the table and voted ten to two to sustain the decision of Mr. Peshall that Beaufort was entitled to the prize, the Cincinnati Sportsman's Club and Michigan Kennel Club voting in the negative, and the Hornell Kennel Club and the Western Pennsylvania Poultry Society blank, the Cleveland Bench Show Association declining to vote.

DICK AND PALMERSTON.—Wilmington, Del., Aug. 16.—*Editor Forest and Stream:* When in Malahide, Ireland, on Aug. 4, Mr. W. H. Lipscomb, one of your subscribers, wished me to hand you the photographs of his Irish setters Dick and Palmerston, which I inclose.—JOSEPH HILL. [Thanks for the photographs. That of Dick is somewhat blurred, Palmerston looks to be a fine typical specimen of the breed.]

WAVERLY DOG SHOW.—New York, Aug. 27.—*Editor Forest and Stream:* The following additional special prizes for our coming show have been offered: $10 for the best kennel of mastiffs, specials for best King Charles spaniel bitch, beagle bitch and best pug. Mr. John E. Thayer has made 25 entries and Mr. Percy C. Ohl 24.—H. F. SCHELLHASS, Bench Show Secretary.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Verdi. By E. Lever, Philadelphia, Pa., for black and tan terrier dog, whelped May 28, 1887, by Vortigern (Viper—Gipsey) out of Torture (Reveller—Lilly II.).

Chancellor. By E. Lever, Philadelphia, Pa., for black and tan terrier dog, whelped May 14, 1887, by Lord George (Burke—Luce) out of Safety (King—Violet).

Beauty L. By T. H. Little, Sparta, Ga., for lemon and white pointer bitch, whelped July 18, 1887, by Mainspring (Mike—Romp) out of Rosa (A.K.R. 1443).

Harry C. C. By J. P. Cartwright, Augusta, Ga., for white and liver pointer dog, whelped July 18, 1887, by Mainspring (Mike—Romp) out of Rosa (A.K.R. 1443).

Whip. By W. F. Rutter, Jr., Lawrence, Mass., for black, white and tan beagle dog, whelped March 21, 1887, by Alba (Ringwood—Harebell) out of Bunnie (imported Kino—Bessie).

Fred Mac. By J. P. McNally, Augusta, Ga., for white and liver pointer dog, whelped July 18, 1887 by Mainspring (Mike—Romp) out of Rosa (A.K.R. 1443).

Clifton Kennels. By J. P. Cartwright, Augusta, Ga., for white, liver ears. pointer dog, whelped July 18, 1887, by Mainspring (Mike—Romp) out of Rosa (A.K.R. 1443).

Frank M. By S. H. Myers, Augusta, Ga., for white and liver pointer dog, whelped July 1887, by Mainspring (Mike—Romp) out of Rosa (A.K.R. 1443).

Thistle. By E. Lever, Philadelphia, Pa., for white bull-terrier bitch, whelped March 22, 1887, by Count (Marquis—Kit) out of Bertha (Dutch, Jr.—Young Venom).

Narka. By Richland Kennels, Wahpeton, Dak., for fawn pug bitch, whelped May 17, 1887, by Bonesetter (Joe—Judy III.) out of Toby (Bogie—Flossy).

Rush and Bramble. By Geo. B. Inches, Boston, Mass., for black and white English setters, dog and bitch, whelped March, 1887, by Gus Bondhu (Dashing Bondhu—Novel) out of Myrtle (Royal Blue—Dora Dale).

Scottie. By A. N. Walker, Saxonville, Mass., for liver and white ticked cocker spaniel dog, whelped Oct. 27, 1886, by Brag (Wildair—Little Buttercup) out of Pansy B. (Captain—Diamond).

Gypsey Girl. By Thos. Schofield, Saxonville, Mass., for black and white ticked cocker spaniel bitch, whelped Oct. 21, 1886, by Brag (Wildair—Little Buttercup) out of Pansy B. (Captain—Diamond).

Jerry Bang and Lady Vixen. By J. W. Trantum, Middletown, Conn., for liver and white pointers, dog and bitch, whelped June 22, 1887, by Bang (Bang—Luna) out of Daisy Ranger (Ranger Croxteth—Fannie Faust).

Gracie Ranger. By J. W. Trantum, Middletown, Conn., for liver, white and ticked pointer bitch, whelped June 22, 1887, by Bang (Bang—Luna) out of Daisy Ranger (Ranger Croxteth—Fannie Faust).

Hill Top Kennels. By Geo. McD. Blake, Richmond, Va., for his kennel of pugs, mastiffs and setters.

Pine Tree Kennels. By I. B. Chase, Portland, Me., for his kennel of greyhounds and pointers.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Lady in White—Nimble. W. Mariner's (Milwaukee, Wis.) bull-terrier bitch Lady in White (A.K.R. 3880) to his Nimble (A.K.R. 2693), June 10.

Kit—Count. W. Mariner's (Milwaukee, Wis.) bull-terrier bitch Kit (A.K.R. 3685) to F. F. Dole's Count (A.K.R. 3178), May 29.

Spoiled Miss—Dublin Scot. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Spoiled Miss (Charlatan—Ada) to their Dublin Scot (The Colonel—Jessie), Aug. 9.

Laura—Dublin Scot. J. Van Schaick's (New York) collie bitch Laura (Strephon—Nancy Lee) to Chestnut Hill Kennels' Dublin Scot (The Colonel—Jessie), Aug. 17.

Fairy—Blue Boy. Thos. Manly's (Philadelphia, Pa.) beagle bitch Fairy (Towser—Sprightly) to W. H. Ashburner's Blue Boy (Regent—May Fly), Aug. 6.

Blanche—Blue Boy. W. S. Manu's (Elizabeth, N. J.) beagle bitch Blanche (Bannerman—Zoua) to W. H. Ashburner's Blue Boy (Regent—May Fly), July 11.

Orgar—Victor Joseph. C. E. Lewis's (Suspension Bridge, N. Y.) St. Bernard bitch Orgar (Hector II.—Nires II.) to Tucker & Daniels's Victor Joseph (Beauchief—Bertha), July 5.

Miranda—Apollo. E. H. Moore's (Melrose, Mass.) St. Bernard bitch Miranda (A.K.R. 3027) to Tucker & Daniels's Apollo (Medor—Blass), July 8.

Marjory—Apollo. J. S. Sheppard's (New York) St. Bernard bitch Marjory to Tucker & Daniels's Apollo (Medor—Blass), July 22.

Alpina—Apollo. C. A. Painter's (Pittsburgh, Pa.) St. Bernard bitch Alpina (A.K.R. 928) to Tucker & Daniels's Apollo (Medor—Blass), Aug. 13.

Flora II.—Victor Joseph. Tucker & Daniels's (New York) St. Bernard bitch Flora II. (Leon—Belline) to their Victor Joseph (Beauchief—Bertha), Aug. 13.

Gretchen—Victor Joseph. E. Stevenson's (Paterson, N. J.) St. Bernard bitch Gretchen (A.K.R. 494) to Tucker & Daniels's Victor Joseph (Beauchief—Bertha), July 20.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Dumps. Hill Top Kennels' (Richmond, Va.) pug bitch Dumps (A.K.R. 5246), Aug. 16, five (four dogs), by Ayers's Bounce.

Daisy Ranger. J. W. Trantum's (Middletown, Conn.) pointer bitch Daisy Ranger (Ranger Croxteth—Fannie Faust), June 22, ten (six dogs), by Tuckerfield Kennels' Bang (Bang—Luna).

Gaudy. R. Gibson's (Delaware, Ont.) fox-terrier bitch Gaudy (Brag—Tricks), July 30, six (two dogs), by E. Lever's Little Swell (Spice—Relish).

Pansy Royal. Frank L. Webster's (Lawrence, Mass.) bull-terrier bitch Pansy Royal (Young Royal Prince—Princess Louise), Aug. 19, seven (four dogs), by Jas. Page Stinson's Silk II. (Hinks's Silk—Puss).

Floss. G. L. Tarr's (Hopedale, Mass.) cocker spaniel bitch Floss (Scribner—Smudge), Aug. 13, five dogs, by C. G. Browning's Ebony (Obo II.—Lofty).

Blossom. W. B. James's (Philadelphia, Pa.) fox-terrier bitch Blossom (Crisp—Fly), Aug. 5, three (one dog), by E. Lever's Little Swell (Spice—Relish).

Lady in White. W. Mariner's (Milwaukee, Wis.) bull-terrier bitch Lady in White (A.K.R. 3886), Aug. 10, six (five dogs), by his Nimble (A.K.R. 2693).

Lass o' Gowrie. N. V. Ketchum's (Savannah, Ga.) Skye terrier bitch Lass o' Gowrie (A.K.R. 5123), July 15, five dogs, by W. P. Sanderson's Jim (Birkie—Highland Mary); two dead.

Kit. W. Mariner's (Milwaukee, Wiss.) bull-terrier bitch Kit (A.K.R. 3685), July 29, eight (six dogs), by F. F. Dole's Count (A.K.R. 3178).

Gem. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Gem (Brack—Fairy), Aug. 9, five (three dogs), by their Strephon (Eclipse—Flurry).

Lady Flories. John Marshall's (Troy, N. Y.) St. Bernard bitch Lady Flories (A.K.R. 5076), July 29, nine (six dogs), by his Tantallon (A.K.R. 4565); three bitches and four dogs dead.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Clyte. Tawny and white St. Bernard bitch, whelped July 24, 1887, by Bayard III. out of Caders, by Weimer & Lincoln, Boston, Mass., to B. Bernard, same place.

Strephon—Flossie whelp. Sable and white collie dog, whelped April 21, 1887, by Chestnut Hill Kennels, Philadelphia, Pa., to S. Fields, same place.

Dublin Scot—Flurry II. whelp. Sable collie dog, whelped June 8, 1887, by Chestnut Hill Kennels, Philadelphia, Pa., to J. P. Whitney, Bryant's Pond, Me.

Strephon—Jennie Nettles whelp. Sable and white collie bitch, whelped March 27, 1887, by Chestnut Hill Kennels, Philadelphia, Pa., to J. P. Whitney, Bryant's Pond, Me.

Strephon—Jersey Lass whelps. Sable and white collies, whelped June 3, 1887, by Chestnut Hill Kennels, Philadelphia, Pa., a dog to Thos. DeWitt Cuyler, same place, and a bitch to Dr. C. R. Agnew, New York.

Elcho, Jr.—Mollie Bawn whelps. Red Irish setters, whelped June 6, 1887, by Chestnut Hill Kennels, Philadelphia, Pa., two dogs to Wm. Dunphy, Peekskill, N. Y., and one dog to J. D. Culligan, Milwaukee, Wis.

Jerry Bang. Liver and white pointer dog, whelped June 22, 1887, by Bang out of Daisy Ranger, by J. W. Trantum, Middletown, Conn., to Arthur Baily, Cobalt, Conn.

Gracie Ranger. Liver and white and ticked pointer dog, whelped June 22, 1887, by Bang out of Daisy Ranger, by J. W. Trantum, Middletown, Conn., to Geo. F. Kissam, Chicago, Ill.

Lady Vixen. Liver and white pointer bitch, whelped June 22, 1887, by Bang out of Daisy Ranger, by J. W. Trantum, Middletown, Conn., to Fred R. Pape, Bucksport, Me.

Pride of Dixie II. White and black English setter dog, whelped Feb. 22, 1886, by Pride of Dixie out of Shelp, by J. W. Trantum, Middletown, Conn., to E. N. Hubbard, same place.

IMPORTATIONS.

Cribb. White bull-terrier dog, whelped Nov. 9, 1886 (Ducrow—Violet), by Wm. Mariner, Milwaukee, Wis., from F. Hinks, Birmingham, Eng., Aug. 4.

Nectar II. White bull-terrier bitch, whelped June 28, 1884 (Marquis—Flounce), by Wm. Mariner, Milwaukee, Wis., from F. Hinks, Birmingham, Eng., Aug. 4.

DEATHS.

Bertie II. Liver and white pointer bitch, whelped Dec. 14, 1886 (Tammany—Bertie), owned by E. K. Leflingwell, Brooklyn, N. Y.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. K., Mausfield, O.—My setter bitch, 3½ years old, is very sick. She had a litter of puppies in April; soon after she weaned them she began shedding, and since then has never been just right. Appetite very poor, body covered with small pimples and scabs, eyelids very much inflamed and swollen, matterate very much, no discharge from the nose. She is kept on table scraps and cooked meat, has plenty of exercise once a day, is kenneled in a good dry barn with plenty of clean straw; to-day had a very hard fit. Ans. Keep bowels clear with syrup of buckthorn in one or two teaspoonful doses. Give five drops of Fowler's solution of arsenic morning and evening.

A. C. L., Minneapolis.—A 6 months old Gordon setter's ailment is a continual shaking and jerking of right foreleg and shoulder, so bad that he occasionally falls down. It had distemper 2 months ago; I treated for 2 weeks with Fowler's solution of arsenic, three or four drops night and morning, and the disease passed off, but was followed by what I have described. I am now giving a teaspoonful of syrup of buckthorn every other day. She seems to have passed a few worms but does not improve. Ans. You had better give an active purge of castor oil (two teaspoonfuls) and a full dose of powdered areca nut, thirty grains made into a large pill. Give the pill three hours after the purge, and follow the pill in three hours with a second purge; afterward give the following:

℞ Ferri et strychnia citrat grs. 24, div. in pil. No. 12.
Sig. One three times daily.

BRADFORD RUBY.—The attention of breeders of pugs is called to the advertisement of the well-known champion Bradford Ruby in the stud. He is not only a great winner on the bench both in this country and England, but is the sire of winners also. Among other winners of his get in England are Little Count and Little Countess. Several of his get also distinguished themselves in the puppy classes at our shows last spring. He is a small, nicely formed dog, well marked, with beautiful ears, remarkably good in wrinkle and tail, and without doubt is the best specimen of the breed in this country.

Rifle and Trap Shooting.

RANGE AND GALLERY.

CREEDMOOR, N. Y., Aug. 29.—The ninth qualification and marksman's badge match of the N. R. A. was shot at Creedmoor on Saturday, Aug. 27. The attendance was large and the weather conditions, light and wind, were very favorable for making good scores. Sergeant Frank Stuart, Co. C, 69th Regt., won the gold marksman's badge; he is the ninth man who has won it this season. Following are the winners of the cash prizes:

	200yds.	500yds.	Total.
F Stuart, Co. C, 69th Regt.	22	25	47
N B Thurston, Co F, 22d Regt.	22	24	46
O W Yatet, Co F, 22d Regt.	21	24	45
E W Rudolphy, Co E, 22d Regt.	21	23	44
F S Kennedy, Co F, 7th Regt.	21	23	44
Jas McNevin, N C S, 13th Regt.	21	23	44
C E De La Vergne, Staff, 13th Regt	22	22	44
Medal Winners.			
H C Brown, Sup Staff	21	24	45
R McLean, Co K, 7th Regt.	22	23	45

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

WORCESTER, Mass., Aug. 24.—Yesterday was the opening day of the New England Tournament at Coal Mine Brook Range, in this city. It is held under the auspices of the Worcester Sportsmen's Club. Yesterday and to-day have been very wet and disagreeable. Among those present were E. W. Tinker, of Providence, R. I., Harry Tucker, of Bridgeport, Conn., E. N. Folsom, C. Beers, A. G. Traeger, G. E. Albee, L. W. Widman and Mr. Carey, of New Haven, Conn., H. W. Eager, of Marlborough, O. R. Dickey, of Boston, and S. A. Tucker, agent for Parker Brothers. During the day there were ten events and three extras. They were 12 clay-pigeons, then 12 blue rocks, 10 clays, open traps, 12 clays, 20 blue rocks, 5 pairs of clays, doubles, 25 clays, 12 clays, two men team, 10 blue rocks per man; miss and out; 9 clays, 5 clays and 3 pairs clays. The aggregate of entries for these events was 330. The principal events yesterday were the seventh, which is to be continued to-day, and the fifth event, which was for a Winchester repeating shotgun, and which was won by W. R. Dean. A second prize of a Frank Wesson rifle was secured by H. W. Eager after breaking 12 straight on the tie. The third prize E. N. Folsom took, it was an old style flint-lock pistol. The work of each man, as far as his correct name was given, as well as the aliases, is as follows:

W R Dean, Worcester	5555—20	Dansereau	4445—17
W L Davis, Worcester	5555—20	J Beaudry, Worcester	5444—17
HW Eager, Marlborough	5545—19	Geo Sampson, Clinton	4444—16
E T Smith, Worcester	5455—19	H T Rice	5434—16
T G Stanton, Boston	5455—19	L R Hudson, Worcester	5345—16
W S Perry, Worcester	5545—19	C B Holden, Worcester	5254—16
A R Bowdish, Oxford	5455—19	A Traeger, New Haven	4354—16
G J Rugg, Worcester	5554—19	L Widman, New Haven	5334—15
Clark, New Haven	4555—19	Longley	5343—15
G F Jourdan	4555—19	E Whittaker, Worcester	4542—15
E W Tinker, Providence	5544—18	G Gould	455w—14
E N Folsom, New Haven	4545—18	L G White, Worcester	2453—14
Hill	5454—18	G W Russell, Worcester	2335—13
M D Gilman, Worcester	4544—17	H Webber, Worcester	4513—13
O R Dickey, Boston	4553—17	E F Snow, Worcester	3334—13
Carey, New Haven	5543—17	A L Gilman, Worcester	3324—12
G E Albee, New Haven	5453—17	Eames	3333—12
J B Tougas, Worcester	4544—17	C Beers, New Haven	5223—12
H Nichols, Bridgeport	5534—17	Warren	344w—11
A B Franklin	5534—17	C A Parker	531—8

To-day there were 10 events and two extra in which there were over 230 entries. The principal event was the remainder of the seventh event of yesterday. Where there was a possible 25 clay pigeons, to-day there was a possible 25 blue rocks, the totals of the two decided who should have the prizes. The first was a Parker gun valued at $125, which was secured by O. R. Dickey. The second prize, a Dickerman hammerless gun, was secured by H. W. Eager. The third, a gallery target pistol, was secured by Mr. Wheeler, while a flintlock pistol was awarded to J. B. Tougas who made the smallest score. The work of each man each day in detail was as follows:

	Clays.	B. Rocks.
O R Dickey, Boston	55554—24	54555—24—48
H W Eager, Marlboro'	44455—22	55555—25—47
Wheeler	55544—23	45554—23—46
C B Holden, Worcester	44534—20	54555—24—44
E T Smith, Worcester	45445—22	44445—21—43
W S Perry, Worcester	32552—17	55555—25—42
M D Gilman, Worcester	33544—19	54545—23—42
W S Davis, Worcester	52352—17	55455—24—41
T G Stanton, Worcester	44353—19	44554—22—41
G Gould	34433—17	55451—23—40
Dansereau	54335—20	53444—20—40
Henry	54443—20	53443—19—39
G W Russell, Worcester	45235—19	45254—20—39
Clark, New Haven	55422—18	55551—21—39
E W Tinker, Providence	45233—15	44555—23—38
A R Bowdish, Oxford	21241—14	44554—22—37
G F Jourdan	23341—13	55544—23—36
G E Albee, New Haven	32242—14	45443—20—34
E N Folsom, New Haven	23433—15	44144—17—32
J B Tougas, Worcester	11314—10	44433—18—28

THE CLEVELAND TOURNAMENT.—The Cleveland Target Co.'s four days' tournament will begin Tuesday, Sept. 13. Chamberlin Cartridge Co.'s rules to govern. The company's prizes amount to $3,000, and another thousand is guaranteed. An ample number of traps will be provided, insuring plenty of matches during the Chamberlin Cartridge Company's tie shooting. On Monday, as shooters for the Chamberlin Cartridge Co.'s tournament gather, if desired, sweepstake matches will be made to suit participants, but not on traps used for tie shooting. It is expected by the management that the ties for the Chamberlin Cartridge Co.'s prizes will be shot off in one day, as sets of traps will be provided for each class of ties, viz.: The sixties, seventies, eighties and nineties. Wedell House, headquarters. Race week—Special railroad rates to Cleveland. For full programme address Cleveland Target Co., Cleveland, O.

GREENSBURG, Pa., Aug. 24.—Greensburg Gun Club, two teams, live pigeons, one plunge trap, 25yds. rise; prizes, expenses:

Ehalt	0	1	0	1	1	1	1	1	½	—	6½													
W S Gessler	1	0	1	1	1	1	1	1	1	—	8													
Thomas	1	½	½	1	1	1	½	1	1	½	—	8	—	22½										
Shaner	½	1	½	1	0	1	½	1	1	½	½	—	6½											
Brunot	0	0	1	1	1	0	1	0	0	1	—	5												
John Gessler	0	0	0	½	0	0	1	0	½	1	—	3	—	14½										

The Greensburg Club was challenged to shoot with the Scottdale team on the same day, but were compelled to postpone their fun with the Scottdale boys until some future time.

THE DIAMOND BADGE MATCH.—New York, Aug. 29.—*Editor Forest and Stream:* At the request of a number of shooters whose engagements prevent their participating in the shoot for our diamond badge, within the time first fixed, we have concluded to extend the time for entries to Sept. 28. The badge cost much more than was first designed. There is nothing sham about it, and it is one of the finest ever offered.—THE ATLANTIC AMMUNITION CO., LIMITED.

PITTSBURGH, Pa., Aug. 27.—The Herron Hill Gun Club, of Pittsburgh, hereby challenges any six members of any gun club in western Pennsylvania to shoot a friendly match at the trap with them at inanimate targets. Conditions to be agreed upon hereafter.—C. A. R.

JOHN R. CHAMBERLIN, ESQ., editor of *The Trap and Trigger*, Cincinnati, writes the U. S. Cartridge Co., of Lowell, Mass., under date of Aug. 11, as follows: "I have not heard any complaint against the Climax Waterproof Paper Shot Shells of late, and I observe it used at club shoots by many whom I used to hear complain of long firing; and the gas leakage I know is entirely removed." The company have always aimed to make a perfect shell, and claim that end has been attained in the shell they are now offering the sportsman, and they ask that if any defect is discovered, that they may be notified at once, as by so doing the public and company are benefited.—*Adv.*

The *Maine Industrial News* says that the stuffed skin of a sea serpent is now being exhibited at Peak's Island, Portland Harbor, by W. H. Ordway. His snakeship was captured on the banks of Newfoundland, October 11, 1886, by Capt. F. F. Barnstead of the schooner Hattie F. Walker, Halifax. Its length was 47ft. 3in., and its weight 9001bs. Its mouth contains a fine set of teeth, and on its upper jaw are two feelers, each 13½in. long. Five feet back of his head are flukes on each side, and the end of his tail is formed like a sculling oar, being flat and 9in. in width at the end.—*Boston Daily Advertiser, Aug. 17.*

Canoeing.

THE A. C. A. MEET OF 1887.

RACE WEEK.

Monday, Aug. 22.

AS a sailing ground the waters about Bow-Arrow Point are equal to any on which the previous meets have been held. The outside course, as shown in the map in the FOREST AND STREAM of July 23, is fairly in the open lake, and at times a heavy sea was running, while in spite of some calms, the winds were very good. An inside sailing course was also laid out easily, with the base of the triangle along the camp front and the apex off Simms's Point, when the water was too rough outside. Here the paddling course, about a half mile, was marked out, starting from the little wharf. The main sailing course was in full view of the bluff, but the start was further off shore and the work over the course was not as easily seen without a glass as at Grindstone. The course was not accurately measured and the legs were all over half a mile long.

The actual location of the camp is not correctly shown on the map, as the tents were pitched along the east shore to the north of E and not B. The front of the ladies' camp also was on the same side, opposite the turning flag of the paddling course. The programme, as published in the FOREST AND STREAM of May 26, was fully carried out, only one race being dropped for want of entries, the open single paddling. It differed little from that of the previous year, but was more condensed. The paddling races with loaded canoes were dropped, Classes II. and III. paddling single, were combined, as were Classes A and B sailing, and with good results, as Class A has proved itself fully able to sail on even terms with Class B; and in the paddling race the boats were about 15×29. Of course a boat 15×26¾ would be eligible to this race, but she would be too small for the sailing races and would fail to make a record, though she might easily, in good hands, capture first prize in this one race.

The additions to the programme were the consolation race, the sailing upset, the "man overboard," and the club race. The A.C.A. Trophy was sailed for this year only by Americans, the contest being in no sense international. The arrangements for starting, etc., and the entire details of the races were well carried out and the events were all well managed by the regatta committee in spite of more difficulty from the weather than has usually been the case. The plan of starting the sailing races in squadrons was abandoned, as it was found to be unnecessary. The boats which started in the various events were as follows:

CANOE.	SIZE.	OWNER.	CLUB.
Hornet	17.00 ×23[4]	F. F. Andrews	Rochester.
Eurylda	15.06 ×30	R. W. Bailey	Pittsburg.
Atalanta	14.06 ×33	L. B. Palmer	Ianthe.
Le Cid	15.00 ×29[3]	E. C. Knappe	Springfield.
Dimple	15.00 ×31	G. C. Forrest	Hartford.
Blanche	15.00 ×31	Paul Butler	Vesper.
Coffin	15.11 ×23[5]	D. S. Goddard	Vesper.
Goanaware	14.06 ×30[2]	G. F. Secor	Shattemuc.
Whim	15.00 ×29[2]	H. A. Marvel	Newburgh.
Mystic	14.10 ×29[2]	W. A. Stephens	Rondout.
Saone	15.08 ×30[1]/16	F. M. Sinclair	Brooklyn.
Sea Urchin	15.00 ×28	B. H. Nadal	New York.
Latona	15.00[4]×30[2]	Wm. Whitlock	Brooklyn.
Vixen	15.08 ×30	C. F. Wolters	Rochester.
She	14.05 ×32	C. S. Laney	Rochester.
Regina	14.06 ×27	H. M. Lawrence	Lawrence.
Evangeline	15.00[6]×22[8]	H. C. Ward	Brooklyn.
Lassie	15.00 ×28	Geo. A. Warder	Jabberwock.
Bo-Peep	15.00 ×28	C. B. Vax	New York.
Essex		Geo. W. Cox	Essex.
Chingackgook	14.07[4]×30[2]	W. A. Wheeler	Mohican.
Argo	15.00[2]×30[3]	C. C. Kritzer	Na-wa-ga.
Notus	16.00 ×29[4]	R. W. Gibson	Mohican.
Wa Wa	15.00 ×31	R. S. Oliver	Mohican.
Jennie	14.01 ×29[2]	John Walsh	Vesper.
Volunteer	14.11[4]×29[4]	C. H. McKnight	Springfield.
Dawn	15.11[4]×30	W. A. Leys	Toronto.
Albatross	15.10 ×28[2]	J. O. Shiras	Cincinnati.
Ramona	15.11 ×30[1]	Ford Jones	Brockville.
Baby Mix	15.04[2]×29[1]	P. M. Wackerhagen	Mohican.
Pecowsic	15.10 ×28[8]	G. M. Barney	Springfield.
Lacowsic	15.09[3]×27[3]	E. H. Barney	Springfield.
Riva	15.06 ×30[5]	S. Schieffelin	
Natchez	14.11[6]×30[2]	E. H. Platt	New York.
Irene	15.00 ×28	R. W. Baldwin	Ottawa.
Curfew	15.00 ×31	E. C. Murphy	Sagamore.
Vesper	15.06 ×30[3]	R. C. Brown	Mohican.
Eurus	13.11[8]×30[2]	W. W. Blow	Oakland.
Scud	16.00 ×29[6]	W. S. Egerton	Mohican.
Adonis	14.11 ×30	Hermon Griffin	Knick.
Narka	15.00 ×30[1]	H. E. Rice	Springfield.
Stranger	15.11[9]×28[2]	C. D. Cooke	Paterson.
Nac Nac	13.03 ×28	W. W. Holt	Misticke.

The first notice posted on the bulletin board on Monday morning announced the combined sailing and paddling race for 9:30, and the A and B limited for 11 A. M., but there was no wind for either, so at the latter hour event No. 1 was called.

No. 1. Paddling, Class I.—This race exempt from "one man, one canoe" rule; 1 mile with a turn:

1. Dawn, W. A. Leys 12 29
2. Le Cid, H. E. Rice 12 43
3. Achilles, E. Stern 12 50
4. Irene, R. W. Baldwin
5. Volunteer, C. H. McKnight
6. Sylph, E.C. Knappe

The race was well contested, Mr. Leys winning easily, but he was disqualified for fouling Mr. Rice at the turn.

The review of the fleet followed, there being 85 canoes under sail or paddle. The fleet, in three parallel ranks, paddled past the Commodore, saluting as they passed, then the sailing division made sail and returned, the others paddling. There was too little wind, but still the sight was very fine.

Event No. 2. Paddling, Classes II. and III., exclusively.—One mile with a turn. Men entering in this event shall not enter in event No. 3. Record event. This race begun the afternoon:

1. Le Cid, E. C. Knappe 12 23
2. Volunteer, C. H. McKnight 12 51
3. Irene, R. W. Baldwin 12 54
4. Mystic, W. A. Stephens 13 47
5. Nac Nac, W. W. Holt

The next event was No. 3. Paddling, Class IV., exclusively.—One mile with a turn. Men entering in this event shall not enter in event No. 2. Record event:

1. Dawn, W. A. Leys 12 51 00
2. Narka, H. E. Rice 13 04 30
3. Evangeline, H. C. Ward 13 41 30
4. Saone, F. Sinclair 13 57 30
5. Whim, H. A. Marvel
6. Atalanta, L. B. Palmer
7. Dimple, G. C. Forrest
8. Latona, W. Whitlock
9. Natchez, E. H. Platt

Dawn won easily, but was protested by Saone for fouling at the start, which protest was sustained.

No. 4. Paddling.—Open canoes with single-blade paddles; one mile with a turn was abandoned, as there were no entries.

Event No. 5. Paddling Tandem.—On the triangle, A and B sailing canoes, decked with wood; 1½ miles, was paddled over the regular paddling course; 1 mile.

1. Dawn, Leys and Barlow 11 37 00
2. Volunteer, McKnight and Lawrence 12 16 30
3. Narka, Rice and Knappe 12 24 00
4. Irene, Jones and Baldwin 12 28 30

Event No. 7. Paddling Upset, Classes II., III. and IV.—No special appliances allowed. At signal every canoe must be turned completely over, righted, and with the crew inside paddled across the finishing line—200ft. Record event. Hornet won easily, her skipper being first in his boat:

Hornet, F. F. Andrews 1
Atalanta, L. B. Palmer 2
Dimple, G. C. Forrest 3
Sea Urchin, B. H. Nadal 4
Irene, R. W. Baldwin 5
Latona, Wm. Whitlock 6

This finished the racing for the day. All the races were paddled in smooth water with no current, but the course was not accurately measured. In the evening a meeting of the executive committee was held, at which the new constitution, as published in the FOREST AND STREAM, was formally adopted, one or two changes being made, the principal one being the reduction of dues to $1 as there proposed, but with a proviso that each member attending a meet be assessed $1 in addition. This removes the objection so often made that those who do not attend a meet are obliged to pay the same as those who do. The two protests of the day were considered by the regatta committee, a number of witnesses being examined and the judgments were made according to their testimony.

Tuesday, Aug. 23.

Early in the morning there was more wind and the sailing races were posted on the board.

No. 11. Sailing, on the triangle, Classes A and B.—Sail limited to 75sq. ft. No limit to ballast. At 9:30 there was a brisk N.W. wind and fairly smooth water outside. The first leg was to windward. The summary was:

Pecowsic, G. M. Barney	0 49 06
Ramona, Ford Jones	0 54 25
Notus, R. W. Gibson	0 54 40
Blanche, Paul Butler	0 54 41
Le Cid, E. C. Knappe	0 57 10
Latona, Wm. Whitlock	0 59 18
Hornet, F. F. Andrews	0 59 30
Curfew, E. C. Murphy	0 59 56
Bo-Peep, C. B. Vaux	1 00 00
Baby Mix, P. M. Wackerhagen	1 02 20
Dawn, W. A. Leys	1 03 53
Chingackgook, W. A. Wheeler	1 05 17
Vesper, R. C. Brown	1 05 32
Volunteer, C. H. McKnight	1 05 37
Riva, S. Schieffelin	1 07 14
Eurus, W. W. Blow	1 10 30
Lassie, G. A. Warder	1 12 10
Atalanta, L. B. Palmer	
Dimple, G. C. Forrest	
Coffin, D. S. Goddard	
Whim, H. A. Marvel	
Mystic, W. A. Stephens	
Magog, E. O. Finel	
Irene, R. W. Baldwin	
Natchez, E. H. Platt	
Lacowsic, E. H. Barney	Capsized.
Albatross, J. O. Shiras	
Vesper, John Walsh	
Wa Wa, R. S. Oliver	
Evangeline, H. C. Ward	Capsized.
She, G. H. Laney	
Vixen, C. F. Wolters	
Sea Urchin, B. H. Nadal	
Saone, F. M. Sinclair	Capsized.

Event No. 9, Sailing—On the triangle, Novices, Classes A and B. No limit to rig or ballast. Open only to members who never sailed a canoe prior to Sept. 1, 1886; 1½ miles.

There was a light rain falling by this time, with less wind. The result was:

1. Saone, F. M. Sinclair	27 01
2. Riva, S. Schieffelin	29 18
3. Vesper, R. C. Brown	30 53
4. Stranger, C. D. Cooke	33 21
5. Coffin, D. C. Goddard	34 35
6. Whim, H. A. Marvel	35 22
7. Scud, W. S. Egerton	35 38
8. Adonis, Herman Griffin	Capsized, did not finish.
9. Narka, H. E. Rice	Capsized, did not finish.

By the time the race was finished there was a heavy rain with some sea and a strong wind, but the next race was called:

No. 10. Sailing, on the triangle, Classes A. and B. No limit to rig or ballast; 4½ miles. The trial race for places in the American squadron in the trophy race. Record event. The order of the boats at the end each round is shown in columns 2, 3 and 4:

Pecowsic, G. M. Barney	1	1	1 15 11
Lacowsic, E. H. Barney	2	2	1 16 11
Ramona, Ford Jones	6	3	3 1 19 08
Notus, R. W. Gibson	9	5	4 1 19 48
Le Cid, E. C. Knappe	3	4	5 1 23 40
Bo-Peep, C. B. Vaux	4	6	6 1 24 00
Blanche, Paul Butler	15	13	7 1 25 06
Latona, Wm. Whitlock	7	12	8 1 25 28
Baby Mix, P. M. Wackerhagen	5	7	9 1 26 10
Dawn, W. A. Leys	10	8	10 1 26 42
Riva, S. Schieffelin	8	11	11 1 27 05
Hornet, F. F. Andrews	11	10	12 1 28 15
Evangeline, H. C. Ward	12	14	13 1 30 00
Chingackgook, W. A. Wheeler	14	16	14
Eurus, W. W. Blow	16	15	15
Saone, F. M. Sinclair	13	9	16
Vesper, R. C. Brown	17	18	17
Atalanta, L. B. Palmer	18	17	18
Essex, G. W. Cox	20	19	19
Mystic, W. A. Stephens	21	21	20
Vixen, C. F. Wolters	22	20	21
Sea Urchin, B. H. Nadal			22
Natchez, E. H. Platt			
Albatross, J. O. Shiras			
Stranger, C. D. Cooke			

At 5 P. M. the weather had changed, there was less wind, and the sun was visible for the first time in the day. Event No. 8, Paddling and Sailing Combined.—On the triangle, Classes A and B, paddle ½ mile, sail ½ mile, paddle ½ mile, sail ½ mile, paddle ½ mile, sail ½ mile; 3 miles. Record event. This was the final race:

	1st Round.	2d Round.	Time.
Hornet, F. F. Andrews	8	1	1 09 32
Atalanta, L. B. Palmer	2	2	1 10 32
Mystic, W. A. Stephens	5	3	1 15 12
Irene, R. W. Baldwin	1	4	1 15 22
Le Cid, E. C. Knappe	9	5	1 15 40
Dimple, G. C. Forrest	6	6	Foul.
Whim, H. A. Marvel	7	7	1 18 50
Latona, Wm. Whitlock	10	8	1 21 15
Evangeline, H. C. Ward	4	9	

Evangeline sailed well and had a long lead on the last leg sailing, but when near the line her mast went at the deck. Her plucky skipper at once went to work to rig a jury sail and after some time succeeded and sailed in, making the race but being last instead of first.

This completed the day's racing. The illumination and night parade had been set for the evening, but on account of the weather it was postponed. Three large steamers loaded with sightseers came in during the evening and those on board were much disappointed at not seeing the illumination and were disposed to blame the Association. It seems that the entire country had been flooded with handbills and large posters, gotten up on their own account by the steamboat owners, setting forth in true circus style the attractions of the camp and offering to carry passengers at so much per head to witness them. This was done without the knowledge or consent of the association, and the blame rests solely with the steamboat men. The A. C. A. camp is entirely a private affair, and its races and displays are only for the entertainment of its friends and guests. The attempt to turn it into a hippodrome was once tried at Grindstone, where regular excursions, landing at the camp, were widely advertised, causing a great annoyance to the camp until all landing was forbidden. Those who have friends in camp, or who are themselves eligible to membership and desire to join, need have no trouble in visiting the grounds, but those who buy a ticket to the camp as they would to any public entertainment must only blame the sellers of the ticket if they are refused admission.

It is necessary here to speak of another evil beside these excursions that needs to be promptly dealt with. Last year there were permanently in camp a number of strangers, not members of the Association, and this year the same thing occurred. At least one of these interlopers this year was a person who would not be allowed to join the A. C. A. and whose presence in the camp should not have been tolerated. The clubs as well as the Association have often entertained guests who were not members, but unfortunately the practice has fallen into abuse and a prompt remedy is necessary, each member or club being held responsible for those attending camp with them. The dues are so low that no gentleman, even though he desired to visit only one meet, would object to paying them and to joining the Association, and except in cases of well-known persons who come by invitation of the A. C. A. or some of its members, no outsiders should be permitted to camp on the grounds.

Wednesday, Aug. 24.

The trophy race was set for Wednesday morning, but at the hour, 10 A. M., there was a light rain and no wind. By 11 A. M., however, there was a good breeze from E.S.E. and the rain had ceased, so the race was started. The first leg was free, the second to windward and the third a reach.

No. 12. Sailing on the triangle, A. C. A. trophy, Classes A and B.—No limit to ballast or rig; time limit 3 hours; 7½ miles. The American squadron will be selected according to the result of the trial race, viz.: Event No. 10, with the exception, however, that the regatta committee reserves the right to name three of the American squadron independent of the result of the trial race. No foreign competitors appeared.

The fleet had a good start, Notus, with full sail, 108ft., running ahead, followed by Lacowsic with 90ft. Pecowsic, with only 60ft., had too little sail and was besides in the middle of the fleet. Over the first leg Notus gained on Lacowsic, gaining still more on the second leg to windward, but on the reach the latter crept up a little. On the windward leg of the second round Lacowsic gained greatly on Notus and finally took the lead, holding it until on the fourth round, near the end of the first leg, when she luffed up and laid for some time head to wind to bail out. Here Notus came up and passed her, luffing out to windward of Lacowsic as the latter lay hove to. Blanche and Ramona had been fighting well for third place, the latter leading for a good part of the course, but Pecowsic, helped by the wind, which had freshened considerably since the start, was after the two and finally passed them. Again, on the last round, Lacowsic stopped to bail, so that Notus came in well ahead, with Lacowsic second and Pecowsic third. The times and order at each round are:

	1	1	2	1	1
Notus, R. W. Gibson	28 45	0 57 32	1 24 05	1 48 58	2 14 12
			1	2	2
Lacowsic, E. H. Barney	30 55	0 58 00	1 23 02	1 49 19	2 15 55
	7	6	5		
Pecowsic, G. M. Barney	35 00	1 04 30	1 29 10	1 53 10	2 18 18
	3	4	4	5	4
Blanche, Paul Butler	32 40	1 02 45	1 28 11	1 33 15	2 18 55
	4	3	3	3	5
Ramona, Ford Jones	32 41	1 02 25	1 28 10	1 52 55	2 19 20
	5	5	7	6	6
Baby Mix, P.M. Wackerhagen	33 33	1 04 10	1 33 35	2 00 10	2 28 30
	6	7	6	7	7
Latona, W. Whitlock	33 50	1 04 50	1 32 15	2 00 32	2 30 54
	11	11	9	8	8
Hornet, F. F. Andrews	35 40	1 06 30	1 34 55	2 02 18	2 31 48
	9	9	8	9	9
Dawn, W. A. Leys	35 15	1 05 02	1 34 10	2 02 55	2 35 35
	12	12	11	11	10

	14				
Eurus, W. W. Blow	38 26				
Chingackgook, W. A. Wheeler					

Commodore Gibson again wins the Trophy held from last year. He has announced his retirement from general racing, and it is very doubtful whether he will defend the Trophy again next year.

In the afternoon there was no rain, though the sky was cloudy and the next race was called.

No. 13. Sailing, Club Race.—Each club shall be entitled to three entries. The first canoe to cross the winning line shall count as many points as there are starters in the race; the second shall count one less than the first, and so on to the last, which shall count one, and the aggregate of the score of the canoes starting for each club shall be the club score. To windward or leeward, 1 mile and return, for a prize banner. This is a new race, proposed this year by Vice-Commodore Stanton, and though the entries were small it promises to become a very popular event. The summary is as follows:

			Finish.	Re-Score.	cord.
Saone	Brooklyn	F. M. Sinclair	5	10	
Latona		W. Whitlock	6	9	
Evangeline		H. C. Ward	7	8	27
Le Cid		E. C. Knappe	fouled.		
Lacowsic	Springfield	E. H. Barney	3	12	
Pecowsic		G. M. Barney	2	13	25
Blanche		Paul Butler	1	14	
Coffin	Vesper	D. S. Goddard	9	6	
Jennie		Jno. Walsh	10	5	25
Hornet	Rochester	F. F. Andrews	4	11	
Vixen		C. F. Wolters	8	7	18
Sea Urchin	New York	B. H. Nadal	12	3	
Natchez		E. H Platt	13	2	5
Wa Wa	Mohican	R. S. Oliver	11	4	4

Le Cid was disqualified by the Regatta Committee for fouling Latona, the latter being on starboard tack and the former on port.

Event No. 14. Sailing, Consolation.—Winners of either first or second places in events Nos. 8, 9, 10, 11, 12 or 13 excluded. No limit to rig or ballast; one mile to windward and leeward and return. This proved a consolation race in name only, as it was sailed in a very strong and squally wind and a sea, five canoes capsizing. The summary was:

Baby Mix, P. M. Wackerhagen	1
Dimple, G. C. Forrest	2
Vesper, R. C. Brown	3
She, C. S. Laney	4
Coffin, D. S. Goddard	5
Albatross, J. O. Shiras	6
Stranger, C. D. Cooke	Upset.
Sea Urchin, B. S. Nadal	Upset.
Latona, W. Whitlock	Upset.
Jennie, John Walsh	Upset.
Dawn, W. A. Leys	Upset.

In the evening a meeting of the nominating committee of the Central Division was held, at which officers for the ensuing year were nominated. The illumination took place after dark, the camp being hung with Chinese lanterns while the fleet, similarly decorated, paddled past. Fireworks were displayed throughout the camp and fleet, and the scene was a gay one. After it was over the canoeists, with some visitors from other camps, including a number of ladies, gathered in the big shed, which had been cleared of the tables and decorated prettily with flags by the ladies from Squaw Point. The orchestra consisted of a small parlor organ, a cornet and two fiddles, the quartette making up in vigor what they lacked in finish and expression. Merrily the old tunes rattled out and merrily the dancers footed it until the building fairly shook. The ball broke up at 2 A. M., every one voting it, the first experiment of the kind at a meet, a great success.

Thursday, Aug. 25.

The first business of the day was the meeting of the Central Division, held under the trees in the main camp, with Vice-Com. Gibson in the chair. The report of the last meeting at Grindstone was read, after which the new constitution was discussed. The election of officers for the year was then held, resulting as follows: Vice-Com., Henry Stanton, Knickerbocker C. C.; Rear-Com., R. W. Bailey, Pittsburgh, Pa.; Purser, E. W. Brown, Knickerbocker C. C.; Executive Committee—W. R. Huntington, Deowinsta C. C., Rome, N. Y., and E. L. French, Buffalo.

After the meeting event No. 17, hurry-scurry race, 100yds. run, 20yds. swim, 200yds. paddle, was called with but four starters:

Le Cid, E. C. Knappe	1
Atalanta, L. B. Palmer	2
Baby Essex, E. Stern	3
Irene, R. W. Baldwin	4

No. 16, Sailing, "Man Overboard."—While under way, at signal, some object that will float, and at least as large as an ordinary cushion, shall be thrown overboard, aft, out of reach. The same must be recovered and the race continued to the finishing line; ¼ mile. In this race Notus was first in picking up the half paddle thrown overboard. A stiff breeze was blowing from astern at the time, but the boats all jibed without mishap.

Notus, R. W. Gibson	1
Albatross, J. O. Shiras	2
Ramona, Ford Jones	3

No. 15. Sailing, Upset, Classes A and B.—No special appliances allowed. Canoes to carry between 50 and 75sq. ft. of canvas in two sails. No limit to ballast. At signal, canoe to be tipped over until top of the foremast touches the water. Canoe to be righted and to cross finishing line under sail or paddle, ½ mile. Record event.

This race was sailed in a good breeze, the course being free. The canoes capsized until the masts and sails were flat on the water, Notus sailing about, though full of water, for some time after finishing the race. The starters were:

Notus, R. W. Gibson	1
Bo-Peep, C. B. Vaux	2
Dimple, G. C. Forrest	3
Atalanta, L. B. Palmer	4

No. 6. Paddling Tandem.—On the triangle. Open canoes; 1½ miles.

This race was paddled over the usual course, the canoes being an open birch and two open Canadian:

Hiawatha, Rice and Knappe	1
Susquehanna, Townsend and Amory	2
Birch, Kimball and Barlow	3

Two extra races were added, the first for canoes over the limits, 1 mile to leeward and return, inside course. There was a very strong wind and two came to grief. The starters were:

Water Witch, A. S. Putnam	1
Nan, W. E. Masters	Capsized.
Madeline, W. L. Palmer	Capsized.

The final race was for sneakboxes and similar large craft, sailed

outside in a blow, with a strong sea running. The Rushton cruiser capsized before the start, and a Barnegat cruiser owned by Mr. Johnson broke her yard and retired. The others were:

Nell, Barnegat cruiser, Denison and Ward	34 45
Pride of Bay Ridge, surf boat, H. R. Averill	40 00
——, Rushton sneakbox, Cornell and Marvel	46 00

The course was one round of the regular triangle.

This concluded the racing of the meet. The races all passed off successfully, thanks to the hard work of Mr. Stanton of the Regatta Committee, aided by Messrs. Brown and Foster, and especially by Mr. N. S. Smith, clerk of the course. The work of managing nearly twenty races, some of them with 35 starters, of timing these fleets, arranging the races to secure the best wind, and deciding protests is no small labor, and the thanks of all who attended the meet are due to these gentlemen who made the races so successful. On Thursday a large camp-fire was lit on the hillside, at which the prize flags were distributed. The announcement of the election of Association officers, previously made by the Executive Committee, was then publicly made, the Commodore being R. W. Gibson of the Mohican C. C., and the Secretary-Treasurer F. L. Mix, of the same club. The commodoreship should naturally have gone to the Eastern Division this year, but at a meeting of the Division on Wednesday it failed to elect a commodore and declined to hold the coming meet in its territory, as it is entitled to do. The question of the place of the next meet was discussed at the camp, but no conclusion was arrived at, and the matter was left for a fuller discussion.

On Friday all but three of the tents were struck, and when the steamer left in the afternoon the camp was deserted. Some returned directly by rail but a number left with the intention of cruising home by way of Lake George and Lake Champlain.

The camp has been in all ways a successful one, both from a racing and social standpoint. In the matter of racing the Association has much to congratulate itself upon, as it is undoubtedly far in advance of any similar body in the matter of rules and methods. Of course there are changes from time to time, models and methods are changing, some classes of boat are disappearing, and the programmes of the races change a little from year to year, but a steady improvement is evident. The table at the head of this article shows the dimensions of the boats that race and the great majority of the cruising canoes present followed the same dimensions. This table shows that the favorite length is still 15ft., as 25 out of a total of 42 are about that length. Of the balance, 15 range from 15ft. 3in. to 16ft., while there is one of 17ft. and three of 14ft. The 17ft. canoe is the first yet built to the full limit of Class B, 17ft. x28½in., and is consequently outside of the paddling classes and not eligible for the record. It is but fair to say that the number of 16ft. canoes is increasing.

The beam is divided as follows: 27in., 2; 28in., 9; 29in., 9; 30in., 16; 31in., 4; 32in., 1; 33in., 1. Thus it appears that Class A is in a fair way to be abandoned, and that the majority of canoes in the future will come within Class B limits, some declining to take the beam allowed by the rule and building about 15×29in., while others run to 15 and 16ft.×30in. Theoretically the two boats would not be on even terms, but even then they are better matched by the present rules than is possible under any system of time allowance; while experience shows that the smaller boats need fear nothing from the larger on the score of superior size when the limits are no more different than in the present case. There is no disposition to build to the maximum limits, and fortunately the favorite canoe is both light and easily portable, two most essential ends to keep in view. The influence of the English boats that visited the meet last year has been very slight, here and there an odd device or a minor detail has been copied, but not in model. On the contrary, Pecowsic has exerted a visible influence, to note only one point, in the matter of length, the increased number of 16ft boats present being due largely to her.

The most important point that struck the observer in a tour through the fleet as the boats lay along shore and their owners stepping masts and rigging for the day's racing, was that out of the entire lot of 150 or more not more than four were in first-rate racing form, bottom perfectly smooth and polished, rig tried and perfected and minor details of gear and fitting strong and in thorough order. The two Barney boats, Lacowsic and Pecowsic, handled respectively by father and son, were in good condition and their simple rig was in perfect order, a number of sails of various sizes for each boat, the sails and spars perfect models of neatness, all ready at hand in a box near the float. Notus was in good form as regards hull and fittings, but even here the sails were only tried at the last moment, the reefing gear being rigged in camp. Fortunately all was right from the first, which is seldom the case, and she started in good form in her first race. Another boat that was in very good shape was the Rat, designed and built by Grant Edgar, of Newburg, and one of the best canoes in model as well as neatness of workmanship and completness of detail, including sails, that has yet appeared at a meet. Unfortunately her owner was too ill to sail her, only coming to the camp for a couple of days.

Outside of these there were a number of canoes of good model, but which needed a thorough rubbing down and half a dozen coats of varnish to make a passable bottom; there were some whose hulls were in fair condition, though this fault of rough bottom was general; while their rigs were nothing more than crude experiments or ill-judged copies of the sails of some fast boat. There were present a number of boats built as closely as possible after the leading models of last year, but in nearly every case their owners went home disappointed. Too many of these were ready to sell their present boats for whatever they could get and order blindly new ones. The fault in nearly all these cases was only a lack of preparation; with good sails, of any of half a dozen varieties, the boats could have been made to go very well, though it is not to be expected that a poor sailor in a Pecowsic will come anywhere near her old or present owner merely because he has duplicated the boat.

The first thing that every racing man should work for is promptness; complete your experiments and finish your sails at home, come to the meet with a finished boat, be ready early in the morning for the races of the day and be at the line in time to chose a good place instead of hurrying at the last minute and being caught with gear in a snarl when the first gun fires. What wins races is perfection of detail coupled with promptness and readiness. You may not have the best possible model, but see that the bottom is smooth, the rudder rising and falling easily, the board straight and sharp on the edge and working easily in the trunk, and that cleats, tiller and small gear are fully strong and in good order. Your sails may be out of fashion and not up to the latest cut, but they need not on that account have the gear half rove, the yard far off to leeward, or the luff slack. Of course no amount of mechanical perfection will alone make a sailor, but on the other hand the greatest skill is only wasted in a new boat, untried and half rigged, with too much or too little ballast, as some have found to their cost of late. Speaking of ballast, we must add that the shot bag was conspicuous chiefly by its absence this year, and that nearly all the canoes, certainly all the winning ones, were sailed without ballast.

To make a successful sailor requires not only a brand new Pecowsic or Notus, but many qualities which are possessed in full by but few, so that the number who will win the first prizes in the sailing races is but small. In paddling it is not quite the same, the interest is not as keen as in sailing and the practice requires perhaps more hard work of a mechanical sort and less pleasure, compared with sailing. There are fewer good paddlers than sailors in the A. C. A., and a better chance for the average canoeist who is not afraid to work to win laurels. A good sailor is born, not made, but any man of fair physique can learn to paddle a canoe well, and by a moderate amount of training and practice can make a very good show in the races. The record for the last two years will show that a man who goes into every race with a fair amount of pluck and skill and a boat in perfect order, such as every canoe should be kept by her owner, need not fear that he will miss his reward. He may take few or even no first prizes, and yet may head the record.

It is a pleasure to note that while racing is on the increase and the improvement in hulls and rigs is proportionately great, that cruising has in no way suffered. There is, it is true, a tendency to purely racing features in canoes that are in other respects cruisers, such as the very small cockpit, a board in the center of the well, and rigs that are unfitted for cruising; but on the whole the rights of the cruiser are well guarded by the Association, and none need fear that the racing will attain more than its due prominence.

SOUTH BOSTON C. C. REGATTA, AUG. 27.—This club sailed its regatta on Saturday over a triangle off South Boston. The wind was light for sailing, and only two out of seven starters finished the first race:

	Start.	Finish.	Elapsed.
Apajune, Com. Frizzell	4 55 00	5 48 00	0 53 00
Enchantress, J. Craddock	4 55 45	5 56 15	1 01 15

The next event was a paddling race, resulting as follows:

Fidget, C. Hird	6 22 00
Cassie, Al Hird	6 22 05
Gros Ventre, Connor	6 22 07
Bluebell, Atherton	6 23 15
Queen, Dix	Time not taken.
Apajune, Frizzell	Time not taken.

The last race was a tandem with single blades:

Gros Ventre, Connor and W. J. Martin	6 44 45	0 03 45
Bluebell, Atherton and J. D. Ponce	6 44 48	0 03 48
Cassie, Hird Bros.	6 45 00	0 04 00
Apajune, Frizzell and John Martin	6 45 05	0 04 05

Judges: Wm. Looney and Alex Lundine; time-keeper, A. B. Lyon.

A. C. A. MEMBERSHIP.—Mr. F. D. Walker, of Springfield, Mass., has applied for membership.

1. America's Cup Match, N. Y.

ROYAL NOVA SCOTIA Y. S. JUBILEE REGATTA.

THE night of Thursday, Aug. 18, was dirty. It was blowing hard from the southeast and raining heavily, but by daylight next morning the sky cleared, and a brilliant day, with a hard breeze of wind from W.S.W., promised excellent sport. There was a heavy sea kicked up by the night's gale, and it increased instead of diminishing; so that dry decks were out of the question. Even big Dauntless was all awash, and in some of the heavy plunges fears were entertained for the safety of some of her hands, as the seas swept fast forward. There were three races on the card; the first for yachts over 70ft. waterline, the second for yachts 70ft. and under. These two classes started at the same time and sailed over the same course—a long leg of 7 miles to the Automatic Buoy, then a triangle, 9 miles E.S.E., 9 miles S.W., 10 miles N. by W., and 7 miles in to finish; 42 miles in all. The S.W. markboat shifted during the night's gale; so instead of a beat, it was only a close fetch, and Galatea overstood and had to free sheets. Of course with the wind as it was, giving a broad reach and a run over the greater part of the course, the chances were all in favor of schooners, and Dauntless accordingly was timed first at the finish, though under her reduced rig she could not shake off the fleet Galatea, which flashed past the line only 25s. later. It was a magnificent race from start to finish, and nothing like it has been seen in the States this year; indeed, Dauntless's commander states he has not had such a breeze and sea to race in since he left England, and the owner of Dauntless is equally pleased with the weather he has experienced here. Had Sachem, Iroquois, Montauk and Grayling been here they would have enjoyed such a treat as very rarely falls to their lot in the lighter weather of Newport and Marblehead; while Mayflower, Puritan, Atlantic and Priscilla would have tried conclusions with Galatea under circumstances vastly different from those of any race in which they have yet met. The visitors agreed that all the arrangements were perfect, and as for the course, it is simply unequalled, for from start to finish it is superior to any on either side of the Atlantic.

There was tremendous interest taken in the regatta, and the shores of Point Pleasant were covered with spectators; while steamers, sailing and rowing craft of all kinds covered the harbor. The entries for the first class race were:

Galatea, cutter, 87ft. l.w.l., Lieut. Henn, R. N.
Dauntless, schooner, 116ft. 7in., C. H. Colt.

The second class:

Stranger, cutter, 65ft. 1½in., G. A. Warren.
Guinevere, schooner, O. S. Weeks.

The latter did not show up, and Stranger sailed over the course under easy canvas. The prizes were, in the first class, two cups presented by the R. N. S. Y. S.; in the second $200, presented by A. B. Sheraton. The starting gun was fired at 10:30 sharp, and the yachts crossed: Galatea, 10:30:25; Dauntless, 10:30:45; Stranger, 10:37:46.

Galatea carried whole mainsail, jib-headed gafftopsail, balloon foresail, and No. 1 jib; and broke out jibtopsail with the gun. Dauntless had whole main and foresails, working topsails, forestaysail, jib and flying jib and set jibtopsail as she passed. She drew up on the cutter at once, and before a mile of water had been run the pair went in for a luffing match, which took them right in under the western land, and off Portuguese Cove Dauntless lapped and blanketed the steel cutter, and up went helms for a rush to the Automatic, first mark, which was rounded: Dauntless, 11:05:15; Galatea, 11:06:25.

Seven miles in 34m. 30s. for Dauntless, in 36m. for Galatea, which speaks sufficiently for the breeze blowing. It was now a run to the eastern mark along a very high sea, and both yachts rolled to leeward and surged to windward in a way that threatened destruction to spars. Small spinakers were set to starboard, but before half the leg was sailed Galatea's 70ft. spar snapped 14ft. from the outer end, and away went the spinaker over the forestay, tearing badly. The wreck was smartly gathered in and balloon foresail shifted for working foresail. Just then the spinaker halliard block on Dauntless broke, and away went her balloon in ribbons. She was near the mark, however, and bar the loss of the sail, the accident scarcely delayed her. The time at the mark was: Dauntless, 11:50:15; Galatea, 11:54:30.

The schooner had thus gained 3m. 50s. on the cutter, but Galatea's turn had come, and in the close fetch to the S.W. mark she launched out in such good fashion that she turned the tables the other way, and was 2m. 30s. ahead at the buoy. Both yachts were driven for all they were worth, and lee rails were showed up occasionally, Dauntless going down to her skylights as she was forced along. It was a grand ding-dong race, hold on all, and blow good breeze. Galatea was smashing through the surges and Captain Dan Bradford did not spare her. She lost her jibtopsail, stowed on the bowsprit, as did Dauntless, the sea being so bad that it was unsafe to send a hand out on either yacht to try to save the sail. The time at the outer mark was: Galatea 1:02:50, Dauntless 1:05:20.

Twenty-five sea miles in 2½ hours, 9 of them close-hauled. Once round it was a broad reach for 17 miles, and Dauntless collared Galatea again and passed her, expending another jibtopsail in doing this, the sail splitting from top to bottom. Galatea set a balloon jibtopsail, but the breeze was too much for the kites, and off Camperdown it went with a vicious tear. Still the cutter held the big schooner and fought every inch of the way, finally coming in, after a hard sailed race, only 25s. astern, amid tremendous cheering. The finish of this superb race was timed: Dauntless 3:04:12, Galatea 3:04:37.

Lieut. Henn took first and Mr. Colt second prize. Stranger came in at 3:52:55 and took the Sheraton Cup.

The third race was for the splendid trophy presented to the R. N. S. Y. S. by residents of Boston and New York, for which the following yachts entered:

Albatross, schooner, D. Cronan	32ft. 6in.
Halicia, cutter, Capt. Trott	32ft. 4in.
Hebe, cutter, Capt. Trott	25ft.
Lenore, sloop, H. C. Madeod	27ft. 1in.
Pastime, schooner, W. M. Black	38ft. 9in.
Psyche, cutter, Capt. Russell	24ft. 2in.
Phantom, sloop, H. M. Wylde	24ft.
Hildred, sloop, W. G. Jones	
St. Kilda, schooner, J. W. King	

The course was to Dartmouth Cove, Mars Rock, lumber yard, twice around, 22 miles. The wind made it a reach all around, and the two larger schooners had no difficulty in disposing of the rest of the fleet. Pastime's sails are worn to a thread, but she sailed in such a way as to show that if canvassed and ballasted in modern fashion she would easily hold Wenonah. The latter simply romped away from the fleet and won with plenty of time to spare. Halicia was dismasted before reaching Mars Rock, and Lenore got third place. The time at the end of the first round was:

Wenonah	12 37 50	St. Kilda	12 57 38
Pastime	12 47 52	Albatross	1 05 25
Lenore	12 55 17	Phantom	1 06 00
Hebe	12 56 45	Psyche	1 06 10

Wenonah increased her lead during the second round; Hebe, which was sailed with wonderful dash by her owner's son, passed Lenore, as did St. Kilda, the sloop having got into difficulties with her jibtopsail, and the race finished:

Wenonah	1 52 57	Albatross	2 39 20
Pastime	2 10 57	Psyche	2 40 17
Hebe	2 34 30	Hildred	2 45 39
St. Kilda	2 26 20	Phantom	2 46 02
Lenore	2 34 10		

Wenonah winning the American Cup and Pastime the second prize.

Second Day, Aug. 20.

Saturday morning seemed to promise nothing better than a light northerly air with no heart in it. But it did not last and barely took the yachts in range of Thrum Cap and Lichfield, when it petered out altogether, and left them cruising about waiting for the true breeze, which came at last from S. S. W., giving practically a new start. There was a long roll running, and the stronger breeze kicked up a jump of a sea, which, in combination with a jibtopsail, accounted for Stranger's topmast. Galatea sailed a superb race throughout, did not throw away a chance, except standing rather too far to the eastward during the shifting and baffling of the wind, and won "hands down," presenting a striking appearance as she flew up the harbor under a crowd of sail.

The starting point was off Green Bank, and the whole shore along the Point was lined with spectators, beside great numbers on the various wharves, steamers, yachts not in the race, and boats of all kinds and sizes. Dauntless was near the line, an imposing object as she sailed about waiting for the gun; the elegant Stranger, with jackyarder aloft and balloon foresail sheeted aft, had her spinaker boom ready to port; Galatea shot along parallel with the line, her immense mainsail and jackyard topsail setting like cards; enterprising Lenore, prepared to contest the possession of the cup with the biggest of them all; Wenonah, with the glory of the Friday's victory lighting up the faces of her crew, ready to "have a hack" at the schooner's prize; and most deservedly admired of all, Halicia, whose owner, thorough sportsman that he is, had got a new mast in during the night, towed down to the starting line, and was actually hard at work with his crew finishing the rigging of his yacht so as to have mainsail and jib at least ready for the signal gun. True British bulldog pluck and perseverance in Captain Trott, and loud were the cheers which greeted him when, off Meagher's Beach, he had his fine little craft fully canvassed and dancing along in the light breeze.

The gun for the start was fired sharp at 10:30 A. M., and away went the crowd over the line, the vast spinakers of Dauntless, Galatea and Stranger revealing to Halifax eyes the true proportions of balloon canvas. The starters were:

Galatea, cutter, Lieut. Henn, R. N.	87.00 L.w.l.
Dauntless, schooner, C. H. Colt	116.07
Stranger, cutter, G. H. Warren	65.01½
Halicia, cutter, Capt. S. Trott	32 01
Pastime, schooner, W. Marshall Black	38.09
Wenonah, schooner, Jas. Stairs *et al*	45.01
Guinevere, schooner, O. J. Weeks	
Lenore, sloop, H. C. McLeod	27.01

The course was the same as on the previous day—from the Green Bank 7 miles to the inner automatic buoy, thence E. S. E. 9 miles, thence S. W. 9 miles, thence N. by W. 10 miles to automatic, and 7 miles to finish—42 miles.

According to the New York Yacht Club rules, under which the race was sailed, ten minutes are allowed for crossing the line. This antiquated style of starting has gone out of use in Halifax altogether, and the English style of starting with the gun is always adhered to, as giving more scope for seamanship and smart handling. The times at which the yachts crossed were:

Halicia	10 39 56	Pastime	10 33 42
Stranger	10 31 54	Wenonah	10 33 55
Galatea	10 32 15	Lenore	10 34 00
Dauntless	10 33 36	Guinevere	10 36 01

Halicia ran fast in the light wind, having spinaker set to port, as had also Stranger, Dauntless and Wenonah. Galatea pulled out hers to starboard, Lenore following suit, and each forged ahead clear of their class, but Stranger falling into the big Englishman's wake becalmed her sails, hauled in mainboom and went by her to leeward, taking and keeping the lead. Dauntless was closing up, with Lenore buzzing on her weather quarter; but the smaller schooners were not running as much water and were dropping behind. Progress was very slow and whistling for a breeze very general. At Meagher's Beach Galatea ran past Halicia, and with Stranger the trio formed a division of their own, the other yachts edging to the westward. By the time the fleet was off Thrum Cap spinakers were aback on the leaders, and it was "haul in and lower away" on all of them, jibtopsails taking the place of the big balloons. An easterly and southerly draft struck the three cutters, and Galatea went off on port tack with sheets flat, Stranger and Halicia to starboard. Between the two large cutters the rest of the fleet was seen coming down with the last of the northerly air. Presently Galatea tacked to starboard and Stranger to port; when they met Mr. Warren's boat had the advantage and went round on her heel to weatherbow the Galatea, but she was not quick enough, and the ninety cleared her wind. Both vessels presently sailed into a patch of calm and came up all standing, Galatea's weight forging her through Stranger's lee out ahead of her and some mysterious breath aloft sending her on to the southward and westward. Away under the Portuguese Cove shore were Dauntless, Wenonah, Guinevere, Pastime, Lenore and Halicia, all becalmed, sails slatting, and the yachts rolling in the heavy swell. Presently the S.W. breeze came off the land. Dauntless's enormous balloon maintopsail staysail filled, topsails, jibs, fore and mainsails bellied out, and the splendid yacht raced for the Automatic with sheets lifted and threatened to take the lead. Wenonah and the smaller schooners had not yet got it; the big cutters were worse off, as they were furthest to leeward; but now the inshore division felt the wind, and Lenore & Co. freed sheets and went off at score after Dauntless. Next Galatea's jibtopsail came full—head sheets were lighted over, the mainboom swung to port, and the steel cutter was away like a greyhound for the Automatic, leaving Stranger still rolling and without a breath. It was a piece of good fortune, and one vast smile lined the weather bulwarks of Galatea as she sped first of the fleet round the first mark. Stranger was now full, but had to nip up to fetch round, and that ran away with some of her allowance. The time round Automatic was:

Galatea	12 21 20	Pastime	12 31 56
Dauntless	12 25 32	Guinevere	12 32 04
Stranger	12 27 46	Wenonah	22 32 17
Lenore	12 30 08		

Poor Halicia had come to grief before reaching the buoy. The new mast, put in that morning to replace the one carried away the day before, broke ten feet from the deck, and settled her chances for the day. The accident was deeply regretted by every one, for each day it occurred when Halicia was doing well, and to lose two masts on two successive days when racing for $500 and $1,000 prizes is worse than trying—it is exasperating, especially as Captain Trott spares neither pains nor expense to bring his yachts to the line in perfect condition. Mr. W. Lawson bore down in his steamer A. C. Whitney and took the yacht in tow.

The breeze was now piping up, the racers sliding along with a long sea on the beam, wind on starboard quarter, Galatea leading with bowsprit spinaker, Dauntless next with spinaker on boom to starboard, but necessarily so far forward that it becalmed her headsails, and Stranger canvassed like Galatea. Lenore was running steadily along and Guinevere and Wenonah were well within their time of Dauntless, and saw visions of the schooner cup in their respective lockers. Galatea was discounting the time allowance of every competitor and romping away from all except Dauntless, which made a slight gain. The schooner's foretopmast being suspected of a little weakness, her balloon jibtopsail was stowed, and about the same time Galatea shifted jackyard topsail for number two, in preparation for the turn to windward. Stranger carried her balloon foresail all day, but Mr. Henn's vessel had working foresail. The second mark, 9 sea miles from Automatic, was rounded:

Galatea	1 21 55	Wenonah	1 47 05
Dauntless	1 25 05	Guinevere	1 47 42
Stranger	1 28 27	Pastime	1 48 00

Galatea had thus gained only 6s. on Stranger, and had to gain 10m. 28s. more on her in order to save her time, but the moment had now come for her to show her powers. It was a beat of nine sea miles to the next mark, which bore S.W. Galatea hauled up sharp on starboard tack, outpointing Dauntless at once. Stranger did the same, and came out on weather quarter of Galatea, but a long way astern. There was now a rattling breeze and a jump of sea, and the steel boat went through it like a knife, sending up spurts of spray from her main chains and a glory of rainbow foam from her sharp bows. Steadily and swiftly she left Stranger, which was now second boat, and settled right out to windward till she had her in her wake. Before this, at 1:36:20, Mr. Warren's cutter had handed jibtopsail. At 2:39:45 Galatea had the markboat abeam, and, with a weather-going tide, she tacked for it. When Stranger tacked at 2:58:35 the clock showed her time allow-

ance was run out, and Galatea had two minutes to the good, and those two minutes had increased when, shortly after setting her jibtopsail, Stranger, at 3:03, carried away her topmast under the eyes of the rigging. The race, already a procession, became still more so as Galatea went away hand over fist, rounding the outer mark to the accompaniment of vociferous cheers from the men on the markboat, and breaking out her bowsprit spinaker as she checked sheets for the broad reach home. Dauntless collared Stranger, now crippled by the loss of her topsail, and was second at the mark. The rounding was timed:

Galatea..... 3 11 20 Stranger..... 3 56 00
Dauntless..... 3 56 25

Pastime and Lenore had given up. Wenonah and Guinevere were out of sight astern, but hanging on to their work, though, bar the crippling of Dauntless, they had not a chance of winning. Galatea flew along at ten knots an hour, passing the last mark at 4:23:30, hailed by steamers' whistles and cheers from passengers and crews of every craft she passed. The St. Pierre put on full speed to catch her, but was left hopelessly behind; the multitudes who lined the shore all along the Point road saw a sight they will not easily forget, as the noble yacht swept on to victory—"Galatea first, the rest nowhere." There were numberless carriages and many cyclists at the Point, and the whole calvacade galloped along trying to keep up with the first cutter, the sight being exciting as well as amusing. From Point Pleasant to Green Bank and on to the finish there rolled cheer after cheer. On the Lumber yard a great crowd was assembled and greeted the Galatea with rounds of cheers.

The crew of the cutter replied, and then the guests gave three cheers and one more for Lieut. and Mrs. Henn, and one for Skipper Bradford, who had sailed the boat so well. Then round the ships of war, whose Jack tars manned the rigging and sent a hurricane of cheers to greet the victor, while the Bellerophon's band played, "See the conquering hero come." A flight past the wharves and Dauntless and Stranger were each waited for and cheered by Galatea and the shore, and thus a splendid race came to a pleasant end. The times at the finish were:

Galatea.....5 16 20 Stranger.....6 37 48
Dauntless.....6 11 52

The others gave up; Wenonah being towed in at about 10 P. M., and Lenore arriving home in a pelting rain at 3 A. M.

Galatea thus won the Jubilee cup, beating Dauntless by 54m. 54s., exclusive of time allowance. Dauntless takes the prize for schooners—the $350 cup presented by residents of Boston and New York.

THE TRIAL AND CUP RACES.

THE programme for the trial races to select a competitor for Thistle is as follows:

First Race.—Tuesday, Sept. 13, at 10 A. M., over the inside course of the New York Y. C.

Second Race.—Thurseay, Sept. 15, at half-past 10 A. M., twenty miles to windward or leeward and return from Scotland Lightship.

Third Race.—Saturday, Sept. 17, at half-past 10 A. M., triangular outside course, starting from Scotland Lightship.

Neither Puritan, Priscilla nor Atlantic will enter, so the contest will be narrowed down to Mayflower and Volunteer. The flagship Electra will carry the Regatta Committee. The following is the programme for the Cup races:

First Race.—Tuesday, Sept. 27, at 10 A. M., over inside course of New York Y. C.

Second Race.—Thursday, Sept. 29, at 10:30 A. M., twenty miles to windward or leeward and return from Scotland or Sandy Hook Lightship, as will be determined on the morning of the race.

Third Race.—Saturday, Oct. 1, at 10:30 A. M., triangular course of forty miles, starting at Scotland Lightship.

The races are in charge of the America's Cup Committee, Ex-Com. James D. Smith, chairman; William Krebs, secretary; Philip Schuyler, John S. Dickerson, G. L. Haight, and the Commodore, Vice-Commodore and Rear-Commodore of the New-York Y. C., *ex officio*.

The following invitation has been sent to the New York Y. C.:

To the Secretary New York Y. C., 67 Madison avenue, New York city:

DEAR SIR—In a week or so, after refitting, we shall be happy to afford those of your members an opportunity to visit the Thistle who desire to do so, and permits to that effect will be issued from this office, by which means only visitors will be admitted.

This method we consider the most desirable in order to regulate the number of applicants compatible with the proper progress of the work aboard. Yours truly, HENDERSON BROTHERS.

NEW YORK, Aug. 22, 1887.

John H. Bird, Esq.:

MY DEAR SIR—The inclosed speaks for itself, and I beg leave to add that Mr. Bell asks me to inform the New York Y. C., through your good self, that he will immediately on arrival (about Sept. 8) issue a general invitation to members of the New York Y. C. to come aboard and view the Thistle to their heart's content. Yours most truly, RICHARD HENDERSON.

NEW YORK, Aug. 22, 1887.

CLINTON Y. C. ANNUAL REGATTA.—The Clinton Y. C. held their first annual regatta off Grove Beach on Aug. 17. It was feared in the morning that the race would result in a fizzle, as there was no indication of a breeze, but as the time for the start drew near a good working breeze from S.W. sprang up, enabling the yachts to make the course in good time; start was from an anchor. In special class Venus, New Haven Y. C., led from start to finish, thus adding another to her list of victories. The third class made the most exciting race of the day, White Wings pulling off a well-earned victory, Ada and Tot pressing her hotly.

SPECIAL CLASS.

	Length.	Time.
Venus, Geo. M. Graves	30.06	1 11 15
John Bacon	25.00	1 23 00
Hornet, M. Buell	31.00	1 29 30

FIRST CLASS.

Widewawake, A. F. Taylor	1 37 00
Kingfisher, H. Dee	2 03 00

SECOND CLASS.

Susie Hardtack, Geo. Seely	1 57 00
Mamie Edith, Ed. C. Watrous	1 59 00
Uncle James, Stillman Robinson	1 59 20
Ives, Mr. Ives	
Idle Girl, A. D. Crowell	
Bunker Hill, Fred Hill	
Idler, Dwight Holbrook	
Sparrow, A. H. Kirtland	

THIRD CLASS.

White Wings, Chas. H. Kelsey	1 51 00
Ada, Edgar Burel	1 52 40
Tot, Chas. Whycoff	1 56 00
Junita, Wm. E. Otis	
Windward, Frank Redfield	
Eli, Robt. Pierce	

Prizes: Special class, Venus first; first class, Wide Awake; second class, Susie Hardtack first, Mamie Edith second, Uncle James third; third class, White Wings first, Ada second, Tot third.

CEDAR POINT Y. C. PENNANT REGATTA, AUG. 20.—The second pennant regatta of the Cedar Point Y. C. was sailed at Cedar Point off Westport harbor, on Aug. 20, in a heavy northeast wind. The course was from a stakeboat off Cedar Point, to and around Cankeen Buoy, thence to Cedar Point, distance twelve miles. The Go-Softly parted her bobstay before the start and withdrew. The race between the Daisy and Puritan was very close, there being only eight seconds difference in elapsed times:

CLASS B—SLOOPS 45FT. AND UNDER.

	Start.	Finish.
Imperia	11 53 04	1 35 04
Genevieve	11 54 02	1 36 06

CLASS C—SLOOPS 35FT. AND UNDER.

Teal	11 51 00	1 28 30
Delphine	11 50 00	1 26 02

CLASS D—OPEN JIB AND MAINSAIL BOATS 25FT. AND UNDER.

Number 4	11 49 05	1 31 30
Alice	11 49 00	Did not finish.
Casino	11 54 00	Did not finish.

CLASS E—CATBOATS 21FT. AND UNDER.

Peggy	11 35 00	1 24 04

CLASS F—CATBOATS 19FT. AND UNDER.

Puritan	11 25 30	1 24 08
Daisy	11 25 30	1 24 00

Genevieve wins in Class B on corrected time. Delphine wins in Class C. Number 4 wins in Class D. Peggy sailed a walkover in Class E, and Puritan wins in Class F on corrected time. An open regatta will be held at Cedar Point, Sept. 20, open to all boats in Long Island Sound eligible to the classes of the Cedar Point Yacht Club. Cash prizes will be offered. Yachtsmen wishing information can address Edwin Thorne, Jr., Secretary Cedar Point Yacht Club, Saugatuck, Conn.—E. S. WHEELER.

KNICKERBOCKER Y. C.—This club will sail its fall regatta, open to its own yachts only, on Sept. 8.

MONTGOMERY SAILING CLUB'S 13TH CRUISE, Aug. 21.—Courses, Norristown to Indian Creek and return. Distance, five miles. Weather, clear and warm. Wind, light southerly. Current ½ mile per hour:

	Length.	Start.	Finish.	Cor.
Gracie, skiff, E. A. Leopold	12.00	9 00 00	12 10 54	3 01 51
E. C. Potts, tuckup, Parker Bros.	15.00	9 00 00	12 07 30	3 05 50
Flying Eagle, tuckup, J. Berndt	15.00	9 00 00	12 06 52	3 06 52
Igidious, tuckup, W. Rochell	15.00	9 00 00	12 15 50	3 15 50
H. C. Scott, tuckup, Carnathan	15.00	9 00 00	12 19 22	3 18 22
Cocktail, tuckup, Max Berndt	15.00	9 00 00	Withdrew.	
Pennsylvania, hiker, J. Adams	16.00	9 12 00	Withdrew.	
Josephine, tuckup, E. Sowers	15.00	9 00 00	Withdrew.	

The wind was so light at the start the boats were just able to stem the current, and it was 9:15 when they moved off slowly with a fair wind. After rounding the buoy the wind freshened a trifle, and in the beat back the hiker Pennsylvania, with 50yds. sail, got no advantage of the tuckups with 27yds. or the Gracie with 35ft. The hiker withdrew at the end of four miles, the E. C. Potts being ahead of her at the time. Judge, Joseph Boucot.

On Aug. 28, over same course, weather clear and cool, wind light to fresh westerly, the times were: Flying Eagle, 1.38.15; Gracie, 1.40.03; E. C. Potts, 1.40.36; Cocktail, 1.43.06; Igidious, 1.43.56; Ino, 1.46.36; Elsie, 1.51.11. Flying Eagle wins champion pennant. It was a beat to the buoy and a reach home, with genuine tuck-up weather, smooth water, and a whole sail breeze prevailing most of the time.

MONATIQUOT Y. C.—The third championship race and sweepstake for first class was sailed over the Fort Point course on Aug. 17. First and second class 9 miles, third class 6 miles. Weather fair. Wind S.E. moderate. Tide high at 9:49 P. M.

FIRST CLASS.

	Length.	Start.	Finish.	Elapsed.	Corrected.
Posy	22.03	2 06 30	3 57 47	1 50 12	1 19 14
Secret	22.06	2 06 30	4 01 24	1 54 54	1 24 23
Folly	26.08	2 06 36	3 58 58	1 52 23	1 25 05

SECOND CLASS.

Diadem	18.02	2 10 28	4 08 33	1 58 05	1 20 55
Tartar	19.5¾	2 10 18	4 08 14	1 57 56	1 22 41
Maud	19.02	2 10 52	4 19 13	2 08 21	1 32 39
Spray	19.02	2 11 40	.....	.....	.....
Nereid	20.09	2 10 47	Withdrew.		
Hester	19.11	2 13 00	Did not finish.		
Christine	18.06	2 10 52	Did not finish.		
Snarleyow	18.00	2 11 00	Did not finish.		

THIRD CLASS.

Flora Lee	17.05	2 15 44	3 49 34	1 33 50	1 08 17
Nifti	17.00	2 15 15	3 57 07	1 41 52	1 15 52
Helen Snow	16.06	2 15 03	Disabled.		

First prize, second class, Diadem; third class, Flora Lee. Winner of sweepstake, first class, Posy. Winner of championship leg, Secret. Judges: Henry Gardner, E. P. Worster, T. D. Bagley.

BAYHEAD Y. C.—The second race for the Bayhead championship pennant was sailed over the Bayhead course on Aug. 18. The Snipe won first place, her performance was a surprise to every one, she being a cruising boat and this her first race. The wind was southwest and all but Snipe carried single reef:

	Length.	Start.	Finish.	Actual.	Corrected.
Snipe	22.08	3 30 30	5 12 20	1 41 50	1 41 50
Edith	20.09	3 29 40	5 15 43	1 45 57	1 44 02
Foam	18.00	3 29 56	5 20 16	1 50 20	1 45 40
Rowena	16.08	3 29 54	5 25 55	1 50 01	1 50 01
Effie	16.08	3 26 25	5 27 27	1 58 02	1 52 02

The third race for the Bayhead championship pennant was sailed on Aug. 25. Snipe again won first place and will no doubt win the pennant if she has plenty of wind. It will be a close race between Edith, Foam and Rowena for second prize, the wind during race was northwest, hard, puffy and unsatisfactory:

	Length.	Start.	Finish.	Actual.	Corrected.
Snipe	22.08	3 03 51	4 34 27	1 30 36	1 30 36
Edith	20.09	3 05 08	4 45 40	1 40 32	1 33 37
Foam	18.00	3 05 07	4 51 12	1 46 05	1 41 25
Rowena	16.08	3 04 24	4 47 07	1 42 43	1 36 43
Effie	16.08	3 04 03	5 03 31	2 01 28	1 55 28

MIRAMICHI Y. C. RACE.—The third race of the Miramichi Y. C. for the silver cups presented by Commodore Miller and Messrs. Call and Noonan, was sailed from Newcastle to Chatham and return, 10 miles. The wind was on the starboard quarter, very light, and all the yachts set spinakers. They kept well together in the run down, but the big ones drew rapidly ahead on the beat back. The winners were Com. J. C. Miller in the first class, and Vice-Com. J. L. Stewart in the second class, the flag officers thus carrying off the honors. Summary:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Kilbride	22.00	2 52 00	2 36 31
Kittoch	21.09	2 54 45	2 38 56
Arrow	19.07	3 11 00	2 52 00
Blondy	19.00	3 14 00	2 55 51

SECOND CLASS.

Annie	15.02	3 50 30	3 23 40
Bear	15.04	3 50 15	3 23 50

BUNKER HILL Y. C. REGATTA, Aug. 13.—Course, 4¾ miles; weather, pleasant; wind, east, light; tide, flood:

	Length.	Start.	Finish.	Elapsed.	Cor.
Thelga, B. T. Hall	21.03	11 13 30	12 54 20	1 40 50	1 40 04
Iola, W. H. Webber	22.06	11 14 10	1 02 00	1 47 50	1 47 50
Kait, J. T. Huggins	17.07	11 17 40	1 34 00	2 16 20	2 16 20
Frolic, Wm. Anderson	17.06	11 20 15	1 50 20	2 30 05	2 28 28
Sprite, P. J. Hinchey	14.10	11 23 55	1 05 40	1 41 45	1 41 35
Flash, C. A. Winters	15.01	11 23 56	1 28 30	2 04 34	2 04 34

Winners first prizes—Class 1, Thelga; Class 2, Kit; Class 3, Sprite. Measurements are in sailing length, which are in this club length on waterline. Regatta Committee—H. L. Johnson, J. W. Reich, H. Leadbetter. Judges—Geo. B. Thomas; Randall Gould, Geo. W. Abbott.

THE FLYING PONTOON.—*Editor Forest and Stream:* I promised to report on the performance of the flying pontoon previously described and illustrated in your paper, but it has seemed advisable to wait for the report of the success or failure of this novel sailing craft from a responsible and disinterested person who has tested her in actual use with other boats. Last month I built and sent a flying pontoon to a well-known gentleman at Saranac Lake, N. Y., who writes as follows: "The pontoon came safely and is a success. I like the way she works, and for lakes like these, which are never very rough, I think she is just the craft. I am sorry I did not let you send me a jib as you proposed, as for light winds she has not enough sail, and we are now racing for a cup." The pontoon is 18ft. in length, 5ft. beam, 11in. depth of hull amidships. She is furnished with a centerboard and draws 2½in. of water with four persons aboard. Her draft of water when carrying twelve persons will not exceed 6in. She is as stiff under sail as a catamaran, easily handled by one man or a boy, and cannot sink, as she has two air tanks running her entire length under the deck.—THOMAS CLAPHAM (Roslyn, L. I., Aug. 22).

DORCHESTER Y. C. CRUISE.—The following order has been issued for the Dorchester Y. C. cruise: ON BOARD FLAGSHIP ARETHUSA, Thursday, Aug. 25, 1887.—General Orders No. 1. The commodore hereby assumes command of the squadron. Charles L. Perrin is appointed fleet captain, and will be obeyed accordingly.—HENRY W. SAVAGE, Commodore. General Orders No. 2. Yachts will rendezvous off Thompson's Island, Saturday, Sept. 3, 1887, at 1:30 P. M. At 2:30 P. M. sharp a gun from the flagship will be the signal to proceed to Marblehead. Two club pennants are offered by the commodore as prizes to the two yachts of the squadron, respectively over and under 30ft. over all, first arriving off the Corinthian Y. C. house at Marblehead. A meeting of captains will be held on the flagship Saturday evening at 8:30 to consider the continuation of the cruise to Monday, Sept. 5, Labor day (a legal holiday). Attention is called to the rules contained on pages 54, 55 and 56 of the club book. By order of the commodore.—CHARLES L. PERRIN, Fleet Captain.

THISTLE.—On Monday Thistle took her first sail, going out to the Lightship. Since her arrival at New York her crew have rescued the crew of two capsized boats. Last week Captain Barr and his crew were given a dinner at Martinelli's by the Social Sons of Scotland. The story has been started in New York that Thistle has an arrangement for forcing air through perforations in her keel for the purpose of decreasing friction, one evening paper considering the yarn of sufficient importance to waste space upon.

HULL Y. C., OPEN REGATTA.—The open regatta on Aug. 27 brought out nearly 70 starters, the race being sailed in a moderate W. wind, with calms during the latter part. The winners were: First class, Shadow, c.b., Aglaia, k.; second class, Atalanta, c.b., Echo, k.; third class, Black Cloud, c.b., Witch, k.; fourth class, Tartar; fifth class, Wildfire; sixth class, Em Ell Eye.

HARLEM Y. C.—The postponed regatta of the Harlem Y. C. was sailed on Aug. 24 in all weather, from half a gale to a calm. The winners were: Class B, Peerless; Class C, Jennie Willis; Class D, Geo. B. Dean; Class E, Jessie; Class F, Wave; Class G, Happy Thought.

MATTAPOISETT REGATTA, AUG. 26.—The regatta for prizes given by the citizens of Mattapoisett was sailed on Aug. 26, with little wind, the winners were: First prize in first class, Climax, second Mollie; second class, Zillah first, Success second; third class, Thrump first, Alice second; fourth class, No Name first, Alice second.

COOPER'S POINT Y. C.—The ninth race of the Corinthian Y. C., of Cooper's Point, was sailed on Aug. 22, starting at 3:10 P. M., wind light E., afterward coming strong from S.E., making a beat home. Item finished at 4:37 and Wilkins at 4:41.

RHODE ISLAND Y. C.—The first open race of the Rhode Island Y. C. will be sailed on Sept. 6, starting off the club house. The classes include sloops and catboats from 18ft. and under up to 42ft. Shifting ballast is prohibited.

COHASSET Y. C.—The open race of the Cohasset Y. C., on Aug. 27, was hardly more than a drift, only one round being sailed. The winners were: First class, Hermes; second Class, Heron; third class, Champion.

QUINCY Y. C., 2d CHAMPIONSHIP, AUG. 26.—This race was sailed in a strong N.W. breeze, over courses of 8, 7 and 6 miles, the winners were: First class, Echo; second class, Diadem; third class, Wildfire.

BAR HARBOR REGATTA.—Owing to the non-attendance of racing yachts this regatta was a failure. Gitana sailed against Iroquois, beating her, and Adrienne defeated Hope Leslie.

STRANGER.—Mr. Geo. H. Warren will shortly leave Boston to take a permanent position in the English offices of the Warren line, and the cutter Stranger is offered for sale.

BEVERLY Y. C.—The Beverly Y. C. sailed a race on Aug. 27 off Monument Beach. Surprise won in 1st class, Mist in 2d and Nymph in 3d.

PHOTOS OF VOLUNTEER.—Mr. N. G. Stebbins, of Boston, has sent us some excellent views of Volunteer, both underway and in the drydock.

STEAM YACHTING.

STEAM LAUNCHES AND THE INSPECTION LAW.

Editor Forest and Stream:

Are steam launches subject to the United States inspection laws? This question interests all who own these boats, and, so far as I know, has not been discussed in these pages, all seeming to acquiesce in the ruling of inspectors that they are so liable. I think this is an error.

It has been held that the power to inspect vessels arises from the provision in the Constitution of the United States giving Congress power to regulate commerce between the States and the Indian tribes. This leaves commerce that is wholly internal subject to the regulation and control of the States. U. S. v. the Daniel Ball, 10 Wall., 557.

This statement means that the commerce must be exclusively internal, and that if the boat carries freight or passengers from another State, so as to make an interstate line of transportation, she will be liable.

The question has arisen most frequently in regard to ferryboats plying between points wholly within a State. The Bright Star was a ferryboat plying between Washington, Mo., and the opposite shore. She was libeled for not having complied with the inspection laws. Justice Miller, of the U. S. Supreme Court, discharged her, saying: "There is a commerce strictly internal to each State over which Congress has no control, although it may be carried on by means of the navigable waters of the United States, and Congress has in its legislation steadily kept this in view." U. S. v. the Bright Star, 1 Wool., 266.

The reasoning in this case has been acquiesced in and adopted in the following cases: The Brunswick, 6 Ben., 112; the Thomas Swan, 6 Ben., 42; the Seneca, 1 Biss., 371. Also in an unreported case in the Eastern District of Arkansas, Caldwell, J., where the captain of the ferryboat at Little Rock was discharged for not taking out a license. The same judge, holding court in the Western District, discharged the ferryboat at Fort Smith. Probably other similar cases have been decided.

The conclusion to be drawn is, that so long as a launch is kept wholly within the waters of a State, and does not so carry freight or passengers as to make herself a means of interstate commerce, she would not be subject to the navigation laws of the United States.

But Justice Miller, of the U. S. Supreme Court, took still another view of the question. The Mollie was libeled at Galveston for not complying with the inspection laws. Justice Bradley discharged her saying: "This is a libel against a small pleasure boat 29ft. long, 7ft. wide and without dock, propelled by a small steam engine with cylinder of 9in. stroke and 3¼in. diameter. It is run occasionally by the owner and the owner of the engine for their amusement on Buffalo Bayou below Houston. In my judgment this is not a vessel navigating the public waters of the United States, within the meaning of the steam inspection laws. Section 4,426 of the Revised Statutes enumerates the various kinds of small steam craft which were intended to be embraced within the law. It declares that the hull and boilers of every ferryboat, canal boat, yacht or other small craft of light character, propelled by steam, shall be inspected under the provisions of this title. And no such vessel shall be navigated without a licensed pilot. Now the vessel in question is neither a ferryboat, canal boat nor yacht. Does it belong to the added category of 'other small craft of light character?' These words must be interpreted upon the principle of *noscitur a sociis*. The last clause of the section shows that to be within the law a vessel must at least be one which will admit of the employment of a licensed engineer and a licensed pilot. It is not to be supposed that a mere pleasure skiff of the kind now under consideration, was intended to be embraced within the regulations of this law. The libel is dismissed." U.S. v. Steamer Mollie, 2 Woods, 331.

Until reversed by the Supreme Court, this decision allows a launch to be run anywhere in the United States, within a State or between them, and on the bays and coasts, without a license or inspection. CASUAL.

AMY, steam yacht, has been sold in England to an Italian yachtsman, the price being $75,000.

With its famous lake and even more famous Sunday-school assembly, Chautauqua county has never been considered unusually primitive, but if reports from that vicinity are to be believed, the march of civilization has not entirely obliterated all remnants of the original savage denizens. Nothing less formidable than bears has been discovered, not half-subdued and fugitive animals, but rampageous, man-eating brutes who have caused the utmost consternation. The locality is described as a deep, rocky gulf, twelve miles in length, not far from Mayville. The presence of something unusual was first discovered by the farmers, who lost a number of fine calves and sheep, but nothing definite was known until Mrs. Oscar Berringer appeared at Mayville in great haste, with the startling information that two cub bears had that morning driven her into the house. She said that she knew that there were wild bears in the wild rocky ledges near her home, and begged that a searching party might be sent out to verify her story. It does not appear that she was enabled to attract much attention, but a few days later when a young farmer started forth with his dinner pail and an empty basket to pick blackberries in the gulf, and did not return, the bear story seemed more plausible. Then the discovery of his dinner pail, clothing, and remnants of bones, and mangled flesh, gave a decided color to Mrs. Berringer's story and at the latest reports a party of hunters was being organized to visit the wilderness.—*Rochester Democrat-Chronicle.*

A reporter, browsing about between midnight and 1 o'clock yesterday morning, saw a man standing near one of the electric light posts on Washington street waving a long horse-whip back and forth high above his head. He had a fishhook on the end of the whip, to which was attached a moth miller, and he explained that with this bait he captured the bats that were foraging among the insects around the electric light. He said he got half a dollar apiece for them, and that he had already caught seven that night. He sold them to the taxidermists, and said that he could get more for them in Boston. He spoke of hiring a man to help him, as he could catch enough then to pay him for shipping them to Boston. He caught two while the reporter remained to watch the operation, and he picked them off the hook and put them in a bag that he carried slung across his shoulder.—*Providence Journal.*

Round Section Bamboo Rods.

Having been the pioneers in the manufacture and introduction of Section Bamboo Rods, we have alway taken great pride in securing and perfecting every improvement in order to maintain our position as the makers o the very best rods. Knowing not only theoretically, but also by long experience, that a properly made round rod is the only absolutely perfect rod, we have invariably refused, and still do refuse, to put our name to any but our "Best" round section rods. While our prices for these round rods are only a trifle more than the prices asked by any other makers, the rods are widely known to be *incomparably superior* and *guaranteed* in the most libera l manner.

We have just finished and put on the market a *new caliber* round rod, 10 feet long, and weighing with the solid reel seat only 7 ounces. This rod has stood the most severe tests, and found capable of killing the largest black bass. The many expert anglers who have handled this rod pronounce it the *best balanced and most perfect rod* in the market.

ABBEY & IMBRIE,
Manufacturers of every description of
Fine Fishing Tackle.

CHAMBERLIN CARTRIDGES!

The Only Genuine Machine-Loaded Cartridge in the Market.

UNEQUALLED IN QUALITY AND CONVENIENCE.

The superior quality of these cartridges is not the result of chance, but arises from the fact that the Chamberlin Cartridge Machine is so constructed that every charge of powder and shot is measured with mechanical accuracy, and the wads, which are made especially for use in these machines, are of uniform thickness, and placed upon the powder and shot with a suitable and unvarying pressure, an advantage which cannot be secured by any other method of loading cartridges. Every trap shooter understands the advantages of uniform velocity of shot in wing shooting; this cannot be obtained except the charges of powder and shot are alike in each cartridge, and the wadding placed upon each with the same pressure. This is accomplished in the Chamberlin Machine by means of graduated rammers, which are adjustable to any desired pressure, from five pounds to one hundred pounds. Thorough experiments have been made by which it is found that thirty-five pounds' pressure upon the powder wads gives the best results in Black Powder cartridges, and seventy-five pounds the best results in Wood Powder cartridges. Previous to the invention of the Chamberlin Cartridge Machine, experiments in this direction could not be made, for the reason that no means for ascertaining the pressure that was applied to the wads had been devised. A blow of the mallet was an unknown quantity, and no two blows were alike, and the same can be said of hand pressure upon the rammer.

The following *REMARKABLE SCORES* were made with Chamberlin Cartridges: Match at Cincinnati, Ohio, June 20. Conditions, 50 singles and 25 doubles:

J. R. Stice	94	out of possible	100
B. Teiple	90	"	"	100
McDuff	88	"	"	100
A. Meaders	86	"	"	100

On July 11, same place and conditions:

J. R. Stice	broke 90	out of possible	100
McDuff	" 90	"	"	100
A. Meaders	" 87	"	"	100

This, we believe, is the highest average ever made at 700 clay-pigeons, one-half being doubles, and shows the superiority and uniformity of the Chamberlin Machine-Loaded Cartridges.

PRICES OF CHAMBERLIN CARTRIDGES.

12-Gauge, Club or Climax Shells, loaded 3 1-4 drams powder, 1 1-8 oz. shot,	Per 100, $2.50
With 3 1-2 drams powder,	" 2.60
10-Gauge, Club or Climax Shells, loaded 4 1-4 drams powder, 1 1-8 or 1 1-4 shot,	" 2.75
With 4 1-2 drams powder,	" 2.85

Same loads Wood Powder, 12-Gauge, per 100, $3.50; 10-Gauge, per 100, $4.00.
Loads for Trap Shooting, " " 2.60; " " 2.85.

Send for Illustrated Price List. **Liberal Discount to the Trade.**

In order to secure the lowest cost of transportation, and insure speedy delivery, factories have been established to supply each locality as follows:

The Atlantic Ammunition Co., 291 Broadway, New York,
Supplies the New England States, New York, New Jersey, East Pennsylvania, Delaware, Maryland, District of Columbia, Virginia, North and South Carolina.

The Chamberlin Cartridge Co., Cleveland, O.,
Supplies all the Middle and Southern States not elsewhere named.

The Western Arms & Cartridge Co., 108 Madison Street, Chicago, Ill.,
Supplies Illinois, Iowa, Wisconsin, Minnesota, Nebraska and Dakota.

Selby Smelting and Lead Co., San Francisco, Cal.,
Supplies the Pacific Coast and Colorado, Arizona, New Mexico and Wyoming Territories.

Trade in Georgia and Florida
May be supplied either from New York or Cleveland.

All the above named companies operate Chamberlin machines, under the Chamberlin patents. **Beware of all imitations.** "Chamberlin Cartridges" printed on all our labels.

Blue Rock Pigeons and Traps
Supplied from all above named depots.

SPORTSMAN'S LIBRARY.

Large crown 8vo, 380 pages and 16 large folding plates.

Price, Postpaid, $3.50.

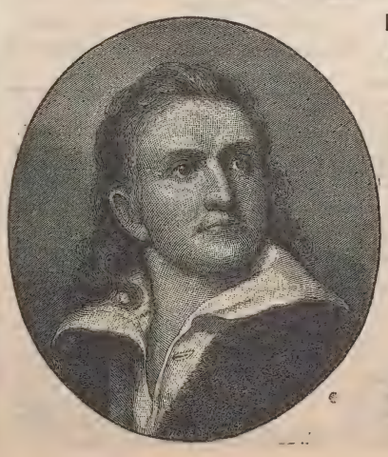
FOREST AND STREAM PUBLISHING CO.,
39 Park Row, New York.

WOODCRAFT.

By "NESSMUK."

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories, anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

FOREST AND STREAM PUBLISHING CO., 39 Park Row, New York.



"Forest and Stream" Fables.

BY AWAHSOOSE.

1. The Puppies Who Didn't Know It Was Loaded.
2. The Wise and Foolish Pike.
3. The Fox and His Guests.
4. The Foolish Fish.
5. The Robin and the Pewee.
6. The Unlucky Bass.
7. The Shrike and the Hawk.

A series of seven fables in prose and to every one a picture. All of them have pith and point best appreciated by anglers and sportsmen, but not a one of them is without a moral for the wise and foolish of the world in general. Price 10 cents. For sale by all newsdealers.

The Forest Waters the Farm;

OR,

The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.

Translated by

REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

FOREST AND STREAM PUBLISHING CO.,

ANSWERS TO CORRESPONDENTS.

CAMPING OUT.

"CAMPING out" is for the most part becoming merely a name for moving out of one's permanent habitation and dwelling for a few weeks in a well-built lodge, smaller, perhaps, than one's home, but as comfortable and almost as convenient; with tables, chairs and crockery, carpets and curtains, beds with sheets and blankets on real bedsteads, a stove and its full outfit of cooking utensils, wherefrom meals are served in the regular ways of civilization. And so, living in nearly the same fashion of his ordinary life, except that he wears a flannel shirt and a slouch hat and perhaps fishes a little, and loafs more than is his ordinary custom, our "camper" imagines that he is getting quite close to the primitive ways of hunters and trappers; that he is living their life with nothing lacking but the rough edges, which he has ingeniously smoothed away. But he is mistaken. In ridding himself of some of its discomforts, he has lost a great deal of the best of real camp life; the spice of small adventure, and the woodsy flavor that its half-hardships and makeshift appliances give it. If one sleeps a little cold under his one blanket on his bed of evergreen twigs, though he does not take cold, he realizes in some degree the discomfort of Boone's bivouac when he cuddled beside his hounds to keep from freezing—and feels slightly heroic. His slumbers are seasoned with dreams of the wild woods, as the balsamic perfume of his couch steals into his nostrils; his companions' snores invade his drowsy senses as the growl of bears, and the thunderous whir of grouse bursting out of untrodden thickets. When he awakes in the gray of early morning he finds that the few hours of sleep have wrought a miracle of rest, and he feels himself nearer to nature when he washes his face in the brook, than when he rinses off his sleepiness in bowl or basin. The water of the spring is colder and has a finer flavor when he drinks it from a birch bark cup of his own making. Tea made in a frying-pan has an aroma never known to such poor mortals as brew their tea in a teapot, and no mill ever ground such coffee as that which is tied up in a rag and pounded with a stone or hatchet-head. A sharpened stick for a fork gives a zest to the bit of pork "frizzled" on as rude a spit and plattered on a clean chip or sheet of bark, and no fish was ever more toothsome than when broiled on a gridiron improvised of green wands, or roasted Indian fashion, in a cleft stick.

What can make amends for the loss of the camp-fire, with innumerable pictures glowing and shifting in its heart, and conjuring strange shapes out of the surrounding gloom, and suggesting unseen mysteries that the circle of darkness holds behind its rim?

How are the wells of conversation to be thawed out by a black stove, so that tales of hunters' and fishers' craft and adventure shall flow till the measure of man's belief is overrun? How is the congenial spark of true companionship to be kindled when people brood around a stove and light their pipes with matches, and not with coals snatched out of the camp-fire's edge, or with twigs that burn briefly with baffling flame?

But it will not be long before it will be impossible to get a taste of real camping without taking long and expensive journeys, for every available rod of lake shore and river bank is being taken up and made populous with so-called camps, and the comfortable freedom and seclusion of a real camp are made impossible there. One desiring that might better pitch his tent in the back woodlot of a farm than in any such popular resort. This mismaned camping out has become a fashion which seems likely to last till the shores are as thronged as the towns, and the woods are spoiled for the real campers, whom it is possible to imagine seeking in the summers of the future a seclusion in the cities that the forests and streams no longer can give them. Let those who can study the delightful and practical pages of "Woodcraft," and go while they may to practice its lessons and get a taste of real camp life.

Yet, let it be understood that make-believe camping is better than no camping. It cannot but bring people into more intimate relations with nature than they would be if they stayed at home, and so to better acquaintance with and greater interest in the mother who deals so impartially with all her children.

SITKA AS A SUMMER RESORT.

THE old Russian town of Sitka, in Alaska, has already acquired celebrity as a summer resort, and the stream of travel thitherward increases apace. A splendid steamer, the finest on the Pacific coast, now makes fortnightly trips in twelve days, and table luxuries are supplied now which were lacking a year or more ago. Last year a large number of public officials, including the Chief Justice of the United States Supreme Court, made the excursion, moved by curiosity to learn the real truth regarding our new Territory and its wants and capabilities, and also incited by the multiplied descriptions and photographs of its marvelous scenery. This season the miscellaneous rush of tourists has not only been much increased, but we find that several of our Members of Congress have been prompted to make personal investigations of a problem which has long been before our National Legislature. We hope, therefore, from what we are sure they must report, that Alaska will next winter receive that legislation which she has so long prayed for, and that her political and industrial disabilities will be removed.

Those who visit Sitka in 1887 find very much of the old rust and rubbish removed. Eyesores which disfigured the town for almost twenty years have disappeared. The quaint and very picturesque Greek Church has been refurbished within and without, at a stated cost of $15,000; the public buildings have been restored or at least partially repaired; the old Russian bath houses at the neighboring hot springs have been replaced, and a sanitarium established; the Indian River Park has been embellished; the ascent of the extinct volcano of Mt. Edgecumb has been made easy; excursion steamboats run to the Lake Mountain Mines and ply among the islands; balls and hops on board the mail steamers and naval vessels, as well as ashore, are of regular occurrence, and the Indian ceremonies and performances add to the interest and gaiety of the passing season.

Last year several yachting parties from San Francisco, Chicago and Seattle passed very agreeable weeks and months at the old Russian capital, and every monthly steamer brought artists of both sexes to transfer the inimitable scenery of the archipelago to canvas and camera. Some photographers obtained complete sets of the most picturesque and interesting places along the entire coast. On the whole, Sitka is a lively and interesting place, and those who have read Mr. Hallock's graphic work entitled "Our New Alaska" will feel assured that none who make the excursion to that far-off locality will be disappointed or regret the journey. The trout begin to run by the middle of July and are at their best in the month of August. Some shooting of bay birds and deer may be obtained.

YACHTS AS LIFE SAVERS.

IT SPEAKS well for the seagoing powers of the Thistle, whatever her success as a competitor for the Cup may be, that she went safely through a sea in which a large steamer foundered, and further than this, was able to save the crew of the steamer. It has already been told how, on her passage from the Clyde to the South Coast, she rescued the captain and crew of the steamer Harkaway, and she now carries in her cabin a hearty testimonial of the gratitude of those she saved. Her companion, Mohican, owned by two of the Thistle syndicate, and now in New York that her owners may witness the races, promises to rival Thistle's achievements, as she too was the means of rescuing many lives on her passage over.

Since her arrival in American waters, Thistle's crew have hauled four more persons from the water who had capsized in sail boats. Thus far these two yachts have been the direct means of saving over thirty lives, a record that seldom falls to the lot of pleasure craft. In both cases at sea the rescue was no child's play, but meant hours of hard and dangerous work against the mighty power of sea and gale, and that success finally rewarded the rescuers was due to the skill and bravery with which the long combat for helpless lives was conducted. Thistle and her crew have already made many friends in America, but none will pray more heartily for her success in the coming races than the poor mariners who owe their lives to Scotch seamanship and courage.

SNAP SHOTS.

THE ethics of bear hunting are again under discussion; and in another column a correspondent, who bases his comments upon an article in the current *Scribner's*, written by the Rev. W. S. Rainsford, questions whether to first trap and then shoot grizzly bears can be reckoned legitimate sport. Quite apart from this is the question raised by a writer in a New York daily, referring to the same magazine article, who dubs the rector's bear hunting "applied Christianity," and asks whether a minister of the Gospel can consistently hunt grizzly bears. At this stage of the world's development he can. By and by, when the lion gets ready to lie down with the lamb, it may be different, and when that time comes, the sentimentalists, who are unable to harmonize applied Christianity with the killing of large game, can safely hug to their bosoms the sweet-tempered, edentulous and anonycous grizzlies of that millennial period.

The salmon of the Connecticut River are a bone of contention for Connecticut and Massachusetts. The fishermen of Massachusetts complain that the fishermen of Connecticut gobble up all the salmon on their way up the river, so effectually netting them in the lower part of the stream that none are left for the upper waters. This condition of affairs has its counterpart in the salmon fisheries of the Rhine. The dwellers on that river and its tributaries, particularly those of Switzerland, complain of the rapidly diminishing salmon supply. The rewards of salmon fishing are decreasing annually, and the fish threaten soon to be extinct. It appears, however, that the true reason why the Germans and the Swiss get no salmon is not because there are no salmon in the Rhine, but because the thrifty Dutch, who control the mouths of the river, net the fish for themselves. It is the story of the Connecticut over again.

Here is the New York *Evening Post* complaining that because of railroad delinquincies its subscribers who are summering in the Adirondacks cannot get the paper on the day after publication, and further, calling the express companies to account because baskets of fruit are not expeditiously sent through to their destination in the North Woods. And yet there was a time when men were wont to go to the Adirondacks as to a far country, and could catch fish and hunt deer with perfect satisfaction, even though they did not get their daily papers on time nor pamper their palates with city market delicacies. Truly these be evil days.

The Sportsman Tourist.

Address all communications to the Forest and Stream Pub. Co

A TWO WEEKS' OUTING.—II.

"MUNISING!" 'Twas the soft voice of the conductor which roused me from my dreams, and soon the train retreated in a cloud of dust, while we arranged the disposition of our outfit with the courteous officials. "Well," said Konan, "this 'ere 's about as fur north 's anybody c'd get, I reckon."

Strolling toward Old Munising we met a specimen of the French Canadian, with whom we were destined to have much intercourse. Like most of his class he was short and sturdy, and he expressed his readiness to convey us for a consideration to any desired point, being careful, meanwhile, to extol the merits of himself and team at the expense of a competitor who lived hard by.

While seeking ineffectually for needed information respecting the streams of that region, we took lodgings with this man, for there was no hotel. He had a "settin'-room," in which was a stuffed eagle. On the table lay a Roman Catholic book of devotion, a volume of Bob Ingersoll, another of Wordsworth, and two or three more oddly assorted works. In our bedroom was a bed with many occupants, and I remember that I slept upon the floor.

The stream which we had planned to follow to its mouth flows past Munising, and is known as Stuck Creek. It has trout and good ones, and in many places a fly may be cast with little difficulty. We, however, eventually learned that our plan was impracticable, owing to the existence of extensive swamps and morasses, which at times almost hide the creek from view.

Two other streams, the Big and Little Indian, lay, the first about twelve miles to the west, the other four miles nearer. "The Big Injun's our best hold," said Konan; and in the morning our host attached his two vaunted steeds to a dilapidated lumber wagon and brought them to the door.

"Git op, Dan-dee," was now the cry; accompanied with a few choice objurgations in a Canadian patois, which with the aid of a buckskin thong liberally diffused over the quarters of the horses, induced them eventually to take us to the "Big Indian." Our way led for a time through a tract of beech and maple timber, afterward through unattractive stretches of "burnt land," where blackened trunks of trees shot up amid a wind-swept waste of swampy grass, or sandy plains, scantily clothed with herbage; and lastly into a forest of yellow pine. The only living animal seen was a skunk, but the carcass of a deer hung from a tree near where we crossed the Little Indian.

Arriving at our destination, we found to our discomfiture that a gang of lumbermen had just built a substantial dam across the river. Its gate was shut, and as we found that for five miles down stream they had felled trees into the river, it was out of the question to attempt its passage. Some hunters whom we met were preparing to leave the neighborhood for the foregoing reasons. We were hospitably entertained by the lumbermen, and, uncertain how best to choose our future course, drove back to the Little Indian, where we camped, intending to test its capabilities. This we did next day, for about six miles; and at length found our further progress barred by obstructions similar to those in Stuck Creek. There were no fish, and but two or three ducks were seen.

We camped near a road over which hunters hauled their game to market, and saw many deer, but all of them were dead. Dead deer, if not seen everywhere, were so numerous that we were soon wearied of the sight. The forequarters were seldom saved. The deer were usually hunted by means of a boat and head light, along the shores of some of the numerous ponds or watercourses. During the four days we remained in that part of the country, we easily counted fifty deer hauled to the railroad station.

It is likely that the recent changes in the game laws of Michigan and the appointment of game wardens may work important changes in the methods of the hunters, and tend to diminish the slaughter of the deer, which usually keep close in the day time, and the density of the swamps to which they resort renders still-hunting very difficult.

Little or no attention seems to have been paid to the game laws thereabout, and though so many deer were slain, there were so many hunters that it seemed, from a business point of view, an unprofitable occupation. The hindquarters, with the skin, netted the hunters about six or seven cents a pound after paying, as the most of them did, for hauling the meat to the railroad, where it brought about eleven cents for shipment.

No hounds are permitted by the hunters to run in these forests, which consist mainly of high, sandy tracts, timbered with Norway pine. Dense swamps of cedar and tamarack are common, and occasionally a ridge of hard wood is found, with beech and maple growth.

These pine forests are in appearance much like those of Florida, and as in that State, they are interspersed with many small sheets of water, which have rarely any name save such as the lumberers have bestowed—East Lake, West Lake and the like. Names of Indian derivation are rarely heard, and I think that the aboriginal inhabitants confined their attentions for the most part to the larger of the streams. The trees visible from our camp were hemlock, pine, tamarack, spruce and alder; and there were near us raspberry and blueberry bushes and the trailing arbutus, over which hovered the first and only humming bird we saw upon the trip. Few birds were noticed in this part of the country.

Rising early next morning, Konan went to watch a deer lick, but unsuccessfully; and the black flies and mosquitoes were, as he said, fearful. While waiting for the team, for which we had sent a summons, appeared in our path a tweed-coated and helmeted person, with a $500 shotgun under his arm, and we remembered having noticed him at the station. He had strolled on in advance of his wagon, which had broken down, and was followed by a rat-tailed pointer which, in running about the marsh, flushed a sandpiper; and as the bird flew past, it was followed by a double shot from the gun of the stranger. The bird, seemingly unaware that mischief was intended, settled on the bank of the stream about thirty yards distant. "Damme eyes," began the fowler; but stayed his speech as Konan, grimly smiling, raised his rifle, and at the report the poor bird dropped headless into the water.

"By Jove, but that's a devilish good shot, donchernaw," said the man of tweed, surprised for the moment out of a certain reserve which we had previously noted.

"I hadn't shot off my gun before, sence I left hum," replied Konan, "'n' eenamost forgot how she was sighted."

"Git up, Dandy," here sounded squeakily from the forest. It was the voice of the teamster, in this case a lad about twelve years old, the father having gone to Au Train as delegate to a political convention. On our way back to Munising, we observed that the black flies did not light on this boy's unprotected face, although Konan and myself could only repel their attacks by the use of some "punkie dope."

Archy's wife had gone to Au Train to lure him home from the seductions of the convention as best she might; and about four o'clock he made his appearance, full of whisky, and running over with what Konan termed "dum canuck gabble."

"Bah golly," he exclaimed, "I drink more like two gallon wis-kee. Zat damn shereef up to Au Train. I knock him more like ten foot."

We had arranged that this man should drive us to Jeromeville, from which place we could best reach Indian River; but I had some misgivings as to his fitness for the trip, and had I been alone, I should not have risked the experiment; but the broad shoulders of Konan loomed like a tower of strength in the fading light, and off, at length, we drove.

We were delayed for half an hour or so at a small "saloon" just outside the hamlet, where the Frenchman laid in more whisky, but at length we got him started, and when fairly on the road, he uplifted his voice in a song of the sad sea waves, which as nearly as I can remember, ran somewhat after this style:

"W'en 'e scow bus' up on 'e Lac St. Pierre,
An' 'e cappen's swum away,
An' leave 'e cook to do mas' lash fas',
De cook he's gon' to pray.
(Dat cook s'appelle Rosa).

"'N' he cut dat lash wiz a couteau croche,
'N' de scow he strike ker-bim,
'N' de cook he stan' in de larbo'd gang,
'N' he fix he feet for swim.

"Den 'e wave he wash wiz a swish and swash,
'N' 'e cook he lif' he toe,
He clear de wave 'n 'e water grave,
'N' 'e lan' on 'e sandy sho'."

"Smart cook, that 'ere," observed Konan. "What d'yer say his name was, Archy?"

"R-r-r-Rosa. Git op, Dan-dee," replied Archy.

"Rosa—why that's a gal's name, ain't it?"

"Oui-oui, sar, did'n' I tell you he's a gal?"

"Darn them Canucks," muttered Konan, "they don't know 'he' from 'she.'"

"Now," said Archy, "where my bot-tel? You boy—w'at you do my bot-tel? Ah-h, here—here he are. Luck, zhontilmens. I d-r-r-rav you Jer-r-rome-ville in gr-r-reat hor-ree, mais but we now go w'at you call circom—w'at ze dev'—w'at you call zat?—oh, circombendibus. We dr-r-rav two mahl for git one quartare. Git op, Dandee. Zat on accoun' of ze r-r-railr-r-road. You boy, w'at you do my bot-tel?"

So our driver maundered on, while the shades of night fell fast, and the bottle's gurgle punctuated his words.

The road crossed the railroad track in several places, and some of these were bridged across broad ditches with a system of loose poles, dangerous at best, but in the night and with a drunken driver, scarcely to be attempted. Konan, an accomplished whip, now took the reins into his own hands, while Archy and the boy alighted and walked the track, in hopes thereby to dispel in part the fumes of the villainous whisky.

I was not quite well at the time of leaving home, and had been anxious to get fairly into camp, which I was sure would set me right; but circumstances had not favored me, and the jolting of the wagon over the corduroy roads was hard to bear.

We spent the night near Jeromeville, in a log building owned by a Mrs. Sawyer, and the next morning drove fourteen miles further to the Big Indian River, where we camped for two days, and I began to feel like myself again.

Here we caught a few small trout in the main river, which is a fine, clear, rapid stream, the current, as we judged, maintaining a nearly uniform speed of about four miles an hour.

The river is about 50ft. wide, its channel deeply cut through the high, sandy plains, which, as elsewhere on our road, are mainly timbered with Norway pines. There are several small lakes hereabout, said to contain bass, pickerel, etc. On our way hither, Konan had fired at a deer he had seen, but which for a wonder was too quick for him; and had snipped the head from a ruffed grouse which was sitting upon a tree by the roadside.

We were now near the supply road from Jeromeville to Manistique; and several persons passed the camp during our stay. One of these had a watch chain of real gold, and carried a "sporting" Winchester express.

Finding that he took FOREST AND STREAM, I became interested in his conversation, and we compared maps. I had found no map of this region which at all compared in accuracy with those obtained from the officials of the D., M. & M. Railroad. Our new acquaintance knew the woods quite well, and gave us much information. He also informed us that Indian Lake was a historic lake, and that upon its banks stood an old block house, built by Père Marquette, as also a portion of his church; and that certain magic springs of fearful repute among the Indians were near the shores of this lake. One of these in particular, they pronounced "wicki-nishi," and never presumed to gaze thereon.

Well, one morning we slid the Otter down the bank and into the water; she switched her tail in farewell and we were off.

At this camp we had seen one Cooper's hawk, also a woodchuck, and had heard one owl and a lynx. We floated down for a time and I landed to fish for trout, but unsuccessfully. Walking along the bank I soon found myself in a gloomy glen, where had lately been enacted a tragedy. The forequarters of a deer were left to tell the tale.

Our journey was diversified by the frequent necessity of cutting out logs, or hauling over obstructions in river, many of which had purposely been placed by lu ers to serve as bridges. They became less frequent a advanced.

The current ran at a nearly uniform velocity of haps four miles an hour. The navigation of the riv easy enough to practiced hands, but a greenhorn w have a chance to upset in dodging fallen trees.

Deer tracks were numerous, and those of bears w often seen along the shores and the face of the sa bluffs, where they sometimes showed like the track barefoot boys.

I seldom take canned eatables into the woods, bu this trip I had brought a can of tomatoes and another corned beef, which last, by the way, remained unope during the cruise. When we camped at evening, I as "Konan, how do you like your toma oes cooked?"

"Never eat 'em," he replied, while he proceeded to the feathers from a spruce grouse he had shot near last camp.

"That's a pity," I said, "for I don't care about myself. I put in a can at the last moment, thinking you might like them for a change. We've carried far enough, anyhow."

I then proceeded to open the can, and essayed the co ery of its contents, but with very different results. S ing along the stream some bushes of the tree-cranb (*Viburnum opulus*), laden with their scarlet fruitage held up the empty tomato can and said: "Konan, might if we liked, have some cranberry sauce."

"Shore enough," replied the tall woodsman, str away in the direction I had indicated, and in a few ments the tomato can, pressed again into service, filled with berries, was simmering over the fire.

After supper, Konan strolled away with his rifle, w I proceeded to sketch the surroundings of our camp, a which I tasted the cranberry sauce, which had now gr cool. Looking up from the experiment as Konan proached, I said with some dissatisfaction: "Th about the meanest thing I've tasted in these woods."

"That so?" said Konan, "I shouldn't hev though was much wus 'n them termaters you was a stew on so long, 'n then hed ter hea e away the most on arter all."

I replied with some tinge of asperity, that I had before attempted to prepare for the palate the escul under consideration, and added that were my own clination to be consulted, it would be long en before I again made a fool of myself in that particular.

"Well," said Konan, "I never tried to cook no b'ry sass afore 's I know of. What's the matter on and with the aid of a spoon he at once "samp ed" preparation. Looking up, and holding aloft the s with the light of inspiration gleaming in his eye, he claimed: "I declare, I don't believe I've put the darn mite of sugar into it."

"Well, you'd better," said I, and soon a new batch berries was simmering in the can, which when compl was pronounced by Konan to be "fust chop." It certainly was excellent, and during the remainder of trip we had all the cranberry sauce we wanted, but venison of our own shooting with which to eat it. saw but one deer along the river, and that was out sight in one bound.

Near this camp we saw a wolf track, and as there not now many of these animals left hereaway, it set thinking of old times.

"Konan," said I, "were you in the crowd the time ran the last wolf on the Gasconade?"

"No, I warn't. I was over to Rolla that time. I hev on't, though. You mean the time when old 'Peasoup' a duckin'?"

It was down in Missouri, just after the war, and th or four of us had one night ridden up to old McKa plantation and secured sleeping room upon the flo One of our party was a big, black-bearded Breton, wh I will call Eliduc. He had been a bugler in the ar and had with him a particularly noisy specimen of favorite instrument.

We became much interested in the after-supper ta about a large wolf, which had killed some young ste for the farmer about that time. No such creature h been seen for years in that region, and while we w talking one of the boys came in, bringing fresh new his depredations. It appeared that he was in the habit frequenting a small valley, into which led several de ravines and where was good pasture for the stock; an Eliduc, who had had some experience in "riding" wol proposed that we form a party and attempt his capt Some of the neighbors agreed to join the hunt and bri their dogs.

The following morning found us in the saddle at da break, armed in various fashion. Eliduc, who was moving spirit in the affair, cheerily slung his bugle, a shaking a heavy trace-chain which he carried in hand, said: "That's the thing for punish wolf."

There was a motly collection of dogs, mostly cu among which, however, were conspicuous two lar brindled hounds, of no particular breed, but evident possessing strength and courage. Old McKay undert the duty of placing the hunters on the stands like best give them a chance at the wolf, and gave his boys dir tions concerning the management of the dogs.

Being unacquainted with the country, and not believi that there would be any sport, I felt little interest in proceedings, and rode along with one of the farmers w took a different course from the main body of huntsm After riding a short distance, he turned back for his h lets, which he had left upon the table at McKay's, an rode on alone, uncertain after a little time in whi direction to look for the party. Soon, however, I hea a shot in the distance, followed by the deep baying o hound. Then came the keen ring of a bugle blast, s ceeded by a chorus of barks and whoops, mingled wi the deeper cry of the hounds.

I now spurred on to join the hunt, but was soon thro out by a large wet marsh. On the opposite side of t the chorus thickened, and soon near the summit of a l appeared the wolf, running his best, while the pack close behind, and the leafless boughs of the copp crashed, where Eliduc came with his whirling chain o thundered down the slope, riding over two or three do as he held on in his wild career. His course lay past little wood which concealed from his view what I no saw plainly as I reached the brow of the hill up which rode, the bluish gleam of the Gasconade as it sparkled the morning's sun.

The river ran between high banks, which completely concealed it from the hunter, as quite oblivious of the trap into which he was running, or of the fact that his garments, rent by the boughs in his reckless ride, streamed out like pennants in his rear, he still spurred on, keeping time to his horse's tramp with the clash of his whirling chain.

The other horseman, close upon his track, shouted to him to change his course, while I waved my hat and yelled, and pelted on in the vain hope to cut him off, but all without avail.

Up the last slope went wolf, hounds and horseman, only to find too late that it terminated in a bluff some 20ft. in height, beneath which swirled the cold current of the stream in a deep, dark pool.

So hot was the chase that not for an instant could the quarry pause. Over he went, and after him followed hounds and horseman, whose cries were stifled in an instant by the waves; and as, a moment later, I came upon the scene, the horse was swimming for the further shore with Eliduc clinging to his mane, while white tusks clashed in the crimsoned foam, where hounds and wolf went down. A bullet from the rifle of one of the hunters ended the struggles of the wolf, which had already been wounded by the first shot I had heard, or the chase might have terminated less successfully. As it was his was the only life lost on this occasion, but many were the jokes cut at the expense of the Frenchman, who swore point-blank in several languages that he would never again undertake to lead a hunt where he knew nothing of the country.

Some heads of the sturgeon which we saw upon the banks of the river reminded us that the fish were formerly so abundant in this stream that the Indians named it Sturgeon River (*Nahma Sebe* in their language). What with fish, deers, bears and maple sugar, all in abundance, the natives must have had pretty fair living in the northern country in their day; and with wild rice and other vegetables, they had really a good variety of food. While we talked of these and kindred subjects, Konan was making bean soup. It took so long for the beans to cook that he got cross and started out for venison, while I took a different route and saw bear sign and woodcock borings. Toward evening the hunter returned unsuccessful, whereat I rejoiced, for I failed to see what use we could make of the greater part of a deer. Still, I suppose that if I had "jumped" one, I might have shot at it. Queer, don't you think so?

The next day our route led for a few miles through a tamarack swamp, succeeded by an elm flat, after which we passed a good sized stream flowing in from the west, supposed to be "Big Murphy Creek." Trout are taken in that river, but the dense cedar swamps render the fishing toilsome in the extreme. From this to Indian Lake stretch miles of tamarack and cedar swamps, with hardly a dry spot large enough to lunch upon. We saw a few ducks, one sparrow hawk, and a large red-headed woodpecker, besides many muskrats. I could have killed some of these with my paddle.

Signs of bear, deer, and otter were abundant. About noon we reached Indian Lake. There seemed no place dry enough to land, and the wind blew so strongly into the mouth of the river that we waited in the boat for several hours until it lulled. The river here is deeper, but apparently no wider than where we landed our boat. It is one of the most crooked streams I know, and I think that in this respect it beats the Cupsuptuc. No bright, clear trout brooks are seen along its course, but instead, sloughs and sluggish bayous are often met with.

It is my belief that in twenty-five years there will be more deer in these forests than at present. The dense swamps furnish good cover, and when the lumberers have cleared the country of its more valuable timber there will be nothing left likely to attract settlers. The supply roads will fall into disuse and become in many cases impassable, so that a deer killed at a distance from the railroad cannot be easily hauled out for shipment. Besides, the effect of the recent prosecutions by the game wardens will have a good effect.

Indian Lake is about four by six miles in extent. It is marshy and muddy to the north and west, where many ducks were seen. On the south and east the bottom is of limestone rock. There are pickerel and wall-eyed pike here, but the Indians gill-net them, and they are not plentiful.

"Big Lake," said Konan, "but not as big as Lake Michigan."

"No, but it's just as wet," said I, for we were still lying, about 4 P. M., in the mouth of the river, with no dry spot in the neighborhood; and the wind still blowing half a gale, made the prospect of a dry camp for the night seem rather remote. In about an hour, however, the wind lulled and we pushed out into the lake, from which arose many ducks as we left the reedy shores. We held straight for the only two buildings in sight, which stood on the southeastern shore and about four miles distant. They were owned by Indians, who were not at home when we pulled up our boat upon the rocky shore and proceeded to take an observation. We pitched our tent in a little grove, and thoroughly wearied as we were, cooked and ate a meal which was unanimously pronounced a "perfect stunner" in its way.

Not far distant was Père Marquette's old blockhouse, of which we had been told, and alone I strolled in its direction.

The moon shone dimly through its cloudy veil as I neared the heavy ruin—not truly so-called—for though through roofless walls and yawning portal the moonbeams shed a dim, uncertain light, yet through the storms of the centuries the grim old fortress well had held its own, and in my mind's eye there floated still against the darkening skies the banner blazoned with the cross—the lily flag of France; while the stern sentinels, with mail and morion, pike and caliver, paced steadily below their nightly round. Is that a firefly or the lighted linstock of the cannoneer? I paused, and breathless waited for the "Qui va là?"

Nearing the ancient fortalice, through chink and shot hole came the faint glimmer of the stars, but where those walls, crenelled for musketry, had spouted forth their flame, and rang to the war cries of their stout defenders, while plume and pennon waved amid the smoke, all now was hushed, the cannon's voice was mute, and birchen branches waved athward the sky.

Musing, I turned away, and silent sought the shelter of my tent. Whether through the influence of the storied past, or of the astounding supper I had eaten, is not for me to say, but through my dreams that night careered on neighing steeds the steel-clad warriors of another age. Rehabilitated as by magic, the ancient block house once more stood forth in its pristine strength, and within its massive walls, Des Monts and Frontenac dispensed justice at one end, and Père Marquette religion at the other, the whole concluding with a grand ball, in which Cabeça de la Vaca danced a minuet with Pocahontas, and Ponce de Leon a saraband with the Queen of the Cannibal Islands.

Suddenly, Marquette sprang to his feet, and flinging his calotte in the face of Pocahontas, shouted, "Caw, caw, caw."

"Cuss that crow," exclaimed Konan, "where's my rifle?"

Away, on the wings of the carrion bird, fled the wild visions of the summer's night. Sword-belted knights and black-robed priests were relegated to their misty realms as Konan said: "Come, it's time to wake up. I've been up to the old block house, and it ain't no block house after all. 'Taint more'n thirty year old, 'n' them portholes along the sides was jest for the 'overlay.'"

Sadly I revisited the scene of the orgies of my dream, and found it even so. While attempting a sketch of the building, the wind arose, and hastily stowing the cargo, we started for the river, singing the while a song of the lakemen, with the refrain:

"Watch her, catch her.
Jump up 'n' a ju-ba-ju.
Give her the sheet and let her howl,
We're the boys kin put 'er through."

It was tight work, with a heavy sea on our starboard bow, but we weathered it and made the river, passing on the way whatever might have remained of Marquette's church, which we had not courage to examine. We saw, however, on the bank of the river, a Yankee cheese-box—this also had no doubt belonged to Père Marquette. We soon reached the dam, two miles from the village of Manistique, and as the river below was blocked by logs, we here drew out our boat. Just above we came upon the carcass of a deer, from which only the head and skin had been removed. I took a bath, walked to the village, and sent a team for the boat. The more pretentious among the hotels was named the Ossawinamakee, but the name looked so forbidding that we chose another.

Next morning at 7 we took the steamer Van Raalte for Petoskey. Manistique is a typical lumbering town, and belongs—or most of it—to the Chicago Lumbering Company. This concern would seem, by all accounts, to lose no opportunity of making charges, and we were told that all sorts of tricks were played off on the dock agents, who let nothing pass free if they know it. To one of these we paid the sum of forty-five cents for storing our boat over night. We thought that he might as well have made it an even half dollar, and are still of the opinion that he made a mistake of five cents in his bill. This was the only freight or dockage charge on our boat during the trip, and I desire to make particular mention of the exceeding courtesy of all officials of the D., M. & M. R. R. with whom we had to do.

At 7 in the evening we were again in camp at Harbor Springs, half a mile from the village, where we supped on whitefish and enjoyed the prospect and the cool evening breeze. The red lantern on Harbor Point was opposite our camp, the lights of Petoskey twinkled across the bay, while those in the summer cottages of the nobility were scattered westward along the shore.

The north star had apparently shifted a point more to the east since our last camp, and having noted this peculiarity in the heavens we turned in and slept. Taking the morning's steamer we reached Charlevoix at ten; at one we were at East Jordan, near the mouth of the famous torrent stream. Here we chartered a farm wagon, and driving some four miles were at nightfall in camp on the Intermediate. At 1 P. M. on the following day we made fast the Otter at our own landing, I having been absent exactly two weeks.

The cruise of the Otter was ended, and though diversified with no very marked incidents was satisfactory to us. True, Konan returned without his bear, but neither of us had much doubt that while on the Indian River, had we chosen to hunt, we could have secured a specimen.

I may here note that this river is known on the railroad maps as the West Branch of the Manistique. There are plenty of trout in the brooks and in the river, toward its head, and had their capture, or the killing of deer, been a leading object of the journey, we need not, as I think, have been disappointed.

Of the ten loaded shells I took with me, I emptied only three, with which I shot three ducks.

It may interest some of my readers to know that aside from supplies taken from home, the cost of the trip was about $25 for each. We returned refreshed in mind and invigorated in body; and intend when the gods are propitious to give the Otter another outing. KELPIE.

Natural History.

A NEBRASKA COLLECTING TRIP.

IN the Great American Desert you may think that we do not have much to excite our longings for the haunts of bird and beast. But though our State is not filled to overflowing with fowl of air and water, this is a paradise for rich experience. Bright and early one Saturday morning in the early part of June in company with Mr. C. J. Pierson, of Auburn, who is an enthusiastic naturalist, I started from Peru, Nemaha county, bound for Lehigh's Lake, five miles N.W. of Peru and about three miles west of the Missouri River, having for our object the collection of specimens of *Anatidæ*, *Ardeidæ*, *Rallidæ* and *Scolopacidæ*. We find the cheewink busily engaged in his ceaseless hunt among the fallen sticks and leaves for stray worm or insect, or with noisy flutter of wings and tail as he darts hither and thither, occasionally giving vent to his feelings in a melancholy whistle or his harsh cry of *chee-wink*. We get a glimpse of crimson, white and black among the green, and we welcome back to his summer home the rose-breasted grosbeak, the gayest of our guests, except perhaps another friend we see presently flitting by, the Baltimore oriole. And so we might continue the list with numerous warblers, vireos, chats, robins, jays and woodpeckers, but remembering our object we hasten onward regretting that we cannot linger.

The inhabitants of this section are mostly backwoodsmen, gaining their living by chopping wood, and by trapping and hunting on the lake. One man had trapped over 600 muskrats in one season. The houses are either dugouts in the bluffs or board shanties in the woods, the usual style being a low, narrow, long building, the walls made by driving two parallel rows of stakes and filling in between with small willows and earth, making a wall about 6ft. high and 1ft. thick, with a roof of undressed wide stock lumber. Approaching one house we saw sitting on an immense stump near the house, a young boy, bare-headed, bare-footed, ragged and dirty, and evidently much entertained by the antics of a bony-looking cur. As we came up he stopped suddenly and with wide eyes looked at us in bewilderment, thinking no doubt that "he was going to be took." We approached the door of the house and looking in saw no less than three very untidy women, each one with a small child in her arms. Making inquiry for the man of the house, we were informed in a somewhat curt manner that "he was not at home." Concluding that our chance to get a boat here was rather slim, we "mosied on." At some distance from the house we came to a couple of wildcats, which had been killed, their skins removed and their carcasses left hanging in a tree by the wayside. Here was a capital chance for a couple of skeletons and we regretted very much the lack of time for their proper preservation.

In a short time we came to the lake, which covers an area of some five or six square miles, and is thickly set with trees and patches of rushes and slough grass. We searched for some time in the hopes of discovering a boat, but in this we were unsuccessful, and so decided to try it without. As we made our way along the bank, which was covered from the water's edge to some rods back by a dense growth of rushes and grass, beyond which is a skirting of willows, we saw in a small open space on the bank a large flock of pectoral sandpipers (*Tringa maculata*) and yellowlegs (*Totanus flavipes*). Of these we captured three, and proceeded on our journey. As we looked up the lake we could see that the water was literally covered with American coots (*Fulica americana*) with here and there a blue-winged teal or mallard, so we walked along, keeping our eye out for a stray duck near the bank. Directly I wounded one; off came my clothes and into the water I went. After some skirmishing I succeeded in bringing it to land, to find that I possessed a fine female shoveller (*Clypeata spatula*), something rare here, so I felt amply repaid for my trouble.

Hastily resuming my clothes we went further up, where we found scattered thickly through the water muskrat houses. These are hemispherical, placed in the shallow water, rising out of it from 2 to 5ft., and being from 3 to 6ft. in diameter. They are composed of bitten-off rushes and grass closely and firmly laid together, forming a hollow hemisphere, with an opening on opposite sides at the bottom. On top of a number of these houses coots were sitting. And we were much engrossed in studying their actions, as they would sit for a few minutes perfectly still and then suddenly slide off into the water, diving as they did so, remaining under for a minute or more, with nothing visible except the tips of their tails. Then they would as suddenly rise, and with a splutter and splash be off again. Very graceful are they as they glide smoothly along, turning their heads from side to side, their white bills flashing in the sunlight in strong contrast to their glossy blue coat. They arrive here the last of March and nest in April. Though I have often found their nests, I have as yet been unable to secure the eggs. Mr. Goss, in his "Birds of Kansas," describes them as being of an oval form, in color cream white or pale olive drab, thickly and evenly spotted with dark brown; size 1.92x1.32. The nests are built in the tall weeds and rushes which grow in shallow, muddy places in ponds and sloughs on top of the broken-down old growth that forms a sort of platform just above the water. It is a deep, hollow nest, composed of bitten-off stems of weeds and rushes. As we were already supplied with specimens, we did not take any of these.

Walking on for a mile or so without sighting anything else, we concluded to cross over and come down on the opposite side; and as the water appeared quite shallow we thought we could wade it without removing our clothes. Once in the water we found we had mistaken a soft and yielding bottom for a firm one. But as we were "in for it," we made the best of it and continued to wade. With an occasional rise on the top of a muskrat house we finally reached the shore in safety. Just as we did so I saw close at hand a flock of mallards and let drive at them as they took wing, bringing down a female, but falling in the thickest rushes she was not to be found when sought for. As we came down the lake we saw skimming over it, with bills pointing straight downward, their white coats and black heads flashing, several specimens of the least tern (*Sterna antillarum*). As we wished very much to secure one of these we waded out into the water, and concealing ourselves in the rushes, waited for them to come within range, but though we waited long and patiently they did not come, and we had to content ourselves with watching their movements at a respectable distance.

Wading on through the rushes we started several American bitterns (*Botaurus lentiginosus*), and although we emptied numerous cartridges in the attempt, it was to no avail, and they went scot free.

As it was now after noon, with the sun boiling hot, we decided to seek a cool retreat and eat our "snack," the while discussing our morning's work and the ups and downs of a naturalist's life. After some time spent in this way we proceeded on our way homeward. Having again to cross the lake, this time we waded about a mile in water knee deep. Buoyed up by the hope of another duck we cheerfully but slowly worked away, Mr. Pierson succeeding by numerous stratagems in capturing a blue-winged teal. We reached home about 9 P. M., tired, hungry and sleepy, having for our trouble two ducks, several snipe, sandpipers and yellowlegs. Thus ended one pleasant and long-to-be-remembered little trip. G. A. C.

LONDON, Neb.

RECENT ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN.—Received by purchase—Two gray foxes (*Vulpes cinereo-argentatus*), one Daubenton's curassow (*Crax daubentoni*), one yellow-bellied songster (*Liothrix lutens*) and one white-fronted parrot (*Chrysotis leucocephalus*). Received by presentation—One macaque monkey (*Macacus cynomolgus*), one opossum (*Didelphys virginiana*), one great-horned owl (*Bubo virginianus*), one great blue heron (*Ardea herodias*), three screech owls (*Scops asio*), one alligator (*Alligator mississippiensis*), one banded rattlesnake (*Crotalis horridus*) and one garter snake (*Eutænia sirtalis*). Born in the garden—One female lion (*Felis leo*) and one aoudad (*Ovis tragelaphus*).

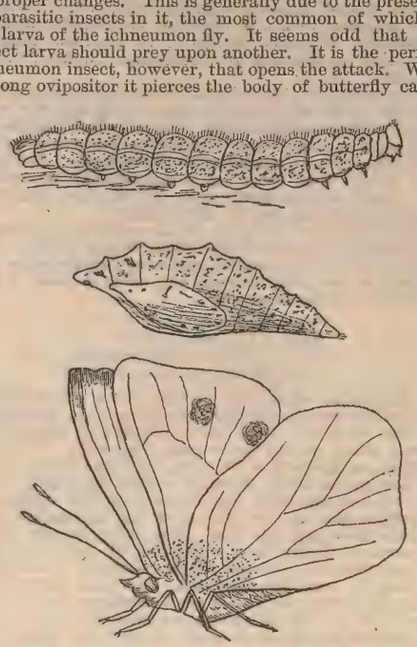
NOTES OF THE FIELDS AND WOODS.

I.—SOME INSECT WAYS.

I WAS quite interested the other day in noticing a large blue wasp dragging a dead cricket across the road. When I went nearer to get a better view the wasp flew away a short distance, but upon my remaining quiet it came back and resumed its task. It seemed to seize the cricket's mouth parts with its own mandibles and then rapidly walking backward dragged its victim along. Twice it lost its hold and seemed to have some difficulty in getting a new one. I was surprised at the facility with which the wasp walked backward. It got into a smooth wheel rut and moved along quite as rapidly, I think, as if it had been walking forward. Pretty soon it turned out of the path into the grass and became lost to my view.

A friend told me of a much more interesting insect drama which he witnessed one day this summer. A large wasp had became entangled in a spider's web. After struggling a while it seemed to give up its attempts to escape and remained quiet. The spider, a large one, which had been watching its victim from its cover, now came out to take possession of it. But at its first touch the wasp showed new vigor; it pounced upon the spider, and giving it two or three dabs with its sting and at the same time breaking through its web, completely turned the tables, and finally bore off the dead spider as its victim.

I have sometimes amused myself by lying upon the grass and fixing my eyes upon some spot, after pushing the grass aside a little so as to expose an inch or two of ground, noticing how many different kinds of insects appeared in the space in a given time. One is surprised at the number, yet each of these little creatures has its individual life and history; it is born, it grows, it sucks food, it mates, it produces young, it dies. It has marvelous intelligence or, as we say, instincts. The more acquainted we became with any one of them the more of an individuality we should find it possessed. In its little world it has its own ways of doing things, habits, dexterities, adaptations, acquired doubtless through long experience of generations of ancestors and handed down by the mysterious law of heredity. Naturalists know something about these little creatures; they have at least given them a name and a place in their catalogues and collections. The habits and the life history of some of them have been carefully studied, though of the estimated 190,000 kinds (species) of insects this can be said of only a very few.



The beetles are the most numerous order of insects, there being 9,000 species. Any one who is interested may find hundreds of them by looking. A common kind is the tiger beetle, found in burrows in the ground, or on fine summer and autumn days flying in the sunshine, often near hot sandy roads. They are very voracious; they prey on other insects which they may be able to overcome, and it is safe enough to assume that includes nearly all. They have powerful nipping jaws. I have placed a small stick between them, and noticed what a firm strong grip the beetle has. The larvæ are large yellowish grubs that live in holes in the ground, where they lie in wait for their prey. An authority says: "They lie at the mouth of this burrow, having their head and thorax closing the opening, so as to be ready to seize any other insect, which, when caught, is immediately dragged to the bottom of their burrow and devoured at leisure." The tiger beetles (*Cincindelidæ*) are put down among the beneficial insects, since they destroy so many kinds that are injurious.

Doubtless the best known members of the order of beetles are two which are nocturnal in their habits, the May beetle or June bug, and the common firefly or lightning bug. The former in its larval stage is well known to farmers, being the hated grub which often does so much damage by devouring the roots of plants. When it passes into the perfect state it feeds on the leaves of trees, making, as is well known, quite an uproar on a June night as they buzz about among the leaves and strike against them in their swift flight. Not infrequently, too, they extend the range of their explorations, attracted by lights into open doors and windows, and are not always welcomed by timid and unentomological persons. I believe the lightning bugs spend the daytime on the leaves of plants. No satisfactory explanation can be given of their curious power of emitting light.

Any one who lives in the country or spends a part of the summer or autumn there and has not tried the experiment of rearing a butterfly from the larval stage, has missed an opportunity of learning in a pleasant way a good deal about the interesting subject of the development of insects. The cabbage butterfly is perhaps as easy as any to rear in this way. One who wishes to make a thorough study of insect development should begin with the egg itself. The eggs of this butterfly may be found on the leaves of the cabbage plant. They are yellow, oval bodies, with ridges running lengthwise, and have been compared in appearance to ears of yellow corn. A leaf with eggs attached may be put in a small tin or wooden box with a piece of window glass for a cover to admit light and to enable the observer to note the changes. The egg soon hatches into a small green and white worm, the larva of the caterpillar. The worm should be fed with fresh cabbage leaves, and it will be found that it has no lack of appetite. It rapidly grows and soon attains quite a large size, at least an inch in length. It is now ready for the pupa stage. It crawls about somewhat eagerly and uneasily as if searching for something. Finally it spins a net, not a cocoon, but a web somewhat like that of a spider, and supported by this net and attached to the side of the box it passes into its long resting condition. What takes place is a moulting of the skin, and the case thus formed gradually takes on its peculiar form—an oblong, angular body, more pointed at one end than the other. In this state it remains for ten or twelve days; but while no visible changes take place, who shall tell the story of what goes on within? At last the case breaks open and there emerges the perfect insect—of not very notable appearance compared with others of its kind, but seemingly of quite heroic and triumphant bearing in its issue out of its confinement. It is rather small, of light yellow color, with black tips to its anterior wings. The male has one round black spot on each upper wing, the female has two and sometimes three. The accompanying figures show the three stages of the cabbage butterfly.

Many other butterflies can quite as easily be reared as this one. The larva of a handsome species feeds on the leaves of the milk weed plant and is a good one for this purpose. Or one may take a common hairy caterpillar and rear moth or butterfly in the same way. Sometimes they are ready to pass into the pupa stage and so need no further feeding.

It sometimes happens that a larva will fail to go through its proper changes. This is generally due to the presence of parasitic insects in it, the most common of which is the larva of the ichneumon fly. It seems odd that one insect larva should prey upon another. It is the perfect ichneumon insect, however, that opens the attack. With its long ovipositor it pierces the body of butterfly caterpillars and deposits its eggs in them. The eggs hatch into larvæ and the larvæ feed upon the tissues of the caterpillars. Sometimes the latter die before the parasitic larvæ complete their transformation, and in this case, of course, the parasites perish as well as their host. But commonly the caterpillar lingers and the larvæ pass into the pupa stage and finally into the perfect ichneumon fly. Indeed we should do great injustice to the instincts of the ichneumon and to the whole tribe of insects as represented by it if we supposed it laid its eggs in any situation where their development was not pretty well assured. In spite of the loss of some eggs no doubt the ichneumon could not find a better place to deposit them than the body of the larval butterfly. What we call the instincts of animals never lead them to do what is not for their own good. S.

THE CABBAGE BUTTERFLY.

FORESTRY PROPOSALS.

MR. B. E. FERNOW, the thoroughly trained German now at the head of the Forestry Division of the United States Department of Agriculture, has, at the request of a special agent of the Department of the Interior, given an outline of a plan for the organization of a Forest Department for this country. He lays down these four fundamental principles of forestry: (1.) No more timber should be cut on an average than can be replaced by growth in any forest that is to be kept in perpetuity. (2.) Clearing must at once be followed by planting, especially in mountain districts. (3.) Cutting must always be done in such a way as to facilitate renewal. (4.) We can only approximate to an estimate of the average yearly accretion. But assuming the area to be 70,000,000 acres, and that this produces on the average only ten cubic feet annually—a yield that by correct management would shortly be doubled—and reckoning this worth only one cent per cubic foot on the stump, our forest domain represents a capital of at least $280,000,000. Suitable management would prevent a large part of the $8,000,000 of annual loss from fire. Therefore, if the preservation of our mountain forests from fire were not expedient for other reasons, the amount of valuable material saved would warrant the outlay.

The things to be done are: (1) To withdraw from sale, preëmption, etc., all timber lands. (2) To secure a survey at least of outside boundaries as fast as practicable. (3) The agents needed would include a central bureau, traveling and local inspectors and forest guards. (4) Organization of the forest area should proceed gradually as needed; 10,000 or 20,000 acres should form a preserve, and from twenty to thirty of these a district; unorganized areas to be divided only into districts. (5) As to the functions of officers: (*a*) Forest guards should be a local police, appointed by, and responsible to, the local inspectors. They should be held to account for their reserves, and in the season of special danger have power to call in assistants who should have sheriffs' authority to call for the aid of any citizen in putting out fires. (*b*) District inspectors should live in their districts, report to and be appointed on recommendation of the Chief of the Bureau and give bonds for fidelity. They should superintend and regulate the cutting of timber and other work, oversee the rangers, see to the execution of laws and regulations and be a means of communication between the public and the Bureau. (*c*) This Central Bureau should be under a commissioner, with three division inspectors or chiefs of division as his council and make rules, disburse funds, according to an annual budget, fix prices and conditions for timber sales and leases, regulate cutting and coöperate with the Land Office in mapping. The chiefs should make annual inspections of their divisions, one of which might include the Pacific slope, one the Rocky Mountain region, and the third all the remaining public forest land. Sales should be on the stump, and, in the first case, only enough for local demand—and with public advertisement, open bidding, and a deposit of the amount bid before cutting begins. Permission to build sawmills should also emanate from the Bureau. The chiefs of division should be trained foresters, the district inspectors should be practical lumbermen and woodsmen and believe in forestry, while the guards would need only such energy, courage, honesty and intelligence as would be needed in similar duties anywhere. To properly care for the public forest domain in Colorado—which probably contains some 5,000,000 acres—there would be needed 300 rangers and 10 inspectors, costing perhaps $300,000 a year. This would be saved, if only there were prevented one-third of the forest fires, which destroy at least $900,000 worth of timber, to say nothing of other damage which is irreparable.

Such is the outline of the plan which Mr. Fernow proposes. The politician will, if he considers it at all, either favor or oppose it, according as he hopes to profit by jobbery or to gain credit for watchfulness against it. Civil-service reform must make a great advance before there could be any reasonable prospect that spoilsmen could be kept from the fat pickings which such a system would offer them. Like the plans of the immortal Surell for the reforesting of the regions in southeastern France which were being torn to pieces by torrents, such proposals as this of Mr. Fernow must be made and pushed with a faith and self-devotion such as that which kept Columbus firm in his determination to sail westward to the Indies.—*Evening Post.*

A TAME KITTIWAKE GULL.—During the summer of 1881, Prof. A. Hyatt of Cambridge, Mass., with a number of other scientists, made an excursion to the Gulf of St. Lawrence to collect, and make observations for the Boston Society of Natural History. While there, among many other specimens, they were able to capture two kittiwake gulls (*Rissa tridactyla*). These were tamed and gave their capturers many interesting and new facts. They were evidently about four days old and were placed in a pail of fresh water, where they were fed upon fish. They ate eagerly of the fish, but would not drink any water, and on the second day one of them died. The other was pining away rapidly and its owners were at a loss what to do, when a sailor put in a pan filled with salt water. This it drank of eagerly, and soon recovered. There have been several theories advanced, as how gulls live when out to sea; few if any naturalists believing that they drink salt water. This proves at least that the kittiwake gull will drink no water unless it is salt, even when it is dying of thirst. If it is true of the kittiwake, why should it not be of other gulls? In about four weeks this gull was able to fly, but he never flew more than two or three feet. It was one day thrown overboard when the schooner was at anchor, so that it could learn to swim, but it showed great terror, so it was immediately taken back. They then put it in a bucket of salt water, but with the same result. At last they placed it in a basin of water, and here it was perfectly happy, as it could touch bottom whenever it chose. After it had had several lessons in the basin it was again placed in the bucket, and this time it was not afraid. After that, it was able to swim in the ocean without the slightest fear. This last experiment was tried in Annisquam, Mass., the summer resort of Professor Hyatt. Up to this time the gull had not learned to fly to any extent, so one day Professor Hyatt threw it gently from an elevation of about ten feet. Instead of flying slowly to the ground, it sailed off for about a hundred feet, turned, flew back over the house and through the trees, avoiding obstacles and soaring quite gracefully and swiftly. At last it flew round and round Professor Hyatt, uttering frightened screams. It was evident that it was in the same predicament as a boy who is riding a bicycle for the first time: it could move with ease, but knew not how to stop. Professor Hyatt then threw up his arms and the bird flew against him and fell to the ground. It was wild with excitement and delight, and would have started again on its own accord if it had not been restrained. When it had cooled down, it tried again, but with the same result, and it was several days before it could alight by itself. After this it flew a great deal but always returned. It was perfectly tame and would come when called and its owners were very fond of it. For fear it would fly too far and be shot by some hunter, its wings were clipped. On August 25 it was seen sitting in the water. Professor Hyatt called it and it came to him. Although its wings were clipped, it seemed to be able to fly quite a distance. After a little while that day, the gull flew across to a marsh opposite the house and never returned. It was probably shot by one of these bird-killing sportsmen. Its friends were very devoted to it on account of its gentle ways, and were very sorry to lose it.—*Amateur Collector.*

THE SONATE.—Tehuantepec, Mexico, Aug. 6.—A few days ago I shot a young bird, full feathered, called here the sonate. The feathers on head were light yellow, almost white, deepening to a bright yellow on the neck. The breast was also bright yellow. The shoulders of both wings were white, while around the vent the feathers were yellow; the rest of the bird was black. The male sonate is a bird about the size of a magpie, a beautiful blue black, the female is smaller and rusty black. They are cunning birds and great thieves, continually about the houses trying to steal food. They destroy young maize by pulling it up by the roots to eat the corn; but they also eat a wonderful amount of insects, locusts, grubs, etc., and therefore do perhaps more good than harm. I have seen one with a piece of hard native bread, steeping it in water to soften it. The one mentioned is the only one I ever saw or heard of having colored feathers. I preserved the skin. There are many strange birds and animals in this part of the world, especially now during the rainy season.—W. W. [The sonate is the yellow-headed blackbird (*Xanthocephalus xanthocephalus*), a common species of Western America.]

GILA MONSTER AND WHIP-TAILED SCORPION.—Tarpon Springs, Fla.—The Gila monster (illustrated in issue of Aug. 4, by Dr. Shufeldt,) is quite common in Florida, where it is called "alligator lizard." I think it must be the same thing; it has all the points mentioned by Dr. Shufeldt, with the exception of size, the Florida specimen rarely exceeding 7in. in length. The whip-tailed scorpion is also common, and is credited with poisonous qualities, but I have never been able to verify any of the many accounts I have heard of its deadly nature. Prof. Otto Logger, of Baltimore, Md., wrote me that it was entirely harmless, and had no poison fangs or glands. While "Nessmuk" was with me two years ago, we had one captive for a long time, and observed it closely. It was very pugnacious, capturing its prey by sheer force. It is known by various names: mole killer, scroungher, devil, bull driver and others that I do not recall. Dr. Shufeldt's articles are very interesting, and I hope he will continue them.—S. D. KENDALL. [The alligator lizard is not the Gila monster.]

HIBERNATING SQUIRRELS AGAIN.—In the fall of the year 1875, an only brother was seriously injured by being squeezed between two cars. During his convalescence it was necessary to provide food which was very strengthing and easily digested, commencing first with beef tea and gruel, of which he soon became tired, and something else had to be tried. The attending physician suggested small game of any description. Not having New York markets to select from it devolved upon me to procure it. In the earlier stages this was an easy matter, as grouse were plentiful and I could secure enough in a few hours to last him a week. But we had to make another change, and it was decided that squirrels it should be. I hunted nearly every day in December and a greater part of January, and although I would start early and stay late, I thought it a good day's work if I succeeded in getting three or four squirrels of the red and ground variety. My experience, then, goes to prove that although squirrels may have the habit, they are not regular hibernating animals. A later incident which came under my observation: My nephew is the possessor of a little pet chippy or ground squirrel, which is very tame and is allowed to roam about the house at will, always retreating to his cage if any danger menaces. My nephew left home for a visit, and in the hurry of getting away little Dick the squirrel was forgotten, and was left in his cage out of door. As he had plenty of nuts nothing was thought of it until two or three days had passed, when it became very cold. The little boy then grew very anxious, as he was afraid the squirrel would freeze to death. As soon as he arrived at home his first thought was for his pet. He came running into the house with the squirrel in his hand, apparently dead and frozen stiff. His father advised him to give it to the cat; this he refused to do, trying to get what consolation he could by patting it and rubbing his hand over its fur. This he continued for some time, when our attention was called to him by his exclaiming, "He's alive," and sure enough there seemed to be a little movement in the animal. He was placed under the stove, and soon appeared as lively as ever, running about the room in apparent great glee. The same squirrel is still alive.—E. B. C. (Rahway, N. J.).

COFFEE AND BEAR MEAT.

IN the fall of 1883 I was engaged to guide a representative of an Eastern lumbering firm to some valuable timber I knew of, located in western Washington and in one of the valleys of the coast range or Olympic Mountains. The agent informed me that he wished to see the timber and return. As that would require but three days' absence, I took my rifle and seven days' rations, which, with twenty rounds of ammunition, I deemed sufficient for a three days' cruise. With this outfit and a pair of blankets each, we started westward one bright morning up one of the numerous rivers that take their rise in the Olympic Mountains and empty into Hood's Canal. Anticipating a quick return, I was careless of my ammunition, shooting pheasants, ducks, pigeons and rabbits. On the evening of the second day I found I had but four cartridges left.

We arrived at the timber, which was duly inspected, and created such a favorable impression on my comrade that while eating our supper he said: "Now, look here, my boy, this is such a valuable body of timber that, if you will guide me, I would like to go to the head of the stream to see how much country it drains, and if at its highest stage there will be enough water to drive logs and if the channel is passable." As in all probability this would necessitate crossing the range as the quickest way home, and as our supplies were limited to four days' rations and it was still thirty miles to the head of the river by a winding, zigzag elk trail, which we had to follow, I might well pause to consider before replying. In the first place, could the man stand the trip and the privations that would accompany it? I thought he could. He was a jovial fellow and one who could appreciate the grand and beautiful scenery we were passing through. He was, too, a lover of tea, and gave me to distinctly understand that he never drank coffee, and under no consideration would he eat bear meat. In reply, I told him he would have to live on bear meat sandwiched with salmon berries. Salmon berries, yes; bear meat, no. It was settled that we were to continue on to the head of the stream, cross the range down to the ocean, and go home by way of Gray's Harbor.

As we had a great deal of climbing to do, we found that on the fourth day out our provisions were gone. Berries to-morrow, sir. But by the next evening we found that there was an aching void in a hungry man's stomach that it required something more substantial than salmon berries to fill; so you may be sure I was on the watch for elk or bear, as there was plenty of fresh sign all around us.

It was afternoon of the sixth day out. We were just below the last cañon before reaching the head of the stream, and just below snow line. There was no underbrush and but few scattering trees on the mountain side. We were on a little grassy knoll about 50ft. above the stream, when I discovered an enormous brown-looking bear. At first sight I took him for a cinnamon; but it proved to be a large black bear with his summer coat not entirely shed. As he was standing almost motionless over the half-devoured carcass of a young elk, which, judging by the sign, had been killed several days before by a cougar, my comrade overlooked him, and not until I called his attention did he know there was a bear near us. I had but two cartridges left, but for various reasons I must have that bear. Cautioning my friend to be quiet, I carefully and silently worked my way nearer and nearer; 150, 125, 100yds; yes, I will try him from here. I took careful aim at the center of his body and fired. With an unearthly yell he reared up, fell over backward, and after several attempts succeeded in getting on three of his feet. His right shoulder blade was broken.

He whirled around several times and started off up the steep mountain side on three legs. Giving my blankets to my companion I told him to follow; wherever I killed the bear there we would camp. Having one cartridge left I started in pursuit and soon had a chance to fire the second time at the bear, hitting him in the mouth, half severing his tongue, but breaking no bones. Now bruin fled with a swiftness that left me little hope of ever overtaking him. There was half a mile of cañon before the stream made its final break up. The bear chose the most inaccessible places in his endeavor to elude me. He would slide down steep banks, where no four-footed animal could stand, and save himself from being dashed to pieces hundreds of feet below by falling against a gnarled pine tree that took root in such places. Then he would tack down to another tree, and so on, until he reached the brink of the cañon, which was a sheer descent of about fifty feet to water. Here was a narrow bench of land; and here, with fire in his eye, he waited my coming. With considerable work I reached the bear, and after resting a few moments I concluded not to kill him at this point, as it was not suitable for camp. Walking up I gave him several prods in the side with my rifle which made him snort. He struck several vicious blows at me with his good arm, and crawling out on the roots of a tree deliberately dropped into the water. This I was confident would kill him; but no; he floundered out and up a fallen tree. I kept him in sight until I could get across and soon overtook him. He had come to a fallen tree, and being wounded and tired could not get over it. Here he concluded to make his final stand; and with a right-about that would have done credit to a veteran he faced me. I was within twenty feet of him and a little below him, resting on one knee with gun in hand perfectly willing to cease hostilities until I could regain my breath. I intended to get above him, so that if he should make a rush he would have to make it up hill. While resting I examined him closely. He was sitting up, his wounded arm hanging useless by his side. His head seemed to be about two feet between the ears, but careful measurement afterward reduced it to one foot. His small black eyes flashed with rage. As he regained his breath he gave several deep growls; and "gentle*men* I *was* skeered." But realizing that my life depended on my coolness and presence of mind I shook off the feeling, and at the same moment he made a rush for me. I had just time to club my gun, and as I felt his hot breath on my cheek I struck at his head for all I was worth. For about two minutes that bear and your Uncle Fuller performed some of the most wonderful gymnastic feats on record until by a desperate effort I grasped the root of a tree and held on for dear life, while the bear went bounding down the mountain side. For the present I was safe. I began to examine my wounds, as in our descent I plainly felt his canine teeth meet in my flesh. The wounds were not there. It was imagination caused by fear. Aside from a few bruises I was safe and sound as a new dollar. Looking down the mountain side I saw the bear had lodged between two trees. I carefully approached him and found him dead. I examined his skull and found it crushed from the force of the blow that I had struck him with all the desperate energy of a last chance. If that blow did not strain my gun it broke the stock.

I hardly need add that my companion drank coffee and ate bear meat for the next four days and enjoyed it too.

TILLICUM.

SOME NOTES FROM THE ROCKIES.

HAVING lived in the mountains for the last five years, guiding during summer and trapping during the winter season, I have had an excellent opportunity of studying the habits of the different kinds of game at the different seasons of the year—abundant in this particular part of the Rockies, the headwaters of the Big Horn, Yellowstone and their tributaries. As the Indians have been forced toward the west by civilization, so the game has been forced from the prairie to the mountains, until animals that once inhabited the prairie are now seldom seen there, but range entirely in the bad-lands and mountains. The bad-lands and the table lands that extend from the Upper Missouri south to the headwaters of the Big Horn (called Wind River), which five years ago afforded a range for 200,000 elk, buffalo, deer and antelope, are now occupied by as many horses, sheep and cattle, without more freedom. Elk, deer, bear, sheep, antelope and mountain lion are quite plentiful here in the mountains.

Elk, which are a prairie animal, are now seldom found outside the mountains, which they inhabit summer and winter. About the first of August, the bulls begin rubbing their horns. By the first of September their horns are clean, and they are as fat as they get; and by the fifth of the month they are whistling and "rounding up" the cows and running the young bulls from the band. At this time elk may be found in almost any suitable place at an altitude from 6,000 to 10,000ft. By Sept. 15 they are rutting, and this is the best time to hunt them, as they are continually traveling; that makes it easy to find fresh sign. Their horns are in good condition, the scalp is a good, deep color, hair tight, and the head is in splendid condition to mount. Their continual whistling during the evening and cloudy and stormy weather, which may be heard a mile, indicates to the hunter or sportsman their exact position; he must be a bungler indeed if he does not get one. During the rutting season large bands are found continually in open country, while small bands stay in the timber during the day, coming into the openings or parks in the evening and returning shortly after daybreak. As the season advances they travel less during the day and lie in the timber on the northern slopes when the snow is deep; and by the first of December the old bulls have left the band, their places being filled by the younger ones. By the first of January the old bulls are to be found in small bunches, and they continue so until after shedding time, which takes place in February and March. In April and May they disband as a rule, while their horns are growing, keeping themselves cached in out-of-the-way places until the first of August returns. The cows and young bulls get pretty well scattered by spring and all join again at the high ranges as soon as the snow will permit. Their summer and winter ranges are about fifty or sixty miles apart. A large bull will dress 600lbs., a cow will dress from 250 to 400lbs.

Of the many different kinds of game that inhabit the Rockies, mountain sheep are the most numerous yet the most difficult to hunt. During the summer and fall they range on the highest divides, which are very difficult to traverse. Although some of these divides are rolling grounds which are covered with a short growth of grass, the majority are very sharp and rugged, bearing no vegetation whatever at the top. These divides are formed by small stone cemented by a lava cement, and are called conglomerate formations. Although very solid beneath the surface, when exposed to the weather they become loose and dangerous to the hunter or sportsman traversing them. Although the southern slopes of these divides are not very steep, their northern sides are nearly perpendicular cliffs from 500 to 1,500ft. high, below which are basins or pockets, which form the heads of the streams draining the adjacent country. Large bands of 75 or 100 ewes and young rams of en stay in these pockets for days without leaving them. As the bottoms and slopes are covered with a growth of short grass, while through the center of the pocket flows a small stream fed by the banks of perpetual snow lying at the base of the cliffs, and as they bed on the small ledges on the face of the cliff, these pockets contain all that they desire. While they are lying on these ledges it is very hard to see them from a distance, for they are nearly the same color as the rocks. It is seldom that one can get near enough the edge of the cliff to see them from above, and as the pockets are only 500 to 1,000yds. across, precipitous on one or two sides, sloping gradually on the other, there is left but one way to approach them unseen, namely, to go up the gulch. A very clever ruse practiced by the hunter is to get above them on the divide, and being careful not to expose himself, fire one or two shots into the ground beyond them, and then wait until they come on top, for sheep will almost always run up hill when frightened.

Although the ewes and young rams of three or four years old are often found together during the summer, large rams are seldom found among them. Ranging lower than the ewes and keeping themselves cached among the rocks and scrubby pine at timber line during the day, sportsmen have great difficulty in finding them unless accompanied by a good guide, and even then some go back home without having secured a good specimen.

Although one can have all the shooting at ewes and young rams he may wish for during the fall, the most favorable time to hunt them is during the month of December, when the snow has driven them from their summer range to a lower and more level country. The rutting season begins the first of the month, and one is sure to find from one to five large rams in each band. They are less watchful and much easier to stalk at this season of the year.

The rams grow to be very large; I have often killed them that dressed 250lbs. The horns of a 6 or 7-year-old will measure about 2ft. 6in. in length, varying from 15 to 18in. in circumference at the butt. A friend of mine a few days ago killed a ram whose horns were 6ft. 10in. in length, or 3ft. 5in. for single horn; 26in. between the points, 16in. in circumference 10in. from the butt of the horn. It is a perfect head, being 12 years old, and an extraordinary specimen, as one seldom finds a ram over 7 years old with a perfect head.

Whitetail deer are seldom found in the mountains, though they are quite numerous among the foothills, and on streams that pierce the mountains but a short distance.

The gazelle deer are not, as a great many people suppose, the crooked-horned antelope, but resemble the white tail deer very much, although much smaller. They inhabit the heads of the longest streams in the mountains and do not leave them until very late in the fall. In this country they are called mountain whitetail. They will dress about 60lbs.

Although the majority of antelope are to be found on the prairie I have often seen bands of one hundred in the mountains, and I have killed them sixty miles inside of them. They do not shed their horns as deer do and are seldom seen in the timbers. Does after they get four or five years old have horns the same as the bucks, only not so large. They will dress from 60 to 90lbs.

The mountain lions are quite plentiful and inhabit nearly the same range as the sheep. One may travel for months in the mountains and not see one, much less kill one; and as they will not eat from a carcass killed by a hunter it is very difficult to catch them in a trap. I have never heard of them attacking a man, though when very hungry they will often follow a man to his camp and annoy him by their screams during the night. A large lion will weigh 250lbs. and will measure from 7½ to 9½ft. from tip to tip.

There are supposed here to be five distinct species of bears to be found in this country—the bald-faced grizzly, silver tip, cinnamon, black and brown. All of these are quite plentiful. I acted as guide for three different parties last season and we killed twenty-four in all. The bald-faced grizzly, cinnamon and silver tips are largest and most ferocious, although it is seldom that either will fight unless wounded, and even when wounded they wil sometimes run.

They may be found at all altitudes at any time, though, as they hole up in the highest timbered country, they are more numerous there than in the lower country in the spring and fall. They come out of their holes in the latter part of March and travel until they find green grass, unless they have been baited to some particular place the previous spring or fall, and they will visit each place they have dined at on meat or the offal of game, turning over the bones, and continue doing so, making their circuit and returning about every three days, until in their travels they find something better. I have never seen more than five in one band, though I have seen the sign of thirteen traveling together. One will quite often see three, an old one and two yearling cubs together; and it is a very easy matter to kill them all if you get one good shot into the old one, as they will invariably begin fighting among themselves, though there are exceptions, as my experience has shown me. I once shot an old silver tip "sow" through both shoulders with a 550gr. ball, 120yds., while she had two yearlings with her, and she got within 40yds. of me before she dropped. They can probably stand up under the weight of more lead than any other living animal.

I have found a great many places where bears have passed the winter, and never saw but one place where one had lived in a cave. They usually select the thickest timber on the northern slopes, where the snow is deepest, and dig a hole large enough to hold them from sliding down hill, and then they let the snow cover them. The she bear and spring cubs usually den together during the winter season and stay together until the rutting season, which begins about Oct. 1, when they are driven away by the male.

Bears will not travel and hunt for meat in the fall as in the spring, as there are plenty of pine nuts. These the squirrels have laid away for winter use, but they hardly ever consume them, as the bears raise their cachés about as fast as they are put down. This plundered provender furnishes all necessary food for them, and by the time they hole are as fat as it is possible for anything to get.

SILVER TIP.

[The "gazelle deer" are probably small-sized individuals of the whitetail species. There is great diversity of size among the whitetails in the Rocky Mountains; we have seen killed on the same day a large whitetail deer, which two men could with difficulty lift on to the horse, and an adult buck so light that one man could lift it with ease. It is not uncommon to find antelope in the timber; we have killed them in timber from the North Park of Colorado to the northern boundary of Wyoming. There are but two species of bears in the United States, the black and the grizzly. "Cinnamon" (of authors), "brown" and black are the same; "cinnamon" (of Rocky Mountain hunters), "bald-faced grizzly," "silver tip" and grizzly are the same. In our bears color is of little or no value in the determination of species.]

JERRY GREENING'S.

HOW the years fly! Luckily there is no mirror handy to enforce the lesson by ocular demonstration and so confound the vanity that still believes itself capable of breasting the ridges and fording the swamps between Milford and the Rattlesnake. Still in my ashes live the wonted fires, and it is not always safe to trust too much to gray hairs. *Fenum habet in cornu* was a Roman adage—not green grass, mark you, but hay—and this reminds me of my first visit to Jerry Greening's.

I had heard of him at Milford, at the Sportsman's Retreat, where after a hard day's tramp our host, the famous "Bub" Wells, used to while away the evening with stories of the "characters" of old Pike. I had heard also of the feud that had arisen between the houses of McCarthy and Greening; and it was with a slight sensation of disloyalty to the former that we organized a party for a deer hunt at Greening's. To desert McCarthy's was bad, while to go to Greening's was to turn your back on McCarthy and the delights of story telling by the stove in his not over clean barroom. Would I ever forget the politics that raged there, and how, in default of a genuine Black Republican, "Bub" Wells assumed the character, and fought me valiantly until we turned in together.

A bright, balmy day, with just enough of November in it to give the air a "tang," saw our party climbing the slopes—not on foot, however, but behind two good horses with Dutch Jake to drive. I am not going to inflict any descriptions of scenery on you—and with this city thermometer looking down on the eighties, I am not going to tantalize myself with cool and pleasant memories. Indeed, I only mention the balminess of the day for a reason, and have only one incident of our ride to recall. This was the meeting on the turn off by the "Rattlesnake" of the cause of war between the houses of Greening and McCarthy, in the shape of the schoolmarm—and her charms we will leave to imagination.

All roads—even pleasant ones—have an end, and ours was found at Jerry's unpainted farmhouse and sheds. To say we were hospitably received is to waste time and paper. The old man, his old woman, boys and girls—not to forget a pack of nondescript dogs—so received us that we took to them at once. Jerry, Sr., however, was not in his usual condition, and his left arm and hand were in a sling. Killing hogs he had cut his hand, and in consequence had nearly lost his life; but his wonderful vitality was expelling the poison that would have been fatal to another. To him it was but a trifle, and his only regret was that he could not hold his rifle—a heavy muzzle-loader—steadily.

Night comes quickly in the hills in November, and men who rise before daybreak go early to bed, and we were no exceptions. Sleep, however, was broken; Jerry's big bear or something lit on the roof and I waked to hear the rain pouring in a deluge. By morning, however, the clouds had passed away and we were ready for breakfast and our tramp for our respective runways. Before we got off, however, my broker friend, whom I had a second time dragged from the city, came to me and told me that young Jerry was anxious about me—thought perhaps that as the woods would be so wet the "old gentleman" might not like to go. Respect for gray hairs is all very well, but as I had not come to Greening's for deference I took young Jerry for my guide and am happy to know changed his opinion in the day. Of course we got no venison, but then we had a glorious day. The dogs puzzled out a scent and the music of their baying echoed all around us, until it died away at last beyond the "Farms" and we turned our faces homeward.

I don't think Jerry Senior has ever read "Clarissa Harlowe;" I even doubt whether he ever tried to model his speech on the lines of the "Common Prayer" book, that well of English undefiled, but there was a certain raciness of style and vigor of invective in his address to his sons, which were not without effect. He remarked to me that "they did not know nothing about deer hunting and the next day he would go with me himself and get a deer," and then the agency invoked was so powerful that none but a heretic or Col. Ingersol could have had any doubts.

Supper over and pipes lit, the yarning began. I heard how old and young Jerry, hunting timber for shingles on the snow, had one of them tapped with his axe a dead pine, while the other looked up to its top, only to have his calculations disturbed by a blow from the paw of a bear that had chosen its hollow for abode. "They had it hot and tight, I tell ye, till I got in a crack with the axe on her blasted head and laid her out." She weighed etc., etc. Then too I heard the legend of the haymaking, and how the "old woman" screamed when she raked up a couple of lively August rattlesnakes, which her liege lord stamped to death with his bare feet. "Women are so skeery," was his comment, not ungarnished with idiomatic expressions. That I believed all I heard will pass without saying, but if there had been any doubt in my mind, my next day's proof of Jerry's insensibility to pain would have removed it. Sitting in the front door I saw him sharpening a coarse single-bladed jack-knife on the flat sandstone that served as doorstep. Next, removing the bandages from his hand, he buried the blade in the ball of his thumb till he reached the bone. This bit of surgery performed without wincing, he informed me that as soon as it stopped running he would be ready to go—and go he did—and during all that day made no allusion to his pain.

It was not fated, however, that our first visit to Greening's should be crowned with success in hunting. Just before starting, I remarked of a little whitish lap-dog playing with the hounds, that if they did not shut her up she would follow them and get lost. "Lost," exclaimed Jerry, "why the little bitch is the sharpest deer hound in Pike county. If she gets out, she will start the deer before we get to our stands." Caught she was, and locked up in a room with a window I believe, and we started. On our way we passed plenty of deer sign. In one muddy spot were the plain tracks of a big buck and two smaller deer, and before we had gone two miles, I had begun to indulge a pleasant hope of being able to show Jerry that even a gray-haired man can shoot straight on occasion. A short half mile and I should be on the best stand in Pike county, when I seemed to hear a sharp yelp. Now I don't know whether foxes bark or yelp, but I thought the sound I heard would fitly come from the body of a very small fox, and so I asked Jerry if there were many in that country. "Lots," he said, "but why! I didn't hear the dogs running one, did I?" "No, but—there it is again," said I as the yelp was repeated, this time more distinctly. "Run Mr. ———, run your hardest. That cussed little bitch has got off by herself and started the deer."

Well, I *was* running and I continued to run, but nearer and nearer came that confounded yelp, and I knew the deer was far ahead of me and gone. This conviction was brought home to me forcibly when, on reaching the open path leading down to the brook, I saw in the soft earth the fresh prints wherever the dewclaws had struck. Of course, it was the biggest buck that had ever wandered up into old Pike from the far-off Alleghenies; but equally, of course, he was well on his way back again, and when the same little whitish lap-dog that I had seen at the house came up shortly after, I could only paraphrase Sir Isaac Newton. What were Jerry's exact remarks I disremember. I don't think he quoted from any of Richardson's works; and yet they had a comforting sound. I saw very plainly that it was my disappointment that moved him, and so in turn I comforted him.

Was it that, I wonder, that took off the edge then, and always since has secured me the kindliest treatment from him and his! I do not know; but this I do know, that rough as he was, dangerous as he was said to be, from no one could I get warmer greeting than always met me on sight of Jerry Greening. If, therefore, I did not bring back branching antlers from my first hunt with him, I brought and have kept a pleasant memory. H. B.

NOTES FROM THE PARK.

THUS far this season the Park has fortunately escaped damage by fires, the frequent showers putting out any fire before it made much progress. Only one fire has burned over any extent of country, that on Pelican Creek, caused undoubtedly by lightning; this fire received a check if it was not stopped by a storm on the 23d inst. Very little smoke has obscured the views here, showing that there are fewer fires in the country west of us than there usually are at this time of the year.

The Union Pacific engineers are very active in the country west of the Park and its immediate vicinity, locating several routes from the Utah Northern Railroad with every indication of making the Park near the Lower Geyser Basin their object point. Lines have been surveyed up the Madison and other routes determined, one of them over some of the same ground located by the Northern Pacific in 1882. It will be much to the advantage of the public to have two lines of railroad to the Park now. There is now over a hundred miles staging before getting to the Park line from Beaver Cañon. Many prefer this, as it is through a delightful country with fine scenery, grand mountains and great rivers, abounding in fish and game.

While on a trip among the mountains in the northwestern part of the Park, in the latter part of July, we saw a great many elk, one band of nine large bulls which we alarmed by their getting our wind while in the timber. We came in sight of them as they left the timber to take a high trail around the top of Mt. Holmes. This was on a very steep part of the mountain and only some 300yds. distant at first. They were in sight for over half a mile as they made their way for the top of a pass. The nature of the ground was such that they could not go out of a walk and had to go in single file as they picked their way over the "slide rock." We dismounted in a little park and watched them with glasses. The leader was a king, crowned with a pair of seven-point antlers. None of them had less than five points. Occasionally they stopped and looked at us and our horses. Their horns were about full grown but covered with velvet, the points soft and tender, as shown by the care the elk used in passing trees. When they reached the pass they all collected to have a last look, their red coats glistening in the sun, the outlines of their forms brought out against a white cloud. Soon the leader disappeared and the others followed him, plunging down through a snow drift. We followed over the pass but saw no more of them; but several other elk cows and calves were seen.

Another day we ran on to a band of over twenty cows and calves in a little park at the head of Grayling Creek. Riding into the park we were within twenty yards of the nearest one before she saw us. We stopped to look at them, they in turn staring for a moment at us. Some of them went on eating, as our horses were doing, all unconcerned. Some could be seen with their calves lying down in the timber. We noticed that the calves were losing their spots. When we moved on toward them they trotted off, right and left into the timber, the calves showing more alarm than the older ones. All the elk we saw in the mountains visited on this trip were not so wild as half the range cattle are when they see a person afoot.

We visited the summits of the Dame, Echo, Bannock and Joseph peaks, Quadrant Mountain, Antler Peak and many lesser points. As a rule the weather was fine and the air quite clear. On August 2, while on top of one of the mountains we were favored with a hail storm and a snow storm which lasted about an hour, leaving the tops of the peaks white with snow a little over half an inch deep. It was a something of a change to come from the heated valleys in the morning to be in a snow storm at four o'clock and walking through new snow and over fields of old snow twenty feet deep, to camp where ice made that night a quarter of an inch thick in our kettles, and to see in the morning daffodils and hundreds of other spring flowers. We could but think of the people suffering with heat in the cities while we required two pair of blankets over us to keep us comfortable.

The scenery from some of the rocks was too grand for description—mountain ranges and peaks in all directions, deep cañon and valley, the whole National Park at our feet, the Yellowstone Lake under us like a blue valley, Mt. Washburn so much below us that it looked like a foothill, hundreds of little lakes, dark green and blue, all kinds of beautiful mountain flowers in great abundance, immense snow drifts with ice-cold streams running from them, cool rivers and freedom from insects. To the west could be seen the great Madison Basin, partially covered with timber, a large portion of it fire-killed. The Basin is well-watered by the Madison River and its tributaries, which abound in trout, grayling and whitefish. While in the Basin we had seen considerable game (although this is out of the Park), mostly antelope. These are found in the timber; if in an open country they will more often make for the timber than anywhere else. I believe this is the only section of the country where antelope, contrary to their usual habits, frequent the timber. All through the mountains we saw a great many grouse, old and young. The young were about the size of quail on the first of August. On July 27 we saw one brood just hatched out; we caught a few of them and let them go again, and they soon disappeared in the grass. We saw a number of porcupines. They are only to be seen now at high altitudes. The tracks of a great many snow slides were noticed, one over 300yds. wide had swept down the mountain for fully half a mile, uprooting hundreds of trees, filling them in a confused mass across the gulch. The creek was yet hidden under masses of ice and snow, and this covered with sticks, stones, logs and dirt. Everything showed the past winter had been unusually severe.

Tourist travel to the Park is a little less this year than last. Several hunting parties have outfitted at Gardiner and gone east and south of the Park to hunt. A great many camping parties, families with wagons from Montana, Idaho and Wyoming, are in the Park; occasionally parties come from Kansas, Colorado, Oregon, Utah and California. Even the gipseys are strolling through the Park, mostly traveling by wagons, all hundreds and some over a thousand miles. It reminds one of the "good old times," when there was not a railroad in this country, game was plenty and wire fences had not taken possession of the land.

The Yellowstone Park Association have replaced their burnt hotel at Norris with a temporary structure, and have put up tents at the Yellowstone Lake.

Road Superintendent Lamartine is pushing work on the wagon roads as fast as $2,000 per month can do it. When the Transportation Company's coaches are late so that they are out after dark between Cinnabar and the springs, they are escorted by soldiers. The other teams engaged in transporting tourists are without escort; they drive ahead of the others. The road agents who held the coach up on July 4 have not been found yet, but many innocent parties have been suspected. H.

YELLOWSTONE NATIONAL PARK, Aug. 27.

WASHINGTON, Sept. 2.—Capt. Moses Harris, acting superintendent of the Yellowstone National Park, in his annual report to the Secretary of the Interior, says: The extent of traveled wagon roads is now about 177 miles. During the year travel has fallen off considerably, which fact, the report says, is in a great measure due to recent railroad legislation rather than to any loss of popular interest in "the wonder-land of the world." The report calls attention to the fact that toll is, and for a long time has been, exacted by private individuals of passengers crossing the bridge over the Yellowstone at the entrance to the Park, and also to the location of a liquor saloon within what is believed to be the Park limits. The hotel and transportation facilities within the Park, the report says, are excellent in character, and sufficient for the demands of travel.

The enforcement of the regulation which forbids any person to engage in business in the Park without permission in writing from the Department of the Interior, has had the effect of ridding the Park of a large number of irresponsible persons who, during the summer months, come in to prey upon the tourists. The rules for protection of game in the Park have been generally observed and respected. Immense herds of elk have passed the winter along the traveled road from Gardiner to Cook City with the same safety which herds of domestic range cattle enjoy in other localities, and several thousand of them wintered in the Lamar River Valley. The number of buffaloes in the Park is estimated at about one hundred. Antelope are found in large numbers. A herd of 200 passed the winter within a mile of Gardiner. Mountain sheep are found in all of the mountain ranges within the Park.

Capt. Harris asks for an additional company of infantry to assist in policing the Park. The estimates for the coming year are: For construction of roads and bridges, $130,000; for care and preservation of game $3,000; for surveying and making boundaries of Park, $10,000; for purchase of toll bridge, $2,000; total $145,000.

THE KIND OF A CITY ATTORNEY HE IS.—Hudson, Wis., Aug. 27.—I inclose a clipping from the *True Republican*, our local paper, to show how we sometimes bag violators of our game laws: "A rumor reached this city Monday afternoon that parties from Stillwater were hunting prairie chickens in the town of St. Joseph, and deputy sheriffs Jas. Baldwin and Will Jones went up to investigate. They first encountered a youngster in regulation hunting costume with a Texas sombrero rakishly drawn down over his left eyebrow, who proved to be Bun Hersey, of Stillwater. They bagged him and shortly after found City Attorney Gregory and Postmaster McCartey, of Stillwater. They came to Hudson without a murmur. Hersey had one bird and paid $5.75, which he put up like a man. Gregory had only one chicken, but he was fined $20.25 and McCarty was let go, on the supposition that he was acting merely as pointer for Gregory, we suppose. Constable Durning, of St. Joe, captured a young man named Thelan shooting chickens, and he was fined $20.25. The open season commences Sept. 1."—BEAUTIFUL.

HUNTING IN THE SHOSHONE.

Editor Forest and Stream:

I have just read an article in the September issue of *Scribner's Magazine* by the Rev. W. S. Rainsford, called "Camping and Hunting in the Shoshone," and it strikes one conversant with the geography of that part of the Rocky Mountains that a good portion of the Rev. Mr. Rainsford's camping and hunting took place in the National Park, at the expense of the "noble American game", therein. He should practice what he preaches, for (quoting from his article) he says "this Park will be doubled in size and then a safe retreat, and what is of more importance a safe summer breeding place, will be preserved as an inviolate sanctuary for our noble American game." In the next few lines he tells of his camp at Heart Lake, "and the dinner was elk steak." This is providing a "safe retreat" with a vengeance for "our noble American game." As Heart Lake is nearly in the center of the National Park, the obvious inference is that the noble game was sacrificed to provide the dinner.

But what riles one most in the article is the cool way the writer describes trapping bears, and it passes my understanding how a sportsman and gentleman of the Rev. Mr. Rainsford's standing can inflict such horrible cruelty and untold suffering even on a wild beast. Every true lover of bear shooting should protest against this detestable practice of killing bears. They are unfortunately scarce enough as it is, without their being killed off by means of those cruel steel-jawed traps. Apart from the cruelty, of what earthly value is a trophy when attained in this manner? It can recall no stirring memory, no sudden thumping of the heart, no thrill of keenest pleasure, as will the recollection of a fair, face to face encounter and capture of bruin's skin by a well planted bullet. On the one hand a noble antagonist, whose death by legitimate means is enough for any one to be proud of accomplishing; on the other a worried, maimed and suffering brute, often half starved, if not wholly so, and often tied up enough to be perfectly harmless by the aid of sixty pounds of trap and ox chain, with the additional stick of timber fast to all. And yet this latter means of killing bear is called sport. There is another feature of evil in this cowardly method, and that is the sacrifice of our noble game to bait the traps with. No bait, no bear; hence an elk, deer or sheep must be killed to get that paw into the trap. This is hard on other sportsmen who are to follow, but it beats the Dutch, my dear sir, what a free translation some people give to the word sport.

The "Col. Pigot" in the article evidently refers to my neighbor Col. Pickett, whose lovely little shooting box way up Grey Bull has been the theater of many an exciting contest, and whose owner is so well known to the readers of FOREST AND STREAM. Here is an example for young sportsman to follow, for Col. Pickett is an old gentleman over sixty, and yet he asks nothing better than to find himself at close quarters with Brer B'ar, no traps either mar the result of his nerve.

ARCHIBALD ROGERS.

BEVERLY, Mass.

THE RIFLE ON FLYING GAME.

I SAW the Raub magazine trap advertisement in your paper, and ordered one two months ago. I have some practice every day with it. It is the most complete trap to make a man a good wing shot with the rifle that exists. When I advanced so far that I could hit either cardboard or clay targets nearly every time, I tried my hand on pipe bowls thrown by hand, then I got so I could hit pennies. I waited patiently for Aug. 25 to try my new 25-shot rifle on mudhens over the dog. I have the good fortune to own an Irish Elcho bitch that is as near perfection on mudhens as is possible to get one. She has a local reputation of being able to put up all the mudhens on a creek within reach of the shooter on low water. The eventful day arrived at last, and although I did not brag about being able to kill every mudhen that got up, yet I had a notion that the mudhen that got up before my rifle was a dead bird.

At 7 A. M. on the 25th, my friend A. and myself, armed with about 200 .22-cal. shorts, took a car to the inlet and engaged the only rowboat that we could get at that hour. The water is rough when there is any wind crossing the channel, and our boat was a flat-bottom, with square stern, so that we shipped considerable water, in fact so much that my friend wanted me to put back. However, we crossed with nothing worse than a part wetting, and finally reached ground that looked gamy. We hied on the bitch and started to slaughter anything that got up before us. After going about a mile and shooting at swallows and sea gulls and making clean misses each time with the exception of a sea gull, the bitch showed game by a point on the bend of a creek. I worked up to her, when up jumped a nice large mudhen and poised in the air waiting for me to shoot. I shot and missed. Then I started to pump lead after him. I shot at him four times, when he finally lit 500yds. away without a feather ruffled. I was mad. My friend thought it would have been better to have brought shotguns along, and after our missing three easy flyers he predicted a clean score. Even the dog was disgusted. I did not understand why I missed. I only seemed not to be able to hold on a bird moving with just the right amount of sight. I finally made up my mind not to shoot at the next one unless I got a sight that I was sure was right, so after hunting a short distance the dog made game and flushed a nice driver. I held on till I was sure, then pulled and down came our first mudhen. The dog seemed as much elated as either of us as she retrieved it. My friend then took courage and felt that if they would only wait a little longer after leaving the ground he would surely hit one. We next saw two swimming out in the bay. We took the boat and started after them. I shot both without a miss; and if any one thinks it is pot shooting to shoot a mudhen swimming in rough water out of a rocking boat, he will find it more difficult than a flying shot, as the head and neck are all that show on the water.

We worked one meadow after another with varied success; the best score I made was three straight hits. Mr. A.'s rifle became disabled by the mainspring breaking, and we finally concluded to make for home. We counted our game. I had shot seven flying, five swimming; Mr. A. killed two, making a score of fourteen birds, all we wanted for one day. I did not count the misses, but out of 200 cartridges we brought home about 75; that tells the tale. I am satisfied that easy birds can be shot with the rifles; and if any one takes a course on the Raub trap and learns to shoot well at all kinds of targets, he will want to try conclusions with live game, and I would rather bring down one bird with the rifle than a dozen with the shotgun. Of course this only applies to easy-flying birds, for I find that in cover shooting sometimes a shotgun has hardly enough pellets in it for me. J. A.

ATLANTIC CITY, N. J.

GAME IN EASTERN ONTARIO.

Editor Forest and Stream:

The following account of game and sport in eastern Ontario may be of interest to some of your readers. Devotees of rod and line may have good sport in any part of eastern Ontario; bass and pike being plentiful in streams flowing south, while trout and bass swarm in the lakes at the headwaters of the Ottawa tributaries, but the inevitable "hog" with net and spear is fast reducing their numbers. Pike (called here pickerel) and bass, both being hard-fighting and gamy fish, are usually taken with spoon or silver minnow, and give excellent sport with a light bamboo rod.

Wild geese seldom visit us and very few are killed, but spring and fall ducks come in considerable numbers to our lakes and bays. They afford great sport to cockney sportsmen who love to make a noise, although they seldom make a bag. To be successful one must have as much patience as Job and be an excellent shot, as the birds are very wary and most of the shooting must be done at single birds; a bag of fifteen or thirty is considered an evidence of a day of good luck. There is very little snipe shooting, and partridge have become exceedingly scarce, most of those killed being shot from their perch in the trees.

Black squirrels are plentiful in the settled part of the country, and when hunted with the rifle give perhaps the best practice for quick shooting of any game in the country. Immediately, when alarmed, they make tracks for some secure retreat in a hollow tree, and methinks it would puzzle the crack glass ball shooters to bring them down at from 30 to 100yds., as their strategic movements to the rear through the treetops are very quick and irregular.

Fox hunting is followed by many sport-loving farmers, many of whom keep efficient packs of well-trained foxhounds; and the pursuit of the "varmint race" is a choice way of spending the winter's leisure. As a matter of course, foxes find Ontario rather a cold climate, and like Yankee bank officials, they "skip out."

Rabbits are very plentiful in the backwoods, and are little hunted, as where they are abundant large game is more inviting to the sportsman; but throughout the settlements they have been nearly exterminated by the local Nimrods.

Deer and bear are yet plentiful along the watershed separating Bay of Quinte from Ottawa waters, but as this region is dotted with fine lakes, the water butcher and his ally, the domesticated wolf, will doubtless exterminate them in a few years. An anti-hounding law is much needed in Ontario. A few years ago a party of Americans, (they call themselves sportsmen) with a pack of thirty or forty dogs, killed upward of two hundred deer, and of these many were left in the woods to rot.

Camp hunting is much resorted to during the open season for deer, and it is a notorious fact that a party of tyros, still-hunting, will get from none to five deer in a two weeks' hunt, while the same party with hounds would be "dead sure" to get ten or twelve deer in the same time. Moose are killed between the Madawaska and Lake Nipissing and occasionally one is killed south of this limit. RAMROD.

TRENTON, Ontario.

GAME PROTECTION SENTIMENT.

FROM the reports of the Game and Fish Protectors to the Fish Commission we take the following extracts as illustrative of phases of sentiment in regard to game laws and their enforcement:

J. H. GOODWIN, JR.—*Second District.*—I have seized two seine nets of the value of $45 and have had three suits settled by fines and costs amounting to $228 and have endeavored during this time to have ten suits brought to trial or settled in some way in the county of New York, but have been unable to accomplish it through the office of the district attorney of that county, and it does seem as though it might do more harm than good to attempt to prosecute in that county, for the reason that in consequence of no fines being imposed, the infringers of the game laws become bold and do not fear the consequences. So I have found that I am obliged to resort to threats only; but I must say that the marketmen and dealers generally, if they are able to keep track of the game and fish laws, are disposed to do what the law requires.

MATTHEW KENNEDY—*Third District.*—I would again recommend a change in the laws of 1879 (chap. 534) where it reads as follows: "Any person who shall, at any time, kill any of said birds, between sunset and daylight, or pursue or fire at any of said birds with the aid of any light or lantern, shall be deemed guilty of misdemeanor, and in addition thereto shall be liable to a penalty of fifty dollars for each offense against this provision." It is very difficult for me to hold violators under that part of the section, as the hunters who do night shooting do it without the aid of a lantern, most of the shooting being done by twilight or moonlight. I have had violators of this section and was unable to convict because no artificial light was used while hunting. Considerable night duck shooting was done in vicinity of Stockport, Columbia county, the past fall, while birds were on their feeding grounds. I have been ably assisted by the various game and fish associations of this district, to whom I am grateful. In my district there seems to be a decided improvement in the sentiment of the people in reference to the enforcement of the game and fish laws. The legislation of the board of supervisors of Dutchess and Columbia counties has been such for the past year as to make fish and game protection more effectual.

S. C. ARMSTRONG—*Fifth District.*—I journeyed quietly down to Burden Lake near Troy last May, ostensibly canvassing for Quain's Medical Dictionary. It is an excellent work; price eight dollars. I did not have very good success as a book agent, for I did not sell a book, but I induced four men to come up to the office of District Attorney La Mott W. Rhodes (may the shadow of that faithful and efficient officer never grow less) and subscribe and pay about $100 for having bass in their possession out of season and for taking fish on a set line. Charles D. Rousseau, of Troy, had venison in his possession out of season. He gave it to his men in a lumber shanty and they did eat it. It is said that occasionally he would put a few deer skins in a Saratoga trunk, and there among bottles of perfumery, toilet soap and woolen socks they would journey down to Troy, and the eye of no official would discern them. However, Mr. Rousseau was indicted, and on payment of fifty dollars to District Attorney Brownell, of Hamilton county, he was discharged. Fifty dollars would buy a fat ox. Peter Wilson was indicted for spearing fish at Brant Lake, Warren county. When the time for trial came he was too low to attend court. His lawyer said he was very low with consumption. He pleaded guily, and the kind-hearted judge let him off with a fine of five dollars. I am glad to hear at this writing that Peter is much better. John Smith was indicted for taking trout four inches long. His lawyer said John's thumb had been in contact with a buzz saw, and that he was poor and unable to work. He also had a blind sister. He pleaded guilty and the judge fined him five dollars. I commenced five suits in Supreme Court when H. A. Howard was district attorney of Warren county. When his successor, C. R. Patterson was elected, Mr. Howard neglected or refused to turn over the papers to Mr. Patterson. I was informed that Mr. Howard had offered to settle these cases on payment of his costs, and that he stated I had authorized him to do so. I never advised or consented to anything of the kind. I have heard that Howard did settle one case in this manner where the defendant was liable for a penalty of $350. Pasco, the man indicted for hounding deer on the first day of July, was tried and acquitted. I do not think there is one case in a thousand where the evidence would be as plain and convincing. Two men saw the deer enter the pond; Pasco came up later and inquired where the deer crossed; he had a gun and hound with him and told one of the men it was his (Pasco's) dog; he crossed the pond, and soon after the deer was driven in and killed; the men saw the deer pulled into the boat. And yet when Pasco, in a hang-dog manner, told the jury that he was there on the first of July with his dog and gun *hunting for ginseng*, the jury by their verdict assumed to believe him. I hope that the fact that some of the members of the jury were bushwhacking about with Pasco's attorney nearly all night before the verdict was rendered, had nothing to do with the decision. The same evidence would have convicted a man of murder. Pasco was fined once before for killing a deer and afterward indicted for burning a building that was owned by the man who made the complaint. He escaped punishment through some flaw in the indictment.

A MORNING SHOOT.

I HAD promised my favorite shooting companion W., an ardent lover of dog and gun, to join him in a little sport the early part of August, and I went up to keep the appointment. W. owns Lew, a descendant of old Leicester, as fine a setter as ever delighted the heart of a sportsman posing as a living statue, while I had Belle, sister to Lew. Both of us used 3¼drs. powder and 1oz. No. 10 shot in 10-bore guns. In the first willows we entered we found a drove of cattle, although we usually find birds here. Although Lew made game the birds had gone. We next entered a cornfield, I taking the center and W. going outside next to the fence. A bird flushed ahead of Belle, but flying in direct line to W. I was prevented from shooting. I cried mark! and W. turned in time to get in a snap shot, but failed to stop the bird which he marked down. Lew being sent on did some very careful roading on this bird which had run, finally locating and pointing in grand style, the bird flushing wild and getting away without a shot, owing to thick brush. Working on in same direction, W. taking the brush and I the outside, both dogs soon made game, Lew being first to find and making another of his grand points. W. walked up the bird, which favored me, and I stopped him. Both dogs were anxious to retrieve, but we always make it a rule to allow the dog that points that honor. Lew was told to fetch, which he did in his truly perfect manner. I had almost forgotten the very important fact that both dogs were trained under Hammond's rules, in "Training vs. Breaking," as indeed are all our dogs.

We now worked quite a little ground before Lew found and pointed, and W. again had to take to the willows and flush, as Lew objects to breaking his points, and W. stopped his bird with a quick shot in thick brush. A short distance on Lew again commenced roading, doing some very fine work, and finally dropping to point with head thrown round on right shoulder. While we were admiring him the bird flushed and flew straight to W., but he scored a miss. Working back, Lew soon found and pointed, backed by Belle, and I scored my second bird. We now worked across the creek and Lew again gave us a treat, roading completely around a close-lying bird in tall weeds. This bird was put up and dropped by my companion. We again moved on, and missing Belle, went back and found her on a point where Lew's bird had just left, took her off, and moved a short distance, when Lew stopped on a bird under an old treetop, which also fell to W.

Swinging a little to the right, the dogs again made game in the opening, Lew again scoring the point. The bird was seen by W., who walked up to flush, when it swung behind some brush, and W. scored a miss and I followed suit with both barrels. This was rather a set back for me, as it was a left quarterer and my favorite shot. Throwing in fresh cartridges we went on. Belle swung to the left and immediately pointed under an old log, and a fine old cock flushed from the opposite side, which I grassed. Then going in the direction the other bird had taken, both dogs again made game, the bird flushing before the could locate him, and W. wiped my eye with a splendid shot.

We were now close to home, which we reached at 11 o'clock, having had as much enjoyment as could possibly be crowded into as short a space of time.

We are anticipating good sport with the ruffed grouse, as the outlook is very promising, the birds appearing more plentiful than last season, and that was the best for a number of years. Deer and bear signs are very thick, and, as we have a good crop of beech nuts, we hope for some right royal time. FRED.

POTTER COUNTY, Pa.

QUAIL IN THE OAK WOODS.

WE go eight miles to the oak woods to try our hand on quail. It is a fine day, misty and damp. Reaching the ground Sport, my liver and white pointer, points a fine covey, but they are wild, rise out of range and go into the woods. We dismount and follow the scattered birds and Spot points again. Three birds rise, I get the last with the right barrel, just as a cotton-tail jumps from under my feet, and I bring him to bag with the left. The thicket here is very dense and we go further on.

The next covey is pointed by Carlo, John's lemon and white pointer, a fine looking dog. John dismounts first, walks up and gets one shot—a clean miss. We think we have marked them down and follow. The dogs are ranging beautifully and Sport points, a bird rises, I fire and the bird is grassed just as John levels his gun; he recovers arms and wonders how I get all the good shots. We go still further into the thicket and Sport flushes a covey from the windward side, so they are up and off without a shot, except one bird that turns and stops in a pine tree. John and I walk up and the bird flies from a tree 20yds. to my left. John misses again. We follow them (or endeavor to do so) and find one bird, which is pointed by Sport. We walk up through wet weeds and grass; all is excitement. I propose to John to select the birds on our respective sides and he says, "We'll take 'em any way we can get 'em." I give the word and one bird rises. We both fire, the bird is dead and Sport retrieves it nicely.

We start back to our horses and walk over a bird; I fire and miss. We continue our march and Sport points, backed by Carlo. The bird rises to me, I fire and miss again. This is the last bird we can find of this covey, so we mount our horses and ride over the hill to a neighboring bottom. John is wet, gets cold, sees a convenient house and steps in to warm, while I ride slowly up a little branch and allow Sport to hunt it thoroughly. I go about a hundred yards, cross and find one more covey. At my first shot John comes out and wants to know if I have started any birds, and just as I respond in the affirmative Sport points again. The bird rises and I bring it to bag. John has marked down two or three birds and has followed them higher into the woods. In a little while I hear five shots in rapid succession. He has now lost the last of the covey and emerges from the woods with one bird.

On our way around to the Ninety-six road Carlo points a covey, but it is getting late and we turn our steps homeward.

R. H. M., JR.

TRENTON, S. C.

LABOR AND REFRESHMENT.

OWING to the inclemency of the weather, and other equally potential causes, I did not indulge very much, during the last season, in the sports of the field. Now and then, however, when the day was inviting, my business engagements permitted, and a genial companion or two could be had, I hitched up my old horse Frank, put in the buggy a change of clothing, my little hammerless 14-bore, and about 200 loaded shells, whistled up my bobtailed pointer Argo, and set out in quest of some laborious and healthful amusement. These trips always made my dog happy, for he looked forward to the gratification of his highest ambition.

During the month of December last my friend, B. W. Jethell, of Rockingham county, in this State, came with his wife on a visit to her immediate family. He was accompanied by Mr. Griff Rinn. Both had their guns and were well supplied with ammunition. After a week or two spent in our vicinity, enjoying themselves by frequent jaunts into the country and bagging quite a quantity of game, Mr. Rinn returned to his residence, leaving Mr. Jethell to get all he could, in the way of sport, from the fields and woods in the upper part of our county. It happened that soon after Mr. R. took his departure Major Edwin Gully, a native of Virginia, most of his life a cosmopolitan, and at present a traveling salesman for a well-known grocer of Richmond, came among us and enlivened our dullness by his sparkling presence. Gully is an enthusiast in hunting and fishing, and can relate some remarkable tales of his former exploits. He is a fair shot—no doubt of that—but like most men who love the rod and gun, he now and then allows his imagination to outrun his facts, and in consequence at times he "bends a rousing whid" without "nailing it wi' scripture."

Gully was anxious to take a hunt, and equally anxious to take along my young setter Eck, for whom he had formed a decided attachment. I agreed to take him to a place owned by me about twelve miles north of our town, where I have a house which I occasionally occupy during the summer, and in which I keep some beds and other furniture which make it a nice place for "camping" when I choose to hunt in that vicinity. I also let him have the use of my gun and supplied him with shells. Jethell aforesaid and Dr. Still Weele, a local sportsman, joined us. We shot a little on the way as well as after our arrival, and by night we had probably two dozen birds. An excellent and cheerful fire was soon blazing in the chimney place. Gully and Jethell pride themselves upon their capacity as cooks, and if they possess the qualifications of which they boast, either could get a large salary at any fashionable restaurant as *chef de cuisine*. I did not choose to settle their respective claims to superiority, but ventured to suggest that Gully should heat the water and clean the frying-pan, while Jethell showed his skill in dressing the birds, Dr. Still bringing the water from the spring.

In the morning Gully would change places with him. Dr. Still acknowledged that his skill lay in being able to determine the quality of the food which they prepared. I claimed the exclusive privilege of making the coffee. With this division of labor we managed to get up a meal which satisfied our hunger. I used the old style coffee pot, boiling a little and then settling with a cup of cold water. If I had had one of these two-story coffee pots, called a Biggin, and dripped the coffee, no doubt the flavor of the beans would have been far better preserved. As to this new-fangled humbug, which professes to distil the liquid, and greatly economize the grain—I did not want it. An eloquent agent who traveled and lied all over our county in regard to the merits of the invention exhausted his art of persuasion upon me without being able to swindle me out of the dollar which he coveted. Distilling coffee in a piece of the cheapest tinware, without a condenser! And a dollar for an article which would have been expensive at twenty cents! It is well for many of these agents that I am not the Czarissimus of this country.

Next morning at an early hour our horses were harnessed, two saddles strapped to the buggies and we set out to try some fields lying on the waters of Mountain Creek, about four miles distant. Men and dogs went forward "with hope elate, the Elysian palm quite soon to win." Reaching the vicinity Jethell and I saddled the horses and with Argo and Barney, J.'s old "yaller dog," who had been savagely treated in his youth, entered an old plantation which I had never hunted, but which I had heard would afford us plenty of sport. Gully and Still acted the part of infantry in the war and had Eck and Dick, two setters who had keen noses and dull heads. For supreme fools I have never known these two canines to be surpassed. Those two sportsmen took a different route and went where I knew they would find birds abundantly, for I had tried it.

Jethell and I ranged field after field, inviting in the highest degree, and found not a bird. On and on we went. At last, in a pine thicket destitute of low cover, our dogs scented birds and came to a point. They flew up wild, but J. got in one shot and winged a bird. The balance of the covey scattered, some taking trees. He got another shot and missed. Soon, though, he called me, and on my going to him he said that he saw a bird perched upon the limb of what he called an old-field pine. We got him to fly and both of us gave him a salute. We thought we had only wasted our loads, but the little bobtail saw better than we did, for dashing down the hill he soon returned with the bird in his mouth. There being no use of further pursuit we went forward to try to find another covey. It took a long while to do it, but we did succeed at last. They flushed upon the first challenge of the dogs, and J., firing from his horn, got one at long range. They went into the woods, of course, so did we. We managed to get three or four more and gave it up.

During a part of this time we had been disheartened by hearing frequent shots of the guns of Gully and Still, and felt that at least they were having a chance to beat us badly in the hunt. We still had hope, however, that we would get to the right place after a while. Going on about a half mile, our dogs came to a stand in an open old-field near cultivated land. Hitching our horse we approached, and as the covey rose we succeeded in getting two birds. We could not see where they settled, but as they flew across the field, and there were some nice-looking places in it, we entered it. Running over the wind, our dogs flushed a fine covey. One of the birds took a different course, and we went after him. Pretty soon Argo got scent, and did some pretty roading, with an occasional halting stand. At last coming to a point, I ordered him on; he sprang forward, but nothing ran. Barney, the unfortunate, came up, and stood at the foot of a thick cedar, and then out went the bird. It being my chance by agreement—the bird giving us a side shot to the right—I discharged one barrel, only to get plenty of feathers. Then Jethell fired, picking him a little more. My second barrel brought it to the ground, and Argo, as usual, unbidden, retrieved the game.

Just here let me say, that despite the judgment of others, I think there would be far fewer lost dead birds if dogs retrieved at once. No doubt the "drop to shot" plan enables a sportsman to shoot more frequently. But I have often seen instances where nearly-one third of the dropped birds remained in the field when the dogs were put to hunting them only after the shooting was over.

To return. After tramping around to no purpose we came back to where we supposed the flushed covey, and the first one we started, had located, and soon I got up two birds in the woods, bagging both. Jethell found by accident the first covey, but not being on the lookout they escaped, with only the loss of one bird and quite a number of feathers from another. On we went, and after a while we found more birds. Jethell got two of them, I wasted several shells to no purpose. Becoming disgusted we started back to the buggies, and on the way got up another covey, from which he got two more birds. I was again unfortunate—or rather unsuccessful. When we reached the buggies we had only fourteen birds. Of these he killed one-half and one was in doubt, so that the score stood 7½ to 6½. He killed two others after that, while I was resting; when I was thus engaged I heard an almost constant fusilade from Gully and Still. Not long, though, they came up, having between them twenty-seven Bob Whites. On being asked how many times they shot they showed some hesitation in their answer, but at last acknowledged that they had used about seventy-five shells, and ought to have had at least forty birds. The wind had become very high and the atmosphere was much colder. We returned to our camping place with forty-two birds, tired and hungry. A fire was started, and with commendable promptness our cooks had prepared a very satisfactory repast, which was evidently much enjoyed by Jethell, who is fond of good eating. None of us failed entirely.

After supper, and Gully and Still had smoked the pipe of peace—or a pipe a piece if you prefer [I hope "M.," of North Side, will not criticise], and I had contented myself with a chew of what is called fine-cut tobacco, J. looking on like a gentleman, it was proposed by Gully that we amuse ourselves with a friendly game of euchre. Having a desire to beat somebody at something, he chose me as a partner. But alas, the fates were against us. By sheer good luck, of course, our opponents achieved a triumph. Soon after this we were in bed.

My dog Eck had a habit of growling and barking all night at some imaginary enemy. To quiet him it was thought best to lay a bag on the floor of my room near the hearth and let him sleep upon it. Not long after we retired to bed, the ungrateful little whelp serenaded us with his usual music, and made "night hideous." The others told me that Eck was only responding to the challenges which I had made by my habit of snoring. They may not have slandered me. Truth compels me to say that I do not regard them as incapable of such conduct.

The following morning we left for home, and on the way got a few more birds. When we got home we had a bounteous supply for our households, and felt refreshed and strengthened by our active exercise and change of habits of life.

Poor Eck! He was a favorite with my family. He staid at home like an honest dog, and "sentineled the bed," like "the faithful Gelert, the flower of all his race." He growled and barked at chickens, and things real and unreal, both by day and night. But he acted as a guard, nevertheless. The poor fellow had an excellent nose, great industry in the field, and was very staunch on a point. He would not retrieve, and lacked in sense. He could not find the way home, and was often lost. In the early spring, on another visit of Gully, he took both my dogs and went after snipe. Eck has not been seen since, so far as I know. I think he ran until he fell in the water in a fit and was drowned. Though not "the gift of Royal John," he was presented to me when a small pup by my friend Eck. Galloway, of Reidsville, the excellent sheriff of Rockingham county, and came of gentle blood, his ancestors on both sides being duly registered. Gully was sorely grieved that the poor fellow should have been lost and has promised me that he will get me another to take his place, provided I will let him hunt when he comes along and have the use of my guns. He can get either at his election, and I indulge the hope that when the next season opens I shall see his genial ruddy face and sandy hair, albeit somewhat frosted, and enjoy with him and others some inspiring jaunts, fraught with unalloyed joy and rosy health.

WELLS.

ELLERBE SPRINGS, N. C., May 2.

TWO DAYS ON THE TRAIL.

IN the latter part of one November our party of six gunners camped on the summit of the Alleghenies, near the line of the Tyrone and Clearfield railway, Pa. Here for six or seven successive years we had spent a week annually, pleasantly and profitably, for although after the advent of railroads in this section the deer diminished in number with wonderful rapidity, yet by the complete knowledge we possessed of the country, and the manner in which our exploits were conducted, we usually returned with some trophies of our skill.

On the occasion to which I particularly refer, after landing in camp and putting everything in order, it was decided to drive a ridge near by where we had been more successful in routing deer than anywhere within the limits of our hunting grounds.

It had been discovered on a former visit to these grounds that when deer were routed they sometimes failed to make their appearance, but slipped out at an unguarded point. We investigated the matter and found that at the north end of the ridge, which broke off very abruptly and was quite rocky and rough, the more wary and venturesome old bucks had selected their way of escape; so at this point one of the party took his stand, the other prominent runouts being watched as usual, leaving two men with dogs to do the driving. Probably an hour passed when the clear report of a rifle echoed over the hills from the rocky hillside below, and after the assembly call was given we hastened to the spot. The buck was gone, but a profuse sprinkling of blood on the ground and brush told very plainly that he had been severely wounded.

There was scarcely enough snow upon the ground to show the print of a track, but one of our number being an expert in this line, we took the trail with confidence, having first proven the unreliability of our dogs, which flatly refused to assist us. Progress was slow and difficult, but the search was continued until after the sun disappeared and we were reminded of the near approach of night. During the afternoon the wounded buck, in company with another, had been seen; but his cunning prevented our getting a shot at either of them. That night, while we toasted our shins around the camp-fire, plans were laid for capturing the buck the next day, and we then laid ourselves down to enjoy well-earned repose.

Morning dawned, revealing a cloudless sky. Breakfast was hastily prepared and served by our jolly cook, and we hurried away to the point where we had left the trail on the previous evening. During the night the buck had wandered about over a small space of ground, crossing and recrossing his track, finally lying down, as we afterward discovered. The runouts near where he was supposed to be secreted were manned and two of the party took up the trail. It was tedious work and required the patience of a Job, but the buck was considered worth the labor, and we determined to have him if possible. Finally he was routed from his bed, and at once begun his zigzag course in order to elude pursuit, so that it was not only difficult to follow him but our plans for getting a shot were completely baffled. It was then proposed to follow the trail abreast as the buck traveled slowly and bled freely, drinking wherever opportunity afforded. Here and there clots of blood and pieces of flesh were found on the bushes; the snow had almost entirely disappeared but the blood betrayed his pathway and enabled us to keep his trail. The course taken by the deer was principally through thickets of barren brush which afforded excellent cover. Toward evening his route described circle after circle, and night came down again without our catching a glimpse of him. Feeling that perseverance would reward our toil, it was agreed that the trace should be continued next day. Strange to say the buck did not seem disposed to leave the brush, although the second day he headed toward the laurel and creeks of lower ground. In all probability this was because he had not been pursued by dogs. An old mountaineer, living about two miles from our camp and whom we employed to transport our traps from the railway, owned a valuable dog, which we secured for the final effort.

Morning again favored us with clear weather, but it was late before the fresh trail was taken. Fearing the dog might start the buck and run him off without giving us a chance to kill him, he was tied to one of the party and started on, while we kept a sharp lookout in all directions. For several hours the winding course was pursued until the dog by his eagerness showed that the buck was not far off. Stationing ourselves in and on either side of the ravine, the dog was loosed. In a few minutes the deer bounded from the hillside with the dog close at his heels, and was brought to bay. Turning quickly with flashing eyes and hair pointing toward his head, the buck assumed a defensive attitude, when a rifle ball crashed through his brain, and the lifeless form lay stretched upon the ground. Examination showed a wound in the stomach, a portion of which protruded several inches through the opening made by the bullet. Nothing had entered the stomach after the wound was produced except water, which ran off, mingled with blood, and this alone made it possible to keep the trail. We had followed this deer from Monday noon until Wednesday afternoon, and although nearly half the week was already spent, we felt fully repaid for our pains and were 160lbs. of venison the gainers thereby.

F. G.

TYRONE, Pa.

MASSACHUSETTS SHORE BIRDS.—Salem, Mass., Sept. 2.—Shooting runs quiet now, although the cream of the season is coming. Some coots (surf, and velvet ducks) are along. Terns are flocking, and the loons are coming south. Upland plover have not been plenty. By the way, some gunners say these birds will not call, but I have shot them several times by lying low and whistling them within shooting distance. During the last long dull stormy spell in August quite a number of doughbirds (*N. borealis*) and so-called black breasts (*C. virginius*) were about Saga more and Essex hills. Some were shot, but green and greedy gunners spoiled the chances for others who know how to handle birds. Small birds have been more scarce this year than I ever knew them—I mean peeps and ringnecks. Wilson's snipe are along; some have been shot at Newburyport or near by. Rail prospects seem not very good, but may improve. I recently tried "Johns' automatic shells" in 10-bore Parker with very poor results.—X. Y. Z.

HOW THE DAKOTA NON-EXPORT LAW WORKS.—East Saginaw, Mich.—Our Saginaw party will not go to Dakota on their annual pilgrimage this fall. For the last four seasons we have taken our car and spent from ten to fourteen days shooting ducks and geese, and we have never had any birds spoil or waste on our hands, but have managed to bring home a good many to gladden the hearts of friends less fortunate than ourselves in not being able to take an outing. However, the good people of Dakota have passed a law that prohibits the shipment of game out of the Territory, and limits the killing to 25 birds per day. We could get along with the 25 birds per day part of it, but what would we do with them if we could not bring them home to our friends? Consequently we shall be debarred from our annual shoot. I suppose this is what the law was passed for, and while it pinches us pretty hard, we are willing to put up with it.—W. B. MERSHON.

HOMOSASSA, Fla., has not lost its charms for the shooting and fishing fraternity. A Brooksville, Fla., correspondent writes: "I wish to say to any of your readers who may visit Florida the coming winter, that if they wish to find a place where they can hunt and fish to their heart's content, with no disappointment, and at the same time view one of the most picturesque and tropical scenes in Florida, let them go to Homosassa, on the Homosassa River, in Hernando county, there you have the fresh-water black bass or redfish, tarpon of immense size, etc., all in the same waters. Deer and bears plenty and a few panthers. Wild turkeys and smaller game numerous. Read what Dr. Henshall has to say on the subject in his book on Florida.—H. B. D."

CADIZ, O., Aug. 31.—Quail are very abundant here but are all late hatch. I suppose all the early hatch were destroyed by the early spring or summer rains. Cotton-tails are unusually plenty; can see old and young ones three and four at a time out playing almost any time after noon along the roads. My beagles have had several nice little runs within the last week, merely for exercise and to train the yougsters. Any of the readers of FOREST AND STREAM that are in search of good rabbit hunting can be accommodated in this vicinity.—S. C.

RECREATION.—*Editor Forest and Stream:* In the first paragraph of my paper, "A Michigan Wild Turkey," in your issue of August 25, there is evidently an omission where I speak of billiards, dancing, etc. What I meant to say was that the dancing hall, race course, billiards or base ball may serve as a relief from oppressive mental toil, but he who enjoys field sports finds in them the completest rest for body and mind, etc. I intended to rate field sports on a higher plane than dancing and billiards.—JOHN DEAN CATON.

GARDNER, Mass., Sept. 3.—The Manomonoc Sporting Club of this town went into camp at Rindge, N. H., yesterday. The party includes Dr. G. W. Garland, A. S. Warren, Walter Newton, Fred Greenwood, George F. Ellsworth, S. W. Brown, J. Frank Pilke, Ed Coleman, John D. Edgell, Lewis A. Wright, C. H. Newton, George Nichols, Amos Coleman, T. P. Perley, L. L. Sawin, Fred Garland, Joel Flagg and L. S. Walker of this town; T. C. Sheldon and F. J. Nichols of Fitchburg.

NEAR NEW YORK.—Perth Amboy, N. J., Sept. 5.—There was an unusually large flight of night hawks on Saturday evening. No railbirds to speak of have been killed on the Raritan or South River marshes owing to poor tides. The birds are reported quite thin but in fair abundance. There have been hardly any snipe on the Raritan or Rahway meadows yet. Young bluefish are numerous near the railroad bridge.—K.

MICHIGAN.—East Saginaw, Aug. 26.—Every one is anxiously awaiting the opening of the season, and I suppose next Thursday morning the marshes along the Saginaw River will be filled with sportsmen, probably ten to every duck. But it is a fact that there is more game in Michigan this year than usual, and every one attributes it to the better observance of the law since our game warden system went into operation.—M.

HYDE PARK, N. Y., Sept. 3.—A friend of mine has been around on a voyage of discovery, and reports that he did not see a woodcock anywhere. The season has been very wet. I hope October will "pan out" better. Partridges (you may know I'm an old country boy) or ruffed grouse are reported to be quite plenty this year, and I hear good reports of quail.—CAPT. CLAYTON.

SMITHBURG, N. J., Sept. 1.—The prospect for the fall shooting is very good. I have seen a good many young quail. A friend told me that he saw fourteen pheasants (grouse) on the road the other day as he was going to his work. There is quite a number of rabbits and a few gray squirrels.—BLUE ROCK.

ERIE, Pa., Sept 2.—While out hunting beach birds on the 30th of August, I had the rare good fortune to shoot a white crane. It proved to be a fine specimen, and I am having it mounted for my dining room.—O. L. G.

RAIL SHOOTING.—Chester, Pa., Sept. 1.—Birds very scarce. High boat 21. Mr. Fred Ingle, of New York, the lucky man. One man shot in right eye. They say the scarcity of birds is on account of Jerseymen gunning for reed birds and frightening the rail away. I got 8.—MAC.

QUAIL ON LONG ISLAND.—Advices from the eastern end of Long Island, in the neighborhood of Southampton in Suffolk county, assure us that quail are very plenty there and that there is every prospect of good shooting this fall.

WESTERLY, R. I., Sept. 2.—The quail shooting promises to be very good at this point. The other day while out for a walk I raised six large coveys.—J. S. A.

FIDDLING AROUND.

HERE is an extract from Game Protector Geo. W. Whitaker's report to the New York Commissioners of Fisheries, setting forth with careful detail his arduous discharge of duty to warrant him in drawing that salary. What an admirable Pepys he would have made, had he lived two hundred years earlier; and what a perfect picture he draws of a protector who fiddles around doing wonders and actually accomplishing not an iota:

"*September.* To South bays in Kings county to ascertain if Staten Island fishermen could be caught, when I found they had not been drawing nets since I visited the persons who notified me last; riding in the woods watching parties shooting there; no chance to take them; to Bridghampton to find out if reports were true that song birds were being shot and game was being snared; could get no evidence of the fact; having heard partridges were being sold by the Smiths, formerly express men, which no doubt was true, but could not be proved; to Canoe Place, making general inquiry as to the shooting of ducks and game; having received a letter from the secretary of the South Side Club informing me it was not understood around there, Huntington, etc., that deer could not be killed for five years; writing him I would see him and also attend to the matter; drawing notice and particulars with reference to the law, sending one to the editor of the South Side *Signal* for one insertion, one to the editor of the Patchogue *Advance;* also to the postmaster at Huntington to affix in his office; again traveling in the woods after a shooter who, when caught, said he was after woodcock; to New York to see secretary of the South Side Club to get further particulars as to killing of deer; no one had been heard of killing any; it is likely my notices had the desired effect, the law having been unintentionally broken.

"*October.*—Visited the shores of Peconic Bay for nets and shooters, also Meacox Bay. Hearing the reports of guns in the woods, and having no doubt parties were shooting quail and partridge, at the same time pretending to hunt woodcock, followed at a distance for a long way, and although sure what they were hunting for, having no power of seizure, and not sufficient evidence wherein to arrest them, I could do nothing but remain unseen; to Brooklyn and New York examining depot for birds out of season which had been represented as transported in the cars, having no power of seizure, I could find no case of a breach of the law; attending on several persons as to the netting and fishing in the several bays; inspected stations for birds between Southampton and Sag Harbor, from where it was reported birds were being killed out of season.

"*November.*—To Peconic Bay, being informed parties were going sailing for ducks—going and waiting there; weather bad; no one in sight on the bay; Gravesend Bay, inspecting the shores and making inquiries of Board of Health which was still at work on the drainage of refuse, killing the fish, and general inquiries as to the people on Staten Island fishing in the bay; all appeared satisfactory; to Canoe Place, to examine canal so as to judge as to the fishing interest; making inquiries as to the shooting of ducks by sailing and the snaring of quail; to Cold Spring after parties sailing ducks; engaged on report, having received notice of parties shooting duck after sunset; writing for further particulars and for an appointment to confer as to what is best to do; my presence would put parties on their guard and make it impossible to get evidence to convict."

Sea and River Fishing.

CAMPING ON THE SAUK.

IT was a glorious July day when John and myself boarded the Mazeppa, a small sailboat that plows the waters of Big Sauk Lake, and with a canoe in tow started from Sauk Center for the head of the lake, nine miles back in the timber. The wind was blowing stiff and the sailboat fairly jumped before it, and with John for a skipper, we were off on the cruise. Our outfit was such that we had carried it to the sailboat in our hands, and for the benefit of many persons who make use of a dray for such purposes when they go off on a camping excursion I desire to enumerate our paraphernalia. It consisted of a heavy cottonade tent which John had made and treated with a proper composition to make it waterproof. It weighed about three pounds and was amply large enough for our purpose; a pair of blankets, three tin plates, two tin cups, a camp kettle, a frying pan, a coffee pot, three spoons, two camp knives and forks, some sugar, coffee, bacon and bread. This was the full amount of our camp fixtures, except our overcoats and some mosquito bar. We had two bass rods with proper tackle, two rifles, one a small .22cal. and one heavy .45cal., and my old dead shot Remington shotgun that I never leave behind on any occasion. Big Sauk is a handsome sheet of water and is environed by the forest, which forms in many places picturesque headlands, points and promontories that enchant the beholder who has stolen a day to spend in this sylvan retreat. The waters teem with fish of various kinds, including the large and small mouth bass, muskalunge, pike, pickerel and sunfish, with now and then a perch, and it was these finny inhabitants that John and I were expecting to interview in our own particular way.

The run up the lake was delightful. The water heaved heavily, making the boat dance; the wind was cool and bracing, and, best of all, dull business cares were left behind for at least four days. An occasional loon drew John's fire, but the rocking of the boat made it impossible to plant a ball within a dozen feet of one of the birds. When the head of the lake was reached we had a stout fight with the contrary wind and lily pads to run the sailboat into the channel of the inlet, where we wished to leave it, and it was well toward sundown when, with our complete outfit packed into the canoe, we said adieu to the Mazeppa and started up the river by paddle.

Here commenced some rare sport. The stream is overhung with heavy forest trees on both sides and hundreds of kingfishers had made this place their summer resort. John's little rifle was brought out and he commenced to exterminate these expert fishermen, on the principle, I suppose, of the survival of the fittest, which should hold good among fishermen as well as others. But a kingfisher makes a small target for a rifleman who is in a rocking canoe stemming a swift current and lurching among the rocks, and the birds escaped with the loss of a few tail feathers. A paddle of half a mile brought us to another little lake which the river runs through, and a location for a camp was discussed. A high, bold hill that rose from the eastern side of the lake was selected, for the reason that a brisk wind was moving most of the time and that would carry the mosquitoes away. In ten minutes we had our complete equipment at the top of the hill, which was about one hundred feet above the lake. John took the hatchet and went into the brush near at hand to cut tent poles, and there flushed a couple of pigeons. He returned for the shotgun and brought them to bag, and just as the dusk of the evening was coming on and the moon brightening its silvery rays we were comfortably located, with a brisk fire burning in front of the tent, bacon frying, coffee boiling, pigeons beautifully broiling, and happiness reigning supreme. Delmonico never served a supper that was relished with such keen sense of pleasure to the gastronomic man as we enjoyed. When John opened his commissary he was most surprised to find that his good wife had stolen a march on him by putting along with the bread a cream cake of large dimensions. No amount of argument was sufficient to convince him that cake and bacon did not agree, and that camp life was not made happy by the sweet cookeries of the good wife at home. He ate his cake, but I did not.

Supper having been disposed of in this most pleasing and primitive manner, plans for the morrow were laid. It was decided to try for bass in the deep pool of the little lake first, and the rods and lines were carefully cared for and made ready for active service in the early morning. John enjoyed his cigar, and dreamed of old hunting adventures for an hour, but I never use the weed, and yet the sylvan surroundings returned to my mind the many scenes of exciting adventure I had passed through during twenty-two years of hunting in the wild forests of Minnesota. Where now were farms, villages and railroads I had killed deer in the early days, but one might hunt a month now and not see a track. Without indulging in much conversation we retired into the tent and went to bed. During the evening we had not suffered from the mosquitoes, although there were millions of them around the low ground. The wind prevented them from working about our camp. A few days before this a party of rather fresh campers had come to the head of the big lake and attempted to sleep in the sailboat, and during the night waged a continuous battle with the mosquitoes, in which the latter came out victors, and the would-be campers fled with the first streak of dawn for home, where liniments and lotions for punctured skin at once went into a genuine western boom. Before retiring a few drops of the oil of pennyroyal were sprinkled about the camp for fear that the wind would go down and the insects find a way into our stronghold, but we were not awakened, and a night of dreamless, restful sleep was enjoyed by both of us.

With the first dawn we were astir and with rod in hand commenced to cast in the deep water of the lake. Half a dozen handsome bass from 2 to 5lbs. were soon taken; none of them developing any very exciting fighting qualities for some reason, although they were large enough to have fought for life. After an hour of exciting sport, during which the small fish were put back into the lake, we returned to camp with our five picked bass which were properly dressed, and the largest one cooked according to the most scientific rules of camp art. It is needless to add that the most delicate flavors of the fish were thoroughly developed, and that our breakfast was even better enjoyed than our supper. John even let his cream cake go begging while he paid his exclusive attention to the piscatorial delicacy. We were not out for the purpose of depopulating the waters of their treasures, and it was decided to take a day of quiet rest in camp with a little fishing in the evening.

About 10 o'clock a dark cloud which had been threatening in the west suddenly developed into a wind, rain and hail squall, and came down upon us before we knew it. We had made things snug, however, and with some degree of contempt for the fickleness of weather that could give so magnificent a promise in the early morning and break it before 10, we awaited the onslaught. It came with tremendous peals of thunder and flashes of blinding lightning that sent chasms of fire from the clouds to the earth, and then came the wind. John and I soon found that our passive attitude was to be broken, and we had a long and hard battle with the wind to keep peaceable possession of our tent. By consderable physical exertion we succeeded in holding the fort, and the storm passed over without the expected disaster, and our little tent had preserved all our camp traps in a comfortable state of dryness. The wind and sun soon dried off the grass and woods, and after shooting at a mark until weary, we went for a walk through the trees. Not far from camp we found a large patch of ripe, delicious wild raspberries, and soon picked several quarts of them, which added to our dinner a most acceptable dessert.

In the evening I decided to stay at the tent and enjoy the great pleasure of communing with myself and nature. I cautioned John not to carry the murder of fish beyond a point allowable by conscience, and with a knowing shake of his head he went to the boat and put out into the lake. Shortly afterward I noticed an old heron, that had been flying around during the day, settle down on the lake shore about 200 rods away, and taking John's Sharps rifle I proceeded to send half a dozen shots at the bird, and finally dropped a ball so near that it flew away. Pretty soon John came to camp with a woeful face. The biggest fish of the season had got away, in fact, it just swam off with boat, man and rod, and by a sudden lunge snapped the rod at one of the joints and carried off half the line. So John's rod was useless without anything to mend it with, and a fit of blues was coming upon him fast. I got out my fishing box, a little inoffensive square of tin, and unlocking it produced the treasures it held. Winding silk, wax a sharp knife, a dozen lines, twenty-five kinds of hooks, leaders, and about everything ever wanted by an angler, even to a whetstone, needles and thread, and a pair of scissors.

"Who would have thought that box held all that stuff," said John as he settled down to mend the disabled rod. "I gad it was a lunker that I had, and if I had only landed him!" continued the disappointed fisherman, but the fish was not landed, and aside from the discomfort of swallowing the hook and carrying around forty or fifty feet of bass line is no doubt doing very well, and will be on hand for John next time. The next morning we were out for the fish early, but they did not take either fly or bait, and we then tried a troller with no better success

except that a little pickerel struck and was hauled in only to be thrown overboard again. The day being cool and pleasant we took a canoe trip up the river. It wound around among clumps of willows, through groves of elms and oaks, and in some places was bordered by wide meadows of tall waving grass with here and there larger meadow flowers that stood high above and exhaled a perfume that sweetened the crisp air and turned it into a life-giving elixir that no compound druggist ever made could equal. As we were passing a large log that lay on the bank of the river there was a sudden rush and a chuckle, and the quick eye caught a glimpse of a woodchuck as he darted into a hollow in the log. The canoe was allowed to drop down stream a rod or two while John got out his little rifle. In a moment the curiosity of the little animal got the better of its instinct and it stuck its head out of the hole to reconnoiter. The little gun cracked, there were a few shrill whistling sounds and all was over for that "chuck." Canoeing was so pleasant that we ran down to see if the old Mazeppa was safe, and decided to break camp and go home the next day.

In the early morning, after a night of resting sleep, we, with sad hearts, broke camp and started for the Mazeppa, well satisfied with the exquisite enjoyment our trip had yielded, and willing to leave to conscienceless potters the labor of taking the hundreds of fish that might have been brought to basket. The sailboat was gradually worked through the lily pads to where the fresh breeze filled its sails, and we were off for a day's cruise, as we calculated to sail about the lake and not go home till evening. John threw the troller over the side of the boat, and in less than half a minute had a tremendous yank on the line. At the same moment the water broke about 50ft. behind the boat, and a large fish cut a semicircle in the air at least 3ft. above the surface.

"Muskalunge, by my troth!" said I, and John commenced to haul in, but the fish held to the water for fully ten minutes before he came over the side of the boat, and then as he flopped we saw that it was only a big pickerel. "To look at," as I once heard a "Hoosier" say, "I should reckon it was right smart of fifteen pounds," but when the spring scale was applied it proved a trifle short of eight pounds. And so a big fish story was spoiled. This is just about the usual foundation for twenty-five and thirty pound muskalunge. Some one catches an eight or ten pound fish and multiplies it by three, and he has the veritable piscatorial legend of the season.

After a day of delightful sailing with a strong, cool breeze, and a dinner eaten under the shade of monster maples where a little spring came bubbling up from the depths of the earth, and where the maids of the woodland had spread the softest of moss carpets, we returned home in the glowing, golden twilight. W.

BASS IN THE DELAWARE.

BLACK bass fishing in the upper waters of the Delaware at Lackawaxen, Pa., is always good. This is the most accessible and most certain fishing ground for New Yorkers; it is 110 miles distant. The scenery is magnificent and the mountain air bracing. The windings of the river, with its clear waters, deep pools and massive rocks, make it a stream of rare beauty. The splendid stretches of water between the riffs contain bass in its pools and under sheltering rocks in numbers that make angling a success. The mountains rise up in imposing grandeur all along the river banks, and the eye perpetually rests on beautiful scenery.

I have visited these waters every fortnight during this summer, going out on Friday nights after office hours and getting on the waters early Saturday mornings, and with a company can always secure twenty bass each in a day, weighing from ½lb. to 1½lbs., with a two, three or four-pounder thrown in. There are clear cold water springs at intervals along the shore that make good camping grounds. You can have your boat carted up stream four or five miles and fish down, anchoring by the big rocks and pools and fishing there. Lots of excitement in getting your boat over the riffs. If the boat catches on a rock, fish before trying to get off.

The best fishing is down stream, and best of all right at the village of Lackawaxen. The fishing is done between the riffs, and for thorough enjoyment the angler should set out for the day, float down the river, fishing until late in the afternoon or dark, then have his boat hauled on to the Delaware and Hudson Canal, which runs alongside the river, and row home. Or leave your boat on the river side, and Captain Buck, the host of Lackawaxen, will send for it next morning. You can't row back on account of the riffs and the current in the river. Unfortunately Delaware River black bass, at least in this neighborhood, do not take the fly freely. Bait is the best lure, minnow, lamprey, eels and clippers, the last named the surest. I have seen on several occasions this summer a party of five fishing from two boats, with ladies in the party, land 100 bass. For steady fishing I do not believe any distant river beats this one almost at our doors. The fare is $3.40 there and back if you buy a book of fifty tickets. Lackawaxen, Erie R. R., is the place to go to, and Captain Buck has horses, dogs, boats, bait and men to cater to your wants. MOUNTAIN BROOK.

NEW YORK, Aug. 27.

A POMPANO IN RHODE ISLAND WATERS.—Newport, R. I., Aug. 27.—Last week a friendly fish marketman called me in to identify a strange fish. I did. It was a pompano of about ¾lb. weight. I invested a dime and had it for supper. It was caught by hook off the rocks. Its capture furnishes a certain amount of corroboration to the views of those who take more trouble than I feel like taking to prove that the Gulf Stream is either further inshore or stronger or something than usual. Certainly the pompano is a denizen of the Florida keys and even at Key West is comparatively scarce, scarce to such an extent that though I having caught in that vicinity in two seasons say 500 fish, I have but a half dozen pompanos on my list. In 1875 at Wood's Holl, about three were brought to Prof. Baird, caught in pounds in the Sound, and in each case it was a new fish to the fishermen.—PISECO.

HUDSON, Wis., Aug. 27.—Our anglers are having great luck trout fishing. Wednesday, the 24th, Sam Cockburn and Steve Jones caught three rainbow trout that weighed 9¾lbs., the largest weighed 4¼lbs. Thursday, the 25th, J. E. Jones caught two that weighed 3¼lbs. each.—BEAUTIFUL.

A BIG SALMON.—A salmon 87½lbs. in weight was exposed for sale recently in the Central Fish Market, Farrington Road, London, by Mr. A. Drake. It was a male fish, or what is known in the north of England among fishermen as an "eke." No scales were on it, and it was turning somewhat brown or copper-colored. There was an indentation on the tail part just beyond the umbilical fin, which showed that it had been gaffed or leistered. It was taken in the river Tay, on Mr. Dunn's estate.

A CONNECTICUT SALMON.—Hartford, Conn., Aug. 29.—I send you a photo of a 10lb. Connecticut River salmon, caught last May. It shows that the labors of the Fish Commissioners bring forth results.—EVERETT S. GEER.

DR. M. G. ELLZLY, one of the veteran contributors to FOREST AND STREAM, has removed to Woodstock, Md., where he will reside.

ONTARIO LAW.

COPY OF AN ORDER-IN-COUNCIL, APPROVED BY HIS HONOR THE LIEUTENANT-GOVERNOR, THE 26TH DAY OF MAY, A.D. 1887.

UPON the recommendation of the Honorable the Commissioner of Crown Lands, the Committee of Council advise that the accompanying regulations under the "Ontario Fisheries Act, 1885," be approved of and established by your Honor. Certified, J. LONSDALE CAPREOL, Asst. Clerk Executive Council, Ontario.

The Honorable the Commissioner of Crown Lands.

The Commissioner of Crown Lands has the honor to recommend to the Executive Council that the following regulations be made under "The Ontario Fisheries Act, 1885," namely:

1. That leases granted for the purpose of conveying the fishing rights pertaining to public lands adjoining the rivers, streams and lakes of the Province, shall be for the depth of one chain inland from the water's edge.

2. Such leases shall be granted, as far as practicable, to responsible parties, able and willing to improve the lakes and rivers and guard them well. Applicants having in view the personal use and enjoyment of the fishing rights to be generally preferred to such as may offer higher rents with a view to farming or sub-letting the right to fish. Care to be taken that residents in the Province be allowed to enjoy a due proportion of the fishing rights.

3. That the valuation of the lands for rent shall be based on the character and condition of the rivers, streams and lakes which they adjoin, as made known to the Department of Crown Lands by reports of official inspectors or private individuals, all such reports to be considered confidential, and not to be communicated to other parties without the express authorization of the Commissioner of Crown Lands. Offers made by applicants for leases not to be communicated to other applicants.

4. That leases of lands made and granted under the provisions of "The Ontario Fisheries Act," shall not be held to convey the right to work any mine that may be found on such lands, or to cut any timber thereon.

5. That licenses and permits to fish shall be granted upon the payment in advance of such fees as the Commissioner of Crown Lands may from time to time determine, and shall be valid until the close of the angling season of the year in which it is granted.

6. That excessive or wasteful fishing or killing of fish shall involve the cancellation of the lease, license or permit covering the waters in which it has taken place.

7. That it be obligatory upon any person who has no domicile in the Province of Ontario, and who desires to fish in the rivers, streams or lakes under the control of the Province, to procure a permit or license to that effect from the Commissioner of Crown Lands before beginning to fish.

8. That no person shall, except under authority of a fishery lease, fishing license, or permit, fish for, catch or kill any fish in any inland lake, river or stream adjoining the ungranted lands of the Province.

9. That no person shall, without lawful authority, fish for, catch, or kill, by any device or means, any fish during their spawning time, or disturb or destroy their spawn or spawning-beds.

10. That it shall not be lawful to fish for, catch, or kill, brook trout, salmon trout, whitefish, bass, pike, pickerel, maskinongé, tulibee, grayling, herring, or perch, in any inland lake, river, or stream under the control of the Province, by any device or means other than by hook and line, or angling, except in waters leased or licensed for the express purpose of net fishing.

11. That it shall not be lawful to us any explosives, or chemical material, or compound, for the purpose of killing or catching fish.

12. That fishing by torch-light, or other artificial light, placed in or above the water is prohibited.

13. That no person shall fish for, catch, kill, buy, sell, or have in possession any fish at times when the taking or killing of fish is prohibited by lawful authority.

14. That parties holding leases under the provisions of "The Ontario Fisheries Act" shall not have any recourse against the Government of the Province for any hindrance to their use and enjoyment of the fishing rights pertaining to the lands leased, by the operation of any law enacted or that may be hereafter enacted by the Parliament of Canada, or by any action of the Government of Canada, or any person employed thereunder.

15. It shall not be lawful to use or set in any of the inland rivers, streams or water courses within the Province, any net, rack, trap, weir, or obstruction for the purpose of catching fish, or whereby the free passage of fish up and down the same may be obstructed or prevented.

16. The catching, killing or molesting of fish when passing or attempting to pass through any fishway or fish-pass, or in surmounting any obstacle or leaps, the use of any invention to catch, kill or molest fish in the mill-heads or water-courses appurtenant thereto, are hereby forbidden.

17. It shall not be lawful to put into any waters, in any inland river, stream or lake in the Province where fish are taken, any offal, blood, putrid brine, putrid fish or other deleterious substance, and all fish, offal or filth of any description whosoever accruing from the catching and curing of fish, shall be burned or buried twenty yards distant from the water's edge of said river, stream or lake.

Close Seasons.

It shall not be lawful to fish for, catch, kill or have in possession:
Speckled trout, between the 15th September and 1st May.
Pickerel (doré), between the 15th April and 15th May.
Bass and mackinongé, between the 15th April and 15th June.
White fish and salmon trout, between the 1st November and 30th November.

T. B. PARDEE, Commissioner of Crown Lands.

Department of Crown Lands, Toronto, May 5, 1887.

MIGRATION OF LAKE SUPERIOR FISH.

BY W. D. TOMLIN.

[Read before the American Fisheries Society.]

THE whitefish of Lake Superior waters is prized for its edible qualities, and the increasing scarceness is causing much concern among those whose tastes incline toward this really fine fish for table use; already the supply is being drawn largely from Canadian waters and from Lake Winnipeg; year by year men engaged in fishing have seen their feeding grounds almost deserted and the numbers still diminishing, until at last to find a large whitefish in their nets is indeed a curiosity. The present season's fishing finds scarce any body of fish north of Ontonogan, Michigan.

The fishermen of Wisconsin and Minnesota are thus deprived of any chance of obtaining this fish by the gradual desertion of the old spawning grounds. I have said gradual because the disappearance has been fluctuating; some years the catches were prolific, then growing scarcer.

In the memory of men living in Duluth to-day, whitefish could be seen in Sucker Bay, twenty years ago, so thickly crowding one another that the water seemed alive with them. A thousand barrels of whitefish could have been put up from this single spawning or feeding ground.

Captain Vose Palmer, an old fisherman who owns property on this bay, states that twenty-five years ago it was enough to send an enthusiast wild to see the immense quantities of fish come in on the swells until the waters were apparently a compact mass of fish.

Captain R. H. Palmer, a brother of Vose Palmer, who has fished Superior waters nearly thirty years, says that beginning at Sucker Bay or Stony Point, and following the north shore line eastward up to Thunder Bay, near the mouth of the many rivers and streams that come tumbling into Lake Superior, you could find the feeding grounds of the whitefish, and in the bays near to them millions of young whitefish could be seen in their season.

Captain Alex. McDougall, a lake captain, whose earlier years were spent in fishing, has cruised in almost every bay, creek, river or stream in this end of Lake Superior, and has carefully noted the habits of the whitefish, and knew both their spawning grounds, and feeding grounds, and has seen the young fry of whitefish by the million along the shores both of Minnesota and Wisconsin, Captain McDougall has endeavored for years to call attention to the alarming decrease of whitefish and to find some remedy for the same.

With the demand for whitefish, and the opening up of towns in the great Northwest, larger areas of nets were spread, more men were employed in the business, steam tugs were employed to carry the fish to the trains that delivered the fish to the towns on the prairies of the West and beyond the Mississippi; then came the first notice of any spasmodic migration or variation of the schools of fish on their feeding grounds. It became so noticeable as the years rolled by that the most observant and intelligent fishermen counted the years. There came an immense glut of fish, markets were overstocked, the nets in the water were filled, and before the men could dispose of the first catch and get to their nets, the fish were dead and thus useless. That season much fish was destroyed, not by any carelessness, but by such immense schools coming into the nets that the men could not take care of them.

The year following the season's catch was a diminution of the usual catch, the next season was still smaller, the fourth season was almost a failure; these singular periods vary, sometimes coming every fourth or fifth year, and until the men ceased expecting catches of whitefish they almost knew about the proportion of whitefish they might expect. These facts are confirmed by Captain Martyn Wheeler and Captain Ed. S. Smith, both engaged in fishing for some years, as well as fishermen of other nationalities who have been fishing these waters for more than twenty years.

The fishermen were at one time prodigal of the fishing wealth of this inland sea; it was each for himself, and undoubtedly grew careless both of the manner of netting and the disposing of offal when cleaning the fish for the market. When the facts began to present themselves in fierce array, "that there was a possibility of over-fishing Lake Superior," then the fishermen began to enlarge the size of the mesh of their nets, and to discontinue the use of the pound nets; and using only seine nets for their work, the size of meshes was increased from 3½in. to 4in. Still finding their catches diminishing they inquired for causes; at this point the U. S. Fish Commission by some means had circulated along the chain of the Great Lakes the information that all offal dumped into the lake near to spawning grounds was injurious to spawn, and that both trout and whitefish would seek other grounds to spawn if fish offal was dumped into the lake.

One after another all the old grounds had been deserted until fishermen who went to Sucker Bay, twenty miles from Duluth, now have to go one hundred miles away, and then only get an occasional whitefish; while the fishing grounds proper lay in the body of the great lake, too far for fishermen at the eastern end of Lake Superior to reach them. It looked as if the fishermen had "killed the goose that laid the golden egg," not by any greed or gross carelessness, but by ignorance and inadvertence.

Many of them believe firmly that the coming of the schools of whitefish and lake trout are spasmodic, though they cannot assign causes for this. They think that after a season of unusual northeasterly gales succeeding spawning time the spawn is destroyed by a too violent agitation of the waters. And as Lake Superior eastern storms are often long continued and of destructive force, the next season's supply of young fry is very small in numbers. Another cause may be the careless dumping of fish offal on the feeding grounds, this causing the whitefish to seek new grounds until this substance is destroyed, and thus in three or four years the fish have returned again to the old feeding grounds.

The fishermen of Lake Superior have learned that the whitefish is a very timid fish; that continued netting for two or three seasons will drive them to seek new grounds; and that once driven away it takes years for the schools to come to the same grounds again. The sentiment is increasing that the utmost care must be taken not to drive away the young fry that have been planted by the Minnesota Fish Commission and are finding their way to feeding grounds that were fished ten years ago.

DULUTH, Minn.

THE NEW YORK FISH COMMISSION.

WE recently noticed the report of the Commissioners, promising to do the same with the reports of the Superintendents. The first report is of the Caledonia Station, and is simply an account of fry and eggs distributed in 1886, without other note or comment. The following is a condensed table of the distribution:

Lake trout	1,924,000
Brook trout	1,937,000
Rainbow trout	1,442,000
Whitefish	430,000
Hybrids	45,000
Brown trout	116,000
Total number of fry	5,894,000
Lake trout eggs	251,000
Whitefish eggs	100,000
Brook trout eggs	25,000
Brown trout eggs	1,500
Rainbow trout eggs	546,100
Total number of eggs	923,600

The report from Cold Spring Harbor goes more into detail of the work that has been done on the grounds, as well as with the fish, and an interesting article on the hatching of the smelt is given quite at length. There is also a figure of a new automatic tidal hatcher, especially designed for floating eggs, which is not only ingenious but very effective.

The following is the table of distribution from this station:

Penobscot salmon—Hudson River	297,873
" Lake Ontario	99,200
" St. Lawrence	45,500
	446,573
Landlocked salmon—Franklin county	31,020
Brook trout	195,000
Lake trout	100,000
Brown trout	26,500
Whitefish	942,300
Smelts	2,100,000
Tomcods	2,225,000
Lobsters	4,000
Total	6,070,393

The following table gives the distribution of fish eggs from the Lake Brandon station, Little Clear Pond, Franklin county.

Brook trout	404,000
Lake trout	35,000
Frostfish	20,000,000
Total	20,439,000

The Clayton Hatchery presents the following as the number of fry turned out for 1886:

Lake trout	500,000
Whitefish and ciscos	500,000
Brook trout	20,000
Rainbow trout	500,000
Pike-perch	500,000
Oswego bass	32,000
Total	2,052,000

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 7 and 8.—Second Show of the Fox-Terrier Club, Newport, R. I. Entries close Aug. 27. F. Hoey, Sec., Long Branch, N. J.

Sept. 13 to 16.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary; Chas. Weil, Superintendent.

Sept. 20 to 23.—Fourth Show of the New Jersey Kennel Club, Waverly, N. J. Percy C. Ohl, Secretary, 44 Broadway, N. Y.

Sept. 20 to 23.—Wisconsin Kennel Club's Annual Show, Milwaukee, Wis. A. M. Grau, Secretary, 552 East Water street.

Sept. 27 to 30.—Annual Show of the Southern Ohio Fair Association, at Dayton, O. M. A. Nipgen, Secretary.

Oct. 4 to 7.—Fifth Annual Dog Show of the Danbury Agricultural Society, Danbury, Conn. B. C. Lynes, Secretary.

Oct. 12 and 13.—Third Annual Show of the Stafford Kennel Club, Stafford Springs, Conn. R. S. Hicks, Secretary.

Feb. 21 to 24.—Twelfth Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Sept. 6.—Manitoba Field Trials Club Field Trials. Derby entries will close July 1; all-aged entries Aug. 1. Secretary, Hubert Galt, Winnipeg, Manitoba.

Oct. 17 to 22.—Second Annual Meeting of the American Coursing Club, at Great Bend, Kan. G. I. Royce, Secretary, Topeka, Kan.

Oct. 31.—First Annual Field Trials of the Indiana Kennel Club at Bicknel, Ind. Open to dogs owned in Indiana. P. T. Madison, Secretary, Lock Box 4, Indianapolis, Ind.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

Jan. 10, 1888.—Second Annual Field Trials of the Texas Field Trials Club, at Marshall, Tex. W. L. Thomas, Secretary, Marshall, Tex.

Jan. 16.—Fifth Annual Field Trials of the Pacific Coast Field Trial Club, near Kingsburgh, Cal. N. P. Sheldon, Secretary, 320 Sansome street, San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5296.**

BEAUFORT—PATTI M.

Editor Forest and Stream:

Now that the American Kennel Club has placed itself on record as upholding a wrong act, and a violation of the A. K. C. rules, permit me to present the real facts of the Beaufort—Patti M. contest, and also to reply to the communication of Mr. C. J. Peshall, which appeared in the FOREST AND STREAM of May 26. Most of your readers are aware of the cause of the protest, but to enlighten them more fully I quote from the *Turf, Field and Farm's* report of the Waverly show bearing upon this special prize:

We had hoped to be able to say that the show was an entire success and devoid of any unpleasant features, but such is not the case. Mr. Peshall, president of the club, anxious to attract a large entry of pointers and setters, announced through the sporting press before the entries closed two specials for $50 each, donated by him for the best pointer or setter and best brace of either breed. When the entries closed, Mr. Peshall found that the Graphic Kennels and some other leading kennels were not represented. Under the rules of which we have always found Mr. Peshall a strict constructionist, no additional entries could be received, but it was thought feasible to offer an inducement in the shape of a pointer sweepstake of $5 each, open to all comers; Mr. Peshall liberally added $50 to this amount and the experiment was made, it failed as we believed it would to bring in any number of entries, the stake closing with three, Nick of Naso, owned by Mr. Peshall; Patti M., winner of first in small bitch class; and one minute before the time set for closing Mr. Peshall entered Beaufort, who was catalogued "not for competition." When the special was offered we were under the impression that Mr. Mason would "try for it," to use his language. Mr. Peshall, however, plainly and positively said in our hearing that Beaufort would not compete. Secretary Vredenburgh also was thus informed, and before Patti M. was entered he told Mr. Munhall that Beaufort had not been entered, otherwise, so Mr. Munhall tells us, he would not have competed at all, believing that Mr. Davidson's opinion of Beaufort would render such competition unnecessary.

In presenting my protest I claimed that as Beaufort was entered not for competition, he forfeited all rights to compete for any prize over which the show had any control, and cited Rule 6 of the A. K. C., which makes it necessary for a dog to compete in regular class in order to compete for specials. The conditions attached to a special prize by the donor, when they conflict with the rules, cannot be carried out if objection is made by any exhibitor interested.

At the meeting of the A. K. C., Dec. 6 last, my appeal from Delegate Peshall's decision was heard and decided against me by the following vote: Ayes 4, nays 3, blank 4. The secretary, Mr. Vredenburgh, voted the Pittsburgh proxy contrary to Article IV. of the Constitution, which is as follows:

Officers of the American Kennel Club shall not be privileged to vote upon business before the executive committee unless regularly elected delegates from their clubs, except the president, who shall have the casting vote in case of a tie.

At the meeting May 6, I asked for a rehearing of my appeal upon the ground that the vote at the meeting Dec. 6 was illegal as the secretary had acted as proxy for the Pittsburgh Club, in violation of Article 4 of the Constitution. The rehearing was allowed and the case decided in my favor. I doubt the correctness of President Smith's entertaining Secretary Vredenburgh's motion to reconsider, but claim that the A. K. C. must have given me a rehearing by general consent, as its former action would not hold. I take issue with Mr. Peshall as to his interpretation of Article 4. It is plain English, and clearly says that an officer of the A. K. C. cannot vote the proxy of a club of which he is not a member.

Mr. Peshall criticises me for having voted upon a case in which I was personally interested. In extenuation for such action I will state that I refused to vote upon the question of a reconsideration, but as Mr. Peshall voted, and as I consider him as much of a party interested as myself, I did vote upon the main question to offset his vote. Right here permit me to say that my club approves of my course, and back me up in my claims. Much has been said about my having transfered the proxy intrusted to me by Gen. Shattuc, to Mr. Hanna. The following letter will no doubt satisfy these gentlemen that I did not abuse the confidence imposed in me:

CINCINNATI, O., July 16.—C. M. Munhall, Esq.—Dear Sir: I notice in the FOREST AND STREAM, this week's issue, the question is raised whether you had authority to transfer the proxy of this club given to your club to vote at the May meeting of the American Kennel Club in New York. I beg to say to you that you had full authority to use this proxy just as you did do, and without any evidence on the subject, it is presumption on the part of any one to insinuate that you had no such authority, or that you were misusing the authority given you by our club. Our club fully indorses your claims, waiving, perhaps, some technicalities, but as to the merits in the case you undoubtedly are right. Under the spirit of the rules of the American Kennel Club, it is clearly the intent to force any dog which is to compete for any special prize to be entered in the regular class, and any club holding a show under the auspices of the American Kennel Club or its rules, has no right to change these conditions. If I understand the case, you entered your dog regularly, and after entries had closed this outside business was permitted by the local club after you had entered, and a dog not entered in the regular classes was permitted to compete with your dog, which to our mind is clearly wrong. There are some parliamentary questions, however, in this matter, which I have not time to review, but simply on the merits of the case, without regard to any technicalities at all, you certainly are right. This letter is not a private one; you may make any use of it you wish to.—Yours truly, W. B. SHATTUC, President Cincinnati Sportsmen's Club.

To show your readers that I have good reasons for contesting this case as I have done, I feel called upon to present some facts and charges, which is not to the credit of Mr. Peshall or the New Jersey Kennel Club. In the first place I charge that Mr. Peshall never gave the prize, but that the money, $50, was donated by two gentlemen, whose names it is not necessary to make public. When the entries for the Waverly show had closed, the Graphic Kennels did not appear among the list. It was a great disappointment to the N. J. K. C. to have one of the most noted kennels of the country, who were right at their door, decline to exhibit their dogs at their home show. An explanation was asked for and given, when the sweepstake prize was suggested as a bait to get them into the show. The $50 was donated, not by Mr. Peshall, but by other parties. The prize was accepted by the N. J. K. C., but a certain promise made to the Graphic people could not be carried out to their satisfaction, and they refused to make any entries. The prize had to go, Mr. Mason saw his opportunity to win $50, took advantage of the Graphic Kennels' absence, and sent Beaufort into the ring, which he would not have done if Revel III. had been there. He explained his actions by saying that he "needed the money." May be he did, but that does not excuse the N. J. K. C. for permitting a violation of A. K. C. rules. Mr. Peshall admitted to me personally that the prize was poorly given, and had full knowledge of all the facts pertaining to the case; and no man knows better than himself that Beaufort had no right to compete for the prize.

Summed up these facts present themselves. Mr. Peshall permitted his name to appear as donor of a prize when he was not, and thereby was party to a scheme for a certain dog to win the sweepstake, which was known by him could be done, under the gentleman who was to judge. As president of the N. J. K. C., their delegate to the A. K. C. and the advertised donor of the prize, he has voted on all occasions to sustain his own decision. The N. J. K. C. accepted this prize, knowing that by its conditions it could not be competed for under A. K. C. rules.

Mr. Mason compromised himself "as he was one of the judges," by taking advantage of the absence of the dog which was known could win, and entered his dog for the prize, and won. And now the A. K. C. by a majority of its members indorse all this; and approve by their vote of the breaking of its own rules. C. M. MUNHALL.

CLEVELAND, O., Aug. 26.

RAISING HOUND PUPPIES.

Editor Forest and Stream:

Since advertising my foxhound puppies in your paper I have had some dozen or more letters, and as some of them want to know the best method of raising and breaking them, I would like to answer them through your paper. To commence I want good stock and the bitch to be two years old before having a litter, and while carrying her pups to have her liberty, and up to within a week or so of whelping to be hunted as much as possible, as I think it develops the hunting instinct in the pups and that they will commence to run much earlier than where the bitch is kept tied. As soon as the pups have got their eyes open, put them out on the bare ground with a shelter to get under and a good nest of straw to sleep in. As soon as they begin to eat, I give them for the first two weeks sour milk three times a day, all they will eat. Then begin to feed the same that I give my old dogs, which is clear lean meat and Indian meal. I have a kettle that holds five or six beef heads with the cheeks left on, these I boil four or five hours, then skin off the tallow and when cool enough to handle take out the heads and give them a shake over a tub; the meat will all drop off. While it is warm salt it well and stir until the meat is fine and well mixed, then spread it out about an inch thick, cover with mosquito netting to keep off flies, and dry in the sun; when well dried it will keep a long time in the hottest weather. Every morning I take a piece, pour on boiling water and let it boil till it becomes fine, then add Indian meal enough to make a stiff pudding and feed at night, only one meal a day, whether hunting or not; but when running them every day I give them a big meal, and in the summer time not more than half as much. I have fed this for years and never had a case of mange, which I think is generally caused by a too greasy diet. I never doctor for distemper and have never lost a pup. If they are strong they will pull through providing they do not catch cold, and are kept in good warm quarters.

The pups that can be in the company of the old dogs, and best of all their mother, generally make the best hunters; and if they can be kept in the country where there are foxes they require no breaking, as they will very early get to going with the older dogs; but any one that has to keep his dogs in the city had better buy dogs a couple of years old than to take the best pup for a gift, as they are sure to be in mischief and get whipped; and a hound pup that has been whipped much might as well be buried. A whipping that would teach a setter something will take all the grit out of a young hound.

Some hunters think it spoils young dogs for foxes if they run hares and rabbits. Mine always chase them in the summer, but will not mind them as soon as I begin to hunt; but they like the taste of a young rabbit and will dig all day to get at one.

I hope to see some accounts of good hunts this fall. Foxes are not very plenty this fall, but enough so I can start one any morning. H. C. NEWELL.

ASHBURNHAM, Mass.

EASTERN FIELD TRIALS CLUB.—The quarterly meeting of the Eastern Field Trials Club will be held at 44 Broadway, New York, on Tuesday, Sept. 13, at 3:30 P. M

THE HORNELLSVILLE DOG SHOW.

Editor Forest and Stream:

The second annual bench show of the Hornell Kennel Club held here this week was quite a nice little show. It was held on the exposition grounds under the auspices of the Hornell Farmers' Club. There were 123 dogs entered, many of them well known winners. On Wednesday and Thursday the weather was fine and large crowds were in constant attendance, on Friday there was rain and but comparatively few were present. The show was managed by Mr. J. O. Fellows and the arrangements gave general satisfaction. The St. Bernards of the Hospice Kennel, the deerhounds and bulldogs of the Hillside Kennel and the spaniels of the Hornell Spaniel Club made in themselves quite a respectable show. There were also some good collies headed by the well known Nullamore and Clipper, the latter in very poor condition. The bob-tail sheap dog Sir Lucifer came in for more than his share of attention. Some one, Uncle Dick I guess, pasted a placard over him stating that he had won innumerable prizes and killed a fabulous number of wolves, and in consequence there was an immense crowd around his stall mostly all the time. No money prizes were offered, the club giving bronze medals instead. The exhibitors appeared to enjoy themselves and a good time was the verdict of all. Following is a list of the

AWARDS.

MASTIFFS.—CHAMPION—No entries.—OPEN—*Dogs:* No entries. *Bitches:* 1st, G. W. Schenk's Tola.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—No entries.—OPEN—*Dogs:* 1st and 2d, Hospice Kennels' Eiger and Alvier. Very high com., H. S. Pitkin's Prince Barry, *Bitches:* 1st and 2d, Hospice Kennels' Tromba and Dame Blanche.—SMOOTH-COATED—CHAMPION—*Dog:* Hospice Kennels' Hector. *Bitch:* Hospice Kennels' Queen of Sheba.—OPEN—*Dogs:* No entries. *Bitches:* 1st and 2d, Hospice Kennels' Reka and Thuna.

GREYHOUNDS.—OPEN—*Dogs:* 1st, withheld; 2d, Harmony Kennels' Custer. *Bitches:* 1st, Harmony Kennels' Harmony; 2d, E. H. Pyott's Queen in Black. PUPPIES—*Dogs:* 1st and 2d, Harmony Kennels' St. Maur and Sir Royal. *Bitches:* 1st and 2d, Harmony Kennels' Lady Olivia and Grace S.

DEERHOUNDS.—CHAMPION—*Dog:* J. E. Thayer's Bran. *Bitch:* J. E. Thayer's Lorna.—OPEN—*Dogs:* 1st and 2d, J. E. Thayer's King of the Forest and Duncan. *Bitches:* 1st and 2d, J. E. Thayer's Brazen and Berga.

POINTERS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, withheld; 2d, W. H. Van Vleck's Sam. *Bitches:* 1st, J. S. Jacox's Christmas Vic. PUPPIES.—*Dogs:* 1st withheld; 2d, J. S. Jacox's Dan. *Bitches:* 1st, J. S. Jacox's Fly.

ENGLISH SETTERS.—CHAMPION: No entries.—OPEN—*Dogs:* 1st, Nash & Benzinger's Spot; 2d and very high com., Chautauqua Kennels' High Duke and Ted Llewellin. High com., F. M. Shelley's Sporting and J. O. Fellows's Tam O'Shanter. Com., J. D. Holden's Rye. *Bitches:* 1st, G. W. Neal's Daisy Foreman; 2d and very high com., Chautauqua Kennels' Chautauqua Belle and Mischief. PUPPIES—*Dogs:* 1st, Chautauqua Kennels' High Duke. *Bitches:* 1st and 2d, Chautauqua Kennels' Primrose and Mischief.

IRISH SETTERS.—CHAMPION—*Dog:* H. B. Goetchius's Chap II. *Bitch:* No entries.—OPEN—*Dogs:* 1st, E. Shear's Grouse; 2d, F. C. Noble's Bolivar. *Bitches:* 1st, E. Shear's Roley.—PUPPIES—*Dogs:* No entries. *Bitches:* 1st, S. H. Brown's Lady B.; 2d, Arnold & Brown's Lady S. Very high com., E. Shear's unnamed.

GORDON SETTERS.—*Dogs:* No entries. *Bitches:* 1st, C. S. Fitch's Madge.

IRISH WATER SPANIELS.—*Dogs:* 1st, Hornell Spaniel Club's Capt. Muldoon.

COCKER SPANIELS.—CHAMPION—*Dog:* Hornell Spaniel Club's Hornell Silk. *Bitch:* Hornell Spaniel Club's Hornell Ruby.—OPEN.—*Dogs:* BLACK—1st, Hornell Spaniel Club's Hornell Jock. *Bitches:* 1st and 2d, Hornell Spaniel Club's Black Daisy and Jock's Girl.—OTHER THAN BLACK—*Bitches:* 1st, Hornell Spaniel Club's Hornell Fancy Buff.

FIELD SPANIELS.—*Dogs:* 1st and 2d, Hornell Spaniel Club's Hornell Mikado and Hornell Sport. *Bitches:* 1st and 2d, Hornell Spaniel Club's Hornell Eva and Hornell Sunlight.—PUPPIES—*Dogs:* 1st and 2d, Hornell Spaniel Club's Hornell Bob and Bendor. *Bitches:* Hornell Spaniel Club's Hornell She and Vanity Fair.

COLLIES.—*Dogs:* Equal 1st, M. Harrison's Nullamore and J. Watson's Clipper. *Bitches:* 1st, M. Harrison's Bonnie Brae; 2d, R. C. White's Frankie.

BOBTAILED SHEEPDOGS.—1st, Glencoe Collie Kennels' Sir Lucifer.

BEAGLE.—*Dogs:* 1st, 2d and high com., Harmony Kennels' Bounce, Sport and Ross. Very high com., Spring Brook Kennels' Domino. *Bitches:* 1st, very high com., and high com., Harmony Kennels' Jessie, Zephyr and Pussie; 2d, W. H. Harris's Villa.—PUPPIES—*Dogs:* 1st, J. O. Fellows's Royal Krueger; 2d, Harmony Kennels' Viper. *Bitches:* 1st, 2d and very high com., Harmony Kennels' Maud Muller, Vida and Madge.

FOXHOUNDS.—*Dogs:* No entries. *Bitches:* 1st, C. W. Robinson's Lady Naylor.

FOX-TERRIERS.—*Dogs:* 1st, A. Tilt's Steve.

BULL-TERRIERS.—*Bitches:* 1st, H. W. Lady's Nanon; 2d, Chautauqua Kennels' White Rose II.

BULLDOGS.—CHAMPION—*Dog:* J. E. Thayer's Robinson Crusoe. *Bitch:* J. E. Thayer's Britomartis.—OPEN—*Dogs:* 1st, C. D. Cuyle's Merry Monarch; 2d, J. E. Thayer's Quasimodo. *Bitches:* 1st, J. E. Thayer's Carmen.

PUGS.—*Dogs:* 1st, B. F. La Rue's Baby; 2d, Mrs. N. J. Pechin's Punch.

HARRIERS.—*Dogs:* 1st, J. O. Fellows's Rover.

DALMATIANS.—*Bitches:* 1st, L. S. Lawrence's Lucy.

SPECIAL PRIZES.—Best kennel rough-coated St. Bernards, Hospice Kennel. Smooth-coated, Hospice Kennel. Greyhounds, Harmony Kennel. Deerhounds, J. E. Thayer. Pointers, J. S. Jacox. English setters, Chautauqua Kennel. Irish setters, Shear & Brown. Cocker spaniels, Hornell Spaniel Club. Field spaniels, Hornell Spaniel Club. H. S.

BEAGLES FOR BENCH AND FIELD.

COOKSTOWN, Ont., Aug. 31.—*Editor Forest and Stream:* I have been much interested in the letters which have lately appeared in your paper on the beagle question. I must say that my experience in the field does not tally with that of "H. H." I have found that size has nothing to do with a beagle's hunting or staying qualities in the field provided he is bred right. A pure beagle should never exceed 15 inches, and may run as low as 10; 12 is to my fancy the most perfect size. H. H.'s dogs may be very handsome hounds and first class in the field, but they are certainly not beagles. Are they not harriers? Surely a hound from 16 to 20 inches is a harrier. I have owned and bred beagles for the last ten years; these beagles are bred from the very best stock in America. I have found a 12 inch beagle quite as good in the field as his larger brother of 15 inches; besides a pack of 12 inch dogs are much easier carried and looked after than a larger sized pack. I hunt my beagles after the large American hare (we have no rabbits here) that turns white in the winter; these hares are very plentiful in this locality. When started, this hare runs from 40 to 50 yards ahead of my beagles and I am always sure of a shot. Now when I used years ago (before I owned a pack of beagles) to hunt this hare with foxhounds, when lucky enough to sight the hare I alway sighted him from 100 to 150 yards ahead of the dogs and going for all he was worth right away, and that was the last I would see of him or the dogs perhaps for a couple of hours or more. How different it is with my little beagles, I can sit down on a log and enjoy their beautiful music as the merry little fellows hunt their quarry round and round me, and when satisfied with listening to them (which to me is the best of the sport) shoot the hare. I would often spare the hare but am compelled to kill him as the only means of stopping my dogs. My beagles run from 11½ to 13 inches, and are bred from champion stock. The best field beagle I ever owned was a black, white and tan 12 in. dog. By all means have field trial meetings for the beagle, but do not raise the standard. H. B. N.

THE DANBURY SHOW will be held Oct. 3 to 7.—B. C. LYNES, Sec'y, Danbury, Conn.

MANITOBA FIELD TRIAL ENTRIES.

FOLLOWING is a list of the entries for the second annual field trials of the Manitoba Field Trial Club to be run Sept. 6:

DERBY.

BIRTLE (Thos. Johnson), liver and white pointer dog (Croxteth—Bella).

DUCK (C. A. Boxer), English setter dog (Dime—Flash).

GREAT EXPECTATIONS (H. Galt), English setter dog (Dashing Bondhu—Countess Bear).

GRETNA (T. Moore), lemon and white English setter bitch (Mark J.—Bredna).

MORDEN (Manitoba Kennels), black, white and tan English setter dog (Mark J.—Bredna).

MORRIS (T. Johnson), blue belton English setter dog (Cable—Bredna).

KILDONAN (H. N. Williams), Gordon setter dog (Turk—Gyp II.).

REGINA (Manitoba Kennels), black, white and tan English setter bitch (Mark J.—Bredna).

ALL-AGED.

BERT (T. Moore), liver and white pointer dog, pedigree not given.

CAMBRIA (T. Johnson), blue belton English setter bitch (Cambridge—Pet Laverack).

DASH B. (T. Johnson), white and orange English setter dog (Dave B.—Lucy).

FANNIE M. (D. Smith), orange and white English setter bitch (Count Noble—Prairie Belle).

FLIRT (C. W. Armstrong), white and black English setter bitch (Dan—Qu'Appelle Belle).

MANITOBA BELLE (Manitoba Kennels), lemon and white English setter bitch (Pride of Dundee—Jeanette).

PADDY (S. W. Trott), white and orange English setter dog (Ginger—Duchess Dolly).

PEDRO E. (Dr. W. M. Evan), black, white and tan English setter dog (Cambridge—Belle).

QU'APPELLE BELLE (C. A. Boxer), black, white and tan English setter bitch (Mark J.—Betsey).

SASKATCHEWAN (G. Tempest), liver and white pointer dog (Bang Bang—Phœbe).

SHOT (Major Bedson), black and tan setter dog (Dan—Lilly).

SWIFT (H. Gath), orange and white English setter dog (Dan—Qu'Appelle Belle).

WINNIPEG BELLE (Manitoba Kennels), lemon and white English setter bitch (Rocketer—Manitoba Belle).

THE EVOLUTION OF DOG SHOWS.

MAY I, as one who for years has been devoted to man's most trusted friend—the dog—be permitted to express, through your columns, the views which have been suggested by a visit to the late Jubilee Show at Ranelagh? To commence with, I am desirous of expressing the opinion that dog shows—up to a certain point—are, in themselves, institutions which are essentially calculated to benefit the race of animals in whose interest the exhibitions are supposed to be held. At the same time the idea has been forced upon me that there is a growing disposition on the part of the supporters of these exhibitions to benefit their own pockets at the expense of the dogs. It is the abuse of dog shows which, in my humble opinion, is likey to injure the animals which they are professedly designed to improve. The modern exhibitor, craving after that which is new, is perpetually endeavoring to remodel the breed which he has honored by his patronage. There is no attempt to adhere to one defined type, although the various specialist clubs which have been brought into existence since the establishment of dog shows, each and all profess to follow out certain lines which are clearly laid down for them. That fatal word "improvement" appears to me to be the stumbling block in the way of dog men. One hears on all sides the leading exhibitors and their numerous satellites congratulating themselves upon the "improvement" which has taken place in the dogs of the present day. May I be permitted to express my doubts if the "improvement" is by any means so solid as it is supposed to be by interested parties? I freely admit that dog shows have increased and multiplied. What I do doubt is whether the animals themselves have been "improved" by them. If a constantly varying change of type in many breeds, combined with a vast increase in the number of entries at the leading exhibitions, is any proof of an increase in quality, I confess that my opinions will not be found capable of holding water. At the same time, as an amateur, by which I mean an individual who is fond of dogs, but does not show, I cannot help having formed very decided ideas upon the question. We are told that lookers-on see most of a game, and therefore in the position of a looker-on I am entitled to congratulate myself upon being able to form a tolerably capable opinion. The professional exhibitors—their name is legion—will no doubt—if they condescend to read these lines that is to say—fail entirely to accept the premises upon which I argue. I, nevertheless, as one who is entirely outside the magic circle of vested canine interests, feel pretty justified in pointing out to such of your readers as may care to follow me, the danger that may soon affect the popularity of dogs beyond the somewhat circumscribed area of the dog show world.

To commence with, I believe it will not be denied that the majority of the leading exhibitors are not above turning an honest penny through the sales of their pets. We "amateurs," "outsiders," "non-exhibitors"—call us what you please—are often amused by being told that Mr. So-and-So never sells his dogs; that he would be offended at any offer being made to him for one of his winners. All I can say in reply to this is that I know better, for very few exhibitors are proof against the blandishments of the nimble ninepence. In consequence, I maintain that it is the persons who do not exhibit, but who yet are fond of dogs, who are the chief sufferers from the ever-growing "improvement" in the various breeds of dogs. Animals of a type that has become unfashionable must be disposed of somehow, and it is more profitable for the professional exhibitor to oblige us with them at a long price than to get rid of them in other ways. With this portion of the question, however, I do not care to deal at the present moment, but I may perhaps recur to it, with your permission, at some future time. I may, nevertheless, remark *en passant*, that as dog shows, and the gentlemen who add to their incomes in consequence of the existence of these institutions, depend upon the support of us amateurs for the gate money, as well as for a market for their surplus stock, I think I am fully justified in pointing out the objections we entertain against the changes of type. For my own part I do not consider that amateurs get fair treatment from professional exhibitors who, in their eagerness to produce something novel in dog flesh and thereby dazzle a weak judge, are not adhering to the recognized types that have been laid down for the guidance of breeders. I will endeavor to prove my case by practical illustrations of what I mean. Before commencing, however, I am anxious to state plainly the objections I, as a looker-on, see to the present system under which dog shows are conducted. I feel that such exhibitions, which are professedly established to improve the breed of dogs, are degenerating into the instruments for the benefit of the professional exhibitor. I therefore maintain that the inevitable result will be an injury to the dogs—occasioned by a non-adherence to type—and a disappointment to the public who, as the chief supporters of shows, are apt to become disgusted with the result of the attempt to "improve" dog flesh by means of exhibitions.

To prove my first theory I, with some degree of confidence apply to the impartiality and intelligence of your readers. Is there one among them who cannot recall to his mind the names of certain professional exhibitors who, though they would feel insulted by being described as dealers, are perfectly well known to add very largely to their income by the sale and exhibition of their dogs? It is notorious that many showmen are blessed with sufficient private means to leave their homes and businesses week after week in pursuit of pleasure only. Still they contrive to turn up pretty regularly at shows in every part of the country, and therefore can only reasonably be supposed to exist upon the earnings of their dogs. For my own part I certainly do not blame these gentlemen. From their point of view there is, I freely admit, a great deal to be said. They are, no doubt, fond of dogs and good company, and both are to be met with at shows. Trade is not good perhaps or a man's pocket may not be a deep one, and therefore he cannot be blamed for gratifying his taste for dog flesh and meeting his acquaintances, if at the same time he can make money by so doing. Nevertheless I maintain that it is from these persons that danger to the maintenance of high quality in our dogs is to be feared. The professional exhibitor must win prizes or the end to his progresses through the country will very soon be reached. He is therefore compelled to keep on pulling out something new, especially if he sells his dogs, as many of them do. Unfortunately, however, it is easier to bring out new dogs than it is to breed them to type, and to this fact many a flat catcher owes his success on the bench. The professional exhibitor, like the ditto judge, is usually a man of many clubs—specialist clubs—and consequently knows everybody who is anybody in the dog world. As a consequence the appearance of his latest achievement in breeding is eagerly discussed beforehand, with the result that when it arrives at a show its chances of success are considerably increased. The new animal may not perhaps correspond at all with the recognized type of the breed to which it belongs. In fact it may not in a great number of its points approach the standard of perfection as closely as a deposed winner. Nevertheless a chorus of praise arises from the lips of the professionals' friends, who regard the "improvement," *i. e.*, divergence from the track which breeders have been traveling for some seasons, as something truly wonderful. Yet the worst has still to come; the example is promptly copied by other exhibitors, with the result that the class of dog which has been winning gets considered old-fashioned and the new departure is regarded as the only true type to be followed.

How often one hears of a prize-winner being sold because his owner has a better at home; and yet, when that better one appears, he is found to be inferior to his predecessor in many essential characterists of his breed. Still, the new comer keeps on improving, simply, I maintain, because one or two of his points are dazzling to the strong judges, while the weak ones are afraid to pass him over. It would not be right to give instances of what I mean, and I should not be justified in specifying cases. At the same time, if the conviction that such abuses do exist has forced itself upon the observation of an outsider like myself, it is impossible that it can have escaped the notice of those who are fully acquainted with the inner workings of shows.

The question of collusion between exhibitors and judges is one which I most certainly shall not touch upon, beyond expressing the opinion that it does not exist to any appreciable extent. It is chiefly the mal-application of the term "improvement" to which I take exception. We amateurs, who now and then buy a dog because we like to possess an animal of the winning type, are too often disgusted to find something of a totally different order winning at our local shows. Upon inquiry we learn that our beast is "old-fashioned," and "behind the times." What right, we wish to know, have exhibitors and their friends to create a fashion in dogs? Their winners are no nearer the recognized types than our own are, and yet they go ahead while we are left behind!

Having called the attention of your readers to the chief danger which I firmly believe is likely to affect the prosperity of dog shows, I should be glad if you will allow me to suggest a remedy. Believing as I do that by far too much encouragement is being given to professional exhibitors and their dogs, to the detriment of small breeders and the results of their labors, I should, in the first place, propose that additional prizes be offered for animals who have failed to win prizes before the date at which the leading shows open. Maiden classes, if made valuable enough, would be certain to fill well, and more especially so if the public felt assured that judges, whose opinions were untrammeled by their connection with any of the numerous specialist clubs, would officiate upon the occasion. At present many "outside" breeders shrink from exhibiting, as they are afraid of meeting a promising novice, whose merits have already come to the ears of the gentleman who is to judge the class. In addition to this, there is far less probability of the judge, who only mingles slightly with the body of professional exhibitors, deviating from the accepted type which has been laid down for the guidance of breeders. In consequence the public, who come to learn what is the correct standard to breed up to, will cease to be confused by the perpetual change of fashion in dog flesh.

During the last ten years we have had at least three fox-terriers of a totally different character at the top of the tree. It is impossible that all these varying types can be correct, and I maintain that specialist clubs and their accompanying evils are responsible for the obfustication of the minds of us humble dwellers outside the charmed circle.

Again, in the case of dachshunde, may I inquire what moral right an English club has to "take up" a foreign variety of dog and forthwith set themselves to work to alter it to suit their insular ideas of what is right and what is wrong? From German admirers of the breed I learn that moderately short heads, flat, wide ears, and black noses are points to be sought after in good specimens. Here, in England, the club and their supporters advocate flesh-colored snouts, domed skulls and extremely long ears. Such a perversion of the distinctive characteristics of a foreign breed is, I assert, entirely antagonistic to the main object of shows, viz., the "improvement" of the different varieties of dogs. We Englishmen would not give our German friends much credit if they attempted to improve our mastiffs or bulldogs by breeding them long-faced or light-nosed, or in some other way different from the original type.

A clearly-defined standard for every breed is at hand. Dog lovers and breeders only want the judges at shows to be firm in the adherence to that standard in order to reach it. Fantastic decisions, which are often indulged in, have disheartened many and many an amateur whose ideas are based upon the descriptions he has read in old works. He has there seen for himself the methods by which many of our modern breeds have been produced; and therefore, if he is ignorant of the habits and customs of the exhibition world is lost in wonder at the endeavors that are made to destroy all traces of the original varieties in the person of a modern nondescript. A man who is ashamed of his ancestors is not usually thought very highly of; why, therefore, should our dogs deny their lineage in their looks? Shows have done much in days gone by to popularize dogs with the public; it will, therefore, be a highly regrettable circumstance if such exhibitions are destined to degenerate into being merely the means of providing an income for professional breeders and showmen. Fanciers are being driven away, and their places supplied by persons who only care for dogs as business men care for the articles they buy and sell. The shows themselves, from being genuine fanciers' gatherings, have become grave commercial speculations which amateurs do not care to dabble in. The trade of exhibiting has hitherto been a very profitable one for many, but those engaged in it should beware lest they drive their chief supporters out of the field entirely.—*Mayfly, in Vinton's Fancier's Gazette.*

THE FOX-TERRIER SHOW.

[Special to Forest and Stream.]

NEWPORT, R. I., Sept. 7.—The second annual show of the American Fox-Terrier Club opened to-day. There are not quite as many dogs shown as last year, the total entries being 98. The puppies are a nice lot and show a marked improvement in quality over those of previous shows. The show is well arranged but is not as well supported by the public as it should be. The quality of the exhibits is of a very high order, a large number of our best dogs being present. Judging began at 11:30.

In champion dogs, Lucifer won first and Splauger second; in bitches Richmond Olive first, Cornwall Duchess second, Marguerite vhc. In open dogs, Raby Mixer first, Bacchanal second, Earl Leycester third, Luke fourth. The Warren Spider reserve, Raby Jack vhc., Warren Swagger hc., Beverwyck Tippler c.

In bitches, Rachel first, Richmond Dazzle second, Verdict third, Warren Saucy fourth, Warren Jingle reserve, Richmond Myrtle and Gretchen very high com., Warren Spangle and Meersbrook Nan high com., and Nellie A. com.

This finished the judging to 12 o'clock.

STAFFORD SHOW.—Stafford Springs, Conn., Sept. 6.—We have arranged for the following gentlemen to act as judges at our bench show: Non-sporting dogs, Dr. Geo. Walton, Boston; pointers and setters, H. Clay Glover, New York; fox-terriers, Thomas Dawson, New York; all other sporting dogs, James Mortimer, New York. Our new exhibition building will be completed next week and will be a model for convenience and comfort. Our premium lists will be issued this week, and prospects are promising for a successful show.—R. S. HICKS, Sec'y.

THE MILWAUKEE DOG SHOW.—*Editor Forest and Stream:* We have decided to offer the following special $50 for the largest and best exhibit of one breed owned by one exhibitor. Puppies to compete must be entered in open class. The secretary offers a fine-worked medal for the best pointer, dog or bitch. Champion classes for mastiffs, rough-coated St. Bernards and smooth-coated St. Bernards will be divided by sex, $10 for dogs and diplomas for bitches.—A. M. GRAU, Sec'y.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Barton and Roland. By F. F. Dole, West Philadelphia, Pa., for white and white with brown ear bull-terrier dogs, whelped June 2, 1887, by Count (A.K.R. 3173) out of Young Venom (Old Prince—Venom).

Black Jingo, Black Joker, Black Jocko, Black Jet and Black Jess. By H. D. Brown, Waterbury, Vt., for black cocker spaniels, three dogs and two bitches, whelped July 12, 1887, by Black Pete (Obo, Jr., A.K.R. 1481—Phonsie, A.K.R. 1482) out of Phyllis (A.K.R. 5293).

Sting Noble, Iona and Fleety Noble. By Howard Hartley, Pittsburgh, Pa., for English setters, two black and white dogs and one lemon and white bitch, whelped May 17, 1887, by Count Noble out of Nellie Sting (Sting—Novelty).

Royal Ranger II., Countess Cartmel and Daisy Queen III. By Howard Hartley, Pittsburgh, Pa., for English setters, a lemon and white dog and bitch and a black and white ticked bitch, whelped July 12, 1887, by Royal Ranger (Royal—Novel) out of Daisy Queen (Rock—Meg).

Geo. R. Eager. By J. U. Jackson, Augusta, Ga., for white and orange pointer dog, whelped July 18, 1887, by Mainspring (Mike—Romp) out of Rosa (A.K.R. 1443).

Kelt. By E. B. Convers, Englewood, N. J., for red Irish setter dog, whelped Jan. 26, 1887, by Tim (Biz—Hazel) out of Yoube (Elcho—Rose).

Brown's Folly. By H. D. Brown, Waterbury, Vt., for black Newfoundland dog, age not given, by Sir Arthur out of Sis.

Tit Willow, Richmond Dude, McDuff, Jake Sharp and Tillie Smith. By Hill Top Kennels, Richmond, Va., for fawn pugs, four dogs and one bitch, whelped Aug. 16, 1887, by Bounce out of Dumps (A.K.R. 5240).

Daisy. By A. E. Adams, Clyde, N. Y., for silver fawn pug bitch, whelped Feb. 28, 1886, by Smut out of Susie (Dauber—Maud).

Port. By A. E. Adams, Clyde, N. Y., for apricot fawn pug dog, whelped Sept. 11, 1886, by Santa Claus (Comedy, Jr.—Smut) out of Judy (Dan—Daggett's Daisy).

Galen Pug Kennels. By A. E. Adams, Clyde, N. Y., for his kennels of pugs.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Nina—Thyrus II. H. D. Brown's (Waterbury, Vt.) Great Dane bitch Nina (Thyrus—Cara) to F. C. Evans's Thyrus II. (Thyrus—Caro), Aug. 1.

Fanny—Brown's Folly. H. D. Brown's (Waterbury, Vt.) Newfoundland bitch Fanny (Nero—Darkness) to his Brown's Folly (Sir Arthur—Sis), Aug. 18.

Althea—Black Pete, Jr. H. D. Brown's (Waterbury, Vt.) cocker spaniel bitch Althea (A.K.R. 842) to J. P. Willey's Black Pete, Jr. (Black Pete—Miss Ginger), Aug. 29.

Whim—Beppo III. Robt. Gedney's (Nyack, N. Y.) pointer bitch Whim (A.K.R. 4288) to Graphic Kennels' Beppo III., July 9.

Bertha—Count. John Whiterken's (Philadelphia, Pa.) bull-terrier bitch Bertha (Dutch, Jr.—Young Venom) to Frank F. Dole's Count (A.K.R. 3178), July 2.

Phœdra—Wacouta Nap. Wacouta Kennels' (St. Paul, Minn.) mastiff bitch Phœdra (Debonair—Danaides) to their Wacouta Nap (Morgan's Lion—Morgan's Bess), Aug. 19.

Daisy—Port. A. E. Adams's (Clyde, N.Y.) pug bitch Daisy (Smut—Susie) to his Port (Santa Claus—Judy), Aug. 10.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Maid. Dr. Wm. Jarvis's (Claremont, N. H.) red Irish setter bitch Maid (Bragg—Effie), Sept. 4, eight (six dogs), by his Elcho, Jr. (Elcho—Noreen).

Fanny. H. D. Brown's (Waterbury, Vt.) Newfoundland bitch Fanny (Nero—Darkness), April 15, eight (seven dogs), by his Brown's Folly (Sir Arthur—Sis).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Portia. Fawn mastiff bitch, whelped June, 1884 (A.K.R. 3563), by Tiot Kennels, Norwood, Mass., to John Coles, Linden, Mass.

Nina. Great Dane bitch, whelped Sept. 20, 1886, by Thyrus out of Cara, by H. D. Brown, Waterbury, Vt., to A. Sawtelle, Kansas City, Mo.

Frolic. Blue Skye terrier bitch, whelped June 16, 1887, by Taffy out of Cute, by Calhoun Kennels, Springfield, Mass., to Harry McDonald, same place.

Pickles. Fawn, black points, mastiff dog, whelped 1885, pedigree not given, by Calhoun Kennels, Springfield, Mass., to E. M. Teall, Stockbridge, Mass.

Fury. Gray Skye terrier bitch, whelped June 16, 1887, by Taffy out of Cute, by Calhoun Kennels, Springfield, Mass., to Wm. Kelly, same place.

Sheila II. and Colleen II. Red Irish terrier bitches, whelped April 2, 1887, by Garryowen out of Sheila, by Lawrence Timpson, Maizeland, Red Hook, N. Y., to Lewis A. Shaw, Chestnut Hill, Mass.

Gun Gladstone and Queen Estner. White, black and tan English setter dog and bitch, whelped April 25, 1887, by Gun out of Lady Bright, by Frank Pitzer, Washington, D. C., to J. Bunting, Jr., Roanoke, Va.

Chimer—Betty whelps. Black, white and tan beagles, three dogs and one bitch, whelped May 29, 1887, by C. M. Nelles, Brantford, Ont., to J. C. Cutcliffe, Mt. Pleasant, Ont.

Kelt. Red Irish setter dog, whelped Jan. 26, 1887, by Tim out of Yoube, by Max Wenzel, Hoboken, N. J., to E. B. Convers, Englewood, N. J.

Naso of Kippen—Deka (A.K.R. 1347) whelp. Black and white pointer bitch, whelped May 10, 1887, by Chas. H. Newell, Portland, Me., to J. H. Winslow, Philadelphia, Pa.

Nettie. White, black and tan fox-terrier bitch, age not given, by Little Swell out of imported Nellie, by Wm. W. Silvey, Philadelphia, Pa., to Walter Penrose, Chestnut Hill, Pa.

Roman. Red Irish setter dog, whelped September, 1886, by Dash out of Stella, by Wm. W. Silvey, Philadelphia, Pa., to G. Williams, same place.

Sultan. White, yellow markings, bulldog, age not given, by Guillermo out of Lily Langtry, by Wm. W. Silvey, Philadelphia, Pa., to H. C. Laumaster, Burlington, N. J.

Duchess of Kent. Red brindle bulldog bitch, whelped 1885, by Wm. W. Silvey, Philadelphia, Pa., to H. C. Laumaster, Burlington, N. J.

The Baron—Nelly (A.K.R. 4483) whelp. White bull-terrier dog, whelped June 10, 1887, by Wm. W. Silvey, Philadelphia, Pa., to Victor J. Nyo, Utica, N. Y.

Grant, Jr. Orange and white English setter dog, whelped Nov. 1, 1886, by Grant out of Princess Starlight, by Chas. York, Bangor, Me., to J. S. Case, Tobyhanna Mills, Pa.

DEATHS.

Follie. Black Newfoundland dog, whelped October, 1885, pedigree not given, owned by W. W. Silvey, Philadelphia, Pa.

Tammany II. Liver and white pointer dog (A.K.R. 5242), owned by J. S. Dunshee, Plainfield, N. J., Sept. 4, from lung fever.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

E. R. P., Providence.—Irish setter four months, keeps up a continued scratching and his legs and belly look badly. Ans. Give 3 drops of Fowler's solution of arsenic morning and evening in the food. Give syrup of buckthorn in half teaspoonful doses to keep the bowels free and get the following:

℞. Ung. zinc oxid.
Ung. diachylon.....āā ʒi
Mix. Sig. To be gently rubbed in once daily.

J. W. G., Providence.—My Irish setter bitch, 4mos. old, is troubled with a skin disease. All over the belly and on the under part of the legs are small red pimples, some of which come to a head forming matter. She is now shedding teeth and coat. Ans. Keep her bowels open by giving syrup of buckthorn in half teaspoonful doses. Get the following:

℞ Ung. zinc oxid.
Ung. diachylon.....āā ʒi
Mix. Sig. External. Apply night and morning after washing and drying.

WARREN, Hartford.—Last year an Irish setter pup had the mange. I kept him five or six months trying to cure him, but only succeeded in checking the disease. The dog all the while had full run of the yard. I got a pup on Aug. 8 this year, and this one has just begun to show signs of mange. Did it get it from the first dog, and if so what can I do to kill the germ from around the premises, and what can I do for the pup, which is about eleven weeks old? Ans. You can disinfect your yard by sprinkling Platt's chloride about, using a small sprinkler. Keep the puppy on rather low diet and see that the bowels are free. Give three drops of Fowler's solution of arsenic morning and evening in the food.

N. G. P., Epping, N. H.—St. Bernard bitch, thirteen months old, eyes are quite red and discharge a yellowish matter; is weak in her back and has been troubled with fits for six months. She has never shed her puppy teeth and I am going to have the front ones extracted, will the permanent ones come at her age? Do you think they have been the cause of her sickness? Ans. We doubt the advisability of extracting the teeth. Your bitch has probably had a bad case of distemper. Get the following:

R. Syr. ferri quin. et strychnin. phosphat.....ʒ vi.
Sig. A teaspoonful three times daily.

The improvement will be gradual. Keep the bowels open and sponge the eyes with borax, glycerine and water.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE DOMINION WIMBLEDON.

OTTAWA, Sept. 2.—The meeting of the Dominion Rifle Association closed to-day, and the plum of the Canadian Wimbledon meeting, the National Rifle Association badge and $250, goes to Toronto this year, and the fortunate bearer of it is Private W. S. Duncan, of the Queen's Own. The day set apart for shooting for the Governor-General's prize opened inauspiciously. There was a mist around the targets and leaden skies overhead. The mist cleared away later on, but rain continued to threaten, and before noon it descended pretty sharply. But before that time the name of the winner was known. The contest proceeded with perfect regularity, and it was not until the final stage was reached that anything like excitement began to be manifested. Then Lieut. Chamberlin, of the 43d Ottawa, finished with 91, and everybody congratulated him. He was the winner for sure. But another man, Mitchell, was creeping up, and his final shot, a bullseye, placed him one point ahead of Chamberlin. The last men were at the targets and the crowd of spectators clustered around. Duncan had been scoring well, and when the lookers-on totalled up his five shots they saw that if he maintained his good shooting he would stand pretty well on the list. Duncan had one more shot to fire when the news was brought him how Chamberlin and Mitchell had scored. A bullseye would place Duncan first, and one can conceive what a tension there must have been on his nerves at that moment. With a peculiar sensation pervading his frame, Duncan placed his last cartridge in the breech, closed the breech with a snap, and then stretched himself out. The spectators held their breath. Duncan took careful aim, the trigger was pulled and the bullet went whizzing toward the target. Down went the target—a hit sure! But what sort of one? Slowly rising from the ground appeared the white disc indicating a bullseye, making Duncan's score 93. Then what a shout went up! How they cheered and congratulated him! And certainly he deserved it, for never man kept his nerves steadier and struggled better for the prize.

This was the final match of the meeting. The returns were handed into the statistical officers and the aggregates were made up, the highest twenty being the Wimbledon team for next year—that is, if they all elect to go. In the event of any declining, the next men in rotation will be invited to fill the gaps.

The Governor-General's Prize, value $500; 200, 500 and 600yds. Rounds, 7 at each range. Martini-Henry rifles. Position, at 200yds., standing or kneeling; at 500 and 600yds., any, with head to target:

	200	500	600	
Pvt W S Duncan, Q O R, $250 and badge	30	30	33	93
Lieut W Mitchell, 32d, $150 and badge	29	33	30	92
Lieut Chamberlain, 43d, $100 and badge	31	29	31	91
Capt McMicking, 44th, badge	31	29	29	89
Lieut C K Fiske, 63d, badge	29	28	32	89
Capt Thomas, 54th, badge	31	30	27	88
Staff Sergt W Ashall, Q O R, badge	29	31	28	88
Lieut E A Smith, St John Rifles, badge	29	32	25	86
Lieut Dover, 78th, badge	32	30	24	86
Sergt L Keddy, 63th, badge	34	25	27	86

Martini Extra Matches—Series "A."—Range, 500yds. Rounds, 7. Martini-Henri rifles. Position, any, with head to target. Cup and $10. Sergt. J. Rolston, 37th, 35. Gunner J. L. Beckwith, B. C. G. A.; Sergt. J. Goudie, 8th; Pte. C. M. Hall, 79th; Pte. J. Marks, 6th; Pte. Sutherland, G. G. F. G., 34 each. Staff-Sergt. W. King, 45th; Pte. C. K. Grogg, 31st; Lieut. Kincaid, 6th Cav.; Pte. Morrison, Guards; Sergt. Reardon, Guards; Pte. Burns, 62d; Col.-Sergt. Henderson, 62d; Lieut. C. K. Fiske, 63d; Capt. Corbin, 63d, 33 each. Q.-M.-Sergt. Jno. Ogg, 1 B. F. A.; Major Walsh, 63d; Bandsman Cooke, 5th; Sergt. Loggie, 73d; Gunner Campbell, H. G. A.; Lieut. H. Silver, 63d; Sergt. Johnston, 85th; Col.-Sergt. Mailleau, Guards; Sergt. Armstrong, 1st B. F. A., 32 each. Sergt. W. Harp, Q. O. R.; Capt. Patterson, 85th; Pte. Armstrong, G. G. F. G.; Staff-Sergt. Jamieson, 43d; Lieut. Dover, 78th; Col. Cribb, 78th; Capt. C. Latourneaux, 85th; Lieut. W. H. Stevens, 66th; Pte. W. Hilton, 45th; Sergt. W. Short, G. G. F. G.; Pte. W. Swaine, 14th; Staff-Sergt. Brown, 12th; Capt. W. Robbie, 8th Cav.; Major W. Macdonald, retired list; Sergt. Macdonald, 43d; Corp. H. Marris, 13th; Lieut. W. Mitchell, 22d; Sergt. A. D. Crooks, Q. O. R.; Lieut. C. D. Adams, H. G. A.; Lieut. A. W. Spike, 66th, 31 each. Nine 31's counted out.

Series "B."—Range 600yds., rounds 7, Martini-Henry rifles, position any, with head to target. First prize, Whitney repeating rifle, won by Corp. Caro, G. G. F. G., 34; Priv. C. K. Grigg, 32d, 34; Sergt. M. Davidson, Charln, Eng., 33; Sergt. Armstrong, B. F. A., 33; Col.-Sergt. Henderson, 62d, Capt. J. Hood, 5th, Capt. Anderson, retired list, Sergt. Johnson, 85th, 32 each. Lieut. Spearing, 53d, Lieut. R. W. Longworth, P. E. I. G. A., Capt. A. W. Spike, 66th, Staff-Sergt. W. C. King, 45th, Col.-Sergt. McCrae, 1st P. W. R., 31 each. Staff-Sergt. Margetts, 13th, Lieut. Langstroth, 8th Cav., Sergt. J. W. Marks, 6th, Sergt. E. Pratt, Mont. Eng., Lieut. Dimock, 78th, Priv. E. D. Sutherland, Guards, 30 each. Capt. Wright, 43d, Capt. Macdonald, retired list, Capt. Zealand, 13th, Sergt. J. W. McDonald, 43d, Priv. W. S. Duncan, Q. O. R., Corp. Cribb, 75th, Lieut. Kincaid, 6th Cav., Priv. J. Lands, 45th, Sergt. M. C. Clark, 91st, 29 each. Col.-Sergt. Curzon, R. G., Priv. Ross, 90th, Lieut. C. K. Fiske, 63d, Staff-Sergt. Clarke, 13th, Priv. Hall, 79th, Staff-Sergt. Jameson, 43d, Col.-Sergt. Menzies, 43d, Staff-Sergt. Perrett, 8th, Major Walsh, 63d, Sergt. Goudie, 8th, Staff-Sergt. Wilson, 33d, Priv. A. Thomas, 3d Vics., 28 each. Five 28s counted out.

Series C.—Rifle, Martini-Henry; range, 800yds; number of rounds, 7; position, any, with head to target. First prize, album and $10, Staff-Sergt. King, 45th, 33. Lieut.-Col. Gibson, 13th; Lieut. C. K. Fiske, 63d; Pte. G. Thompson, 12th; Sergt. J. W. Monks, 6th, 32 each. Lieut. J. Dover, 78th; Staff-Sergt. Blair, 78th, 31 each. Lieut. R. M. Kincaid, 6th Cav.; Col.-Sergt. Henderson, 62d, 30 each. Capt. Bruce, R. G.; Sergt. Goudie, 8th; Sergt.-Major Gibson, 66th; Major Todd, F. Guards; Pte. J. Ward, 6th, 29 each. Major Anderson, 43d; Pte. Stanton, 60th; Sergt. Loggie, 73d; Pte. Sutherland, F. Guards; Corp. Cribbs, 78th; Pte. Courtice, 33d; Pte. W. Wilson, 31st; Lieut. Stevens, 66th; Lieut. Abbott, 1st P. W. R.; Pte. Sutherland, F. Guards, 28 each. Sergt. R. Macklin, 90th; Lieut. Ross, 13th; Sergt. Newberry, B. C. G. A.; Sergt. J. Goudie, 8th; Staff-Sergt. T. Mitchell, R. G., 27 each. Pte. W. S. Duncan, Q. O. R., 26. Gunner Beckwith, B. C. G. A.; Pte. Armstrong, Guards; Staff-Sergt. Blair, 78th; Lieut. Vaughan, 5th; Sergt. Loggie, 73d; Lieut.-Col. Gibson, 13th, 25 each. Pte. Cunningham, 51st; Staff-Sergt. Margetts, 13th; Color-Sergt. Henderson, 62d, 24 each. Sergt. Armstrong, 1st B. F. A.; Pte. Lavers, 6th Fus.; Staff-Sergt. Mitchell, 45th; Capt. Bruce, R. G.; Gunner Sargison, B. C. G. A.; Pte. Courtice, 33d, 23 each. Pte. G. Thompson, 12th; Lieut. Mitchell, 32d; Lieut. Gray, Guards, 22 each. Lieut. Rennie, Q. O. R., 21. Thirteen 21's counted out.

Series D.—Rifle, Martini-Henry; range, 900yds.; number of rounds, 7; position, any, with head to target. First prize, aneroid barometer and $10, Lieut. Kincaid, 6th Calvery; Lieut. Silver, 63d, 32 each; Sergt. Major Gibson, 66th, 26; Lieut. J. Dover, 75th; Pte. Kimmerly, 49th; Pte. J. Sands, 45th, 28 each; Lieut. W. S. Russell, 45th; Sergt. Johnson, 85th; Lieut. Spearing, 53d; Asst.-Surgeon McLaughlin, 45th; Col.-Sergt. Donnelly, Q. O. R., 27 each. Two 27s counted out.

Extra Series No. 1.—Rifle. Snider; range, 500yds.; number of rounds, 5; position, any, with head to target. Staff-Sergt. Ashall; Pte. Noble, 7th; Lieut. Crossman, 74th; Capt. Robson, 26th; Capt. Anderson, retired list; Lieut. W. S. Russell, 45th, 24 each; Staff-Sergt. T. Mitchell, R. G.; Pte. Wetmore, St. John Rifles; Trooper Duncan, P. L. D. G., 23 each; Capt. J. Adams, 13th; Staff-Sergt. C. Mitchell, 90th; Pte. Gillies, 90th; Pte. Kimmerly, 45th; Pte. Lavers, 6th; Gunner Sargison, B. C. G. A.; Lieut. Gray, G. G. F. G.; Pte. Adams, 15th; Sergt. Fairbairn, 43d; Pte. Sutherland, Guards, 22 each. Two 22's counted out.

Extra Series No. 2.—Range, 600yds.; rounds, 5; rifle, Snider; position, any, with head to target: Lieut. R. V. Longworth, P. E. I. G. A., 23; Pvt. Noble, 7th, Sergt. H. Miner, 71st, 22 each; Col. Sergt. Henderson, 62d, Sergt. J. M. Davidson, P. E. I. Eng., Pvt. Clark, 53d, Col.-Sergt. Gorman, 3d Vics, 21 each; Staff-Sergt. Margetts, 13th, Staff-Sergt. J. Ogg, 1 B. F. A., Capt. Anderson, retired list, Sergt. Lordly, 63d, 20 each; Sergt. Archer, Cobourg G. A., Staff-Sergt. Clarke, 13th, Sergt. Loggie, 73d, Capt. Hood, 5th, Pvt. A. B. Crawford, 13th, 19 each; Lieut. Kincaid, 6th Cav., 18. Sixteen 18s counted out.

Revolver Match.—Value $76, open to members of the association; revolver not exceeding .45-cal. and 7½in. in length of barrel; range, 25yds.; number of rounds, 7; position standing, off-hand. Pvt. Hall, 79th, Sergt. Fairbairn, 43d, Staff-Sergt. Margetts, 43d, Capt. B. H. Bell, 43d, 33 each; Assist.-Surg. McLaughlin, 45th, Lieut. H. O. Chamberlin, 43d, Lieut.-Col. Macpherson, Guards, 32 each; Assist.-Surg. Grant, Guards, Mr. J. P. Nutting, Q. R. C., Lieut. Clarke, 91st, Dr. Hutchison, Q. R. C., Color-Sergt. Henderson, 62d, Lieut. Russel, 45th, Staff-Sergt. J. B. Mitchell, 45th, 31 each; Insp. O'Leary, Dom. Police, Lieut. P. Thompon, Guards, Pvt. J. Thompson, 12th, Pvt. H. W. Chamberlain, 43d, 30 each.

The Wimbledon team for 1888 stands as follows:

Lieut E A Smith, St. John Rifles	346
Sergt Case, Halifax G A	336
Lieut H C Chamberlin, 43d	334
Staff-Sergt Ashall, Q O R	331
Lieut C K Fiske, 63d	330
Lieut J Dover, 75th	330
Pvt W S Duncan, Q O R	328
Pvt D Mitchell, 13th	325
Lieut W Mitchell, 32d	324
Lieut H H Gray, G.G.F.G	323
Staff-Sergt A Wilson, 33d	323
Sergt W H Adams, 62d	323
Pvt J Armstrong, F Guards	322
Sergt W Short, G.G.F.G	322
Sergt W M Goodwin, 13th	321
Gunner Campbell, H.G.A	321
Sergt J W Marks, 6th	321
Pvt McAfie, 1P.W.R	321
Capt G R McMicking, 44th	320
Sergt H Miner, 71st	320

The following are the names and scores of the winning Ontario team for the London Merchants' Cup and $100, teams of 8 members of any affiliated provincial association; 200, 500 and 600yds., rounds, 7 at each range; Martini-Henry rifles: at 200yds., standing or kneeling; at 500 and 600yds., any, with head to target:

Private J A Armstrong, G G F G	77
Lieut H H Gray, G G F G	76
Corp H Marris, 13th	91
Lieut W S Russell, 45th	88
Sergt John Ogg, 1st B F A	78
Sergt A Wilson, 33d	67
Sergt T Mitchell, R G	86
Sergt A Bell, 12th	80—638

Nova Scotia made 628, winning the second prize of $80, and Quebec and New Brunswick tied with 619 points.

THE MASSACHUELETTS TEAM.—The adjutant-general has issued orders to the militia of the State, giving permission for a team to attend the Creedmoor meeting and take part in the Interstate match on Sept. 17. Col. H. T. Rockwell, inspector-general of rifle practice, will select, organize and take command of the team. For each officer and man upon the team, allowance will be made for transportation and expenses not exceeding $40, which shall be in full for all services. The members of the team have been hard at work and have made brilliant records. On Thursday last eight members of the team shot at Walnut Hill and made the following records. Where two scores were made the totals and average are given and the last column shows the general average of the whole:

	200yds.	500yds.	600yds.		Average.
White	32	28	29	28 27	88½
Merrill	29	32	28	32 27	88½
Edes	28	29	27	27 25	82
Johnston	31	25	31	26 23	85½
Hinman	30	31	33	31 29	92
Osborn	28	29	33	28 37	86½
Chase	25	24	26	29 25	85
Merritt	29	28	30	24 30	85

ATLANTIC CITY, N. J.—G. H. Perkins won the gold medal for August, at Creedmoor; paper targets, possible 120 points, by a score of 118, at Albert's Rifle Gallery. Miss Mayme Disston of the Disston Villa, won the ladies' medal with a score of 116. The following scores were made at trap shooting with the rifle, Raub's trap, cardboard targets, 25 shots, possible 100, 22-calibre rifles: A. M. Reynolds (Alabama) 20 hits, 44 points; Morris Pack (Philadelphia) 17 hits, 37 points; E. Darling (Philadelphia) 17 hits, 33 points; Master Howard Perkins (Philadelphia) 10 hits, 23 points; W. Bartlett (Atlantic City) 6 hits, 17 points; C. Myers (Atlantic City) 6 hits, 15 points.

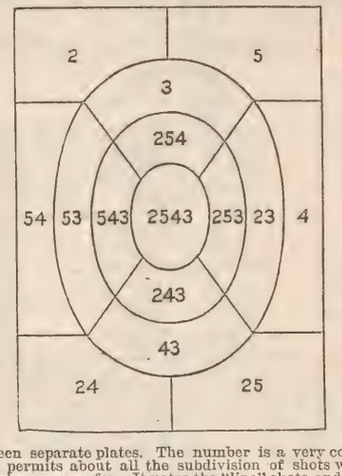
Sept. 1.—In the shoot to-day between James Albert and W. Wolstencroft, at 50 glass balls each, with .22-cal. rifles, solid ball, the score at the finish was: Albert 46, Wolstencroft 45. The balls were thrown very wild and the score was very creditable.

MILFORD, Mass., Sept. 2.—At the last regular meet for practice of Company M, Sixth Regiment, M. V. M., W. L. Tougas was qualified as a second class marksman. During the day, in five shots, out of a possible 25 points the following totals were made: J. F. Barret 23, W. L. Tougas 20, G. A. Moore 19, F. Wilcox 18, G. E. Thayer 18, J. E. Andrews 15, A. B. Montague 16, T. P. Kane 16, W. Annette 15, N. E. Tougas 13, W. Mason 12, W. C. Sleete 12, G. Kelly 10, W. Brown 10. Yesterday four of the eleven second class marksmen of the company, in five shots, 200yds., out of a possible 25 points made the following:

1st Lieut F H Clark	19 17 18	Corporal J F Barrett	19 22
2d Lieut J R Bennett	20 15 18	Musician G A Moore	19 19 22

SELF-REGISTERING TARGET.

THE present arrangement of the targets on a rifle range is a very crude one. Whether the iron slab, against which the bullets impact, or a canvas screen, through which the bullets pass, be used, the whole construction is far from modern. It is slow in action, not over sure in results, and above all, even with every possible precaution, very far from safe.



The marker is an evil, and not by any means a necessary evil, and it is more than surprising that among the rush of inventions which have been made on matters connected with the art of rifle shooting, a greater share of attention has not been paid to the construction of a target which should be all that the inventive talent of to-day can put into such a device.

Mechanical targets have been constructed, but they are not satisfactory. Where they depend upon the power generated by the blow of the bullet to start the recording mechanism, there is apt to be entirely too much force when a big 350gr. bullet comes along, sent by a charge of 130grs. of powder, and quite too little power to work the movable plates when the ping of a 40gr. bullet, driven by 10grs. of powder, falls upon the target.

A target which can be riddled by the missiles will soon be a useless mass of broken mechanism, while on the other hand it must be sensitive enough to catch the record of every shot fired at and touching the target. Cheapness and durability are of course necessary factors in the coming target.

Electricity was soon thought of by those who were working at the target problem, as long ago as 1862. Frederick N. Gisborne, an English engineer, displayed at the Crystal Palace exhibition a device for recording the shots upon a target, of which electricity was an important agent. The exhibit won a certificate from a committee of examiners to the effect that 6,000 shots had been fired and recorded without an error. It was, however, a complicated, and worse still, a costly affair, and did not come into general use.

In this country the subject has been an inviting one and has caught the attention of some very clever mechanicians. Lieut. F. Jarvis Patten, U.S.A., has been one of these, and his apparatus seems to fulfil all the requisite conditions of durability, sensitiveness, cheapness and simplicity. The cut shows an army target, made

up of fifteen separate plates. The number is a very convenient one, as it permits about all the subdivision of shots which the army marksman care for. It notes the "line" shots and the good "elevation" shots, while in the outer space the corner shots are given separate plates. The next practical question was to find just how few signals or circuits were necessary to transmit the record of these fifteen plates to the annunciator at the firing point. The four elements, 2, 3, 4, 5, by the simple rule make up the fifteen combinations, 4×4—1=15, and of these fifteen no two shall be alike, and the record on the annunciator would be translated as follows:

Bull.	Centers.	Inners.	Outers.
	254	3	2
	253	53	4
2543.	543	23	5
	243	43	54
			24
			25

This reduces the amount of wiring to a minimum and it will be seen that there is a certain method in the arrangement of the figures to indicate the value of the shots.

Lieut. Patten has arranged his battery so that it is a closed circuit at all times except when the slight jar from a coming bullet opens the circuit and the annunciator flap drops. If the bullseye plate is hit, down drop all four of the figures, for that plate is connected with all four wires. The other plates are connected as the numbers indicate. The annunciator is a simple box out a few inches square, which may be carried from one part of the range to another and connected with the wire ends in a moment. The apparatus has been tried upon an experimental target and found to work with accuracy and speed. It is patented by its inventors, Lieuts. Bingham, of the Engineers, and Patten, of the Infantry, and will be known as the Patten-Bingham target.

ASHBURNHAM, Mass., Sept. 3.—On Wednesday of this week the field and staff officers of the 6th Regiment, M.V.M., were here the guests of the Rice Guards, Co. E, of the same regiment. In a shooting match between a team of the guests and the Rice Guards 7 shots, 200yds., the result was as follows:

Guests.		Rice Guards.	
Col H G Green, Fitchburg	27	Capt C H Pratt	27
Maj T H Shea, Fitchburg	29	Lieut A S Fullford	28
Maj G H Chollin, Grafton	25	Corp C H Young	29
Surgeon C Rice, Fitchb'g	13	Pvt C A Williams	23
L't Ricker, Ashburnham		Pvt W H Sawlett	26—133

Inspector of rifle practice 29—122

BOSTON, Sept. 3.—There was a large attendance of riflemen at the range at Walnut Hill to-day. A strong fishtail wind prevailed during the day. Appended are to-day's scores: Decimal off-hand match—A. Law, 79; W. H. Oler, 76; W. O. Burnite (mil.), 73; R. Dadman (mil.), 70. Rest match—J. R. Munroe, 115; W. H. Oler, 110; N. Washburn, 109; S. Wilder, 107; A. Law, 106; John Gunn, 103; W. O. Burnite, 100. State militia match—Shaw, 20, 20, 20, 21, 22, 20, 20, 20; J. W. Hodgkins, 20, 21, 19, 22, 18.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

WELLINGTON, Sept. 3.—The regular shoot of the Wellington Gun Club occurred this afternoon. The weather being fine, there was a good attendance. Following were the winners in the several events: 6 clay-pigeons, Snow and Melcher; 6 blackbirds, Sanborn and Snow; 6 clay-pigeons, Sanborn; 6 blackbirds, Snow; 6 bats, Sanborn and Melcher; 6 clay-pigeons, Adams; 6 blackbirds, Adams; 6 clay-pigeons, Adams; 6 clay-pigeons, Snow; 6 blackbirds, Snow; 6 clay-pigeons, Melcher and McCoy; 6 clay-pigeons, Snow and Sanborn; 6 blackbirds, Sanborn; six clay-pigeons, Melcher; 6 blue rocks, Snow.

UTICA, Sept. 2.—The Oneida Sportsman's Association shot this afternoon for the Kamp & Taylor prizes. The scores stood:

Elliot	111011100 11 11 11—12	Beckwith	110111000 00 00 00— 5
Scott	101101100 10 0 01— 7	Kilbourn	110011011 11 11 01—11
Gates	101010110 11 10 10— 9	Roth	001010010 00 10 11— 6
Yates	101001001 00 10 00— 5		

The first place was won by F. A. Elliot and second by Dr. Kilbourn. The first prize, a fishing rod, has been won once by W. C. Harris, and the second, a silver pitcher, by E. H. Devine. Each must be won three times before becoming the property of the winner.

CHATHAM, N. Y., Sept. 3.—Chatham Center Gun Club, match at blue rocks:

M Powell	0011111111011001—11	W Lamoree	1111111001111101—12
J Williams	1111110111111011—13	J Boice	1111110111100011—12
J Goodrich	1111101111010111—12	J Lunnun	1111111111001110—12
B Lamoree	0111011011111110—11		

It was too dark to shoot off ties.

CAPITAL CITY GUN CLUB, Washington, D. C.—American Clays No. 1, 5 traps, N. G. A. rules:

Green	00110—2—17	DuBois	10101—3—19

This shoot ended the club season for record on the club prizes, and resulted in Mr. E. L. Mills winning the championship prize, a solid silver flask. Mr. Seymour Cunningham won the first prize, a pair of field glasses, and the Henshall-Van Antwerp reel, given for second prize, was won by Mr. Geo. W. Collison. The contest was a close one throughout, and was watched with much interest.

Aug. 31.—Birds ordinary, second barrel counts ½. Match at live pigeons, two traps, 24 and 26yds. rise, 80yds. bound. N. G. A. rules, sweeps prizes:

First Sweep.

J M Green	0 ½ 1 0 0—1½	S Cunningham	1 ½ 1 1 1—4½
Edw Godey	1 ½ 1 1 ½—4	F S Mead	0 0 1 1 1—3
E Daw	1 0 1 1 1—4		

Cunningham first, Godey and Daw second.

Second Sweep.

Edw Godey	1 0 1 1 1—4	J M Green	0 ½ ½ 1 1—3
E Daw	0 1 1 ½ 1—3½	F S Mead	0 1 1 1 1—4
S Cunningham	1 1 1 1 1—5		

Cunningham first, Godey and Mead second.

Third Sweep.

F S Mead	1 1 1 1 0—4	E Daw	1 1 0 ½ 0—2½
J M Green	0 1 1 1 1—4	Edw Godey	0 1 ½ 0 0—1½
S Cunningham	1 1 1 1 1—5		

Cunningham first, Mead and Green second.

Sept. 2.—Shoot for the consolation prize, open only to non-prize winners, American clays No. 1, 5 traps, N. G. A. rules, Williams 21yds., others 16yds.:

Williams	0111111011111011101—15	Edelin	1001100010 w

H. L. Williams won first prize.—QUIRT.

SAN FRANCISCO, Aug. 28.—The blue rock pigeon tournament at Adams Point to-day attracted quite a large attendance of representative sportsmen to the shores of Lake Merritt. The shoot was arranged for the purpose of testing and introducing the "blue rock pigeon" to the cracksmen of the Pacific coast. The shooting commenced at 10:30 and continued without interruption throughout the entire day. The scores were good considering that many of the shooters were unacquainted with the actions of the new "discs." W. L. Eyre, the manager of the tournament, acted as judge and referee in all the matches. Following are the leading scores. Sweepstake, $100 entrance, three moneys:

Cate	1111111111111111—17	Fanning	1000001111—5
Laing	0011010011—5	Scovern	1110000011—5
W Golcher	0111010000—4	O'Leary	1100101101—6

Cate and O'Leary divided first and second money. Laing, Fanning and Scovern shot a freeze-out for third. Won by Fanning.

Sweepstake, $25 entrance, four moneys:

Cate	1110000110001010110000— 8	Scovern	1100111000101101100l—11
Scott	1111101101110101010101—14	O'Leary	0011110100101111010010—11
Lambert	1001111111111010101010—14	Ingalls	1100111101011100011O—12
Fanning	1010011101110101011001—12		

Stakes divided. Double-bird match, $100 entrance, three moneys, divided:

Ingalls	10 10 10 10 00—4	Long	00 10 11 10 10—5
Cate	11 11 10 10 10—7	Scott	00 10 11 10 10—5
Lambert	01 11 11 10 00—6	Fanning	10 10 11 10 10—6
Short	10 10 00 10 11—5		

Sweepstake, $100 entrance, three moneys, divided:

Ingalls	0111110111—8	Cate	1011110110—7
Lambert	1011001011—6	Wade	1101001011—6
Fanning	1000110011—5	Scovern	1111100001—6
Scott	1011111111—9		

Single 10-bird match, $100 entrance, two moneys, divided:

Ingalls	0101101011—6	Lambert	1110101011—7
Fanning	0011011011—6	Scott	1111111001—8

Double-bird shoot, $100 entrance, two moneys:

Ingalls	11 10 10 11 11—8	Lambert	10 10 10 11 10—6
Cate	11 00 00 10 11—5	Scott	11 10 10 10 10—6
Fanning	11 10 11 00 11—7		

The last shoot of the day, for 20 birds, proved highly interesting. The entrance was increased to $5, but the shooting was even poorer than the preceding matches. Following is the score:

Lambert	10010011011110010010—10	Scott	0011101001010100101— 9
Ingalls	01100101111100111101—13	Cate	11011001111000011010—11

BROOKLYN, Sept. 1.—The Glenmore Rod and Gun Club had its annual bay outing to-day. There were many games with a shooting contest in the afternoon. The score stood at live birds:

J K Powell	0110001—3	P H Reid	0111110—5
J F Walsh	1101111—6	P P Van Dreel	1111110—6
H Littlejohn	1011111—6	J Maguire	1011111—6
J Ochs	1110110—5	J Bass	1111111—7
N W Linington	1111011—6	H Nickmann	1111000—4
P Suter	1110111—6	A McAvoy	1111111—7
H Boehme	1111100—5	R McAvoy	1101110—5
E Schiellein	0011111—5	J Welde	1011101—5
T T Edgerton, Jr	1111111—7	D Van Wicklen	1111111—7
G Jardin	0111110—5	G Schiellein	1111011—6
H Bookman	0111111—6	H Schlichtner	0001110—3
C Bennett	0001100—2	J Cook	1101110—5
M J Rowke	1111110—6	E H Madison	1111111—7

Mr. E. H. Madison having withdrawn from the contest, the shooting stood as follows on the shoot-off at 30yds.:

T T Edgerton, Jr	111—3 1110—3	Arthur McAvoy	111—3 1110—3
Jacob Bass	111—3 1110—3	D Van Wicklen	111—3 1111—4

The officers of the Glenmore Rod and Gun Club during the present year are: Samuel A. Livingston, President; Mortimer C. Earl, Vice-President; A. A. Phillips, Jr., Secretary; Joseph Ochs, Treasurer; Simon Nager, Steward; Executive Committee, Peter Sutter, Chairman; J. K. Powell, Secretary; Herman Schlichtner, J. J. Garrity, Charles Magee.

THE JERSEY CITY HEIGHTS GUN CLUB will hold their annual tournament at their club grounds at Marion, N. J., on Friday and Saturday the 16th and 17th of this month. "Old South Paw" has his weather eye open and it is full of fire, and he proposes to give the brethren of the steel tubes a rattling good time, both at animate and inanimate targets. The exercises will open at 10 A. M. at the clay saucers, to be alternated as the shooters desire with live birds, a fine lot of which Al has on hand. While shooting at the baked disks two or three sets of traps will be in operation at a time. One set at least for the shooting off of the ties, that there may be no delay in the programme. As Marion is so handy for the shooters from both New York and New Jersey, and the J. C. H. G. Club, with Old South Paw to supervise things, are so well known for hospitality and a good time, a large attendance is expected.—JACOBSTAFF.

WINCHENDON, Mass., Sept. 28.—Regular meet of the Winchendon Gun Club, possible 10 birds: E. M. Whitney 8, H. J. Lawrence 8, J. Sutherland 7, Dr. Henry 7, A. C. Lawrence 6, F. E. Mann 6, S. F. Martin 6, F. F. Hopgood 5.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

Commodore: R. W. GIBSON.....} Albany, N. Y.
Secretary-Treasurer: F. L. MIX.}
Vice-Com. Rear-Com. Purser.
Central Div..Henry Stanton..R. W. Bailey.....E. W. Brown, New York.
Eastern Div..L. Q. Jones.....Geo. M. Barney....W. B. Davidson, Hartford.
N'thern Div..A.D.T.McGachen.W. G. McKendrick.S. L. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses.

THE A. C. A. CONSTITUTION.

THE following is an official copy of the last amendments to the Constitution, adopted at the meet. In all other respects the wording is the same as was published in the FOREST AND STREAM of July 14:

ARTICLE I.

Application for membership shall be made to the Division Purser, and shall be accompanied by the recommendation of an active member, and by the sum of $2, $1 as entrance fee and $1 as dues for the current year, to be refunded in case of the non-election of the applicant. Pursers shall forward names of applicants to Vice-Commodore. Each subsequent annual payment shall be $1, and shall be payable Jan. 1. If not paid the purser shall notify the members in arrears, and if by the first of April the dues are still unpaid the membership shall be forfeited and the member's name stricken from the roll, except in case of absence from the country or other sufficient reason. The entrance fees and dues shall be received by pursers, 70 per cent. for the divisions and 30 per cent. for A. C. A. treasury; except that the division in which the A. C. A. camp is held shall contribute its entire receipt for that year, less purser's expenses of collection, to the A. C. A. treasury. Every member attending the general A. C. A. camp shall pay $1 for camp expenses.

ARTICLE II.

There shall be an annual meeting and camp of the Association, and if practical of each Division (except of the Division in which the A. C. A. camp is held) for business, camping and racing, the date and places to be subject to the approval of the commodore. Division annual meets shall, if possible, be held before the A.C.A. Camp, and so as not to interfere with one another.

THE CANOES OF 1887.

I.

STROLLING through the fleet of canoes and boats that lined the shore of Bow-Arrow Point in the early morning, before the camp was astir and the early birds had launched for a quiet paddle or a dash under canvas unobserved by possible rivals, the first idea that strikes one who has visited the previous meets and is familiar with canoes is that the canoeist is an inventive animal. Each year gives new evidence of the fact in novelties, many of them small and comparatively trifling, but showing an earnest study of minor details and a steady effort toward their perfection. By the time, however, that the stroller has walked up and then down the long line, and has recalled some similar expeditions through the camps of '86 and '85, his conclusion is that if some canoeists are inventive, by far the greater number are imitative to a degree that fully justifies the comparison which we once made, of a flock of sheep ready to follow any leader.

Of the imitative canoeists there are two kinds, one the man who reasons thus, "Pecowsic is a very fast boat; I will buy a new Pecowsic, the best her builder can produce, and next year I will win the A. C. A. Trophy, the limited and unlimited races, and the first Record prize." It is needless to say that only disappointment awaits this gentleman, and that he returns from the meet convinced that Pecowsic is a much over-estimated boat. His brother imitator goes a little further. He says, "Pecowsic has a light bilge; I will cut away the bilge of my new boat, the Hull-Downer, and the Trophy is mine." Or he sees that Pecowsic has a peculiar sail, and at once devotes all his energies to copying that. Needless to say, he does not fare much better than the other.

To the inventive mind there is plenty of food for serious thought and study during the winter to be had in a single trip through the fleet or a view of a few of the races. There is still much that is crude and unsatisfactory, much to be learned on minor points, much that is indeterminate and indefinite; and even the best informed are apt to be misled in their conclusions. We do not mean that canoeing is behind any other water sport in its development, but the truth is that, as in yachting, while the present craft have reached a degree of perfection that is wonderful when compared with the boats of but ten years since, the field for research and improvement is still infinite, and the further we go the more its possibilities are apparent. Thus far, the canoe of to-day is a success; she answers well her purpose, both as a racer and cruiser. The influence which the English models once exerted toward big and unhandy craft, with immense weight of boards and ballast, has disappeared; and while the question of some ballast or no ballast is in dispute, the fact that an unballasted canoe can cruise or race in company with both the heavy ballast and light ballast canoes is fully proven.

As regards Pecowsic's success, a most important question just now, it may be attributed not to one but to many components; an easy model with fine, which does not of necessity mean hollow, lines, a smooth, hard surface to the bottom, a polished plate board placed where sailing dictates, without regard to room, a rig that is light in the extreme, and that is perfect in all details; and perhaps most of all, that the two boats, Pecowsic and Lacowsic, are sailed by men who are thoroughly in earnest, who, having had the brains and patience to produce the two boats, are fully competent to sail them and win races. The boats are kept in thorough shape, and they are always ready at the line in good time. Put the average canoeist in possession of either for a month before the meet, and he would do no more with them than with his own poorly fitted craft. Apart from racing, the boats are not the kind which, for the advancement of canoeing, we should desire to see in general use. Much of the talk about racing machines is simply nonsense, and is certain that in Mr. Barney's hands either is a very good boat. He uses them for general sailing about home as well as for racing; but even this is not quite the work necessary for a test from a cruising standpoint. The two are sailed up and down the Connecticut River to the various local meets, the full outfit of sails, five in number, is carried, and the sails are shifted or stowed as required while under way, and the pair are sailed in rough as well as smooth water. In rough water they are wet and uncomfortable boats; it is necessary to stop at times when racing to bail out; and in this respect the model is capable of much improvement, while compared side by side with their successful rivals, Notus and Vesper, it is easy to see the great superiority of the latter from a standpoint of cruising and general use; carrying a cruising load of moderate bulk and weight, giving comfortable room for sailing or paddling at ease day after day and for sleeping at night, and for taking an occasional passenger. In these points there are many boats that are far superior to Pecowsic, and that they are slower is mainly due to obvious imperfections in finish and rig, to a lack of the skill, care and ingenuity which has made Pecowsic so successful.

This year there were several Pecowsics at the meet, all differing a little, and two or three, if appearance goes for anything, of better model and build than the original, but they did nothing. The best in model and finish was the Albatross, a handsome boat and apparently larger and safer than the original, though supposed to be a duplicate. She had a wide belt of blue around the gunwale, in fact the entire upper streak was painted, and the effect was very good. Her rig was entirely experimental, the Cook spritsails, and she suffered accordingly from lack of preparation. Others of the model were visibly inferior to the original.

The Lacowsic is a new boat built on the old model by a local builder under Mr. Barney's direction, a double skin craft with the inner planking diagonal and the outer fore and aft. She is cut up considerably at the stern, evidently with a desire to make her quicker in stays. At stem and stern brass handles are recessed in, a convenient plan but ruinous to the looks of the boat. She has a single plate board and the same rig as her sister. The method of building was not a success. The boat is heavy, she is not true to the model, and further the planking has warped in places.

Notus, which divided the honors of the meet with the two Springfield boats, is already known to our readers through her lines, lately published in the FOREST AND STREAM. In model she is far handsomer than her immediate predecessor, easier and fairer lines, less bilge and floor. Successful as a racer, she at the same time is a model cruising canoe; and while it would be too much to pronounce her perfect, the model is one that may very safely be followed by all who wish a good all-round racing and cruising boat.

As to the general excellence of the models seen this year, the old boats are rapidly giving way to a much better class of canoe. The influence of Pecowsic is seen in a number, the bilge being cut away more than was formerly the case, but the general characteristic of the models of the day is a strong resemblance to the Canadian canoes. These beautiful boats, the result of a long continued evolution, have been present at every meet for a number of years. Thrown carelessly up on the bank when not in use, bottom upward, and their cleanly moulded hulls in full view, they have won the admiration of all who saw them. In their natural state, undecked, with a grotesque sheer, the stem and stern rounded away so that a rudder could not be used, with neither keel nor board, they were purely paddling and not sailing craft. The leading features of the model, however, could not fail to charm the eye of every builder or designer, and these features have to a great extent become incorporated in the decked sailing canoe. The flat floor, easy but stable bilge and the fair and flowing characteristics of the water lines, neither full and bluff on the one hand nor cut away into a knife bow on the other, are seen now in many of the best canoes. The sailing features have been added, an after deadwood and rudder, a little different stem, a fairer and easier sheer, a board and a deck, but still the easy lines and good bilge, with a moderate floor, not cut away into a sharp V nor yet carried so far fore and aft as to make a tub, are noticeable in the majority of the boats. To sum up, the old hollow bow of the first Nautilus, the bluff ends of some English and American models and other features and fads that at various times have been carried to extremes, are no longer seen, and canoeists have become better educated in the matter of form, the result naturally being that the models are all fairer and better proportioned and resemble each other more closely than in the old days, when each man was experimenting crudely on his own account.

To go back to Pecowsic, only a few years ago the canoeists of the Connecticut River were loud in the praises of a model evolved by some of their number, one of the bluff-bowed follows that would now be voted a tub. These boats were failures from a racing standpoint, and it is easy to see how the search for something different has resulted in Pecowsic, the direct opposite of the old boats, going from one extreme to the other. One or two of the old craft were present this year, and looking from them to Pecowsic, as they lay near together, the question naturally suggested itself, How much are these heavy tubs responsible for the introduction and perfection of the new and smaller model; and had the former been followed by a medium boat, decidedly the best of it this year, and by now rests with the ballast men to prove their case. All must admit that if it is possible to do nearly as good work in an unballasted canoe, then a great point has been gained, as ballast is always a nuisance, an expense and a source of danger.

Looking now at the state of canoe building, it is very difficult to decide among the leading methods now in use, and to say positively that one is better in all ways than another. The ribbon carvel build of the new Albany canoes, Notus, Baby Mix, Wa Wa and Walulla is a return to a method introduced six years since, which then attracted little attention. The boats are of handsome form, smooth skins, and apparently very strong, the doubtful feature being the possible liability of the wide planks to check or buckle. In the first boats built in this manner the planks were from 4 to 4½in. wide, but in the Albany boats the garboards are 6 or 8in. wide, there being but three planks on a side. This makes a very good bottom, and if the fastening is close enough it should be strong and durable. The method of building is the same as described in "Canoe and Boat Building" except in the Notus, where the planks are fastened with brass screws from the inside through the ribs and into the planking, only a few being put in from the outside. These boats are planked with white pine.

Directly opposite to these boats, with narrow planks in place of wide, and caulked seams in place of the inside lap, are the Ruggles canoes. The system certainly makes a strong, light and handsome boat, and some of the new ones, the Eurylda and Nirvana, as well as the Hornet, are very good in model. We have described the method before, narrow strips, ½ to 1¾in. with timbers only 4in. apart, the seams being caulked with cotton cord, thick, a neat and delicate job. Mechanically the boats are excellent specimens of good workmanship, and the models have also improved this year. In one point the boats are still defective, we have not yet seen one that was properly finished for cruising or racing. The woodwork is good, but the surface is rough, the grain of the wood is not filled, and the seams are quite open. The best of these boats at the meet were just ready to go into the finisher's hands, they needed a thorough filling of the grain and seams, a severe rubbing down, and then repeated coats of varnish, to complete them. When this is done they will have a far better chance in the racing than they have had, and the model and build will begin to tell. Their strength and the ease with which repairs are made is in their favor, the two garboards may be removed with little trouble and replaced intact.

As a rule builders are not yet awake to the value of small and apparently trivial features in finishing their boats. To mention one point, a large number of canoes show but a narrow strip of stem outside the ends of the planking, a piece with no particular shape, and offensive to the eye of a practical boat builder. The Notus is a good example of the reverse of this that the builders could follow with advantage, the stem is carefully shaped, as in a yacht, the rabbet line and the outer curve of the stem have some relation to each other, and the waterlines are carried out fair and straight to the stemband, a narrow strip of metal. In the Ruggles boats this latter is a flat strip, ⅝in. wide, a serious obstruction for a racer. Another point which does not receive due consideration is the effect upon the sheer, as the stem is too pronounced, of a beading about the gunwale, a wide upper streak of dark wood or paint on the upper streak. The majority of canoes have a moderate amount of sheer, and if it is desirable to increase this in appearance it is easily done by a strip of color or a dark upper streak, the lower edge of which has a little more curve than the upper which, of course, corresponds with the sheer. Notus, as well as the Ruggles boats, is relieved in this way by a beading of dark wood a couple of inches below the deck at the middle and say 1½in. at each end. Albatross, as previously mentioned, had the upper streak itself painted blue, but in this case the effect would have been better had the colored streak been a little narrower at the middle, decreasing the apparent sheer. Another point is the finish of the stem and stern above deck, especially the former. In some boats the stem is carried off close to the deck, leaving no projection; in others a high spur rises up for an inch or more. A little is needed, and but a little; without it the effect of the sheer is lost and the boat has a tumble-down look at the ends. The worst example of this was Lacowsic, the stem being cut away entirely for the handles mentioned.

The centerboard question is still unsettled, we believe, though the majority of racing canoes at the meet seem to agree on one thing, a light plate board in the center of the well. The two sides

of the dispute may be stated thus, it being conceded that a keel canoe is not desirable and that a centerboard must be used in some form. The requirements of a proper balance demand that the center of area of the board or boards must be about under the center of lateral resistance of the canoe. On the other hand, the comfort of the canoeist for cruising, sleeping, carrying double, and for any purpose except sailing a boat from the deck position, demand that at least 5ft. of the center of length of the boat be free from any longitudinal or transverse bulkheads, such as a centerboard trunk. Canoeists first agreed on a folding board as a compromise, but for racing this has been abandoned. They then came to terms for a time by dividing the board into two parts and placing one forward and the other aft of the space devoted to the man. This plan in turn has been condemned, and the latest compromise goes to the other extreme, giving up the best part of the boat to a single plate board, with the proviso that if the canoeist requires the boat for some other purpose than sailing he may remove the trunk temporarily. This is done in two ways, in the Notus the wooden trunk is screwed fast, but the screws may be taken out and the trunk replaced by a flat piece of wood if the boat is to go on a long river cruise where no sailing is to be done. In the other plan the metal trunk is fastened by cam latches along the keel, so that it may be removed in a short time. A number of canoeists follow the Pecowsic plan, giving up the entire center of the boat to the centerboard. In all cases the boards themselves are of simple construction, a plate of brass of about ⅛in. thick, of triangular shape, and hung by a pin in the fore end. They are lowered by a strip of brass by way of handle, and held when wholly or partly raised by a spring fitting notches in the after edge of the board. Sometime since the wholesome restriction that boards must house within the canoe was stricken from the rules, and these boards often project high above the coaming when raised. One or two boards consisted of square plates dropped vertically through the slot.

Whichever way it is arranged, the present board is unsatisfactory. The plans of removing the trunk entire do not fully answer, as with the best of them it is a troublesome job, taking some little time. When a man wants to go out for a paddle with a passenger he does not want to take so much trouble to prepare the canoe, and when he next comes for a half hour's sail he does not want to reverse the operation and replace the trunk. Besides, neither method removes the chief objection, general cruising, where some sailing is done, but the man wants a free and unrestricted use of the cockpit. Where the boat is used almost entirely for sailing the board may be in the center of the boat, the man sits generally on the gunwale; where an occasional river cruise is undertaken the trunk may be removed and all sails left ashore. But both of these cases are or should be exceptional. The canoe should be always ready for any of its half a dozen uses, with no more change than is involved in shifting hatches and adding a backboard for a second man or removing the bulkhead for sleeping. Viewed from the standpoint of all-round use, the present board is not all that it should be, and though it is now the fashion, we believe it will not be permanently retained save as a purely sailing feature. A canoe is small at best, and any one who has occupied one for an entire day knows how necessary the last inch of space in the cockpit is. The double board plan, in spite of some objections, seems to present the most advantages, and some who tried it last year still adhere to it, there being several boats very well fitted with double boards at the meet. Theoretically the plan offers a perfect solution of the question, and we believe the practical difficulties are but small. There still remains the plan of the Nautilus, a single board forward of the well and yet balanced by sails and hull designed specially for it, aided by a large drop rudder. In one of the double board canoes that raced last year the after board was removed with no loss of efficiency, though the fore board was forward of the well, and in some cases this may be done.

What is really needed now is a board that can have the after end of trunk not over 6ft. from the stem, leaving the cockpit unincumbered, the board itself dropping aft when lowered, so as to throw the center of lateral resistance aft also. This could easily be done to a certain extent, probably as far as is necessary, but it would be difficult to raise the board instantly in case of grounding. This much is settled, the best thing for a canoe is a centerboard, and that board must be a solid plate of metal. Where it is to be placed, how handled, and whether in one large board or two smaller ones, is still unsettled.

Connected with the board is another feature that is not desirable in a cruising boat, in some canoes this year the well or cockpit is cut down to barely sufficient length to sit in and paddle, one canoe having two tight bulkheads but 4ft. 6in. apart and a well of 4ft. or less, while in a number the well was very short. This, of course, is an undesirable feature for cruising; but these boats are used only for racing, in some cases the owners having other canoes for general paddling and still others for cruising; in fact, there are many now who keep an old boat for general work, sailing and cruising, while some have an open Canadian canoe as well for evening paddling and short trips.

In connection with building there is one point that should not be overlooked. A new boat came to the meet this year which was over the limits and only allowed to enter after a heavy deck seat of thick boards was hastily built and forced across her, pulling in her beam. This is a point for the builder, he must see that every boat sent out is within the A. C. A. rules, both as to length and beam. Building to the rules is now so much a matter of course that few cases like this occur, but there should be none at all. Another point came up in measuring for length, some canoes were provided with a brass tube, down which the rudder stock ran, forming the connection of the rudder to the boat. These tubes ran the full length of the sternpost and were very properly included by the measurer in the length, but in some cases it was a close shave and the boat was barely inside the limit. All such pieces that run the full length of the stem and sternpost, or even if of any length and only below the water, should be counted in, of course excepting the ordinary projecting rudder braces.

CANOE RACING AND CLASSIFICATION.

Editor Forest and Stream:

Permit me to suggest through your columns a mode of starting canoes in the sailing races, which I saw adopted at regattas in Eastern seas with very good results. Two boats were moored behind the starting buoy, and between them a long rope was stretched, to which the competing boats were kept by lines fastened at equal distances apart, and held by their respective crews until the signal for starting was given, when they let go and the boats started off all on the same board. To neutralize any advantage the windward boats might have if the wind was blowing up the course, the rope was slanted so that the windward boats were placed behind the others. Places were drawn for, as in rowing matches, and in this way a fair start was effected without any jockeying to get a good place or blanketing of other competitors. This plan answered very well with boats from 20 to 30ft. in length, and I do not see why it should not answer with canoes.

Is it not time some modification of the canoe classification should be made. Class B works satisfactorily enough, but the difference between classes A and B in decked canoes has almost disappeared, while the classification which allows light open Peterboro canoes to compete with decked ones evidently does not work in spite of the various plans which have been tried to equalize the chances of the two. Here is my idea of a canoe classification:

For Sailing.—Class A, length not over 15ft., beam 28in. and under, depth not over 10in. Class B as at present.

For Paddling.—Class I., decked canoes of Class A.

Class II.—Decked canoes of Class B (those between 15 and 16ft. in length to carry an extra weight of say 30lbs., those between 16 and 17ft. in length, to carry an extra weight of say 50lbs.

Class III.—Light open Canadian canoes, as at present, not over 16ft. in length or less than 28in. beam.

Class IV.—Heavy open Canadian canoes, not over 16ft. in length or less than 30in. beam. This is the ordinary double canoe of Canadian waters, 16ft.×31in.

The present Class I. to be abolished; no one appears to want it. Will some one else try their hand at a modification of the canoe classification? C. M. D.

LAKEFIELD, Aug. 21.

[Unless in a start with all sail down, there would be great trouble in holding the canoes, especially if free, and the present method works so well that there really seems no reason for a change. To start 40 canoes in this manner would require a long time for arrangement and preparation; for paddling races this start would answer very well. All that is necessary with the present classification is to separate the open and decked canoes in the paddling races as has frequently been done. With this there need be no trouble. Class A is now practically merged in Class B, but still there is no reason why it should not still be recognized. It cannot be merged with Class II. because the limit of a paddling class is of necessity a minimum limit, not under a certain size, while the sailing limit is not over a certain size. If the Class A limit only be made to cover paddling, then a 24in. canoe could enter the paddling races of the class. The method of handicapping by weight is very unsatisfactory and troublesome besides. Class I. filled this year and seems a desirable feature, as it gives one race to purely paddling canoes. The present rules have stood the test of several years use; this season they worked very well, and if the decked and open canoes be separated in the paddling races, the only objection to them will disappear.]

A LONG CANOE TRIP.—Early in August Mgr. Lorrain, Bishop of Cythere and Vicar Apostolic of Pontiac returned to Montreal, accompanied by his secretary, the Rev. Abbe J. B. Proulx, the Revs. Guegen and Duzois, and Brother Tremplay. Monseigneur had been on a pastoral visit to the Indian mission on the Upper Ottawa, Rupert's Land, and the Upper St. Maurice. His route was from Ottawa, via Pembroke to Lake Temicamingue, Obaching, Kepewa, etc., thence to the source of the River du Molhe; from here through a chain of lakes to the "Lac Barriere" mission, now on Lake Wapous; thence to Lake Wassepatebi, lying between the Province of Quebec and Rupert's Land; through Cypress Lake, River Pekakak, by a chain of live lakes, the Laloche River to Lake Waswanipi. The return trip was made by the same route as far as Lake Waswanipi, to the Mekiskan River and the upper waters of the St. Maurice; thence through various lakes, Lake Long, Lake Coucoucache, and others to the Grand Piles. This involved a trip of 1,700 miles, mostly by water in bark canoes, occupying two months and six days, and 1,172 miles being traveled by canoe. The portages were from an arpent to four miles long, and there were 157 of them. The party slept for 50 nights in tents or in Indian huts. Thirty-five infant baptisms, 5 adult baptisms, 16 marriages, 572 communions, and 458 confirmations were solemnized. —*Montreal Herald.*

LIFE JACKETS AND BELTS.—A correspondent asks for information concerning the various life preservers in the market. Perhaps some of our readers who have tested them can give their experience.

LARCHMONT Y. C. FALL REGATTA.

THE fall pennant regatta of the Larchmont Y. C. was sailed on Sept. 3, over the regular courses of the club, and as there was a good northwest wind all day some good racing was seen. Unfortunately Titania was not in, so the fight between her and Shamrock was missed, and in Cinderella's class Clara did not start, so the contest was between Cinderella and the new Anaconda, the first race the latter has sailed. The start was made at 11:30, the fleet getting away in the following order: Fanita, Amazon, Clio, Inez, Magic, Cinderella, Speranza, Plover, Anaconda, Mercedes, Terrapin, Ada, Gevalia, Arab, Shamrock, Gleam, Gracie L., Oeta, Fanny, Volusia and Gannet. Shamrock soon took the lead, with Cinderella next, and the pair kept well ahead of the fleet during the entire race. Before reaching Mattinnicock Magic lost her foretopmast, but continued the race, her class competitor Speranza dropping out, after losing her balloonjibtopsail when past Captain's Island. The times at Mattinnicock were:

Shamrock	12 31 39	Clio	12 35 41
Cinderella	12 32 12	Gevalia	12 36 25
Magic	12 32 25	Fanny	12 36 58
Fanita	12 33 15	Anaconda	12 37 13
Speranza	12 34 49		

On the short beat to windward from Mattinnicock to Captain's Island Shamrock and Cinderella increased their lead on Fanny and Anaconda, the times being:

Shamrock	1 13 58	Fanny	1 27 34
Cinderella	1 19 10	Clio	1 35 15
Magic	1 26 05	Gevalia	1 35 39
Fanita	1 26 47	Speranza	1 38 39
Anaconda	1 27 00		

The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Speranza	11 35 21	Did not finish.		
Magic	11 34 31	3 03 55	3 29 24	3 01 50
CLASS B—SCHOONER YACHTS 60FT. AND UNDER 75.				
Gevalia	11 36 55	3 10 30	3 33 35	3 33 35
Clio	11 34 08	3 12 13	3 38 05	.....
CLASS E—SLOOPS AND CUTTERS 65 AND UNDER 75FT.				
Shamrock	11 38 02	2 38 34	3 00 32	3 00 32
Fanny	11 39 25	3 03 12	3 23 47	3 20 35
CLASS G—SLOOPS AND CUTTERS 47 AND UNDER 55FT.				
Anaconda	11 35 53	3 00 02	3 24 09	3 24 09
Cinderella	11 34 43	2 48 52	3 14 09	3 14 06
Fanita	11 32 19	3 02 11	3 29 52	3 24 27
CLASS 2—SLOOPS AND CUTTERS 34 AND UNDER 40FT.				
Volusia	11 40 00	3 45 52	4 05 52	4 05 52
Inez	11 34 22	3 26 20	4 01 58	.....
CLASS 1—SLOOPS AND CUTTERS 24FT. AND UNDER 29FT.				
Arab	11 37 35	3 07 08	3 29 33	3 29 33
Amazon	11 34 03	3 14 45	3 42 42	3 37 54
Plover	11 35 32	3 22 29	3 46 57	3 41 15
CLASS 5—SLOOPS AND CUTTERS UNDER 24FT.				
Gleam	11 38 22	2 51 46	3 13 24	3 13 24
Gannet	11 40 00	2 57 22	3 17 22	3 12 27
CLASS 10—OPEN MAINSAIL YACHTS 20FT. AND UNDER 23FT.				
Ada	11 36 40	3 26 11	3 49 31	3 49 31
Oeta	11 38 33	Did not finish.		
CLASS 11—OPEN MAINSAIL YACHTS UNDER 24FT.				
Mercedes	11 36 04	3 37 40	4 01 36	4 01 36
Terrapin	11 30 12	3 49 38	4 15 26	4 10 00
Gracie L.	11 38 35	3 45 04	4 07 39	4 02 28

After the race the following agreement was drawn up by the owners of Anaconda and Cinderella:

"LARCHMONT, Sept. 3, 1887.

"Agreement between John G. Prague and William E. Iselin for a match race between the yacht Anaconda, owned by the former, and Cinderella, owned by the latter, for a cup to be purchased out of the fund to be hereinafter created.

"The race shall be sailed on a day to be fixed by the judges on or between September 10 and 17, 1887. The Regatta Committee of the Larchmont Yacht Club are hereby constituted judges of the race, and they shall on the day of the race select the course, starting from Larchmont, and shall act as stakeholders. The length of the course to be thirty miles, and to include windward and leeward work equally as near as may be possible.

"Larchmont Yacht Club rules and time allowance shall govern, except as to course and time of race.

"Stakes of $250 a side shall be deposited with the judges upon signing these articles. Each yacht shall carry a representative of the competing yacht. All questions shall be decided by the judges, whose decision shall be final.

"No limit as to time of race. In case of unfavorable weather or wind, or disabling of either yacht before the start, the judges may postpone the race to a date to be fixed by them.

"Expenses of a steamer for judges and their other necessary expenses to be deducted from the fund. The balance of the fund to be applied to the purchase of a cup as a prize.

"JOHN G. PRAGUE.
"WILLIAM E. ISELIN."

YONKERS Y. C. CRUISE.—The annual cruise of the club was up the Hudson River and was intended to extend to Hudson, but owing to continual head winds the yachts only reached Kingston. Peekskill was the point of rendezvous, and the fleet there assembled on Sunday, Aug. 28, consisted of schooner Edith, Com. A. J. Prime; cabin sloops Henry Ward Beecher, J. H. Warren; Crawford, O. E. Day; Racket, J. Dixon; open sloops Pansy, F. A. Rigby; Rambler, J. H. Thorn, and the large catboat Ella F., Newton Quick. The new sloop Bonita, Judge Brown, met the fleet on Monday near Newburgh, and the celebrated cutter Madge, H. F. Trevor, joined the club at Kingston on Wednesday. Rambler broke her centerboard on Tuesday when nearing Poughkeepsie, and was forced to return. The club had a most enjoyable time during the cruise, and all reached Yonkers in good season on Saturday, a fresh N.W. wind sending the yachts bowling along to the home port.

MEASUREMENT AND SAIL AREA.

Editor Forest and Stream:

The Yacht Racing Association of Great Britain, previous to the adoption of the new rule $\frac{\text{L.w.l.}\times\sqrt{\text{sail area}}}{6000}$—obtained from the notable yacht designers of the country an expression of opinion as to what they believed would be a just or expedient rule of measurement. Of these opinions—a condensed statement of which I append—an issue of your paper in last November informed the public. The preferences of the various designers and builders are as follows: Richardson, sail area; Watson, length+beam×sail area; Webb, sail or sail and length; Froude, sail or sail and length; Payne, sail or sail and length; Wilkins, sail or sail and length; Clayton, sail or sail and length; Fife, Sr., length and sail area, or if hull alone, then depth and girth; Fife, Jr., length and sail area; Kemp, length and beam and sail area, or length and sail area.

Note that in these recommendations sail area receives the largest support. The consequent effect is shown in the Y. R. A. rule, which is a closer approximation to a sail rule than is the Seawanhaka, as the following examples show:

L. W. L.	Sail Area.	Seawanhaka	Y. R. A.	√Sail Area.
45ft.	2,500ft.	47.5ft.	18.7 tons.	50ft.
50ft.	2,500ft.	50.0ft.	20.8 tons.	50ft.
50ft.	2,025ft.	47.5ft.	16.8 tons.	45ft.
100ft.	10,000ft.	100.0ft.	166.6 tons.	100ft.

The Y. R. A. rule is practically a bulk or displacement rule, but without the faults or loopholes of either. It will be seen that the 100ft. boat rates as 166.6 tons by the English rule, the 50ft. one measuring 20.8 tons, that is one-eighth of the larger boats; now the bulk or displacement of the smaller boat is also one-eighth of that of the larger one.

The success of the Mayflower on this side of the Atlantic and of the Thistle on the other, make it extremely probable that under the present rules they in turn will be outbuilt, vessels of greater power displacing them, until the beam and draft become as large a proportion of the length as in the small sloops, wherein the limit has probably already been reached under the action of a length rule or its near relatives.

The possibility of a further increase of power in large sloops is easily shown. If for instance we take a model of 6ft., a sloop of 30ft., and another of 80ft., all of the same proportions of hull and of sail to l.w.l., we find that, in a wind which brings the sloop of 30ft. to her rail, will necessitate the stowing of most of the model's sail, and yet the 80ft. craft is quite capable of standing up under an area of sail largely in excess of that given her. It is this truth which is now being taken advantage of under the present diverse and imperfect rules of measurement. In the case of small yachts there is no harm in racing on the basis of length, as their sail area (lower sail) is never largely in excess of the square of the l.w.l., but in larger craft the tendency to an unhandy, unsafe amount of sail can only be curbed, it seems, by resorting to a tax upon it. However, this tax may produce unduly long vessels, in which case, and to provide for small yachts, I would suggest—in the absence of a better or readier rule—rating a boat solely by the square root of the sail area, when this exceeds the l.w.l., but if it does not, then by the l.w.l. alone. Thus a vessel would race on the largest element of its form, and this rule checks excess of length or sail.

There need be no fear that racing solely on a sail area basis will cause greatly reduced rigs, for the curve of a vessel's resistance is not sufficiently concave to make it profitable to reduce the sail to any less area than that needful to bring out the full speed.

But no matter how good a rule a club may have, if a neighboring club has a different one it spoils the effect of the better system. And as you have justly contended, there should be a rule, and not rules. Why? Because yachtsmen build with an eye to other prizes and triumphs than the home club offers. The readiest way of obtaining this really desirable uniformity is by means of an association similar to the British Y. R. A. S. F.

THISTLE AND MOHICAN.

ON Sept. 1 the steam yacht Mohican, owned by Messrs. John and William Clark, of Paisley, Scotland, arrived at New York after a stormy and exciting passage of sixteen days from Glasgow. The Mohican is one of Mr. Watson's vessels built in 1885 by D. & N. Henderson, of Partick, on the Clyde. She is 199ft. l.w.l., 27ft. beam and 18ft. depth of hull, with three masts. Her engines are triple expansion, 18, 27 and 43in.×33in. She was built for cruising and only lays claim to 13 or 14 knots, but the interior is roomy and elegantly fitted up. Besides her owners were Messrs. Robert Clark, J. W. Clark, J. B. Hilliard, Geo. A. Ballentine, N. B. Challoner, R. W. Cumming and Dr. Jas. MacDonald. She is commanded by Captain Timpson and has a crew of 32. She passed through the hurricane of Aug. 25 with some damage to her bulwarks, and on the 27th fell in with the bark Lilian, in a helpless condition. The Mohican laid by her for five hours, taking off 17 persons, including two women. The ship's dog was also rescued, and now forms one of the crew of the Mohican. The first port made was Halifax, where the Lilian's crew were landed, the run from Halifax to New York being made in 48 hours. She is now at Bay Ridge for repairs to her bulwarks.

Thistle has been sailing about the bay and out to the Lightship, part of the time under gaff trysail. She has been followed by reporters in steam tugs, and calculations and comments on her speed are now gravely printed, as though they could be of any possible value. Messrs. Watson and Bell are expected by the City of Rome to-day, and Mr. William Fife, Jr. and Mr. James Grant, owner of Lenore, the fast 20-tonner, will be on the same vessel. No arrangements for docking Thistle have yet been made.

WOOD'S HOLL Y. C.—On Sept. 3 a race was sailed off Wood's Holl in a strong northwest breeze, the classes being: First class, cats 21ft. and upward, sailing length. First prize, $15; second, $10; third, $5. Second class, cats under 21ft. and over 15ft., $12, $8 and $3. Third class, cats under 15ft., $8, $5 and $3. Fourth class, centerboard spritsail boats, $6, $4 and $2. Fifth class, keel spritsail boats, $6, $4 and $2. Course for first and second classes 10 miles, remaining classes, 7 miles. Summary:

	Length.	Actual.	Corrected.

Pastime, sch., W. M. Black	38.09	1 30 00	4 51 25	3 21 25	not m'd

No time allowed for difference at start. Winner first prize, Wenonah. Judges, I. W. Stairs and F. C. Sumichrast.

EARLY AMERICAN YACHTING.

ABOUT 1820, the population of Portland was less than one-fourth of the present number. The number of sail boats used for pleasure was in far less proportion to the present number than the population. The largest and finest sail boat, or yacht (as she would now be called) that had sailed up and down Casco Bay was built by John H. Hall in 1807. Hall was the son of Stephen Hall, a graduate of Harvard College in the class of 1765, and had been a tutor in that institution. The son, John H. Hall, was born here in 1781, and although the father was well to do, the son learned the trade of a boat builder and had a shop on Richardson's Warf. He was an enthusiastic boatman, and early showed a disposition to step aside from the beaten track in modeling sailing craft.

The rage for fast privateers at the commencement of the war of 1812 gave Hall an opportunity to introduce a favorite principle in a thirty ton sloop. Hall saw the advantage of something to hold the vessel up to her course, preventing her falling off to leeward. He built the privateer Yankee with a keel 5ft. deep, with no support but the through and through bolts that went down through the keelson. On the trial trips made in fair weather the deep keel did wonders, but it probably was the destruction of the vessel on her first cruise, as she never was heard from. The great leverage of the deep keel probably started a garboard in a gale and she foundered.

Hall obtained his idea of a deep keel from watching the defects in the sailboat which he built in 1807. She was about 30ft. long, with what would now be considered great breadth of beam at about 12ft. from the stem and lean aft. In looking down upon her from the wharf, she appeared to have the outlines of a sculpin. Her bow, like all vessels of her time, was very full. She had a forecastle deck, covering about one-third of her length, with a cuddy below it, with sleeping bunks and doors to close in halves. The after part of the boat was floored over about 3ft. below the gunwale and had seats all round, which would accommodate perhaps fifty or sixty persons. She had two masts without shrouds, but no topmasts. The foremast was 4 or 5ft. higher than the mainmast, and placed well forward to prevent the raising of a jib. The rig was well calculated to enable one person to manage the boat alone, as the foresail would work itself, and while holding the tiller the helmsman could haul in or pay out the main sheet. These short and wide boats would go about much quicker than long ones, giving them an advantage in beating against the tide in a narrow roadway. Their blunt bow allowed them to run well in-shore out of the current, and in skillful hands they could be made to shoot ahead in the still water, before they filled away on the other tack.

Hall's new boat was called the Swiftsure, and her owner was cock of the walk and champion of the bay until the war of 1812 drew his attention to other matters. There were no silver cups to be sailed for then, but boatmen took their cups full as often as they do now. Hall had invented a breechloading rifle which was a great improvement. The Government bought his patent and employed him to superintend the manufacture of the arm at Harper's Ferry, where he continued twenty years. He died in 1841. He had a son who was a member of Congress from Missouri.

In 1820 the boatmen of the town concluded that Hall's Swiftsure had held the championship about long enough. Lazarus Harlowe, a joiner, who came from old Plymouth, Cape Cod, opened a grocery on the west corner of Fore and Union streets. Harlowe had a film between his toes like any other water bird, and his store became the headquarters for boatmen. Just down the wharf from Harlowe's Joseph Roberts, who came from Cape Elizabeth, had a boatbuilder's shop, and he was consulted by Harlowe about building a rival to compete with the Swiftsure. The last year's Boston Mayflower was not looked over by Burgess and Paine for faults to remedy in the model of the Volunteer with more interest than was the Swiftsure by Roberts and Harlowe. The result of their work during the summer of 1820 was the production of the Laurel, now Judge Goddard's yacht, although she did not arrive at the dignity of being called a "yacht" until she had grooved the waters of Casco Bay and the coast of Maine for nearly sixty years. Her advancement was not on account of alterations, for her owner has made none; she has yet only the two old-fashioned sails, blunt bow and square stern.

The new Laurel was 4ft. shorter than her predecessor, the Swiftsure, but of full equal burden and capacity. Often, while owned by Harlowe, she carried from sixty to seventy passengers and always with safety. She was of the same rig as the Swiftsure, painted green outside and is yet. The Laurel was launched; the day came for the trial. Both boats had their friends, just as the yachts and racehorses now do. Bets were made of money and bottles of wine, but wine was not stout enough for the treat by the friends of the vanquished boat. The race was a fair one, although neither boat carried spinakers, balloonjibs or kites of any kind. The ends of the wharves were occupied by an excited crowd to see if the new boat took the laurels from the old favorite. The owners of the Swiftsure acknowledged a defeat, but claimed that it was owing to the Laurel being favored by a flaw of wind. For a week the contest was kept up in all kinds of weather. Harlowe's store was for that week at least a wet grocery. The Swiftsure lost her laurels that she had flaunted for fourteen years. Hence the name of the winner. The bets were paid, and like the discarded champions of Boston Bay the Swiftsure was sold at a great discount; the winning Harlowe became her owner.

Joseph Roberts, the builder of the Laurel, continued to build boats at Union Wharf until his death. His son, Thos. F. Roberts, continues the business at the foot of Center street. In answer to my question, "When did you commence business?" he replied, "I should think you might know. The first sailboat that I built after I was free was for yourself." He is now 75. That boat came near drowning the writer on her trial trip by upsetting for the want of sufficient ballast. That was a severe lesson, but a valuable one.

In 1822 the Laurel was advertised in the papers to take passengers to commencement at Brunswick. After getting help to get her sails up in 1820, the writer, her only occupant, sailed her from Union Wharf, round Hog Island, and back to her moorings. Those two safe and comfortable boats were kept to let by Harlowe until the Swiftsure wanted repairs in 1860, when she was hauled out. She was burnt accidentally, with a near building. For several years Mr. Harlowe had for a partner his brother-in-law, Charles Baker, and afterward his son, Edward Harlowe, now of the West End, was his partner. Besides the two boats named they had several smaller sailboats. Mr. Harlowe sold the Laurel in 1862 to Mr. Evans, and since that time she has had several owners. She is now in commission as a yacht of the Portland Club, with no alteration of rig or sails, and is in the sixty-sixth year of her age, with a fair prospect of many more to come.—*Hon. Wm. Goold in Portland Daily News.*

MONTGOMERY SAILING CLUB'S 14TH CRUISE, Sept. 4.—Courses, Norristown to Indian Creek and return. Distance, five miles. Weather, clear and cool. Wind, light to fresh northeasterly. Current ½ mile per hour:

	Length.	Start.	Finish.	Cor.
Gracie, skiff, E. A. Leopold	12.00	9 00 00	10 47 58	1 38 55
Flying Eagle, tuckup, J. Berndt	15.00	9 00 00	10 47 52	1 47 52
Lulu, tuckup, J. Frith	15.00	9 00 00	10 48 10	1 47 50
Priscilla, tuckup, E. Stanley	15.00	9 00 00	10 47 01	1 48 51
E. C. Potts, tuckup, Parker Bros.	15.00	9 00 00	11 04 25	2 02 45
Ino, ducker, W. Sullivan	15.00	9 00 00	11 12 20	2 09 32
H. C. Scott, tuckup, Carnathan	15.00	9 00 00	11 11 45	2 10 45
Iglulous, tuckup, W. Hochell	15.00	9 00 00	11 09 45	2 11 15
Elsie, ducker, E. MacAllister	15.00	9 00 00	11 15 10	2 12 18
Pennsylvania, hiker, J. Adams	16.00	9 12 00	Withdrew.	

Gracie champion pennant. It was a reach both ways, with an occasional short tack off shore. The open boat Gracie led the entire fleet over the first four miles of the course. Judge, John H. Henniss.

RACING AT BAYHEAD.—The fourth race for the Bayhead championship pennant was sailed over the Bayhead course on Sept. 1; the wind was light during the race and Edith won first place, beating Snipe easily. Edith and Snipe have each won two firsts, and the next race will undoubtedly settle the question between them. The other boats are working hard for second prize, the wins being as follows: Spray 1, Edith 1, Rowena 1, Foam 1.

	Length.	Start.	Finish.	Actual.	Corrected.
Snipe	22.08	3 03 35	4 46 06	1 42 31	1 42 31
Edith	20.09	3 03 38	4 43 48	1 40 10	1 38 15
Spray	18.04	3 04 07	4 51 29	1 47 22	1 43 02
Foam	18.00	3 04 11	4 50 14	1 46 03	1 41 23
Rowena	16.08	3 04 32	4 52 54	1 48 22	1 42 22
Effie	16.08	3 04 44	4 58 07	1 53 23	1 47 23
Ivey	15.00	3 03 36	Did not finish.		

VOLUNTEER.—On Saturday evening Volunteer got under way from Boston Harbor under lower canvas, the wind being N.W. light. She passed Martha's Vineyard at 9 A. M. on Sunday, New London at 12 P. M., and was off Whitestone at 5 P. M. on Monday. The same evening she towed to Bay Ridge. A new and larger mainsail, made by Wilson & Griffin, was taken on board at Boston. A duplicate set of spars has also been made, the mast 87ft. 10in. over all, boom 87ft. and 14in. diameter, both of Oregon pine, and a new topmast.

THE MISSING YACHT MERLE.—On July 28 the sloop Merle, of Boston, sailed from Dorchester with two young men, Geo. A. Sears, age 19, and J. T. Howe, Jr., age 21, bound on a cruise of two weeks. After the first two or three days nothing was heard from them, and they were given up for lost, until last week, when a friend of Howe received a letter from him asking for news from home, but requesting that nothing be said to his parents. The letter was turned over to Howe's uncle, and Mr. Sears at once went to Philadelphia where the letter was mailed, and where the yacht was found by the harbor police. The young men had changed the name of the boat to the Elmer, and had intended going to Florida. They promised to return home at once.

YACHTING NOTES.—Nirvana, schr., formerly Julia, is out at Port Jefferson for a keel in place of a centerboard. Originally a centerboard boat she has been changed several times, the last alteration being at City Island three or four years since, when her keel was removed and board replaced....The fisherman, designed by Mr. Burgess, is now in frame at Story's yard, Essex. She is 102ft. over all, 94ft. l. w. l., 24ft. 6in. beam, 11ft. hold.

A NAUTICAL EXHIBITION IN BOSTON.—The 16th triennial exhibition of the Charitable Mechanics Association will be held in Boston from Sept. 27 to Nov. 12, and a special department will be established devoted to yachting and shipping. Exhibits are requested from builders and designers throughout the United States. The secretary is Mr. Alfred Bicknell, Box 2,468, Boston, Mass.

DORCHESTER Y. C. CRUISE.—On Sept. 3 the Dorchester Y.C. fleet, with the flagship Arethusa in the lead, left for a cruise, the first run being to Marblehead. Com. Savage offered two pennants as prizes for the run, the one for boats over 30ft. being won by Aruna, and the smaller boats being headed by Echo, with Kitty and Majel next. The programme was to sail to the Isle of Shoals.

LARCHMONT Y. C.—The Larchmont Y. C. has offered two prizes, $1,000 and $500, for a race for first and second class single-stickers, to be sailed on Saturday next over a 40-mile course off Larchmont. Up to this time the first class yachts have not entered, and it is doubtful whether any will start.

BUZZ.—The little steam yacht Buzz, 50ft. long, built by C. D. Mosher, of Amesbury, Mass., has been astonishing Boston by her performances about the harbor. A speed of 26 miles is claimed for her, but even if this is not verified she is certainly very fast.

BEVERLY Y. C.—A race was sailed off Swampscott on Sept. 3, in which Beetle won in first class, Witch in second, and Holden, Wraith and Psyche in third and fourth.

RACING AT ONSET BAY.—On Sept. 3 an open race was sailed in Onset Bay, the winners being: First class, Onset Belle; second class, Secret; third class, Nymph.

NEWARK Y. C.—The open fall regatta of this club will be sailed on Sept. 12 on Newark Bay, off Greenville. Handsome prizes will be given.

GREAT HEAD Y. C.—On Sept. 3 a race was sailed in which the N. & S. won, with Lizzie F. Daly second.

STEAM YACHTING.

"STEAM YACHTS AND LAUNCHES."

THIS is the title of a new volume by C. P. Kunhardt, author of "Small Yachts," which has already been well received by the public since its appearance a short time ago. Although the subject of steam engineering in the wider acceptation has been covered by a full share of technical literature, little attention has so far been given to that special branch of marine work applicable to the rapidly growing pleasure fleet of yachts and launches. With scarcely an exception the science and art involved in propulsion by steam have been approached in books from the standpoint of graduates and experts, with the presumption that the reader has mastered the elementary stages long ago and thirsts for the more abstruse theories of the science or the practical details of the machinist's art. Such volumes, useful as they are to the classes addressed, do not serve the ends of the steam yacht owner who, as a "business man," has neither the fundamental schooling nor the time to master that which calls for special education and apprenticeship of many years' duration. Several text books, appealing more directly to his wants have appeared abroad, but even these presuppose considerable familiarity with the shop and engine room, so that the layman finds himself groping in unknown terminology and professional details, obscuring a connected train of ideas and that general bird's eye view of the whole subject, which is all he is immediately concerned with as a beginner and yacht owner in search of entertainment rather than deep study.

It is time enough to take up steam engineering as an amateur enthusiast after the rudiments have been acquired. In the higher branches he will find himself already well provided with literature to meet his case, but as a preliminary guide within the compass of any person "Steam Yachts and Launches" stands alone as a useful volume, having the elementary features of a primer combined with a sufficiently comprehensive consideration of the whole subject to render it instructive and of service even to those accustomed to regard themselves as adepts. Although the marine engine has been treated essentially from a practical standpoint, the underlying principles and theories are made clear by easy explanations. Their application to practice is always traced in this book, so that connected thought and intelligent appreciation of the relation of the various parts to one another can be kept up by the reader without undue effort.

The volume opens with a short review of the evolution of the steam engine from the days of Watt and the improvements introduced by subsequent experience, notably the early attempts at "compounding," carried out by Hornblower, for the sake of increasing economy of performance. The theory of working by expansion with Mariotte's law as the basis, is explained as well as the limits beyond which it is not profitable to work with a given initial pressure. The experiments and deductions of the elder Perkins with extraordinary pressures of 800 and 1,000lbs. to the square inch are cited in sustaining the author's view, that the highest performance is to be sought in extreme pressures and extreme expansion, with the range of temperature limited as much as possible by the introduction of cylinders enough to suit, in pursuit of which the triple and quadruple expansion engines of recent times have been devised. General plans of Gladiator's engines and connections are given as an example of the latest British practice, for no matter what the genius of our own mechanics and engineers may be it must be conceded that we have to look abroad for the most improved patterns of marine and especially yacht machinery. It will be a surprise to many to learn that our fastest steam yachts, though built expressly for speed, are still many miles behind the results obtained across the Atlantic, where speeds of 23½ miles have been recorded and 25 miles has become almost common among torpedo boats carrying considerable weight in armament and appliances. The usual practice of our high speed yachts with cruising vessels abroad, the latter being intentionally designed to steam 10 to 13 knots only, such reasonable speed being a better balance between rate of travel and other equally important requisites than excessive weight and space of more powerful machinery, for which there is no actual call in a cruising vessel. Hence the popular misapprehension that higher results have been achieved in America than elsewhere. The author of "Steam Yachts and Launches" gives official records to show what has been done abroad when speed was the main object. Scarcely any reliable data exist concerning the velocity attained by yachts in America. Loose statements, in which a favorable tide is ignored, or lively imagination drawn upon, are floated from hand to hand, encouraging extravagant notions and self-complacence, when in truth we have many miles to add before equalling in fact the high speeds attained by the specialists of Great Britain or continental Europe.

Passing from the theory of the steam engine, the principles of the boiler are taken up next in the book under notice. The requisites for combustion and construction are considered and pipe boilers compared to the cylindrical kind in general use. The author has a decided preference for the pipe or watertube variety and gives good reasons therefor. Many engineers will agree with him and it may be argued in general that with the demand for constantly increasing initial pressures, the days of the shell boiler with its heavy body of water and large volume of steam are numbered. When even the Thorneycrofts cannot guarantee against crown sheets collapsing upon the slightest oversight or lack of keen judgment upon the part of the attendant in charge, the time cannot be far distant before the shell style shall give way to the practically unexplodable pipe generator. The "expansion stays" of the modern locomotive type of boiler are probably the last resort of ingenuity seeking to overcome inherent weakness of structure for the high pressures now in demand.

The prospects of employing mineral oils in place of coal are referred to with a timely injunction to steam yacht owners to be up-and-doing on their own account in place of jogging along contentedly in wake of the merchant service. The yacht owner who will devise or cause to be devised an efficient burner or furnace for the use of mineral oil will not only receive the thanks of his brother yachtsmen but will reap a golden harvest from his foresight and enterprise. As we are supposed to be the inventive nation of the world, particularly where dollars and convenience are concerned, here is an opportunity for the "business man" to give his over-wrought faculties an agreeable change in furtherance of health and profit.

Three chapters are devoted to a description of the engine, boiler and screw in detail, each part being separately described and illustrated. The operation of the slide valve, the reading of an indicator card, calculating horse power, functions of the condenser, pitch and slip of screw and resistance of hull in its various aspects, are some of the divisions of these chapters.

Then follows a compendium of the U. S. laws relating to steam yachts, and such regulations of the Board of Supervising Steamboat Inspectors as have a bearing upon the construction and equipment of small steam craft, many of which will form a basis for the proper outfit of a yacht. The lawful signals for engine room, official for sea and river service, the pilot rules and the lights to be carried are matters of constant discussion and reference, and are supplied from official sources in this chapter. It should be noted that a conflict of opinion or interpretation is cited between a judicial tribunal and the Supervising Inspector in the case of the yacht Yosemite vs. steamer Vanderbilt, note of which appears in the back of the book. By this conflict yacht owners are placed for the time being between two fires, although the directions of the Supervising Inspector are likely to prevail, as experts think they properly ought to.

Lloyd's building rules for iron and wood hulls and for boilers are produced in condensed and handy form, which, if not altogether followed in American practice, form excellent groundwork upon which to base specifications for building, or by which to judge the character of an intended purchase.

A chapter is also given up to rules for racing yachts, in which the author outlines the requisites of a rule which shall not only be fair to all classes, but lead up to intelligent and profitable results from an engineer's standpoint. Without such aim the racing of steam yachts is little more than "horse play," and inclined to do more harm than good. It is only half the battle to cross the finish first. The chief end is to accomplish the course in the least time in proportion to the elements available in the yacht for the production of speed, and that also with the greatest economy. The management and care of machinery is covered specifically, and rules laid down which every launch owner should familiarize himself with, in case he should be called upon to take charge in an emergency. One of the chief features of the book consists of a well-rounded series of examples of yacht machinery, collected from the practice of the principal builders throughout the country. The leading types are described, their points enlarged upon and numerous tables of dimensions and weights adduced, forming a concise book of reference and supplying a great deal of accurate information. Direct-acting engines, compounds, steeples, oscillating, disk and other styles of machinery, as well as pipe boilers, tubular boilers and coil boilers receive attention seriatim, all being illustrated with perspectives and sectional views.

There are also hints on the designing of hulls, with many examples and plans of launches and decked yachts.

Throughout the book there are numerous handsome illustrations, many of them with complete annotation and references which is a provision which will commend itself to the reader and greatly enhances the practical worth of the volume as a text book.

There is a total of 240 pages and 97 illustrations, handsomely printed on heavy quality of paper and tastily bound with a cut of a typical steam yacht on the cover.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

T. G. H. M.—No. 4 Exchange place, Boston, Mass.

W. W. G.—It is manufactured in Hartford, Conn.

A. B. C.—Robins are protected at all times in New Jersey.

C. J., Bond's, Tenn.—Melody won first at New York in 1881 and champion prize in 1883.

A. A. B.—You will find the leather dye as a regular article on sale in leather finding stores.

W. L. B., Philadelphia.—For shore birds, Barnegat and vicinity; for squirrels, Sussex county, N. J.

J. N. P.—Woodcock season opened on Long Island Aug. 1; ruffed grouse and quail season will open Nov. 1.

F. A. M.—You will find descriptions of methods of Indian arrow-head making in issues of Sept. 23 and Oct. 7, 1886.

J. S. S.—In Pennsylvania the ruffed grouse season will open Oct. 15, the deer season Oct. 1, the trout season closed July 15.

S. H. R., Providence, R. I.—Try Andover or South Coventry and covers on the Hop River. The season will not open until Oct. 1.

G., Wahpeton, Dak.—Champion Joe is by champion Comedy (Tragedy—Cloudy) and out of Clytie. His A.K.R. number is 925. Flossy's number is 2551. Bogie is not registered.

W. H. D., Avoirdupois weight is used in measuring rifle charges. For shotguns powder and shot are not weighed, but measured in the standard measures, which are for sale by dealers in sportsman's supplies.

C. E. B., Schuylerville, N. Y.—Wild rice seed is advertised in our advertising pages. It should be sown in late fall or early spring, in shallow water. The success depends much on character of soil. Your climate is adapted to its growth.

C. M., Washington, D. C.—1. About how many persons usually compose a rifle team sent to compete for prizes? 2. What advantage is there in shooting patched bullets? 3. Can good shooting be done with the ordinary sporting sight at more than 200yds.? If not, what would you recommend for a .38-50? Ans. 1. Military teams, 10 or 12; club teams, 4 to 8. 2. Prevents leading. 3. Yes, military open sights are used at 1,000yds. The Lyman sight is the favorite.

COAHOMA, Memphis, Tenn.—I found in the swamp a day or two since a very curious beetle, which I mail to you. With a long experience in the woods and a disposition to notice nature's eccentricities, I never before observed a specimen like this. I found this one in Coahoma county, Miss., near the Mississippi River. I think this must be the species *Caput elephanti*, if that is not "dog Latin." Ans. It is one of the stag beetles, so-called from its branched antler-like mandibles. This specimen appears to be *Lucanus elaphus*.

R. E. H., West Torrington, Conn.—It is my ambition to kill a bear, and when I get him I want to have a good prime skin to keep. Most of the bears I read of being killed are killed in spring and the early part of summer; even guides and hunters living in the woods, and who ought to know what they are about, do it. I have done a good deal of trapping of small animals and the fur was not very good until Oct. 15 to Nov. 1, still better up to Jan. 1. How is it with bears? Ans. The bear should be trapped between October and May if a prime skin is the object sought.

C. W. C.—Please tell me how to remove expeditiously verdigris from brass shells? A brass shell blooms so quickly after being shot that unless cleaned with hot water and soap, and heavily oiled inside and out, within twenty-four hours of using it becomes covered with a thick coat of verdigris. A tedious process it is handling them one by one. Is there not some mixture that the shells could be thrown into, perhaps boiled, that will clean them from the powder and prevent the formation of verdigris? A green shell is a nasty thing to reload or handle. Ans. Soak in vinegar for ten minutes and rinse off with boiling water.

S. H. K., Clay Center, Kan.—Will you kindly inform us what bait should be used or what manner of fishing should be followed in taking German carp with a hook and line? We have some ponds stocked with carp, but cannot get them to bite at ordinary bait, such as is used in fishing for other fish in this section. Ans. They can be taken with meat, bread pressed on to the hook, grasshoppers, and occasionally with angle worms; or you may succeed with the artificial fly. Fish in shallow water, or on or near the surface, in cloudy weather or in early morning or at dusk. If all these fail, the fish may be fed for a time in a shallow spot, and will become so tame as to take food from your hand, when you can gather them in by hand.

NEW YORK CITY, May, 1887.

The U. S. Cartridge Co., Lowell, Mass.:

GENTLEMEN—I wish to thank you for the very excellent shell you are putting on the market. I refer to the "Climax." *I swear by it*, not at it, as I have had to do with other makes. It has given me unqualified satisfaction ever since I first began to use it, and that is since its introduction. Don't allow it to deteriorate, and sportsmen will call you "blessed." Very truly yours,

—*Adv.* (Signed) C. W. CUSHIER

The Only Genuine Machine-Loaded Cartridge in the Market.

UNEQUALLED IN QUALITY AND CONVENIENCE.

The superior quality of these cartridges is not the result of chance, but arises from the fact that the Chamberlin Cartridge Machine is so constructed that every charge of powder and shot is measured with mechanical accuracy, and the wads, which are made especially for use in these machines, are of uniform thickness, and placed upon the powder and shot with a suitable and unvarying pressure, an advantage which cannot be secured by any other method of loading cartridges. Every trap shooter understands the advantages of uniform velocity of shot in wing shooting; this cannot be obtained except the charges of powder and shot are alike in each cartridge, and the wadding placed upon each with the same pressure. This is accomplished in the Chamberlin Machine by means of graduated rammers, which are adjustable to any desired pressure, from five pounds to one hundred pounds. Thorough experiments have been made by which it is found that thirty-five pounds' pressure upon the powder wads gives the best results in Black Powder cartridges, and seventy-five pounds the best results in Wood Powder cartridges. Previous to the invention of the Chamberlin Cartridge Machine, experiments in this direction could not be made, for the reason that no means for ascertaining the pressure that was applied to the wads had been devised. A blow of the mallet was an unknown quantity, and no two blows were alike, and the same can be said of hand pressure upon the rammer.

The following *REMARKABLE SCORES* were made with Chamberlin Cartridges: Match at Cincinnati, Ohio, June 20. Conditions, 50 singles and 25 doubles:

J. R. Stice	94	out of possible	100
B. Teiple	90	"	"	100
McDuff	88	"	"	100
A. Meaders	86	"	"	100

On July 11, same place and conditions:

J. R. Stice	broke 90	out of possible	100
McDuff	" 90	"	"	100
A. Meaders	" 87	"	"	100

This, we believe, is the highest average ever made at 700 clay-pigeons, one-half being doubles, and shows the superiority and uniformity of the Chamberlin Machine-Loaded Cartridges.

PRICES OF CHAMBERLIN CARTRIDGES.

12-Gauge, Club or Climax Shells, loaded 3 1-4 drams powder, 1 1-8 oz. shot,	Per 100, $2.50
With 3 1-2 drams powder,	" 2.60
10-Gauge, Club or Climax Shells, loaded 4 1-4 drams powder, 1 1-8 or 1 1-4 shot,	" 2.75
With 4 1-2 drams powder,	" 2.85

Same loads Wood Powder, 12-Gauge, per 100, $3.50; 10-Gauge, per 100, $4.00.
Loads for Trap Shooting, " " 2.60; " " 2.85.

Send for Illustrated Price List. Liberal Discount to the Trade.

In order to secure the lowest cost of transportation, and insure speedy delivery, factories have been established to supply each locality as follows:

The Atlantic Ammunition Co., 291 Broadway, New York,
Supplies the New England States, New York, New Jersey, East Pennsylvania, Delaware, Maryland, District of Columbia, Virginia, North and South Carolina.

The Chamberlin Cartridge Co., Cleveland, O.,
Supplies all the Middle and Southern States not elsewhere named.

The Western Arms & Cartridge Co., 108 Madison Street, Chicago, Ill.,
Supplies Illinois, Iowa, Wisconsin, Minnesota, Nebraska and Dakota.

Selby Smelting and Lead Co., San Francisco, Cal.,
Supplies the Pacific Coast and Colorado, Arizona, New Mexico and Wyoming Territories.

Trade in Georgia and Florida
May be supplied either from New York or Cleveland.

All the above named companies operate Chamberlin machines, under the Chamberlin patents. **Beware of all imitations.** "Chamberlin Cartridges" printed on all our labels.

Blue Rock Pigeons and Traps
Supplied from all above named depots.

SPORTSMAN'S LIBRARY.

We will forward any of these Books by mail, postpaid, on receipt of price.

Registration 10 cents extra. Our responsibility ceases after goods are mailed.

Large crown 8vo, 330 pages and 16 large folding plates.

Price, Postpaid, $3.50.

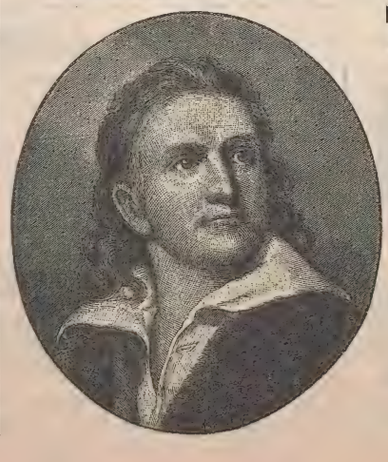
FOREST AND STREAM PUBLISHING CO.,
39 Park Row, New York.

WOODCRAFT.

By "NESSMUK."

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

FOREST AND STREAM PUBLISHING CO., 39 Park Row, New York.



"Forest and Stream" Fables.

BY AWAHSOOSE.

1. The Puppies Who Didn't Know It Was Loaded.
2. The Wise and Foolish Pike.
3. The Fox and His Guests.
4. The Foolish Fish.
5. The Robin and the Pewee.
6. The Unlucky Bass.
7. The Shrike and the Hawk

A series of seven fables in prose and to every one a picture. All of them have pith and point best appreciated by anglers and sportsmen, but not a one of them is without a moral for the wise and foolish of the world in general. Price 10 cents. For sale by all newsdealers.

FOR SALE BY

FOREST AND STREAM PUB. CO.,

39 Park Row, New York.

The Forest Waters the Farm;

OR,

The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.

Translated by

REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

FOREST AND STREAM PUBLISHING CO.,

FOR SALE CHEAP, AS I HAVE NOT TIME to use him, Llewellyn setter dog. BOX 305, Leominster, Mass. 1t

---

English Setter Puppies.

From imported Flora, by Prince Fred II. (Emperor Fred—Kate II.) whelped July 7, 1887. Price $10. Dogs or bitches. Will guarantee these pups to be just right; strong nose, natural hunters, and very staunch with little training. They are not sold to close out any scrub stock or to make room, but were bred especially for the trade, as *business* dogs. Address,

H. J. PIERRE, Winsted, Conn.

FOR SALE.

A fine black and white Llewellyn setter, 15mos. old, sired by the field trial winner Gus Bondhu ex Model Druid; yard broken. Address, A. M. TUCKER, 85 Main street, Charlestown, Mass.

DOU YOU WANT A LLEWELLYN SETTER dog or bitch pup for *work* that comes from *field trial stock* and as well bred as any in the country at a fair price? Enclose stamp for pedigree and price to CHAS. L. YORK,

9 & 11 Granite Block, Bangor, Me.

FOR SALE.—FINE LITTLE COCKER BITCH, 18mos. old, now in whelp to Black Pete, Jr.; fine pedigree. Solid black and a fine one. Will be sold cheap, owner making a change. Address, J. WHEELOCK, Waterbury, Vt. 1t

FOREST AND STREAM

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SEPTEMBER 15, 1887.

VOL. XXIX.—No. 8. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price. $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

THE NATIONAL PARK IN 1887.

THE close of tourist travel in the National Park is at hand, and before long the hotels will have been shut up and the last sightseers will have left the reservation. It is fitting, therefore, that we should take a look backward and see how matters have been managed in Yellowstone Park during the past tourists' year.

The season opened early, but the travel, while large, was not up to that of last year. This fact is to be explained by the going into operation of the interstate commerce law, which has cut off a large number of travelers who have heretofore traveled on passes.

The troops have been in charge of the Park all this season. The Yellowstone Park Association has had control of the hotels and Wakefield of the transportation.

Captain Harris, who is in command of the troops and is thus acting superintendent, has made many improvements. He is deeply interested in the reservation and is anxious to do all that is possible for it and for the comfort of those who visit it. Our reports from the region have shown how energetically he has striven to protect the game and how successful he has been in preventing the spread of the fires, which in previous years have so often caused such great damage to the forests which clothe the mountains of the reservation.

In one respect he has done an especially good work. He has driven all the bummers, loafers, dead beats and tramps out of the place, and there is the greatest improvement at the Springs in this regard. One sees no loafers around the hotel, and every suspicious person has to say who he is, where he came from, and what he is doing; and if he cannot satisfactorily answer these questions, a sergeant and two soldiers look after him and hustle him out. Under Captain Harris's wise rule there has been very much in the military government of the Park which has worked well, and those who at first regarded it as an unmixed evil have had cause to modify their views. It is apparent now that a good military government is far better than a poor civil government; but, on the other hand, it can hardly be doubted that a thoroughly good civilian administration is preferable to a military one, however good. At the same time it is far easier to obtain good military administration free from politics than civil government.

The transfer of Captain Kingman, for several years engineer in charge of the roads and bridges, to another station, is a serious loss to the Yellowstone Park. Captain Sears, the engineer now in charge, has been in the Park two or three times this season, remaining on each occasion only a few days. He has the direction also of the improvement of the Upper Missouri, and this work occupies almost all his time. The care and extension of the Park is therefore left wholly to his superintendent or roadmaster, who spends most of his time at the Hot Springs hotel. A hasty and superficial examination of the roads leads to the conclusion that they are by no means so well constructed as were those made under Captain Kingman's direction. This officer, it must be remembered, spent his whole time in the Park, and gave to the improvements which he was directing not only the benefit of his education and experience in planning and directing, but also his own personal supervision in carrying out the work in his charge. His removal is a misfortune to the Park.

A consideration of the hotel and transportation management, and of some other matters in connection with the Park, must be postponed to another occasion.

SCIENTIST BRUSKE.

AS a rule a great naturalist displays at an early age a taste for those pursuits in which he subsequently acquires distinction. Audubon, Agassiz, Baird, were in youth ardent students of nature; the boy gave promise of the man. It is only in instances of extreme rarity that a scientist bursts forth full-fledged and mature, without any previous indication of scientific tastes, but such a case has just come to public notice in Michigan.

The sportsmen of that State are much worked up over the doings of one Bruske, a clergyman, who without having given any previous warning of a penchant for scientific investigations has suddenly developed an overmastering passion for natural history, even going so far as to pose as a martyr and suffer a certain degree of contumely for the cause. It appears that early in August Mr. Bruske went into camp at Higgins Lake, a summer resort in Roscommon county, in a region where deer are not yet extinct. A buck was reported as having been seen in a neighboring swamp, and although the season for killing deer had not yet opened, Mr. Bruske set forth, killed the buck, sent the venison to his boarding house and shared the savory viands with such of his friends as were of toughened conscience and would partake of venison out of season. Under the old regime in Michigan this exploit of Mr. Bruske would have been regarded as a matter of course, to be forgotten so soon as the reverend gentleman tired of relating how he had slain the buck. But there happens to be a new order of things. The last Legislature provided a game warden system for the enforcement of the laws, and the prosecution of men who kill deer out of season. Mr. Bruske having hunted the deer, the warden proceeded to hunt Mr. Bruske. It was at this juncture that, accelerated by the threatened coming of the warden, science took hold upon Mr. Bruske, or Mr. Bruske took hold upon science. There is a clause in the Michigan game law (Chap. 124, laws of 1869) which says:

"SEC. 11. The provisions of this act shall not apply to any person who shall kill any of the birds or animals protected by this act, for the sole purpose of preserving them as *specimens for scientific purposes*, nor to any person who shall collect the eggs or nests of any birds for such scientific purposes."

This clause probably had something to do with it, for it is difficult to explain on any other ground the extraordinary solicitude and haste of Mr. Bruske to have the head of the unlawfully slain deer cleaned and mounted by a taxidermist and hung up to dry in his cabin on Higgins Lake.

The game warden duly arrested the Rev. Mr. Bruske, and being haled before the justice the culprit plead science. He was a devoted student of natural history. He swore that he had killed the buck out of season for purely scientific purposes. He had devoured the venison and divided it among his friends strictly in the interest of science. And science stood forth as a sure defense of her new devotee. On the plea of science the justice let Bruske go.

That was not the end of it, however. As we have said, the sportsmen of Michigan have given the Higgins Lake deer killer much attention, and Mr. Bruske's exploit has been done up in prose and machine poetry in numerous papers throughout the State. Accepting Mr. Bruske's science plea as honest, he has had to bear a tremendous deal of jeering and sarcasm; and he finds himself in a position not unlike that of a chicken-killing dog doing penance with a dead hen tied to his collar.

Michigan sportsmen are ready to wager that the next deer killed out of season at Higgins Lake will not fall to the buckshot of scientist Bruske.

THE JAMES RIVER DAMS.

AT the last session of the Virginia Legislature an act was passed to secure the removal of certain dams in James River and its tributaries, under which the Board of Public Works appointed as a commission Senator Paul C. Edmunds, of Halifax; Delegate W. D. Dabney, of Albemarle, and Mr. R. D. Kirkpatrick, of Rockbridge.

This committee recently presented its report, and recommended the removal of a dozen or more of the dams. Although required by law to maintain fishways at these obstructions, the owners have failed to provide any adequate means for fish to ascend the stream; and the destruction of the dams will in consequence be a decided impetus to the increase of black bass, with which the James is well stocked. When the recommendations of the commission have been carried out the citizens of the State will have reason to congratulate each other upon the improved opportunities thus afforded for a better fish supply.

SNAP SHOTS.

SEVERAL correspondents have written to inquire our opinion of Newport morals as exemplified by the item of 500 "partridges" in the menu of a recent Vanderbilt musicale there. It all depends. If the partridges were imported, as they very well might have been at the published cost of $2 a pair, it was only an instance of give and take. Great Britain consumes a vast supply of American game; it is only fair turn about that America should consume British game products. If the "partridges" were American ruffed grouse, as our correspondents appear to think they were, this part of the Vanderbilt entertainment was an exhibition of gilt-edged hoggishness as scandalous as brazen.

One of the most grotesque feats of the "journalism" of the times was the New York *World's* submarine diving excursion one night of last week. What the *World* takes three columns and a half to relate may be told in five lines. That paper hired a diver, conveyed him to the vicinity of the Scotch yacht Thistle and sent him down into the water after midnight to determine the shape of the yacht's hull. The diver dived, came up again, drew an outline of what he had seen in the pitch-dark water, and the *World* gravely prints this outline as the "lines of the Thistle." A more arrant piece of humbugging has never been perpetrated in the history of international yachting and New York "journalism." The only thing about the whole business not utterly ridiculous is the *World's* faith in the idiocy of the public to swallow the yarn; and this faith is positively sublime.

A correspondent calls attention to a new blunder by the secretary of the American Kennel Club. There is one consolation about it; if the club has come to fill a want it is likely to go through in spite of the stupidity of the present president and secretary. There is no telling how long such incompetent and unfit officials will be retained in their places, but a time must come when more capable men will be put in office, and provided the club can hang together until such a change is made there will then be hope of its taking a respected position in the world and amounting to something.

The election of Mr. Charles E. Whitehead, one of the best known sportsmen of this city, to the presidency of the New York, Pensylvania and Ohio Railroad leads an exchange to suggest that that gentleman's sporting proclivities may prompt him to establish the general offices of the road on the great Sandusky marsh through which the road runs, and which is justly celebrated for its blue-winged teal and canvasbacks.

The Sportsman Tourist.

IN THE BRUSH.

EVERY man's experience, especially a woodman's, ought to be worth the telling, if he takes pains in so doing. Most of my shooting has been done in the brush. In fact I would rather go in and take my chances, following my dog right up, than to be outside man. In the brush is more like being on the skirmish line, therefore I jot down somewhat in a snap shot way my recollections of many years' experience with rod and gun. I have thought it high time to put up my rod and begin to fire off my gun, and whether I can interest my readers will depend, I take it, on how I handle my gun; my ammunition and weapon I think good enough; the intention, though, may be far better than the execution. However, I shall load and fire away.

I can say without any braggadocio I come from an old shooting family, for I have often heard my father say (and "Felix Oldboy" in his delightful reminiscences of old New York, in the *Evening Post*, confirms the truth of the story) that he used to shoot snipe where Canal street now crosses Broadway. There used to be a stream or "fly" running through there from North to East River. All of the family are first-rate shots with rifle and gun, Frank Forrester to the contrary notwithstanding; while even—but let me put in a snap shot right here. A long low island, out at sea, way down in Dixie, abounding in game, a sportsman's lodge, plantation huts, darkies, boats, everything going to make a huntsman's home. Staghounds, foxhounds, and a merry party of kinsmen expectant for the chase. A sandy beach fringed with green weeds stretches far away. The sea waves lap and ripple on the shore. Suddenly out dashes a buck, plunges into the surf and swims boldly out seaward. Vain are his efforts. One of the fleetest staghounds, Bruce, is close to him, dashing in in hot pursuit, the noble dog gains swiftly on him. Will he seize him in the surf? Ah no, he knows too much for that, he heads him off and turns him in shoreward. Poor buck, thy days are numbered. The master of the hunt swings his wife as lightly from the saddle, as did Lochinvar of old, as he hands her the Winchester and holds her bridle rein. One word is uttered, steady! Up comes the rifle to its level. Steady it is. A moment's pause, and as the deer gains the sands, the water dripping from his sides and Bruce almost springing on him, out rings the report, down falls the buck shot through the heart, dead in his tracks, 75yds. if it's a foot, while hats are thrown up in the air and ringing cheers from the huntsmen attest their rejoicing at the shot.

When I say all my kith and kin are good shots I do not include myself. I yield to none of them in the enjoyment, but truth compels me to state that I am the poorest shot of the lot. I killed a crow with a stone once, and so I did a pig, provoking the cruelly sarcastic remark "that a fellow that did as well as that with a stone had no need of a gun." I stick to the gun for all that, and sometimes do not get very "badly left."

My uncle, Judge P., well known for many a year in Dutchess county, was a famous old-time sportsman, and many a story of his exploits "on old Long Island's seagirt shore" in company with his companion, Gov. King, have I listened to. That country then was the sportsman's paradise. The Governor used to shoot, if I remember right, with spectacles, and gun at hip, taking sight over the top of the barrel, and a good shot he was, too. The Judge once drove off to his favorite shooting ground, and started off, up got a woodcock in plain sight; he fired, missed him, called off his dog, got into his wagon and drove home. On another occasion while shooting in Dutchess county up the creek, a famous place for birds, he fired at a bird, down fell the bird, up went a terrific shriek, and a young fellow digging on the other side of the stream was totally incapacitated from sitting down for the rest of the day.

The Governor and the Judge used to meet daily to play at racket, the court being situated somewhere up the Bowery; and a great attachment sprang up between the Judge's setter Tippoo and the Governor's saddle horse. If the horse arrived there first he would keep a sharp lookout for the dog and neigh when he saw him coming. If the dog got there first he would keep a bright lookout for his friend and bark and wag his tail when he saw him coming; then the two would rub noses together and evince every mark of satisfaction. There was a curious story told of a dog owned by a brother of John Stevens, who owned the yacht Maria in old times. This gentleman, who lived at Weehawken, had a noble Newfoundland dog who constantly accompanied his master. Some one made Mr. S. a present of a little tan terrier, to whose presence the big dog strenuously objected. Finally one morning the Newfoundland caught the little dog by the nape of his neck, swam out into the river with him and left him there. Of course the terrier swam ashore. The big dog took him out again and again the little fellow returned to land. The third time the Newfoundland carried him out and held his head under water until he was drowned. Then he swam ashore and reported to his master as if to say, "No more little dogs to be allowed here."

An old-time president of the Chemical Bank was very fond of quail shooting on Long Island. On one occasion he went down with a friend to have a rap at the birds. When they got down there they asked for a guide, and were referred to the village blacksmith as being just the man they wanted.

"Can you show us some quail?"

"I guess I can."

"Well, bring along your gun; we don't want all the sport ourselves."

So the man took down an old muzzleloader, of course, slung his powder horn and shot pouch over one shoulder, old game bag over the other. "Never mind your dog; ours will do." And off they went. Arriving on the ground, dogs came on a bevy, trailed, stopped and pointed them. The genial president walks up to his bird, and the old blacksmith knocked him down before either of the two gentlemen could get their guns to their shoulders. This performance he repeated several times, until finally they had to ask him to hold up. "My friend, we didn't come here to see you shoot."

"But," added the bank man, "what a shot he was."

Hammering away at hot iron appears to make a man a real good shot. My old instructor was a blacksmith, and I shall allude to some of his performances hereafter to show he was no exception to the general rule. They all shoot well. Old Dutchess county abounded in game. Woodcock were as thick as bumblebees, partridges tasted just as good for being called so. Pigeons were plenty and so were copperheads.

An old dog named Flash taught me lots of things in hunting. I can almost see from my window a famous swamp called the "Indekill." I went in there with an old-fashioned long barrel muzzleloader, said to be made out of nails used to shoe mules in crossing the Alps; this I cannot vouch for, but I can vouch for the fact that it would kick like a mule anyhow. I was just beginning "to get the hang" of shooting on the wing, and I fired just seven shots and killed seven woodcock; as I pulled on the seventh the old gun went off with a roar, and I went off without a roar, kicked ignominiously heels-overhead off of the stone wall into the mud, and as I scrambled up, a sight to behold, old Flash was coming in demurely with the bird in his mouth. Though I have shot lots of birds since then I have never beaten that record of seven straight, though I once "tied it" on quail.

As I am writing about game birds I may at once set down here my unalterable conviction "first, last and all the time," that no sport in my estimation approaches that of shooting the ruffed grouse. I have devoted years to the sport and rank it first of all. I will supplement this by saying that for training a dog to be A1, no bird comes near to the "partridge," as we country boys always have and will call him.

Eastward from what I can call my native village, I have lived near it so long, runs the creek road, following close by a stream that heads up near Wirtembergh church. This used to be the famous ground for woodcock, and they have been killed there more than man could number. Very few there now. You may go up and down it carefully and pick up three or four. Not so many years ago but that I can well recollect it, a young fellow from our village went up the stream on a day's shoot. There were hunters ahead of him, but still he persevered. When he had tramped up several miles with varied success he rested himself under a tree and waited until along in the afternoon. The men ahead of him were not crack shots. He was a good shot, and I had offered to back him to kill a dozen straight in the brush. When well rested he turned round and came right back over the same ground and he came off the creek with thirty-five birds. I saw them and I counted them. That shows what the shooting was. The shooting was the prettiest imaginable in summer July weather. Then the water was not very deep, you could wade down stream or up, send your dog on either side, and when the birds flew down stream you had a clear sight.

Some sportsmen have a knack in shooting woodcock; some quail, some grouse. My father once killed two woodcock with one shot, and my great delight, as a boy, was to tramp alone and carry the game bag, and I may "rise to remark" that gunners and fishermen have "honors easy" in the telling of their exploits; and as I shall probably tell some tall shooting exploits, incidentally I will record that the biggest shoot I ever heard of was a man telling me he killed fifty-three woodcock in fifty-two shots down in Rhode Island (they must have lit in that State in their fall flight). This beats anything I am acquainted with. The man was a good shot, I've seen him shoot, "nuff sed."

The first one to give me points on shooting was "Dan Wigg," though nobody round here would know him by that name, he has always been called the "Domine." I have known him ever since I was big enough to squint over a gun barrel. I do not know that he has ever fired off a breechloader. Of a rifle he knows no more than a child, but in the matter of handling a shotgun "he's equalled by none and surpassed by few." I have known him to go out right into the brush, on a wager, fire twelve shots and bring in twelve woodcock. The Governor generally gets three out of five. These two shots can both "down me" and not half try.

When first I met the "Domine" I was a mere lad learning to shoot, he a stout, stalwart young man, a born shot. Now I am gray-bearded, while the "Domine" walks "with tottering steps and slow." He will never kill any more birds. But I often drive down to his shop and sit down by the kind-hearted old hunter and review our old-time hunts. It is just as well. There is nothing around here now to shoot. The "Domine" knew every inch of ground all around for miles; he always had a good dog and gun; and no day was too long for him to go a-hunting. Being a beginner, I had not met him then, though he was well known to the older members. So it came about one day that I went out to the Widin's ash swamp with a noble dog called Buff. He was the only dog I ever shot over (and I have shot over a great many, and good ones, too) who would sit right down on his haunches, "hunkey punkey," and point a woodcock when first flushed. He did this frequently when I first hunted him; later on he got entirely over it, though I never reproved him for it. I don't believe in shooting where you have to make a fog horn of yourself by shouting at your dog. A brass band is a poor thing to go out in quest of game with. When I ran across the "Domine" I made up my mind at once what to do if I wanted to get any birds. So I sang out to him "Hello!" ranged up within easy hail, unlimbered and went into action.

I shall always remember that day; a lovely summer afternoon, plenty of game; two noble dogs, one jet black old Ned, the other tawny red Buff with his white circles. Could there be a prettier picture, or was it one you ever tire of? Just look there once. Both dogs on a point, side by side, eyes ablaze with excitement, limbs rigid as steel, not a motion, save the tremulous movement of their muzzles, as the hot scent strikes their nostrils, "Domine" as cool as a cucumber, and I about to perpetrate an awful fraud on my unsuspecting companion. A cluck, a toss of the head, dogs and men take a step forward, up goes Timber-doodle like a flash, out ring the reports of our guns as one piece, a few feathers flutter down wind, as the bird tumbles over and Buff brings him in to me. How I wish I could have had an instantaneous photo of the scene. I played this dodge on the "Domine" three or four times in succession, until finally he turned around to me with an indescribable look, "Ain't you going to give me one bird?" We made a mutual treaty of peace then and there, which has been kept unbroken for many a year. Dan was an inveterate joker and I think rather appreciated my getting ahead of him. We got all the birds we wanted to, and after a promise to the "Domine" to come out soon and have another shoot, with a wave of the hand I went home.

CAPT. CLAYTON.

FISH AND GAME IN CALIFORNIA.

Editor Forest and Stream:

Your editorial remarks in the number of Aug. 18, relative to the wholesale destruction of deer in California, are timely. I imagine, however, that there are few "would-be sportsmen" who kill for brag, for the conventional sport to whom you refer has to go too far from centers of population in these days to get any chance for deer. The "skinners" abound in the land, though, and as a result of their efforts the deer are becoming scarcer every year. The steamers and trains which arrive at San Francisco bring hundreds of bundles of hides from all parts of the State, and the majority of them are probably received from professional deer-skinners, who hunt only to obtain hides. These facts are well known here in California, but no remedy seems to have been suggested or put into practical effect.

We are still worse off in the matter of fish. Time was when there were plenty of trout in all the coast streams within from twenty-five to one hundred miles of San Francisco. I have been a resident of San Francisco for thirty-seven years, and since I was big enough to carry a rod have cast on most of the streams from San Diego on the south to Humboldt county on the north. Gradually, from year to year, I have seen one favorite stream after another become depleted and worthless, as far as fishing was concerned. There are good laws here as elsewhere, and here, as elsewhere, there is no one to enforce them. Our Fish Commissioners have hatcheries and stock streams, and they also, to a certain extent, prevent violations of the fish laws on the larger rivers where the salmon canneries are established. But the State is large and the appropriations small, and the minor streams, both in the Sierra and on the coast, are paid little attention to. Last summer I took my annual fishing trip northward along the coast a couple of hundred miles, for in that direction there are no railroads as yet further than Austin Creek, above Russian River, eighty or ninety miles from San Francisco. Every few miles we meet a creek or river emptying into the sea. The previous year I had gone over the same ground, fishing in the Gualalo River, the Garcia, Brush, Caspar and Elk creeks, the Novarro, Big, Little and Albron rivers, up to Ten-Mile River above Fort Bragg and near the headwaters of the Eel. The first season we had fine sport, but last season it was poor. Sawdust in the streams and fishing out of season are gradually spoiling all the sport.

This summer I made a longer jaunt and have just returned after a month's trip. We first went to the summit of the Sierra Nevada, and then down to the beautiful and historic Donner Lake. Thence to Truckee and Lake Tahoe. In the latter fish were very scarce. In fact the owners of excursion steamers and hotels have a fish hatchery with which to keep up the lake supply. Where formerly 90 to 150lbs. was a day's catch, 10 or 15lbs. is now not bad. Our party got none at all. Coming back to Truckee we set out for Independence Lake. We there met at a camp among others one who said his fish record was half a one a day. He had been there twelve days and caught six fish. Webber Lake, not far off, had, however, furnished passably good sport. We then visited Sierra Valley and again crossed the range at an elevation of 7,000ft. to Sierra City on the South Fork of the North Fork of the Yuba River. The several branches are all magnificent streams of clear, cold water that would do the heart of any angler good to look at. But in all of them fish were scarce. Below the mills the main fork was filled with "tailings" from the quartz mines, and above the smaller forks and branches had been unmercifully fished.

Back on the mountain again we found the two sardine and two salmon lakes, which are portions of a chain of lakes including Deer, Parker and Gold lakes up back of the great Sierra Buttes. There we had some sport. But the lakes are difficult of access. There are no hotels, and in fact no houses except the cabins of the ditch-tenders or lake-men, who regulate the water supply for the mining flumes. These lakes have been stocked by the English mining company which owns them. The best one was spoiled last winter by an immense quantity of snow forcing the ice down and crushing thousands of fish. They have 12 or 15ft. of snow in that region in winter. But in summer the climate is magnificent. The country is rugged and mountainous, but is heavily timbered. Near by, on the summits and in the cañons of the higher mountains, the snow lasts all summer.

But even in this comparatively out-of-the-way region, between 300 and 400 miles north and east from San Francisco, the fish were scarce. They cannot exist on the lower rivers by reason of the mining debris. They get penned in above the mills, but are so persistently sought after they have little chance to multiply. I refer to the streams of course, for in the lakes the fish are more plentiful.

Returning from this northern region I started south down through the great interior valley of California past Merced, Fresno, Tulare, Sumner, over the Tehachapi Mountains to Mojave, across the Mojave desert to Los Angeles; thence by Pasadena, San Bernardino, Riverside, Colton and so on to San Diego, only a few miles from the Mexican line. Everywhere there were complaints about scarcity of fish. Of course in southern California you don't expect much fishing, for they have little water to spare for fish to swim in. They need it for irrigating, etc., and the water is worth more than the land.

But having gone from some 400 miles north and east of San Francisco to some 650 miles south of it—nearly from one end of California to the other—I can corroborate the views expressed on the increasing scarcity of fish and game. I was enjoying a vacation from the editorial chair on this trip and was not on business. Where there was any chance for fishing I tried it, but must confess to an unpleasant regularity of failures. The mountain lakes of Sierra county were the only places where passable success was reached.

We who are fond of the rod and stream must keep going north toward Oregon for good sport. In the region above Sissons, Shasta county, which the railroad has recently tapped, there are plenty of fine streams. The famous McCloud, and headwaters of the Sacramento River, are no longer worthy of mention as fishing streams.

The railroad carries a fishing rod with every traveler, and the natives never give the water much rest. But north of these places, in Oregon, there are numbers of fine streams filled with fish. On the California coast, in upper Mendocino and Humboldt counties, where there are yet no railroads, there is also still good fishing ground. But the lovers of the rod who live in San Francisco can no longer get a good day's outing within reasonable reach of the city. Two or three hundred miles must be traversed to get good sport. There are places on the Sierra Nevada Mountains, at distances from railroads and where there is no mining carried on, that have splendid streams with plenty of fish. But these are hard to get at, and takes too much time for most of us to visit. Since California has become a "show State," the tourist is everywhere, and it is hard to dodge him. The lines of travel must be left widely to get to good fishing water.

By the way, we have not a single anglers' association in this State. There is a sportsmen's association of course, but there is more shooting and clay-pigeons in this than anything else. The anglers seem to let well enough alone, but we will doubtless have before long to co-operate for mutual protection, and try to formulate some plan to prevent the decrease of the trout in the various streams. The use of giant powder in railroad building and mining has become so universal, and so many are accustomed to handling it, that it is now an important factor in the fish question. The men who use it for splitting big logs in the redwood forests, in blasting on the railroads, in building roads, and in mining, also use it in the pools of the streams. When they want a few fish they do not mind killing a few hundred with a piece of "stick" of dynamite. And they do this everywhere. People living near the streams will not tell on one another, and it is very hard to get a jury to convict for violations of the fish laws.

The market gardeners and wood choppers who live near the creeks and rivers within a radius of 100 miles of San Francisco are largely Portuguese, Italians and Chinese. None of these people have the slightest regard for our fish and game laws, even if they know anything about them. They fish in and out of season. They use fish traps, giant powder, *Cocculus indicus*, etc. So it is not necessary to look for the reason of decrease in trout. Then here is a city of some 300,000 inhabitants, and another one of 50,000 across the bay, and several others not very much smaller not far off, so they furnish not a few fish hogs who fish for count and put fingerlings and all in the creel.

A friend of mine has just returned from a two weeks' deer hunt in Mendocino county. He tells me that he stayed a part of the time on a ranch where six or more men are employed. These men killed, during the past three years, 900 deer, and had this season's skins in the barn at the time. So on this ranch alone an average of 300 deer a year had been slaughtered. They said they killed the deer for fun, for sport and food, not for the skins. The scarcity of deer in many regions is to be attributed largely to the cupidity of the ranchers and other residents of the interior, and not to raids of city sportsmen. No section of country will have deer very long where such indiscriminate shooting is carried on.

These facts are regretted by all of us who are fond of the forest and stream, but are none the less facts.

I stopped writing this letter to read an account in this morning's paper of the meeting of the "State Sportsmen's Club." The entire proceedings relate to handicaps, live pigeons, bluerocks, tournaments, prizes, etc. Not a word was said, as far as may be judged by the report, of the question of fish or game preservation. The club may be, and doubtless is, an organization which affords amusement and instruction to its members, but it is certainly the case that it is looked upon more as a shooting club than one which exercises much practical influence in the matter of fish and game preservation.

It may be that it was organized for the purposes to which it now seems to be devoted, but in that case its title is a misnomer. A State Sportsmen's Association should be one that would exert its energies mainly to preservation of fish and game, as I take it, and the tournaments should be "side shows," rather than the main circus. This club has, in a few instances, exerted itself to compel the construction of fish ladders, but I am afraid that tournament shooting seems of most importance. Perhaps, not being a member, I have no right to criticise its methods, but I only refer to it to show that there is no practical organized effort to make any marked improvement on existing conditions of the fish and game question in California. It seems difficult to make men "pull together" in this direction, and what is everybody's business is nobody's business.

Those who prefer a few large fish to a basketful of fingerlings look to the Oregon streams now rather than to those of California. Of course every stream in this State is not yet spoiled, by any means, and the general scarcity of fish referred to may be perhaps considered comparative. Still, we do not have the sport we used to, and have to go much greater distances than formerly. This is to be expected, of course, in a country rapidly settling up, as this is. However, fishing out of season and with giant powder are things that can be prevented if proper effort is made. Until that time we must all deplore the existing conditions, which are much as you have represented them. CHARLES G. YALE.

SAN FRANCISCO, Cal., Sept. 1.

ROD AND GUN IN NEVADA.

THE sportsman who imagines that all the fishing and hunting to be obtained in the Silver State is found along the eastern slope of the Sierra Nevada, in the vicinity of Tahoe and Pyramid lakes, is far from correct in his surmises. Nevada, though mostly desert, has in common with Idaho, Montana and Wyoming, royal surprises for the lineal descendants of Nimrod and of Izaak Walton. One of these surprises awaited a party of five pleasure seekers who pitched camp last week at the head waters of Goose Creek. This stream rises about fifty miles northwest of Tecoma, on the C. P. R. R., and flows in a northeasterly direction, emptying into Snake River a short distance above the famous Shoshone Falls. In common with all streams and rivers tributary to the Columbia it is well filled with members of the noble family of Salmonidæ. Its banks have been unexplored save by the Indian and the adventurous cowboy, and the surrounding country is the home of many animals that do not yet know what it is to be frightened by the report of a rifle.

The first forty miles of our trip was through an uninteresting, sandy, sage brush country; but once over the ridge that separated the desert waters from those that flow northward, everything was changed. The vulgar jack rabbit disappeared and in his place we found the white-tailed mountain hare, the gamiest of his genus. Flocks of sage chickens would rise from every clump of quaking aspen that we passed, and soon we had more birds in the wagon than we could dispose of. About 5 o'clock we reached Goose Creek. The wagon as it rumbled up frightened seven wood ducks from the stream. As it was impossible to secure any of them, we devoted ourselves to the willow grouse, which had now succeeded the sage hen. The willow grouse is much more gamy than the chicken, and should be hunted with a dog. It is somewhat smaller than the sage hen, flesh lighter-colored, back brown rather than gray, breast light, with V-shaped marks distinct, not blotched. The crops of those we killed contained only the fruit of the Arctostaphyllos and of the rose, no trace of sage being detected by sight or smell.

The next morning we pushed five or six miles further up Goose Creek. As our leader was riding ahead to locate a permanent camp, three handsome deer bounded from grassy flat within stone's throw of his horse. The omen was favorable and here we pitched. As soon as the wagon was driven up two of our number started after the deer, but one of the two was a professor and not a sportsman. He would shout and sing and the deer would stay out of range. Meanwhile the rest of us put up the tent and straightened camp. As soon as possible I sought the stream, here about thirty feet wide and a constant sequence of riffles and deep holes. Securing a favorable stand scarcely twenty yards from the tent, I made the preliminary cast. A beauty rose to the fly and struck it savagely. When landed he showed on the pocket scales one pound and three ounces. This seemed very fair for a brook trout, but two pounders became so plentiful as to make anything from a pound downward insignificant. In half an hour I had captured eleven fish without stirring from my tracks save to land them, and in two days this same riffle yielded twenty-eight good trout.

The afternoon was devoted to study with Winchester, Remington and Springfield. Result, a fat doe and a two-pronged buck. Apropos, one of the best places to lie in wait near sundown is by a clump of the White Mountain columbine (*Aquilegia cærulea*). There is no plant so relished by the black-tailed deer, and he will feed upon its honeyed blossoms just so long as he thinks he has a chance of safety.

The third day out was devoted to fishing, and we undertook to settle the question as to whether the best results are obtainable with natural grasshoppers or artificial flies. The fly champion undertook to catch as many fish as two grasshopper users. At 8:30 we started up the creek. Where willows hugged the water we waded. Anything for a good cast and a big string. At 12:50 we halted for lunch with just 100 fish. Of these 67 were credited to the fly and 33 to the grashoppers. It is needless to say that those who had been tempted to renounce the feathery bait threw away the hoppers and returned to orthodox principles. These 100 trout were put in a flour sack and were more than any of us cared to shoulder; so one returned for a pack horse and the others fished down to camp. The best results for the day were obtained by Mr. Geo. B. Brastow, of Salt Lake, who, with a Leonard split bamboo rod and three-fly leader, landed 133 fine trout. His favorite flies were the grizzly-king, brown-hackle and royal-coachman. The yellow-bodied gray-hackle did good work in the morning, but seemed worthless after 2 o'clock.

In conclusion—a word to Eastern sportsmen who try the West—please remember that you are not in the Adirondacks. You cannot have guide, valet and cook. Some one must get wood, some one water; one must cook, one must wash dishes and another make down the blankets. Nothing so disgusts the Western boys as to have a few "tenderfeet" around—good fellows and ardent sportsmen but men who think when their guns are cleaned the day's work is over and expect to be waited upon. Here a man can find trout, deer, chicken, grouse, "fool-hens," mountain hare, coyotes, black and cinnamon bear, wolverines, mountain lions, etc., etc., but to thoroughly enjoy himself and to make his own company acceptable he must lay aside some of the prejudices of civilization, bring himself down to hard work and rough it. SHOSHONE.

NOTES OF THE FIELDS AND WOODS.

II.—SOME COMMON FUNGI.

NOT long ago in walking through a piece of woods I came across an immense puffball; it must have been at least 10in. in diameter. I stopped for a quarter of an hour to examine this odd-looking vegetable growth. It was a freshly grown one; the color was a creamy white; it was soft and leathery to the touch, and it had its strong characteristic odor. It seemed a pity to spoil it, but when I had satisfied myself with an examination of the outside I could not forbear cutting into it with my knife to observe its interior structure. Inside the leather-like rind it was softer, whiter and more porous, while in the center there were many small cavities. I knew that the thin lamellæ which bounded these cavities would come to be covered with multitudes of spores, and that when the puffball became ripe its rind would burst open and these spores would escape, to be distributed by the winds to new situations where, perhaps, they would bring forth a new crop of the odd-looking plants.

Many other fungi, less noticeable than the puffballs, but none the less curious and interesting, are common in the fields and woods. Almost every decaying stump or fallen tree has some form or other of fungus living upon its fast perishing substance, eagerly striving, as it were, to prevent it from passing back into the inorganic world, whence the tree in the days of its strength and beauty obtained it. In the open fields, too, we find the mushroom, the true edible species, *Agaricus campestris*, and a host of its worthless allies, the toadstools. It is well worth our while to know something about the round of life through which these plants go. What do they spring from, how do they grow and propagate themselves? A brief account of the mushroom is here given; in its main features it will apply to other common fungi.

The part of the mushroom seen above ground is by no means the whole of the plant. It is only the fruit-bearing part corresponding to the flowers of the higher plants. The main portion of the mushroom plant is underground and consists of many branching filaments loosely woven together into a mass called the mycelium. The mycelium penetrates the substance of decaying organic bodies, either plants or animals, sending out shoots in every direction, which absorb the juices of the decaying tissues. Thus these plants are parasitic in their nature, not being able to manufacture their food out of elements obtained from the air or soil, as the green plants do. They are to be distinguished, however, from the true parasites, which feed upon the living juices of other plants. In distinction from these the fungi are properly called saprophytes. Returning to the mushroom, we may next consider the growth of the above-ground or fruit-bearing portion. On some of the branches of the underground part small buds arise; they appear at first like little knobs at the end of the branches. These increase in size and are lifted by their lengthening stems toward the surface of the ground. They are at first solid, but, the outside growing faster than the inside, gradually a hollow, in the form of a ring and near the lower surface of the ball, is formed. The lower surface is then called the velum, since it is like a veil separating the hollow interior from the air outside. After a time the veil breaks away, thus destroying the cavity and giving to the plant the well known umbrella shape of the mushroom. Meanwhile there have been formed thin plates, like knife-blades, which radiate outward from the stem on the lower side of the umbrella.

All these changes take place very rapidly; it is proverbial that mushrooms spring up in a single night. It is on these thin, blade-like parts, called the gills of the mushroom, that the spores are produced. If a piece of white paper be placed under the plant the spores will fall upon it and will be disposed in radiating rows corresponding to the gills. Each plant produces very many spores and they are widely distributed by the winds; it is evident enough that the object of the spore-bearing part being above ground is to secure this distribution. If the spores chance to fall where nourishment can be obtained they soon give rise to a filament which branches and finally becomes a new mycelium from which buds will grow again, as described. A single mushroom plant commonly gives rise to many of the umbrella-shaped parts. Buds are constantly forming and rise successively to the surface. This explains how a new crop of mushrooms may be found where another has only recently been picked.

The figure of the mushroom here given indicates its structure and manner of growth.

As to the way to distinguish the edible mushroom from the worthless and, in the case of a few, poisonous species, the following characters are usually sufficient to identify the most common edible species, *Agaricus campestris*. It has a white, firm and solid stem; its umbrella or cap is moderately thick and fleshy and its gills are of a pinkish color. The last character is the one by which they are most commonly distinguished. It marks the time when they are fit to pick; the pink color passes away when they are over ripe. There are many other species of the edible mushrooms besides this one, but as they vary a good deal in appearance it is difficult to lay down rules to distinguish them. The best way to learn to know them is to go out with some one who already knows them.

It may be added that the edible mushrooms almost always grow in open fields, as pastures where the grass is kept short by grazing sheep or cattle. They are never large in size, the cap seldom exceeds four inches in diameter and is commonly no more than two.

The other common fungi, as the puffballs, ear fungi, earth stars, etc., resemble the mushroom in their main structural features and manner of growth. All consist of a mycelium lying underground or ramifying the substance of decaying wood, and a spore-producing part of the shape that gives to the most common kinds their names. In some the spores are produced inside the mass, as in puffballs, and in others they form inside of hollow tube-like cavities that open on the lower surface, as in the ear fungi.

There are very many other fungous plants besides the conspicuous ones commonly met with. All the moulds and blights belong to this class of plants. Spores of fungi seem to be present in all ordinary atmospheres. Wherever organic matter is left to decay a crop of fungi is sure to spring up. What their use in nature is, if they have any, is difficult to say. With a few exceptions they are of no value as food to man or beast. Possibly they fill an important office in absorbing gases and liquids resulting from decay and otherwise injurious to living things. S.

A MINK IN TOWN.—A mink invaded the offices of the Providence, R. I., *Journal* the other day. How it got into the city is a mystery.

NIGHTHAWK AND SWALLOW.

Editor Forest and Stream:

One of the most interesting birds common in this locality is the nighthawk. To one who, like myself, is not an ornithologist, there is one peculiarity about this bird that distinguishes it from all others, and this characteristic habit consists of its chief point of attraction; and yet those who have written interesting descriptions of this bird and its habits for FOREST AND STREAM during the past six years have never touched upon this most notable feature, until in your last issue your correspondent "José" makes mention of it.

I refer to the habit of diving down from a great height in the air, uttering a loud booming sound and then ascending with almost lightning rapidity to its former elevation and resuming its monotonous cry of "scaipe," as though nothing unusual had happened. This performance generally takes place after sunset and continues until it is quite dark. During the day the bird is about as stupid as an owl and will perch upon the top rail of a fence and allow a boy to come near enough to knock him off with a club. This refers to the country boy, who, I am sorry to say, is sometimes up to such tricks, the city boy would never see the bird, as under such circumstances it looks like a knot on the rail.

Your correspondent also refers to the beauty of the plumage of the swallow. Quite recently I was impressed with this same thing. I was returning from a fishing excursion four miles up the river, in my skiff, the Gracie. I had two sails set and was leaning lazily against the mizzenmast. A swallow perched on top of the mainmast and peered down curiously to see what kind of a craft it was, and what it contained. At the same time I had a fine view of the under plumage of the bird in its natural, unruffled condition, and at close range. It is a little beauty and no mistake, though many persons with a less intimate acquaintance would not suspect it. On this particular occasion I noticed a large number of swallows were flying quite low and frequently dipping down into the water, making a great splash. I have seen this on other occasions about sunset, and at a distance of a quarter of a mile one is apt to be deceived by it, thinking that it is the fish jumping. I think that the swallows are at such times catching flies and other insects which are floating on the surface. When at this occupation the swallow sometimes makes a splash similar to that made by the kingfisher, but at other times merely touches the surface and leaves a wake like that of a minnow jumping out of the water in his efforts to escape his mortal enemy the black bass. E. A. LEOPOLD.

NORRISTOWN, Pa.

[The swallows referred to by "José" were no doubt the violet green (*Tachycineta thallassina*), a small western species, the one seen by Mr. Leopold may have been the white-bellied swallow (*T. bicolor*). The swallows that touched the water as they flew over it may have been drinking or catching insects or bathing.]

A FEATHERED WAIF.

THERE came by express to the FOREST AND STREAM last week a young sawwhet owl (*Nyctale acadica*) which had been captured on a vessel on Lake Superior, forwarded to Cleveland, O., where it came into the possession of our well-known correspondent Dr. E. Sterling, and was by him sent on to this office. The little bird appeared to be in good condition and was taken down to Long Island to find a home after its wanderings, but the next day it succumbed to the hardships of travel and died. Advised of the owl's safe arrival here, Dr. Sterling writes: "I am glad to know that the owl has finally reached the office of FOREST AND STREAM alive and in good condition, eyes golden and bright. The voyage of this bird is remarkable. A waif migrating across the great inland sea of Lake Superior, when midway finds a resting place. Then captured and fed for several days by a rough crew of kind-hearted men, who at any time on more important occasions would be found at their post. The little bird of "Hellen," after landing at Ashtabula Harbor, Ohio, had a day of rest, when it was put into a peach basket with two live mice for food, and was covered over with brown paper and twine. Arriving at Cleveland by railroad, the little owl was taken from the basket, eyes bright and luminous as ever, though the feathers were somewhat disarranged. Then a special box was made, the waif again boxed up and provisioned for transportation. Through all these tribulations I am sure our little owl never once snapped her bill, as they are wont to do when disturbed, so intelligent was our bird. I cannot say where this stranger had its home, perhaps far north in the Hudson's Bay region of British Columbia or Onalaska's shore. However, he was moving south, "got over the line," and was captured.

BLACK AND SILVER FOX.—*Editor Forest and Stream:* I wish to give my testimony and indorsement on the position taken by "K. N. L. McD." on black and silver foxes, in a late issue. Up to ten years ago I trapped foxes every season in one of the best if not the best sections for red fox in this country, and of the 1,013 taken not one was black or silver gray. Now, if the black or silver fox is a freak or sport of the red species, I think I should have taken some. I once saw one in the summer season and would have shot it, but preferred taking the chance of getting it in the proper season. I have never heard of them being found further south than Vermont, and learn from collectors of their frequent occurrence further north, between the range of the red fox on the south and that of the white and blue fox north. If they are freaks they should be most plenty where the reds are. Once I marketed my furs in person, selling to Wight Bros., 72 Chauncy street, Boston, a firm who have been in business a generation or more, and handling furs from all quarters of the globe, and are presumed to know all about their trade. I was shown three specimens of the silver gray fox. No. 1 was jet black, except the tip of the tail, which was white, the pelt was very dark, as it should be if taken in early fall. No. 2 had a few coarse hairs tipped with light gray, with the pelt lighter colored, as would be if taken later. No. 3 a perfectly prime skin, the pelt white and the fur a full silver, and was told that the so-called black and silver fox were one and the same, the difference in season accounting for color, and that it was a distinct species from the red, and its habitat the higher latitudes.—WARFIELD (Maine).

WOODCOCK IN THE SOUTH.

WOODCOCK shooting commences with us about Christmas time and continues until the first moon in February. If that moon be early, but few birds remain and breed with us, but if it comes late in the month and the weather be cold, quite a number will remain. I have found the nests in the month of March, and on one occasion I found four nests within 50yds. of each other. In the month of July I shot six woodcock not one mile from the city, and in the month of October last year I shot twelve within a space of 200yds. Last season a very great number of birds bred with us, indeed so many that market gunners thought they were flight birds. In this, however, they were mistaken, for at no time up to Dec. 10 that year was the weather cold enough to drive the birds southward to us. The season had been a very dry one up to that time, when we had some rain, and the birds shifting their grounds gave the hunters an erroneous impression. About Jan. 1 this year we received the first flight, and the birds were numerous; several were caught in the streets of our city. I was told that 63 were shot to two guns in one day on one occasion, and at another time 41. On my first hunt after the flight I met two acquaintances about 7 o'clock in the morning, at which time they had 7 birds and I had none. In the evening we met again at the same place, and my friends had 41 woodcock and I had 16 woodcock, 2 partridges and 2 doves, 61 birds to three guns, 57 of which were woodcock. I had but one dog, and that an old and inferior on account of his age. If I had had a good dog our bag would have been much larger.

There is no bird shooting that I know of which requires a good dog so much as woodcock shooting. A dog which has the best of a nose and one which thoroughly understands what he is hunting for—such dogs should in close cover range around you instead of in front of you, for it oftentimes happens that when a cock is flushed he will fly around and alight in the rear of you, and you will not be able to find him with a common dog if you have failed to mark the flight of the bird. Any fair dog will find woodcock, but when they are first found they are likely to be in a very thick and consequently very hard place to shoot them, especially if you are alone, but with a friend it is different, for one can drive the bird when flushing in the direction of an opening, and the bird killed on the first point; but if not killed on the first point, you require just then a first-class dog, for the bird will alight in the opening and will flush at the least noise and very often will flush before an ordinary dog can wind them, and this is the reason you often wonder what has become of the bird, as he is continually flushed out of your sight and hearing. The first-class dog, when he finds them not shot, will slow down his pace, throw his head in the air and move cautiously and work for the body scent and will point at a long distance, and this work requires the best of nose, for the woodcock has but a light scent.

Some persons think that a slow dog is the best for woodcock, but I differ. I have hunted both and I find I can kill more birds over a fast dog than over a slow one, if the dog has not a good nose then a slow one is the best; for in such a case you are playing dog yourself one-half of the time. On the second or third flush, if it is made without a point, and you are the flusher, you have to take your chances; but with a good dog with a first-class nose each flush is made from a point and you can take your time to flush the bird in the direction you want him to fly, and if a good shot, bag him. In proof, a friend and myself in the day's hunt over a brace of setters found 58 cock and bagged 54, and this in heavy cover; on another hunt with another friend and the same brace of dogs we found 24 birds, bagging every one. Some of these birds were pointed from two to four times before we had a chance to bring them to bag, for the cover was canes. Thinking that some of these birds were not the ones flushed at first, but that they were a second bird, we beat the swamp from side to side back but could not find another bird. One day I followed in the tracks of two of my friends who were good shots but who bagged at that time eleven birds over three dogs. I bagged thirteen birds with my brace of dogs, and had I been ahead I do not think they would have bagged three. I have hunted over other dogs, finding from twelve to fifteen birds and bagging not more than five or six. This was the fault of the dogs, not because they were not staunch enough but because when I did not kill the bird on the first point, I failed to get another point on that bird, so you see that what I state is from personal experience in this class of shooting.

So much for the dog, now for the habits of the birds—their migratory flights are made when the moon is nearly full, and they move only when compelled by severe frost, which prevents them from procuring food. They remain in cover during the day and feed at night, commencing their flight for their feeding grounds about twilight and leaving at dawn. A number is at hand on these flights who take their stands and shoot them as they fly past. On very cold mornings the best place to find them is along the shrub oak ridges on the sunny side of the swamp. This is hard shooting, especially if the weather be damp, when they are found in the thickest kind of cover. In warmer weather they are found among the sprouts close to the water on the hillocks in the swamps among the sprouts at the edge of a road or stream where the ground is damp or wet. You then have the best shooting, for the birds are found in places more open, and woodcock shooting may be then enjoyed, for you can see your dogs and get good open shots. Another good place for these birds too is among the patches of rich gardens, when these patches have sprouts or cane on the edges, and particularly if the ground is damp among the cover, and a favorite place for them to feed is burnt fields. Years back numbers used to be killed in burnt fields by the negroes by torchlight and bushes. When the birds were flushed the torchlight would affect their eyes, and they becoming confused would fly toward the light and be knocked down by the hunter with the bushes.

This manner of hunting and securing these birds is among the things that were—the negroes now are the most destructive market gunners, and they go in gangs of two and three together, so that a bird has no chance of escape, and they care not whether a bird is a hen from the nest or not since their object is money. In proof of this I heard a negro market gunner say ('twas in the month of March) that he had shot four woodcock the day before. I told him that they were then breeding, when his answer was that he would shoot them on the nest as long as he could get twenty cents apiece for them. A few days after this I visited the place where he said he had shot them, and I found the four nests but no sign of bird, and on inquiry found that those were really the birds he had shot. I have been told that the negro pothunters are no injury to game because they are not good shots. This may be true in that section from where the gentleman writes, but here we have numbers of them who are good shots.

To successfully shoot woodcock two parties, or persons, I mean, and two good dogs, are necessary; two friends make company but three a crowd. With two, one flushes and one shoots and marks, or one may shoot while a servant flushes. You may ask why not use a cocker? I answer no, for in the first place you lose the pleasure of the fine work of a good dog, and secondly in nine cases out of ten a cocker will flush when you are in thick buck briers and the bird will fly in any direction but the one you wish. Cockers are good in canes or low brush, but when you have to take the cover yourself give me the staunch setter, for then you can flush in the direction you want. I find a 28in., 12-bore hammerless with cartridges loaded with 1¼oz. of No. 9 shot and 3¼drs. of F.G. powder do good work. I use heavy loads of powder, for in this kind of shooting you have to take your chance through canes and brush, and very often with light loads of powder the pellet which would bring your bird to bag is stopped by a twig or the leaves of the cane, but with a heavy load you can be sure of your bird. I have frequently in a day's shooting bagged birds that I did not see at the time of firing, and it was only when my dog retrieved that I knew that I had hit the bird.

Shooting in heavy timber by one not accustomed to woodcock, although a good shot, will vex him very much, for when he is positive that the bird is covered, and fires and finds that the shot is a clean miss, and shot after shot is missed, he becomes puzzled and can in no way account for it. The shooting is comparatively open and before he commences he could almost swear that he would kill every bird he could flush on such ground, but when he does begin he finds out his mistake, for when the bird is flushed he flies direct for a tree, and when within a foot of it he dodges suddenly and is around the tree just about the time the shot is fired and the tree gets the shot intended for the bird. I remember on one occasion I was out shooting and met with a gentlemen who said he had found several woodcock in a certain locality in the swamp, but that he could not hit them—he was a good shot and had bagged but two birds—although he had fired a great many shots. I knew the spot well; it was an old pond with low maiden canes and heavy timber; the canes were not over a foot high and the timber were 20yds. apart. I laughed at him and told him I could kill any bird in such a place. His answer was "Come and try." Well, we started and in a short time reached the ground, and soon both of my dogs were on point. I flushed and shot, but no bird. I flushed from the other dog, and no bird after firing at least twelve shots. Finally I sat down utterly disgusted and saw my friend fire and miss as usual. In a little while I saw what the trouble was, got up and started my dogs and in a short time had a point. I called up my friend, who told me to fire away, flushed, waited until the bird dodged the tree, fired and bagged my bird. My friend said said he thought I had changed my mind and was not going to shoot. I then commenced and soon bagged eleven birds without missing one shot. I had shot hundreds of woodcock before, but never in such open ground. When they are flushed a number of times they fly very fast, and I have heard them make a noise with their wings like a partridge, and sometimes if you are not quick you will shoot behind them, for the general belief is that they are not flying as fast as they really do.

Another thing with woodcock in open ground is, that they will run before a dog for some distance, and, as they leave but slight scent, the dog is afraid of flushing and moves slowly, and before you know it the bird is up and to one side and off before you can cover him. I think that woodcock flush more from sound than sight—it seems that they are partially blind in the daytime. I have had them alight within a few feet of me after they were flushed; and this season two of my friends told me that while they were taking their lunch one of their dogs flushed a bird in the rear of them and he flew between them and alighted near the other dog, which caught it between her feet and held it there for some time. It finally got away from the dog and was shot by one of the gentlemen. The dogs and men were not 5ft. apart.

I saw an amusing thing with pointer and woodcock at one time, which occurred in the historical "Jasper Spring" swamp. This swamp covered at that time about five acres, in the middle of which was an open space. The best place for shooting was near the road and close to the spring. I had entered the swamp from the opposite side and soon heard shooting near the road. When I reached the open ground my pointer bitch came to point. I thought it was a partridge she scented, as there were two coveys in this swamp, but as I advanced what do you think I saw—the bitch was pointing close to a log—a woodcock jump upon the log, fan his tail, strut, draw his bill close to his breast and hiss at the dog, which, not being a very staunch one, and not liking the insult from the bird, made a snap for it, which caused Mr. Woodcock to take to his wings for safety. Between laughter and the sudden movement of the dog I missed clean with both barrels, and to pay me for my levity five more woodcock jumped up from around the log. The fact was the gunner at the road had driven the birds to this opening which accounted for so many being in the one place. In my next I will have something to say about the Virginia partridge or Bob White. VITUS.

SAVANNAH, Ga.

THE NEW YORK GAME LAW.

Editor Forest and Stream:

A communication is noticed in a neighboring sporting paper inquiring for some lawyer to codify the game laws so as to make them consistent and efficient, etc.

Now if there be any such, who can arrange, and get such law passed, he ought to come to the front at once. The assertion is ventured that none such exists. Several capable lawyers well versed in the game laws, and good sportsmen as well, have given their best efforts to write a better than the present law, only to acknowledge signal failure when their efforts were put under criticism. It has been tried by different ones at different times in the last six years, with the same result. True, some of the inconsistencies may be taken out of existing laws to make it good, but the men are scarce who know it all in respect to each species or locality.

But writing game laws and passing them are widely different matters. When a wise and prudent law is presented, then the difficulties at once begin, and it is beset with all sorts of ideas, is attacked in all sorts of modes, and with all sorts of motive. There are several leading interests that at once clash with all best of efforts, and work to undermine the best of laws.

First—The market men oppose all restraint upon trade in fish and game.

Second—The summer resorts striving for all the extreme delicacies to draw patronage.

Third—The pot-hunters who supply their demands want loose laws to be violated with impunity, while others abide them.

Fourth—The clever and obliging legislator, often giddy with the dignity of his office and duty to his constituency, who knows little and cares less about game or game laws.

Against all these is a large public sentiment honestly desiring game preservation and protection by honest, consistent and prudent laws. The latter rely upon common sense and merit for success. But they fail of being heeded at Albany in the persistent tumult, bluster and clamor of the others. The clown legislator listens to all sorts of buncombe and becomes bewildered because he knows little or nothing about the subject, and is led by others whom he thinks, or who claim, to know it all.

It is reported that Mr. Hadley of Franklin county is now engaged upon a new game law for the coming session. For two years he has been chairman of Assembly Committee on Game Laws. He has procured a renomination and expects to be re-elected. It is also understood that if Mr. Husted is returned and made speaker, and if Mr. Hadley is re-elected, he is to be again made chairman of game laws with his new bill to the front seat.

If future prospects may be judged by what has happened to the game laws during two years, a tall sample may be expected. It is true the 6in. trout law which he repealed in 1886 was restored last winter, but it was due to other efforts than his. It was well nigh lost by management in his committee. What his new law will be let those conjecture who can. It is reported that one feature of it is to be a "bureau of protectors," with himself at the head of it. It may be asked what kind of protection may be expected, and whether the whole State may expect a fish and game protection similar to that of Franklin county for the last few years. Sportsmen may be interested in finding it out if they can before their first knowledge finds it on the statute books.

There is only one way to obtain a better law than now, and that is by having as chairman of the game committee a man that fully understands the uses and abuses of the subject; can discriminate between wise suggestions and buncombe, and is firmly honest toward the public. There are several such outside the Legislature. OBITOR.

A DAY WITH THE QUAIL.

Editor Forest and Stream:

When I read of the exploits of my fellow craftsmen I can see them in my mind's eye sitting round the blazing camp-fire, rehearsing the extra care they took in vainly trying to land the largest trout in the stream, or with swift footsteps following through the day till the shadows of night came on the largest deer that roams the forest. I have been there myself and know all the pleasures of the camp, having tented or "shantied" some forty times. As I read of these trips from time to time my mind goes back and memory is filled with the happy hours I have passed in the field and by the swift mountain stream. Often the question comes to me when I read of these things, Can I record my experience on paper so that those that read it can see it and feel it as I do? If so, then my object will be gained; if not, then the narrative of this one of those happy days will be lost.

I went to the city of Mt. V. to live, and among the many friends I made was Al B., the sheriff of K. county. His duty often called him to the country, I would be invited to go with him, and I usually found his dog and gun under the seat of the buggy as his companions. Up to this time I had always used a rifle, looking upon a shotgun as only fit to scare the crows from the cornfield with; but after a few trips I began to feel a conviction that I was wrong, and at last became converted. Since that time till to-day I have kept my dog and gun.

After securing my first shotgun the question arose, Could I ever hit that mass of shining feathers. I had grave and curious doubts. One day shortly after my purchase Al drove up and asked me to go out with him; he said he only wanted one bird for a lady who was sick. When we got to the field a meadow lark flew up. I wounded it, and the next shot killed it. Al says, "That is good enough. You can shoot as well as I can." And I found by obeying his rule of holding ahead on cross shots that I have been very successful.

The grand national day of turky and thanksgiving was drawing nigh and we proposed a day of sport. The day broke cold and sharp, but with no snow on the ground. Four of us with two dogs and two boys to carry the game and see to the team, started for a farmhouse some three miles from town, where arrangements had been made for dinner. The sun came out and helped cheer us on our way. When within a mile of the place we got out and sent the team ahead to the farm. Al and myself went over the hills to the right, while our friends took the valley along the Kokasin. We had hardly got out of sight, when from the valley an almost continuous firing was heard and kept up. I urged him to retrace our steps, for as yet we had found nothing after working for over an hour. My old friend says, "Don't worry, we will be there for dinner." We passed through a field and mounted a fence, and while sitting there the dog as he came up flushed a bevy, but we being on the fence did not get a shot. They flew wild and passed over a hill and we lost sight of them, but after half an hour found them and the first fire brought four to bag. We followed them till we secured eighteen, and from that time on our sport was royal. On our way to dinner the dog made a point and four birds flew up at once and we brought three at the first fire.

When we got to the house a bright fire in an old-fashioned fireplace awaited us and a pitcher of cider for our comfort. All being strongly temperate would not taste it, but I thought it very fine. We laid out our birds on the desk and window sill and smoothed the feathers out nicely and found our count was forty-six quail, four squirrels, one rabbit and one hawk.

Our companions had passed the house, and we could hear them firing some way up the stream. A conch shell was brought into requisition and at last the hungry crowd came together. We met them at the gate with the usual inquiry, "Where is your game?" One said in the house, (we had seen none); the other showed us two in his game bag. "Where is yours?" they asked. "Oh, in the house." When we came to go in they brought out four more. But you should have seen their eyes when they saw our "lay-out." They declared they would not shoot again, and they kept their word. We sent the team ahead, and after dinner went to the field again, and did not stop till it was so dark one could see a stream of fire at least a foot long streaming out of our guns at each shot. We were obliged to dip our guns in the stream to cool them occasionally. The birds would fly seemingly from under our feet. With light hearts and weary feet we arrived at home, and dividing our game equally we found Al and I had killed 76 quail, but had not added to our other game, as we had left the woods after dinner. I have not seen my old friend for some time. He is one of God's noblemen, with a heart large enough for all his friends, and a laugh that does one good to hear. GILL.

SHOOTING NOTES.

STRAWS show which way the wind is going to blow, and there are many signs that indicate that we are to have an early autumn. The unprecedented flight of English snipe to the inland marshes of New Jersey in the middle of August was one of these pointers: then the pears ripened in this vicinity fully three weeks earlier than usual; while the grass plover, who came in large numbers from their northern breeding haunts, tarried with us but a very brief time.

Just prior to the rainfall of this week, there was an immense migration of all kinds of birds from northern climes. The robins appeared on Staten Island in great flocks on Monday last, while from Thursday until Saturday, of the past week, black ducks, coots and teal strung along down the Jersey coast in vast quantities. All these things predict an early fall, and woodcock may be expected to come along on the next moon. As the swamps are in good order, the shooting this season should be much better than usual.

Speaking of English snipe, there has been very fine shooting at them in Delaware and Maryland this month. Below Cambridge, in the last named State, big bags have been made by several Baltimorians. Report says that 182 were killed by two New Yorkers on Thursday and Friday of last week. Fourteen months of drought in the West has evidently had much to do in sending the birds this way.

Sam Camp, of Mauricetown, Cumberland county, N. J., writes me that there are plenty of sora and Virginia rail on the meadows along Maurice River, but as yet the tides have been running too low to get at the birds, which have congregated on the high islands. The tides at this place served during the afternoon from Sept. 5 to 11. Next week they will again be propitious. For the information of those who intend going to this locality, I append a table of tides which is about correct: High water, Sept. 15, 8:30 A. M.; 16th, 9:15 A. M.; 17th, 10 A. M.; 18th, 10:45 A. M.; 19th, 11:30 A.M.; 20th, 12:15 P. M.; 21st, 1 P. M.; 22d, 1:45 P. M; 23d, 2:30 P. M.; 24th, 3:15 P. M. The tides at Mauricetown are about 45 minutes later every day. The end of next week, therefore, and the beginning of the week after may be looked upon as a good time to go to the Maurice River, yet the shooting is best after the reeds are broken down, and when southeast winds drive the water into the mouth of the Delaware River.

A number of Philadelphia pot-hunters have been making themselves very objectionable to the farmers in South Jersey, especially in Cape May county. They swarm there at this season and make the lives of the land owners a burden. Some of the farmers have become prematurely old. The other day the wife of one of them who was watching her better half keep yanking with fearful grimaces the white hairs out of his head she said: "John, don't you know that fer every gray hair yer pull out o' yer head six will come tu th' funeral?" "I don't care if they will only come in mourning," was his reply. They say a protective society is to be formed for the purpose of keeping the gunners off the land, and shooting at anything that runs or flies.

In Green county, in this State, partridges have been killed in despite of the dense foliage of the rhododendron swamps in goodly numbers. The birds are well grown. They are found feeding on the wild grapes, and many a bird is potted while rustling in vines.

The quail outlook in the Indian Territory is very favorable. Eastern sportsmen seldom get there, but when they do they always return for a second shoot. There is no section in this country so well supplied with game of all kinds as "the Nation" at the present time.

THE WISE ACRE.

NEW YORK, Sept. 13.

RAIL IN CONNECTICUT.—"Never was so few birds," is what all the old shovers on the Connecticut rail grounds have been repeating for the last three or four weeks. None of the northern birds seem to have come, and it looks as if those that had bred with us had all been drowned. A careful survey of the Essex meadows the first week in September failed to show a bird. The Housatonic meadows are equally barren, and so are those at North Haven. The prospects for rail are slim. When the birds do come they will come all together, and there may be good shooting for a few days if the tides are right.—ALTRO (New Haven, Sept. 10).

QUAIL AND GUN SPOTS.

THE prospects for an abundant supply of Bob White are excellent. Owing to heavy rains a few weeks ago and the consequent floods in the streams, there is no doubt that some of the young coveys were destroyed. But in the hills and on the smaller streams that trouble did not come. Many coveys are now nearly grown. About ten days ago I saw two as I was traveling along the highway which flew with vigor.

Some correspondent, writing from Tennessee, indicates that the old muzzleloading guns were made of better material than the breechloaders. He says that they did not spot so badly on the inside. Is he sure of that? Perhaps the trouble is that he can not see the interior of a barrel closed at one end quite so clearly as he can one which is open at both ends. If he will plug up the breech end of a modern gun it will look quite as well as any muzzleloader. Besides this some of the old guns—made even seventy-five years ago—have not been shot on an average one hundred times a year. Breechloaders are shot more frequently. The fact is, any gun will rust if it is not cared for, and no attention possible will keep them entirely free from spots. There is a difference, however, and a great one, owing, no doubt, to the quality of the metal. I have a high grade gun with an extra set of barrels; one pair is Damascus and the other laminated steel. The Damascus barrels have been shot a thousand times and it requires close looking to see a spot. The other pair has not been shot more than two hundred times. It is easy to see spots in them, and the same care has been observed. The left barrel is far worse than the right. The metal of one must be purer than that of the other.

But I think there is something in what Birdo writes. Flaws were not so common in twist barrel guns made thirty to forty years ago as they are now, even in high grade guns.

In a short article of mine, printed May 26, your printer makes me attribute the "Noctes Ambrosianæ" to Prof. Wilcox. My chirography is a hard one to read—so it is said—but I surely wrote Prof. Wilson. He was called "the Wizard of the North," but Prof. Wilcox is a gentleman of whom I know nothing at all. I fear your readers supposed me to be little familiar with the writings of an author to whom I referred. They may be right—but I knew his name was Wilson. WELLS.

ROCKINGHAM, N. C.

There is a man in this town who has I think killed as many birds in the county as any other man for the past fifteen years, and he has shot the same muzzle-loading gun all that time, and I very much doubt if it has been cleaned fifteen times in the fifteen years. I have repeatedly seen him cut a small twig to push the paper wad home as he could not get a cut wad down. I have used guns for over twenty years, muzzle and breechloaders, and (I have used kerosene, naphtha and water, and it makes little difference which you use if you only get off the lead and burnt powder from the inside of the barrels and then use plenty of "elbow oil" and dry rags, cotton in preference to woolen, until the cloth comes out as clean and dry as when it entered the barrel. During the shooting season I never oil the inside of my barrels, as I am sure I can not get as good pattern as without it, but when I put them away at the close of the season I oil with good sperm oil and cork the barrels tight, and have had no trouble as yet with scale. I buy as good sperm oil as I can get and fill the bottle half full of calcined magnesia; it takes out all the impurities, leaving the clear oil on top. I think the principal trouble is that the barrels are not thoroughly dried before they are oiled, and in some cases the oil is not pure. O. S.

FAIRFIELD COUNTY, Conn.

BEARS AND BEAR KILLING.

Editor Forest and Stream:

I always looked upon bears as enemies of civilization. We, I and others, destroyed them by whatever means we could employ to do so. We canvassed all our resources to circumvent their cunning, and that they are possessed of a large degree of cunning no one who has hunted them will deny. When a boy of sixteen years, in 1844 and '45, I spent a year at the mouth of the Arkansas River. The country thereabout, at that early period, was almost a *terra incognita*, and game, deer, turkeys, ducks, etc., were abundant. Our stock, hogs especially, suffered from the inroads made by the bears. Our members from Africa put out spring-guns at the crossings where the bears came from the canebrakes to the cornfields, and also set traps for them in the vicinity of the "quarters." We didn't want the meat, we didn't want the sport, but we did want to kill the pesky, cowardly bears. Our members from Africa took great pleasure in finding a good fat b'ar in a trap or killed by a spring-gun, and they were sure to get a five dollar gold piece for each and every bear they killed. We never considered them game and did not hunt them as such. They are a mean, sneaking, cowardly animal, and always will "squeal" when hurt. There is no game in them, and the sooner the race is exterminated the better for all who live in the vicinity. I think any person who manifests sympathy for a bear in a trap should be sent to some locality where he would get all the bears he wanted and he would soon be convinced that his notions of kindness to bears were mistaken.

E. S. Y.

BALTIMORE, Md., Sept. 9.

A LARGE BEAR SCORE.—On invitation I accompanied my friend Irving to his bear trap. We followed a blazed line, and when we neared the vicinity of the trap silence was enjoined. We moved cautiously forward but found the place vacant. So far as bears were concerned, I was surprised at not seeing anything in the shape of a trap except a piece of a horse, which was fastened to a stump. This was flanked on the sides by spruce boughs, leaving an opening in front. A bear after stepping over the stick would find himself in the clutches of a 40lb. trap, which lay covered by soft moss. About a fortnight ago a bear had been caught in this trap. Irving pointed out the path he took with the dog, and the spot where the bear "hung up" and was shot. Sitting on a log I listened for some time while Irving related stories of bears which his father and grandfather had caught. His grandfather, Uncle John Sprague, 77 years old, has a record of 150 bears to date.—W. H. W. (South Presque Isle, Maine).

A MISSISSIPPI RIVER RESORT.

NEW BOSTON, Ill.—New Boston is one of the oldest and in consequence one of the smallest towns along the Mississippi River. It is 34 miles above Burlington, Ia., 55 miles below Rock Island, Ill., and Davenport, Ia. There is an average width of two miles of lowland on either side. The mouth of the Iowa River adds its waters to the Mississippi opposite this place, and the bay known as Sturgeon Bay here meets the river. All this lowland overflows at times, and forms numerous lakes, sloughs and marshes at all seasons of the year. Our duck shooting opens with the first signs of spring, often before the ice is gone. Mallards are generally the first, and many a good bag of canvasbacks has stopped at this point, followed by teal, both blue and green-winged, with summer ducks, of which a few make their home here. Lest you class us all as pot-hunters, I will defer mentioning the number killed. Suffice it to say that of those killed none are allowed to spoil.

Along with the summer come the woodcock and jack snipe, then the teal and later our large ducks again.

There are many reasons why game abandons certain sections. My experience of thirty years here leads me to believe that when everything is favorable we have just as many ducks as ever, though less geese. I know that some of the oldest river men say that we had more ducks here during our high water of 1881 than they ever saw in as many miles of river, and they only saw those along the river and islands. Of islands there are a good many, and most excellent places for sport they are, too. In that year on either side of the stream it seemed to be one swarming mass of ducks; and how I wished that everybody knew about it and would get out for a day and keep them up. It looked as if there were ducks enough for all then and for all time to come if they could be protected during their breeding season.

I remember a remark that one of America's best wingshots made, who comes here regularly, that such papers as the FOREST AND STREAM did more harm than good by publishing all places where game could be found; but I don't agree with him there. I am positive there is a ring which keeps all members posted and makes a business of visiting as many of the best places possible during the open season, and whose motto is secrecy. A stranger inquiring of this invariably meets the wrong man first, and is very apt to take proffered advice. G. R. M.

MAINE LUMBER CAMPS AND THE MOOSE.—A correspondent who has had unusual opportunities for learning the facts writes of the Maine lumbermen: "In the far-back camps, where big game is abundant, may be found one or more hunters who are harbored, generally with free board, for the sake of having fresh meat provided, and to save the proprietors from the penalties, the hunters are paid $4 per hundred pounds for the dressed meat delivered at the several camps. The hunters set up lines of traps for fur and cover a great extent of territory, reaching far beyond the operations of the lumbermen, where game, especially moose, seek uninterrupted grounds. But in most camps some of the men have rifles and on Sundays go hunting, and a great deal of game is gotten by them, but mostly deer and caribou, especially the latter, as caribou are always on the move. In crusting time these men kill many moose also; and I know of proprietors who kill a large share of the meat used in their camps. One of these shot 4 moose, and more than 20 deer and caribou two years ago, most of them out of season. Another shot 6 moose, the same season, in one day. Now I will relate some facts I learned on my last trip this summer. One hunter shot 12 moose, not to speak of deer and caribou; and another man in the same camp shot 3, and of these 15 moose the meat of only 3 was saved. Another hunter shot 8, another 7, and two others 4 each. Here are 38 moose shot by 6 men in and about the works of 2 operators only. Now there are a score or more of op rators in country as well stocked with big game as those mentioned. My trips every summer cover territory not visited by sportsmen, and embraces 100 miles or more of main streams and small tributaries. I visited 8 camps, and at all of them were seen moose legs, heads and pieces of skins. More than this, I saw and talked with some of these very hunters and men who worked in the lumber camps. Every season till this I have seen live moose nearly every day, while in that section some days several together; but on this last trip I saw three all told, and not one track to where I used to see dozens. This tells the whole story, and if next winter should be as favorable for crusting as the last past, the moose will receive their quietus, or nearly so. From present indications greater operations are planned than those of last season."

A WILD RICE PROJECT.—Northern and Northwestern Railways, Engineering Department.—Toronto, Sept. 9.—*Editor Forest and Stream:* In order to increase the quantity of wild rice in many of the very numerous small lakes on the northern portions of these railways, and to introduce it in lakes where at present it is not found, we have decided, if the scheme be practicable, to sow a quantity in such a manner as to answer our purpose best. I would like to have the experience of your practical correspondents in the following: What time of year would it be best to sow? What depth of water should it be sown in? Should the water be still water? What is the best manner of sowing so as to insure sinkage of the grain without too deep penetration into the mud? What is the best kind of bottom to sow on? What is the most northerly limit south of which wild rice will grow in quantities large enough to answer for duck feed? At present there are not large quantities of rice north of Gravenhurst, and our intention is to encourage the ducks by providing it if we can. Duck shooting through these lakes is very good although rice is not their staple food. —H. HOLGATE.

QUAIL IN FLORIDA.—Narcoossee, Fla., Sept. 2.—The promises for quail shooting here this season have been particularly good, and on the opening day, yesterday, we were not disappointed. Mr. Frank Vans Agnew, Mr. F. L. Woodham and myself bagged twenty-five brace; other good bags were also made. The coveys, probably on account of the dry breeding season, are very large, and birds are very strong on the wing. If the unsportsmanlike trapper and equally bad potter will leave them alone, we may hope for several more good days.—A. E. WOODHAM.

FLINT-LOCKS FOR AFRICA.—Not many days ago I made a pilgrimage through the vast collection of arms paraphernalia in the store of Wm. Read & Sons, Boston. The zeal of the sportsman and the admiration of the devotee were within me as I looked reverentially upon those almost sacred treasures. All that could awaken enthusiasm surrounded me, and all that could inspire imagination confronted me. But passing all these, and shutting out of mind resolutely the temptations of the glittering show cases, I found as a curious fact that the firm were then filling a large order for military weapons from one of the colonies of Africa, and that by peremptory instruction the modern percussion rifles were all to be altered back to the flint-lock system. The occurrence is almost incredible in this day. It is enough to startle the advocates of the breechloader and the hammerless and the other forms of progress in this age of wonderful progress. I found the explanation to be that these guns were to be given to the native troops, who would not use other than the flint-lock weapon. Shades of our forefathers! How it carried my thoughts back to the olden times, to be standing there, under the shadow of Bunker Hill, gazing upon stacks of the flint and the flash pan. We are wont to claim that science and the arts are encompassing the earth with rapid strides, and so undoubtedly they are. But clearly this African field is virgin soil as yet to them. —GLOAN.

DORIES FOR DUCK SHOOTING.—"If the sun rises at five we must all be up and off in our dories before the first gleam of the sun comes dancing over the water," said I. "Dories," said the Major, with a somewhat horrified expression on his face, "you don't mean to say that you expect to kill any ducks from one of those flat-bottomed boats; why the birds can see them a mile away and won't come within a dozen gun shots of you." "By all means I do," I replied. Now let me tell FOREST AND STREAM why a dory is the best to use in ducking on the New England coast. The dory is a boat that is used by all the fishermen on the coast, and the ducks on their passage north become perfectly accustomed to the sight of it, and by the time that they have gotten near enough to discover that the boat contains a sportsman instead of a man with a hook and line, Messieurs the ducks are very likely to feel the effects of an ounce and a half of No. 4 shot. Moreover, even if the dory were twice as conspicuous, the birds would come quite as near, for it is not the sight of a boat at all that causes them fright, but the slightest movement on the part of those who are in it. So in the case of the dory, the sides being higher than those of the ordinary float or keel boat, the sportsman is kept more out of sight. Further, it is easier to land on the beach from a dory in case of a storm.—S. DER.

AN ADIRONDACK BUCK.—"Frank Newell, James Clonney and C. F. McHenry," says the Binghamton *Republican*, "returned from the North Woods Saturday, where they have spent the past two weeks. Of course they have fish stories to tell, but they have fish too, and Mr. Newell bears the proud distinction of having shot and killed a real live buck. Just how this was done and many other incidents of one of the most enjoyable trips of the season can be heard by engaging any one of the trio in conversation. They also have photographs taken in the woods showing the party in hunting costume, the guide, his dogs and the dead deer." [We should like to know just how it was done. That photograph of the guide and dogs is suspicious.]

ONTARIO.—Dundas, Sept. 8.—Duck shooting began on Sept. 1, last Thursday. As usual there were more gunners in the marsh at daybreak than ducks. Some funny incidents are related, including several upsets into the rather solid wetness of the marsh. Two young Hamilton lawyers, who have many times been ducking in the marsh when ducks were more plentiful and their years fewer, spent the whole night on the banks of a pet pond to find when dawn broke that just eighteen guns were there to keep them company. Two ducks showed up before breakfast, but both got away.

THE LARGEST BLACK BASS.

GLENS FALLS, N. Y., Sept. 9.—*Editor Forest and Stream:* In your issue of Aug. 25 you publish a communication under the caption "The Largest Black Bass," signed by Mr. A. N. Cheney, of this place. Mr. Cheney refers to three large bass besides the Lake Ronkonkomo fish spoken of by you as the biggest, in your paper of Aug. 18. The claim made by Mr. Cheney is for a fish of 8¼lbs. weight. The files of FOREST AND STREAM contain record of one still larger than either under question, and I can vouch for the accuracy of the record. On page 91 of FOREST AND STREAM of Aug. 31, 1882, you will find the following: "Enormous Black Bass.—Glens Falls, N. Y., Aug. 25.—Landlord Pardo, of the American House, caught the champion black bass on the 24th. It was 23½in. long, 19in. girth, and weighed 8¾lbs. It was of the small-mouth species and was taken in Glen Lake, sometimes called Long Pond, three miles north of this place, with an 8oz. rod and fine tackle.—F. JOYNER."

Mr. Joyner is the well-known canoe builder of this village, and he was raised in the Adirondack region, and has legitimate claim to authority in fish matters, in which he takes great interest.

There is not a particle of doubt in my mind as to the truth of the weights given in the recent cases, but my fish was the largest by the record, and while the question is up the matter ought to be set right. GEO. PARDO.

TROUT AS CLIMBERS.

NEARLY every one who has been in the part of Coos county immediately north of the White Mountains, or has ridden on the Grand Trunk Railway between Gorham and Island Pond, must have noticed two peaks which stand out very conspicuously from the other mountains. They are nearly conical in appearance, and are so close together as to look from some points almost like one. They are quite destitute of vegetation for at least one-half of their height, and altogether present so striking an appearance that once seen they are not soon forgotten. These are Percy Peaks. At their eastern base lies Christian Lake, formerly North Pond. Under the new name it is the property of the Percy Summer Club, of which Geo. P. Rowell, of New York, and Hon. Osinon Ray, of Lancaster, N. H., are members.

Although so well known as these peaks are, very few people know that immediately north of them is one of the prettiest brooks in New England. This brook rises in Nash Ponds—three ponds which lie north of the Percy Peaks and ten or twelve miles from the settlements—high among the mountains, where they nestle in their sandy beds perfect gems of the forest. In these ponds monster trout used to live; and it was not uncommon for those who knew the way to go there and return the next day with all the trout they could bring, and not one of them a small fish, but ranging from ¾lb. to 5lbs.; and not once in a while did they go, but many times each summer, and winter too for that matter. Few knew the way, and so jealously was the secret guarded that people believed that the outlet ran under ground for a long way. But when the lumbermen went into that region, it was more fully explored and more people found their way thither, until their fame spread far and wide, and soon the larger trout, the pride of the pond, were gone, and not one was left to keep up the departing glory of those beautiful waters. With nets and setlines, spears and rendrock, in season and out of season, summer and winter, on the spawning bed or on the June rise, they were taken until now a trout that will weigh a pound is a rare fish in those waters. Small ones are there now just as plenty, and though an immense amount of fishing has been done there in the last ten years, still the stock is kept good.

As stated, these ponds are situated high above the surrounding country, and many hundred feet above the base of the Percy Peaks, and so there could be but one way for trout first to reach the waters. That way is through the outlet called Nash Pond Brook. This brook, after it leaves the pond runs through a swamp for a few miles, but at last reaches a spur of the peak and comes rushing and roaring down its side like any well-conducted trout brook; but before it can reach a quiet resting place again it has to go over ledges which would prove destructive to anything except water. After a race of a mile or more over and under rough granite boulders, sometimes out of sight but not of hearing, it comes to its first slide, which is down a smooth granite ledge about 75ft. long, and at an angle of 50 degrees, and then it becomes a rushing, noisy brook again, until it takes its last slide and plunge. This is near the foot of the peak, and is not far from the junction of Nash Pond Brook with Nash Stream. The ledge over which the water falls is of granite, and has been worn so smooth by the action of the water that no dirt can collect on it, and it is at all times of perfect color. The great volume of water which in the spring rushes down this brook has carried away all soil from each side of its center for a distance of 10 or 15ft., and has also worn these sides much smoother than they would otherwise have been. This ledge stands at an angle of about 40 degrees, and has a perfect face except that there is a small crack running diagonally across it about half way up, but this does not in the least break the descent of the water. The distance from the bottom to the top of this slide has been variously estimated at from 125ft. to 175ft., but I think that it cannot be more than 140 or 150ft. The water here as in the fall above is only a few inches deep —I should say not more than 6in.—and always runs in one channel or bed. So smooth does it look in its fall that one could almost imagine it was glass. At the bottom of the slide is a nearly level place some 15 or 20ft. long, which is strewn with rough and jagged boulders, among which the water rushes in perfect foam. But here it does not stop, for below is a pool of about 30 or 35ft. in diameter—perhaps it is a little longer one way—and into this the water falls with a plunge, clearing the steep wall by about 2ft. at the bottom; and there for a few moments it finds a chance to rest before it begins again its headlong rush down the mountain. This pool is quite deep, and in its shady nooks one can always find a few nice trout.

I will acknowledge that it does not seem possible that a fish could go up this brook, for in the first place they must leap up over a perpendicular fall of at least 6ft., only to find a mass of foam and seething water for a resting place before it begins its climb of at least 140ft. of swiftly moving water, only to find when that point is gained that another climb remains, which is scarcely less difficult than the first. But it is a fact that trout do go up and that quite frequently.

I have conversed with many fishermen who have fished that brook and have always asked them if they caught any between the falls, and in nearly every case the reply has been in the affirmative. I have caught them in the foaming water above the fall at the foot of the long slide, and after I had caught all I could my friend would catch some more that afternoon or the next day, and on one occasion I saw one jump over this fall and disappear in the foam above.

The nature of the brook between the two falls is such that trout would not select it as a spawning bed, and I do not think that it would be possible for the spawn to reach maturity there, and such being the case their ranks must have been supplied from below or there would soon be no fish to catch.

Within a few years a dam has been built at the outlet of the pond on this brook for the purpose of saving the water to help drive out the logs in the main stream, and it is the business of our man to go from the drive up to this dam, a distance of about five miles, and open the gates at such times as the water may be wanted. He has told me and others that when coming back after having raised the gates, he has repeatedly seen fish going up the long falls and hardly ever did they fail to reach the top.

It is claimed by those men whose business takes them

into the woods and on the streams during the time when fish are on the move that the trout will go up the long falls without trouble, but it is death for one to come down. Small fish called chub or shiners are often caught below the falls, but I never heard of any being caught above, which would go to prove that they are not as smart as the trout, and so not able to go up, and that if the trout had got into the pond by some other and easier way, the chub would have been there too. But it is impossible for fish to reach the pond by any other way, and so we must accept the fact that they took the way that nature intended.

I have yet to learn that there is any other fish in the world that can go up such small and broken streams as our brook trout, and all I can learn from salmon fishermen who have been up their streams, leads me to think that the sea trout will go further up the streams and over higher barriers than the salmon, and that after one gets up past the last salmon pool and has gone up and up, there he will find our *Salmo fontinalis* in all his glory.

This has been written with the hope that some one whose good fortune has been to go further into the woods and in less frequented places than I have, would give us in the columns of this paper such facts in regard to the ability of brook trout to climb falls as may have fallen under their observation. C. D. C.

NORTHUMBERLAND, N. H.

ALONG THE SUSQUEHANNA.

DURING the days of almost unbearable heat, while Sirius reigns and offices seem like furnace-heated ovens, and business cares are too heavy burdens to be borne, all lovers of the gentle art are to be congratulated who can leave behind, even for one brief day, all cares and perplexities and go a-fishing. Such was recently my happy lot, for, after days of pleasant anticipation, the time at last arrives and we are off for a day afloat upon our grand old Susquehanna.

My friend Sharpe is the ideal angling companion, and this is not the first outing we have enjoyed together. Living very near to nature, he loves the forest and stream and has a quick and appreciative eye for everything found therein; and

"Finds tongues in trees, books in the running brooks,
Sermons in stones, and good in everything."

Whether afield or afloat, his enjoyment is keen and satisfying, and ill luck or mishap never calls from him the first word of complaint.

An enjoyable ride of twelve miles bring us to the river at the straggling little village of Mehoopany, and we are "crossed" by the genial ferryman, ex-Fish Warden Joe Briggs, who sent in his resignation because the Legislature refused to appropriate money to pay honest, capable officers for faithful work in enforcing our fish laws. Is it economy to pay members of the Legislature $10 a day to enact laws that are rendered abortive by their refusing the means for enforcing them?

"Boys, you have come at just the right time; the bass are biting freely."

Joe had seen us before and guessed our errand at once. With such a report our spirits rose still higher. After the final preparations were completed for an early start on the morrow and a pleasant evening with friends, we seek our beds to dream of leaping bass and whirring reels.

With the early dawn we are astir, and not waiting for breakfast we soon reach our boat. Leaders are got into water, rods set up. The boat clears the beach, a few strokes of the oars and we feel the current of mid stream and float gently away. Past the depot with its confusion of lumber piles and empty cars, past the mouth of the creek that here comes roaring and tumbling over the bar to mingle its colored waters with the clear river, past a solitary boat at anchor containing a fisherman with a very high collar and an equally high hat, on through the long stretch of placid water until we pass under the wire of the lower ferry and hear the roar of the rapids under Maynard Hill. Crows are cawing along the water's edge as they breakfast upon the shellfish the falling waters have exposed. A kingfisher with jerky flight and shrill note crosses our wake and alights on a dead branch overlooking the water. A blue heron takes alarm at our approach, flaps awkwardly into the air and goes off to resume his wading at a safe distance. But just here my observations are interrupted by an electric communication from below. A slight motion of the wrist fixes the hook "where it will do the most good." The fight that follows is sharp and decisive and my claim of "first blood" is allowed as the bass goes into the fish box towing astern. Another "hopper" is placed on the hook and the boat quickens its pace as we approach the rapids. All thoughts of fish are banished for the present as we approach the rough roaring water and are carried onward with a speed and buoyancy that sets every nerve tingling. The rapids passed, we float along under Maynard Hill, where the rocks rise perpendicularly from the water to a height of more than one hundred feet. The remains of the old Horse Race dam now show in front. We pass through the wide break in the cribbing, turn sharp to the right and anchor under the wall of the old chute—now but a mass of decaying timbers, rusty spikes and disorderly stone. The lunch basket comes to the front and is voted the right thing at the right time. The crimson reflection on the sky over the hills to the eastward proclaims the rising sun. Out over Comey Flats smokes rising here and there show that the farmers are astir and anxious for the welfare of the wheat not yet secure in barn or stack. A train rumbles past with lights still burning, looking pale and lifeless in the morning light.

I fall to musing over the incidents I have read and the stories heard told connected with the scenes about us, but I am suddenly brought back to the present by a tug at the end of my line some 20ft. down in the dark waters beneath. The but half eaten biscuit is overboard in an instant. I strike gently and the fun begins. Something worth while this time by the way the reel spins. First up stream, then down he dashes; but the spring of the good rod each time brings him round and back toward the boat. Then again he dashes out across the current that comes through the break in the dam, and I lose 7ft. of line. But lancewood and oil silk prevail, and completely exhausted and conquered he is brought alongside and lifted tenderly into the boat, where he lies with quivering fins and withal a beauty. I feel a little inclined to exult over my capture, for Sharpe has not yet taken a fin, but he only responds "wait;" and I said no more, for I had fished with him often enough to know that he was very apt to "get there" before he reeled in his line at night. After an hour's fishing we are again afloat with twelve bass fanning the slatted box with their broad tails. We go ashore near the mouth of the Vosburg tunnel, an improvement of which the Lehigh Valley R. R. Co. may well be proud. Three-fourths of a mile in length, it saves rounding the "Neck," a distance of five miles. The work was talked of when the North Branch canal was built, and although engineers tested the rock and pronounced the undertaking feasible, it was abandoned and the canal built around. Sharpe, who is well acquainted with the locality, went through to within 200ft. of the end and returned with a pail of cold water that there flows from the broken rock.

Again we seek our boat, go dashing through some rough water and glide out upon the broad expanse that separates Grist Flats on our right, and the mountains along the Neck at our left.

Your entertaining correspondent W. M. Graydon will bear me out in the statement that this is one of the finest of the many grand mountains to be seen from the bosom of the river as it flows through Wyoming county. Rising almost perpendicular many hundred feet, its massive rocks and beetling crags partially hidden by the dark green of pine and hemlock, interspersed with the lighter shades of the deciduous trees, it stands, in its beauty and grandeur, a constant source of inspiration and delight to the quiet fisherman at its base or the canoeist floating on the peaceful bosom of the river. Borne gently on by the current, taking bass at short intervals, drinking in the beauty of river and mountain and the peaceful scenes, with an ever changing canopy of bright blue sky and fleecy clouds above, and pervaded by the same peace and quiet that broods over all, we enjoy it keenly.

Again we hear the roar of swift water and reel in our lines as we dash into Horse Race Rapids, the wildest water we had yet encountered. This passed we glide out upon deep, dark water under the mountain that now rises on our right with an island of considerable extent at the left, a part of which is under cultivation. Huge boulders that have rolled from the mountain above during the past ages here line the bottom of the river. Of every shape and in every conceivable position, they offer natural hiding places for the bass. This is our objective point; we throw over the anchor close by a huge boulder that projects some two feet above the water, and begin our fishing in earnest. And we have not the least reason to complain of the behavior of the fish. It is never long between bites, and their fighting weight is fully 16oz. to the pound.

Soon Sharpe strikes something heavy and a fighter as well. Some of its impetuous dashes threaten to wreck everything; but there is a cool hand on the butt and each emergency as it occurs is promptly met. I get a glimpse of the fish as it swirls the water near the boat and pronounce it a 4lb. bass. Finally it gathers all its remaining energy for a last effort, and with the butt in its face goes down under one of the many rocks beneath us. The sinker fastens in a cleft in the stone, and in a twinkling it is free, save of the hook and leader. Considerable maneuvering is necessary to loosen the sinker. This finally accomplished, Sharpe reels in his line, ties on another leader and hook, and resumes his fishing. He says very little about his loss; words won't reach the case. But soon his disappointment is forgotten in the excitement of a hand to fin encounter with another one, which ends disastrously for the bass; and it beats my best one by half a pound—consolation, indeed.

The sun had now reached its highest point; we land on the island, and Sharpe procures a pail of water from a well at a farmhouse just across on the mainland. I brew a pot of lemonade, and we enjoy our midday meal as fishermen are wont to do after a good morning's sport. At last our appetites are satisfied, and, throwing overboard numerous empty tin cans and paper sacks, we resume our fishing, and the afternoon sport is as good as during the morning hours.

So absorbed are we that we fail to notice the shower gathering in the west, and only give it heed as the rain in its first wild burst comes dashing down the river. No time to go ashore and seek shelter. Huddled close under an umbrella we watch the storm sweep down the river and against the mountains at the bend below. And although we are made to realize that we are getting wet, we accept it as a part of an angler's experience. Here my attention is called to a printed notice on a box of crackers in the lunch basket that is getting severely pelted by the rain. "Keep in a cool, dry place." Yes, Mr. Baker, we would gladly follow your instructions; only furnish the place and we will go along with the crackers.

The shower passed as quickly as it came; our clothing is soon dried by the warm rays of the sun, and we continue our sport until the lengthening shadows tell us it is time we were homeward bound. Sharpe removes his leader and ties on a fluted spoon. I rig a cast of flies. Heading the boat up stream I take the oars and settle down to a long steady pull against the current, while Sharpe attends to the rods, with spoon and flies trailing 50ft. astern. Whenever we encounter swift water we draw up the boat by means of a chain as we walk on the beach.

After passing Horse Race Rapids, a squall came sweeping up the river, kicking up waves that threatened to swamp our little craft; and while it lasts the bass are as full of life as the water. I try to control the boat with only indifferent success, while Sharpe has more than he can attend to with two rods. Two bass are quickly taken on the spool. Click, click, sounds the other reel. Grasping the butt he commences reeling in, when the two remaining flies are taken by two more bass. Three bass on a single leader is too much of a good thing with the boat rolling and pitching and the water boiling all around. A heavy lurch of the boat, the rod straightens and the line comes back minus the flies. With smooth water we might have saved them, but under the circumstances their escape was a foregone conclusion. The squall, like the shower, soon passed, and I pull steadily along, taking three more small bass as we go. We often hear the remark that it is not all of fishing to fish, I was fully convinced ere my four-mile pull was finished; and yet it was not the least of the many pleasant experiences of the day.

In the gloaming we swing in at the landing with forty-seven bass in our box. And better still, the memories of the very pleasant incidents connected with their capture that will long mark it as a red-letter day among our angling experiences. BON AMI.

AUBURN, Susquehanna County, Pa.

FLOATING FLY-FISHING.

OF late years there has been a new departure in angling, and thanks to the courtesy of Mr. R. B. Marston, editor of the *Fishing Gazette*, I have had an opportunity of learning how to fish with a dry fly. We started from London Bridge about six o'clock in the evening, and in about thirty minutes were landed at Mitcham Junction, whence a short walk brought us to the river Wandle, on which celebrated trout stream Mr. Marston has some private fishing. A clear and quiet brook, some 20ft. across, flowing gently seawards between grassy banks o'ershadowed here and there with willows or tall poplars such as we see in English water-colors. The river somewhat resembled in its characteristics that of Smithtown, Long Island; it was from 1 to 2ft. deep, the surface as smooth as a sheet of glass save here and there where the boil of a feeding trout started circling waves. On such water the old style of chuck and chance way of fishing with three flies would have been useless, and so the new method has taken shape.

The leader is three yards long and made of gut infinitely finer and longer than any I have seen in America. One very small fly, a wonderful imitation of a natural dun, is put on the end of the leader and the fisherman begins to swish his line to and fro above the water, walking slowly up stream to where he sees a trout feeding. Then he makes his cast, up stream, graduating his distance so that by holding the rod perfectly still the lure shall float over the nose of the feeding fish. The angler watches his fly and, when the fish makes for it, is ready to strike. The evening I was on the water there were very few duns floating down, and I was not accustomed to follow my fly in its course. We did take, however, some handsome trout (*Salmo fario*), one of half a pound and another of three-quarters; but as everything under 12in. goes back again to the water, we had no trout for supper, but enjoyed in place thereof some sole which hospitable Mr. McRae served us instead. This dry fly-fishing is very pretty and fascinating, there is quite a lot to it, you can and do fish it on perfectly still water, and once our anglers have tried it they will regard it as a real improvement on the old style.

Mr. Marston and I also exchanged tips on heaving the lead, he casting from the reel, Nottingham style. In this method the guides and reel are on the under side of the rod, which is slung very much as we do, but with two hands. Either the right hand is held above the reel and the left encircles the spool so that the run can be checked with the touch of the tip of the third finger, or else the left hand is above the reel and the right below it, the run being controlled by a touch of the fore finger. Mr. Marston is the happy owner of $30 worth of an American multiplier; some time ago he exhibited the same to a congregation of anglers and essayed to display its merits when fixed under the rod. Since then it has been a cherished plaything for the baby, who enjoyed seeing the wheels go round. I rigged up the minnow casting rod and reel that I won in the tournament, borrowed a couple of latch keys to serve as a sinker and let fly. In three seconds those keys were roosting 20ft. from the ground in a tree about 110ft. away. I wish you could have seen Mr. Marston's face when he saw the way that we folks cast. I rather think the baby won't have so much fun with that reel in the hereafter, for Mr. Marston picked the knack of it up very quickly and intends to do a little quiet practicing before he gets up another tournament.

GRAYDON JOHNSTON.

MAINE WATERS.

THE angling for the season is not yet all over, since the reports of the past few days are rather pleasing. At Moosehead Lake the fly-fishing is good. There are a number of Boston sportsmen there, as have already been mentioned in the FOREST AND STREAM. To that number may be added Mr. Steese, of the wool firm of Brown, Steese & Clark. Mr. Steese is a long-time patron of the rod and line. He has visited Moosehead in the fly-casting season many, many times. But he is one of those conscientious sportsmen who cares for no other fishing than with the fly. There is no season that suits him like the early autumn, or possibly the late summer. Mr. Steese will be followed this week by his business partner, Mr. Clark.

Mr. T. B. Stewart, of New York city, is just out with a better record than ever, though previously he has made some good scores in taking the Androscoggin trout with the fly. Mr. Stewart has visited the Upper Dam, Richardson Lake, nearly every season for a number of years, and almost always in the fly-fishiag season. He caught on Aug. 31, at the Upper Dam, near the Union Waterpower Co.'s works, twenty-one trout. The largest, a female, weighed 8½lbs. and measured 23in. in length. The next largest was a male, and weighed 6½lbs. and measured 22in. These are not the largest trout that have ever been taken at that point, but they are very large to be caught with the fly. These two trout were shown in Appleton & Litchfield's window on Saturday. They were beautiful specimens of the true brook trout, and they drew a crowd of the curious. The many sportsmen who have met Mr. Stewart at the Upper Dam on former seasons, will feel like congratulating him on his good success. Two sportsmen from Haverhill—I did not learn their names—took from the same waters about the same time 50lbs. each of trout, all that the law allows. They brought them out. I don't know that they are in the fresh fish business, but the taking of so many fish and taking them to the city would indicate such an occupation. Trout enough for the camp table is true angling; trout to send out by the 50lb. box is slaughter and taking and killing the sport that belongs to another.

The autumn crowd of sportsmen to the Maine waters bids fair to be large. The season has opened well in the direction of fish already taken. One first cause is probably the high pitch of water in nearly all of the Maine lakes. Again, the weather has been remarkably cool for several days in those northern regions, the ground being covered with frost on several mornings. The season has opened well, but will the fishing hold out through September? It is to be feared not. It is hardly possible that the supply can be sufficient, even under fishing no worse than that mentioned above. SPECIAL.

A RED SNAPPER (*Lutjanus blackfordii*) was caught off Long Branch, N. J., Sept. 7. This is far north for that fish to be found.

LOST ON A TROUT STREAM.

To those who never have "been there" it may seem a weakness to get lost upon a stream which flows past your door. But let them try my experience, and if they get out any better than I did I will own my stupidity. Mr. G. A. and self, after enjoying the hospitality of Mr. Mattison a few days, and the splendid fishing in Wilmurt Lake, in the North Woods, with the most excellent and satisfactory results, had a desire to try the father of all the northern trout streams, the West Canada Creek, and on the last day allowable for trout fishing took rather too late a start in the morning, having delayed from the limitations of one of Mrs. Stimson's delightful trout breakfasts (and who would not delay for such a reason?). A row of two miles in the stillwater above the Home brought us to the trail, which took us another half mile through the woods to the beginning of the rifts. Well, instead of proceeding to the head of the rifts and fishing down stream as we should have done, we could not resist wetting our lines at once. The stream was unusually low and the fishing was mostly done in the numerous pools and an occasional rift with more water than the average. Mr. A. was rather quicker than myself and managed to keep ahead, which I felt bound to reverse so as to get the first of some of the best pools, and finally succeeded in passing him. We had then proceeded up the stream some four miles or seven miles from the Home, and the sinking of the sun admonished us that it was time to turn. A. did so, but I thought there would be no harm in going up a quarter of a mile further so that we would be more apart upon our return.

The fishing was getting better and I flattered myself that I would overcome the lead A. had when we parted. At length I turned down stream, being convinced that there would be no more light than necessary to reach the boat. All the time I had not realized that on this creek with high mountains upon either side there is no twilight.

But I soon found out my error and was in darkness. Then I made good time for a mile, but the increasing darkness and the uncertain footing upon the slippery stones made my progress very slow and dangerous. So bad did it become I foolishly thought that any other walking would be an improvement, and I left the stream for the woods, first taking my bearings from the stars, which were quite clear and bright. I knew there was a trail in the woods, and thought I might find it, although those trails are not macadamized. But alas! those old woods do not allow the city tenderfoot to brave them with impunity. Once in them the darkness was total; and over fallen trees, briers, slough holes—oh dear, the memory of it is still dear. I did not count the number of times I fell, nor would the bruises upon my body, which remained for a month, account for the times I tumbled over logs or rolled down into the holes, where I was nearly smothered in mud. At this stage (I could just hear the water rushing over the stones in the creek) I concluded that I must give up the hope of finding the trail. Also that if I did find it no one could follow it; and therefore I worked my way back to the creek, which at length I found. But I was so nearly exhausted that I was compelled to sit upon a rock for fifteen minutes and rest.

Then again came the weary work of wading in the shallow water, among the millions of stones which varied from the size of a tenpin ball to that of a house. A half-mile of this was indeed discouraging, but it must be done. At length I came to an island, covered with wiry grass as high as my head. This island was about a quarter of a mile long, and I thought it better to flounder in the grass than feel my way over the stones. When well into it I found that I had encountered another hardship, for I could not take a step without falling, my feet being entangled in the grass as if there were a million fishlines to a rod laid there on purpose to trip me. The falls I had were not so heavy as in the woods; and I came to think it was the proper thing to do. Consequently with much deliberation and calculation I threw myself down the whole distance of the island, gaining at each fall about half my length, like the inch worm. Now my height being 5ft. 9in. and the distance ¼ mile, it is an easy mathematical problem to find how many times I fell.

Once out of this I solemnly promised myself that I would have nothing more to do with grass or woods that blessed night, and would have added no more wading among the stones, but that being the last resort, except making a bed of spruce boughs and camping for the night. But the thought that my friends would start out all the guides in the vicinity and that my wife was at that moment thinking that I was being made a meal of by some ferocious panther or bear roused me for one more effort. This brought me to a fallen tree across the creek, which I well remembered and I knew that I was close to the trail.

The temptation once more came to try the woods and I was deliberating whether I would or not, when I heard a faint call, "Yoo ho!" in the distance. I answered it with a hello which would have demolished any telephone office in the world and then I heard it returned so distinctly that there could be no mistake. And what blessed music it was. In a few moments I saw the lanterns and the party of three persons, headed by the brave Miss Gussie Pomeroy, a girl of nineteen who had left a warm comfortable parlor, and without thinking of the danger or darkness, came to my rescue. A year and a half has now passed since that time, but although words on paper are cold and no one that has not been lost in those primeval woods can appreciate their difficulties or dangers, I shall never cease to remember her kindness and courage.

My friend A. had managed to reach the fallen tree before it was yet quite dark and got home by the trail between 8 and 9 o'clock, but in an exceedingly dilapidated condition. He too had been over the stones and in the grass, and the soles of his shoes were flopping like the crown of a dilapidated hat in a nor'wester, but having had some light he did not suffer as I did.

We had fair luck fishing. He having taken about 60 trout ranging from ¼ to ½lb. and myself about 40 of the same size.

Although I was very stiff and lame the next morning, on the advice of Mr. Stimson I started out again with him and A. for Pine Lake, and I can testify the best medicine for a bruised and exhausted city chap is to take another tramp the next morning.

The long tramp to the lake quite limbered me up so that I enjoyed the magnificent sport of taking four large salmon trout as well as the rest of them.

In October, I went to Wilmurt Lake again and had two days of deer hunting. One day was all for naught, although it is worth going the distance for the pleasure of even carrying a rifle a few miles in those woods and in that pure bracing atmosphere. But the next day we were more fortunate. Mr. Stimson very handsomely placed his bullet back of the shoulder of a fine fat deer. There were many shot at and missed by even professional marksmen that season, but the deer that gets away from Stimson's bullet would be as well entitled to boast as the Mingo from the long rifle of "Hawkeye." G. T. B.

HOOKS.

Editor Forest and Stream:

I am well aware that the Sproat hook is perhaps the most used by experts, but I must say that my experience has not made me its devotee. I keep a record of all catches, sizes, weights and outlines of the largest, and also the kind of hooks used. In my hand the Sproat does not come up to other hooks in hooking qualities at least. I file all my hooks when dull, and it certainly helps a Sproat hook very much. The Limerick I regard as about as good an all round hook as there is made, taking into account everything. Its hooking qualities when sharp are first-class, though in my opinion not up to Carlisle.

One great fault I find with most hooks is the manner in which the gut is bound to the shank. After being in the water for say about four hours fishing, most snell will, when the hook comes in contact with a snag, slip from the binding, leaving the hook in the snag.

The Carlisle hook, though generally made of too fine material and very liable to break at the bend, I regard as the best and surest hooker on the list. It has some faults, but I think that a Carlisle improved as follows would make a perfect hook. First, to be made of heavier material; second, to have a shorter bend from the turn in the shank to the point. Both of these would remedy its worst fault, that of breaking at the bend. Two of its best features are its unusual sharpness and the twist in the bend, enabling the hook to find a lodgment in the side of the head and through the gills rather than in the upper lip where most hooks catch. Other hooks have these twists but not to such a degree. Six weeks ago I received from Mr. T. H. Chubb, of Post Mills Village, Vt., some Carlisle hooks which, barring the brittleness which all Carlisle hooks have were the best I ever had, and I have had hand-forged imported. The gut was superb, being clear, well drawn and very firmly fastened to the shank. I did not have one slip out. I generally use a Limerick for a part of my fishing, the rougher part, but when I come to a nice hole I change the Limerick for a Carlisle to make sure of the big ones. I very seldom, almost never, lose a fish that bites at worm with a Carlisle hook through it.

I have much faith also in the Sneck bend, and would like to enlarge upon its virtues, but for fear of taking up space which could be employed to better advantage by papers of more merit I will close.

I should very much like to read other anglers' experience with Kirby and O'Shaughnessy hooks.

PEMIGEWASSET.

PIKE, PICKEREL, MUSCALONGE.

Editor Forest and Stream:

I would like to know whether there is any difference between the pike and pickerel. I have a book describing the above named fish, also the muscalonge, but I am unable to learn from it whether pike and pickerel are or are not the same fish; in fact, am left in doubt whether muscalonge are not pickerel of a larger size.

Some years ago I spent a few weeks at Clayton, this State, and, of course, fished among the Thousand Islands of the St. Lawrence. Some bass were caught, the first one by my wife, who was with me, and who bragged considerably about it; and a good many pickerel were caught. The bass were cooked by our guide, and eaten for lunch, but I never knew what became of the pickerel. I never saw any of them on the hotel table. I supposed they were not thought good enough. While we were at Clayton, Gen. Davis, of New York, brought in one day a muscalonge weighing 42lbs. It was sent to Saratoga, but whether for show or to be eaten I did not learn. Last summer I was at Blue Mountain Lake, Hamilton county, and trout and bass fishing being dull, I made a trip to Indian Lake, ten miles distant, where I had been told pickerel were so plenty that they covered one another. I did not find that story to hold good, but I caught a few pretty large pickerel which I carried back to Blue Mountain Lake and had them cooked, but it was impossible to eat them.

In Lake Charlotte, a small and pretty lake in Columbia county, N. Y., pickerel are caught that are very fine eating. They are not as large as those in the St. Lawrence or those in Indian Lake, but they appear to me exactly the same fish. I would like to know whether there is any difference. S. P. H.

[The muscalonge (*Esox nobilior*), the pike (*Esox lucius*), and the pickerel (*Esox reticulatus*) all belong to the *Esocidæ* or pike family. The muscalonge is the largest and may be readily distinguished from the pike by these two characteristics: The lower half of the cheek of the muscalonge is scaleless and the anterior half of its lower jaw is toothless. In the pike the cheek is entirely covered with scales and the lower jaw is filled with teeth. The three fishes are colored as follows: Muscalonge, greenish or brownish gray with circular brown spots darker than the body color. Pike, dark green or gray, with oblong light spots, sometimes white. Pickerel, green or brown, covered with a network of dark lines.]

SEA BASS.—New Bedford, Mass., Sept. 7.—Bass fishing continues to be good in Westport River, and good catches are made almost every day by gentlemen who do not tire of the sport. Mr. Martin, of Washington, captured a 38-pounder the first of last week, while Henry Grinnell, of New York, took two big ones last week weighing respectively 32 and 27lbs. Every member of the Cuttyhunk Club went to the island on the steam yacht Aida yesterday. Mr. McGrouty of the club recently caught a 28 and also a 14-pound bass.

NEW LISBON, Ill.—Our river and bay abounds in black bass, pike, wall-eyed pike, mukalonge, jack-salmon, white and striped bass, croppies or goggle-eyes, sunfish and channel catfish, besides many other kinds, which take the bait or spoon hook of the faithful angler.—G. R. M.

CAUGHT WITH A WORM.—A Graham, Me., correspondent, L. McL., of Graham, Me., sends us this story of the Hon. Thomas Amory Deblois and John Whyley, in his time the leading gunsmith of Portland: Mr. Whyley used to repair Mr. Deblois's fishing and shooting tackle, etc., and they knew each other very well. I always suspected, (although I have no real reason therefore, and hope he'll not sue me for libel for stating it) that Mr. Whyley must have been guilty of poaching on English premises of fish and fowl before he emigrated. However that may be, he could "tie" a fly and "cast" one with most men. But he knew every snipe run, woodcock cover and trout brook within ten miles of Portland, and some that were further off. On one of his early spring trout-fishing expeditions, he had caught (as usual) a fine string of fish. He sent them up to Mr. Deblois as a present. Mr. Deblois invited his friends and had the trout served in proper style. The next day he called into Mr. Whyley's place and thanked him politely, if somewhat formally, as usual with him, for his present of magnificent fish. The interview was very pleasant to both; but as Mr. Deblois turned to leave him he said: "By the way, Mr. Whyley, would you mind telling me with what fly you killed those trout?" "Fly be d—d," responded Whyley, "don't you know that brook trout won't take a fly the 1st of April?" "Caught them with a worm!" shouted Deblois. "Caught them with a worm! and did you dare to send trout caught with a worm to me!" and started off in a rage.

NEPIGON TROUT.—Mr. W. F. Whitcher has written and the Passenger Department of the Canadian Pacific Railway publishes a pamphlet descriptive of Nepigon trout fishing, and giving much needed information about getting to the river and what to do after one is there.

Fisheulture.

CANADIAN FISHERIES DEPARTMENT.

WE have the annual report of the Department of Fisheries of the Dominion of Canada for the year 1886. The report is, as usual, voluminous and instructive.

Under the head of "Produce of the Fisheries," we learn that with the exception of Prince Edward Island, where a decrease of over $150,000 is noticeable in the value of lobsters alone, it is satisfactory to note that this great source of wealth is in a flourishing condition.

The following figures represent the total value of the fisheries of the Dominion of Canada for the year 1886:

Nova Scotia	$8,415,361
New Brunswick	4,180,227
Quebec	1,741,382
Prince Edward Island	1,141,991
British Columbia	1,577,348
Ontario	1,435,998
Manitoba and Northwest Territories	186,979
Total	$18,679,288

This is exclusive of the quantity consumed by the Indian population in British Columbia estimated at 25,000,000 pounds, and also of the total yield of Manitoba and the Northwest Territories, of which only approximate data are at present available, which would increase the total value to fully $22,000,000.

For Nova Scotia the yield of the fisheries shows an increased value of $131,438, although a slight falling off occurred in salmon fishing. This industry is in a healthy condition, and gives promise of better results. In New Brunswick the returns of the year's catch show an increase of about $175,000. The improvement in the catch of salmon, which marked the previous year's returns, was not sustained. The statistics of the Province of Prince Edward Island show a deficiency as compared with last year of $151,438, there being a falling off of nearly one million of pounds in the item of lobsters. The catch of mackerel was very fair, exceeding that of last year by about 5,300 barrels.

An increase of 5,000lbs. is also noticeable in the oyster fisheries. In the Province of Quebec the returns show an increase of $21,922, in spite of a heavy falling off in the value of fish oils. Seal fishing improved considerably, the number of skins being 28,226 in 1886 against 9,195 the previous year. Salmon show a slight falling off. In lobsters there is an increase of 77,225lbs., and mackerel fishing was a total failure. It is difficult to compute the value of the fisheries of British Columbia, as the amount consumed by the Indians must be estimated; but it is supposed that there was an increase of $449,310. In Manitoba and the Northwest Territories the value of the fisheries is given at $186,979, the most important item of production being whitefish. In Ontario there has been a steady improvement and an abundant yield during the present year. Their general condition and increasing productiveness are most satisfactory. In several instances the value has nearly doubled that of previous seasons. These satisfactory results are justly ascribed in a great measure to the excellent fishery laws enacted by the Dominion Parliament.

The fishery laws of the Dominion are given with a table of close season for 1887, followed by a synopsis of the fishery laws. Five new fishways on the Rogers model were built on the following streams in the Province of Nova Scotia during 1886: La Have, Gold, Nine Mile, St. Mary and Sherbrook.

There are twelve hatcheries under the control of the Dominion Government located as follows: Ontario—Newcastle, Sandwich. Quebec—Magog, Tadoussac, Gaspé, Restigouche. New Brunswick—Miramichi, St. John River. Nova Scotia—Bedford, Sydney. Prince Edward Island—Dunk River. British Columbia—Fraser River.

No new hatcheries were built during the past year, but considerable repairs were made in the hatcheries at Sydney, Dunk River, St. John River and Fraser River, and all are now in good working order.

The total number of young fish of various kinds hatched at, and distributed from, the several hatcheries of the Dominion during the season of 1886, from the crop of 1885, amounted to 76,724,000, and the total quantity of ova laid down in all the hatcheries during the fall of 1886 was 93,224,900.

The kinds of fish at present hatched out in these hatcheries include the Atlantic and Pacific salmon, the whitefish and salmon-trout of the great lakes of Ontario, the pickerel (*doré*) and the speckled or brook trout.

A list of the fishery officers of the Dominion of Canada occupies nearly twenty-three pages. It includes the name, district, post office, rank and salary, and is followed by a detailed statement of expenditures on account of the fisheries and fishing bounty claims received for the year 1885.

NEW YORK CITY, May, 1887.

The U. S. Cartridge Co., Lowell, Mass.:

GENTLEMEN—I wish to thank you for the very excellent shell you are putting on the market. I refer to the "Climax." *I swear by it*, not at it, as I have had to do with other makes. It has given me unqualified satisfaction ever since I first began to use it, and that is since its introduction. Don't allow it to deteriorate, and sportsmen will call you "blessed." Very truly yours,

—*Adv.* (Signed) C. W. CUSHIER.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

FIXTURES.

DOG SHOWS.

Sept. 13 to 16.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead. Secretary; Chas. Weil, Superintendent.

Sept. 20 to 23.—Fourth Show of the New Jersey Kennel Club, Waverly, N. J. Percy C. Ohl, Secretary, 44 Broadway, N. Y.

Sept. 20 to 23.—Wisconsin Kennel Club's Annual Show, Milwaukee, Wis. A. M. Grau. Secretary, 552 East Water street.

Sept. 27 to 30.—Annual Show of the Southern Ohio Fair Association, at Dayton, O. M. A. Nipgen, Secretary.

Oct. 4 to 7.—Fifth Annual Dog Show of the Danbury Agricultural Society, Danbury, Conn. B. C. Lynes, Secretary.

Oct. 12 and 13.—Third Annual Show of the Stafford Kennel Club, Stafford Springs, Conn. R. S. Hicks, Secretary.

Feb. 21 to 24.—Twelfth Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Oct. 17 to 22.—Second Annual Meeting of the American Coursing Club, at Great Bend, Kan. G. I. Royce, Secretary, Topeka, Kan.

Oct. 31.—First Annual Field Trials of the Indiana Kennel Club at Bicknel, Ind. Open to dogs owned in Indiana. P. T. Madison, Secretary, Lock Box 4, Indianapolis, Ind.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

Jan. 10, 1888.—Second Annual Field Trials of the Texas Field Trials Club, at Marshall, Tex. W. L. Thomas, Secretary, Marshall, Tex.

Jan. 16.—Fifth Annual Field Trials of the Pacific Coast Field Trial Club, near Kingsburgh, Cal. N. P. Shelden, Secretary, 320 Sansome street, San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5296.**

BEAUFORT—PATTI M.

Editor Forest and Stream:

The old saying, "save me from my friends," must in the case of Mr. C. M. Munhall be rendered "save me from my pen," for it is hard to conceive a more erroneous and illogical argument than that advanced in your last issue signed by the owner of Patti M.

Mr. Munhall starts off by saying that the American Kennel Club has placed itself on record as upholding a wrong act and a violation of the A. K. C. rules, implying that such was the effect of its original action in supporting Mr. Peshall's decision that Mr. Mason was entitled to the $50 special awarded to Beaufort at the Waverly show of 1886. That is what the case amounts to, for the last act in the matter is simply a duplication of the initial resolution.

In support of his position Mr. Munhall says:

> In presenting my protest I claimed that as Beaufort was entered not for competition, he forfeited all rights to compete for any prize over which the show had any control, and cited Rule 6 of the A. K. C., which makes it necessary for a dog to compete in regular class in order to compete for specials. The conditions attached to a special prize by the donor, when they conflict with the rules, cannot be carried out if objection is made by any exhibitor interested.

If Mr. Munhall had given Rule 6, the error, we will call it so, in his quotation of the nature of that rule would have been seen at once. In order to show this I will give the rule, which is as follows:

> 6. Dogs to be eligible for special prizes must in all cases be *entered* in their regular classes, and no dog eligible for special prizes can be withdrawn from competition, unless it has been stated on entry blanks, "Will not compete for special prizes."

The substitution of the word "compete" for "enter" (italicised by me in the rule) is too conspicuous to have been overlooked by any person whose sole object would be the rectifying of a wrong. There is a very decided and important difference between the mere entering a dog and its being a competitor in the open clsss. Mr. Munhall will acknowledge that dogs are occasionally entered "To compete only for specials," and according to his argument it is illegal to do so, whereas it is no such thing. Mr. Munhall will have to amend his claim if his case is based upon Rule 6, for it will not support him in any particular; indeed, it is an argument against him so far as Beaufort is concerned.

With regard to the final sentence of Mr. Munhall's claim, quoted above, he is right in this sense, that if a special is offered the conditions of which are not in accordance with the rules, it cannot be carried out. Not, however, as he would have it, "if objection is made by any exhibitor interested." It lapses through illegality. Now, Mr. Munhall would have us believe that the terms of the special were contrary to the A. K. C. rules. For the sake of argument. I will admit that and then ask Mr. Munhall what is his standing in the case. If it is impossible for Mr. Mason to win a special because the terms of that special are illegal, it will occur to the man of ordinary understanding that it would be equally impossible for Patti M. to win it. In other words, that the special was void and could not be put in competition. Not that it was illegal for Mr. Mason's dog, but perfectly proper for Mr. Munhall's to win such a special. When we find, however, that Mr. Munhall desires to provide one sauce for the gander and the other for the goose and supplements it by a demand for $50, which he never won and never can have awarded to him, his argument has too much of a filthy lucre attachment to it to carry conviction for the searcher after truth and into motives.

Mr. Munhall then proceeds to a discussion of the secretary's power to vote on a proxy and quotes a portion of Art IV. of the Constitution, but let me give it in full:

> Art. IV. The officers of the association shall be a president, first vice-president, second vice-president, secretary, treasurer, and an executive committee, consisting of one delegate for each club members of this association. The president, vice-presidents, secretary and treasurer shall be elected annually, by ballot, by the delegated members of the association. Officers of the American Kennel Club shall not be privileged to vote upon business before the executive committee unless regularly elected delegates from their clubs, except the president, who shall have the casting vote in case of a tie.

In connection with this let me also quote from Art. III. as follows:

> A person to be eligible to act as a delegate or proxy for a club or association, whose regularly elected member or representative is absent, must be a member of a club, one of the members of the association, but in no case shall any delegate act as proxy for more than one other member of this organization.

Mr. Munhall could not quote Rule 6 because it would not suit his argument, which was that the dog had to compete whereas he had only to be entered, and entering implies for exhibition or competition. Now he gives a bit of the rule which supports his view and leaves out the context which qualifies it completely. His extract is the last sentence of Art. IV.

Let us look at the object of that rule, and see how quickly Mr. Munhall's second row of bricks will come down with a run. The officers of the association are not to be allowed to vote unless they are delegates from their club. It is easy to see the reason for that. Each club that had an officer would have two votes if the officers had a vote, therefore to provide against any club having an advantage only delegates had the power of voting. If the secretary had represented his club he would have been allowed to vote, not as secretary, but as delegate, and if a person has the right to act as a delegate he has an equal right to hold the proxy of a delegate. Again, the Pittsburg club could appoint the secretary to act as its delegate although not a member of its club, and Article III., which gives that power, places the proxy holder on an equal footing with the delegate. Mr. Munhall in his excess of virtue is seeking to deprive his allies from the Allegheny of the right they have under the constitution to be represented by a member of an associate club. He is caught between the bases, and I don't think he can slide good enough to make the bag this time. And even if he does evade the ball, this time the umpire will lay him out cold on this statement, "I take issue with Mr. Peshall as to his interpretations of Article IV. It is plain English, and clearly says that an officer of the A. K. C. cannot vote the proxy of a club of which he is not a member." Mr. Munhall is occasionally right, and he is so when he says Article IV. is plain English. It is plain English and it says exactly the reverse what Mr. Munhall would have us believe. I guess Mr. Munhall must walk to the bench, and not being on the home nine will have to sit on the sunny side.

Falling back upon General W. B. Shattuc as a support is the one gleam of humor in Mr. Munhall's communication. But even he does not support Mr. Munhall, for he supposes that Beaufort was not entered at the show, and then declares that Mr. Munhall is correct, skillfully providing a retreat by saying that "there are some parliamentary questions" which he has not time to review. With regard to General Shattuc's assertion that Mr. Munhall had the right to transfer the Cincinnati proxy he will find himself in a decided minority under any parliamentary system.

Unfortunate President Smith does not escape even Mr. Munhall's censure when he says the president was wrong in accepting the secretary's motion when he was neither a delegate nor proxy holder. Thank goodness the Smith regime is at an end, and brighter days are in store, I hope, for the A. K. C.

Respecting Mr. Munhall's assertion that Mr. Peshall "has voted on all occasions to support his own decision" we will have to give the owner of Patti M. credit for ignorance as to Mr. Peshall's action on the occasion of the first vote of the A. K. C. Mr. Peshall neither used his own vote nor his New Haven Kennel Club proxy.

The littleness of Mr. Munhall in the whole business never appeared to my mind so contemptibly small as when he winds up with the assertion that "Mr. Mason compromised himself as one of the judges by taking advantage of the absence of the dog which was known could win, and entered his dog for the prize and won." This, like his accusation that Mr. Peshall "was party to a scheme for a certain dog to win the sweepstakes, which was known to him could be done under the gentleman who was to judge." Losing that $50 must have been a bitter pill when, beginning with deceptively misquoting rules and making extracts to suit from others, Mr. Munhall winds up with misstatements and mud slinging.

JAMES WATSON.

Editor Forest and Stream:

I can safely say that after Mr. Munhall had judged Patti M., awarded her the sweepstakes and applied to the Jersey club for the "rocks," it was pretty generally supposed that his unequalled impudence had reached a limit. But such does not appear to have been the case and he again blossoms out, this time in the startling role of a superhuman creature possessed of the power to unravel the thoughts and intentions of men. Mr. Munhall says, "Mr. Mason saw his opportunity to win $50, took advantage of the Graphic Kennels' absence, and sent Beaufort into the ring, which he would not have done if Revel III. had been there. He explained his action by saying that 'he needed the money.'"

Who told Mr. C. M. Munhall what I would or would not have done had the Graphic Kennels entered their dogs, and who told him that I "explained my actions"? These and the like untrustworthy statement emanating from an individual who during a period of twelve months has been mourning the loss of a paltry $5 bill, may or may not be deserving of notice, but by your kindness I will give the facts in the case:

Out of courtesy to the N. J. K. C. for whom I had the honor of being appointed judge of many classes, I entered my champion pointer dog Beaufort "not for competition." Not many days before the show came off a gentleman prominently connected with the club informed me that a sweepstakes, with $50 added money, would be made for pointers, with a view of bringing together the best dogs in the country. The prize was to be open to "all comers" and the Graphic Kennels' dogs would compete for it, although they were not entered for competition in the regular classes. It was to be a grand gathering of the cracks, and my informant hoped to see Beaufort at the head of affairs. I did not hesitate a moment, but assured him that Beaufort would compete for the prize. I have never been and never shall be satisfied with Mr. Davidson's decision in favor of Revel III. over Beaufort, and that is the main reason why I wished to have the dogs rejudged for the sweepstakes, and why I was so anxious to have them meet again for the gold medal at Boston.

Mr. Davidson placed Beaufort over Graphic and then hurriedly put Revel III. over Beaufort. I am quite sure that a careful examination of Graphic and Revel III. would result in victory for the former, and as Mr. Davidson has never shown himself afraid to right a wrong I have always felt that if ever Beau and Revel III. should meet again under his judgment my dog would win. The first time I saw Beaufort (at Washington, 1883). I said he was the grandest dog I had ever seen with the one exception of Wags. I backed up my opinion by paying for him the highest price ever offered by an English breeder of pointers, and there is all the proof in the world that my judgment has been indorsed, not only by the best judges, but by every independent sportsman's paper in the country. Why then should I refuse to exhibit such a dog? Have I ever refused to exhibit him in competition with Revel III. or any other dog? Never when there has been an honest man in the ring. Mr. Munhall's stupid statement that I "explained my action" answers itself. There being nothing to explain no explanation was given or asked. A prize "open to all comers" was offered for competition. Beaufort, the champion pointer, being one of the "all comers" and eligible for competition, did compete, did win, and his owner did have the pleasure of pocketing five big Munhall dollar bills, hence all these tears.

The erratic genius who conceived the idea that I did not enter my dog until just before the time of closing the entry book in order that the owners of third-rate dogs might be made to believe that they could, if they put up their money, win a prize of greater value than their exhibits, must have written his report on the desk of a Newark bar-room. No sporting paper in its sober senses would question a man's right to enter his horse or dog for a stake at any time he thinks fit, so long as he conforms to the rules, which I most certainly did. No, it was not to catch Mr. Munhall's five dollar bill—the bill with more cents to the dollar in it than any I have ever seen or heard of—that Beaufort was entered after Mr. Munhall had put up his money on a "sure thing." The delay, if there was any, was simply owing to the fact that I did not leave New York until after 9 o'clock; entries were to close at 10. When I arrived at the show the secretary, whose business it was to receive entries, was not in his office, and I had to wait until he returned. Mr. Wilmerding can bear me out in this statement.

Dog show secretaries and other officials should not be permitted to divulge the names of dogs entered for competition. What is a sweepstakes worth when the owners of second and third-rate dogs have been told before making their entries which dogs have been entered. The sweepstakes dwindles down to the added money with one or perhaps two entries.

This is obviously unfair to the owners of good dogs. It is unwise for other reasons. Award a valuable prize to an indifferent specimen and you are certain to mislead somebody. You may retard progress, and you may even permanently injure a breed which should be jealously guarded against undesirable crosses. The mischief that was wrought when that miserable apology for a pointer—Meteor—was given first prize at prominent shows may never be fully realized by the present generation of sportsmen, but it has taught a practical lesson. We want no more of that sort of thing.

It seems to me that a valuable prize open for competition to all pointers in this country should be awarded to a typical dog or be withheld, and on no account should an owner be permitted to judge his dog. In attempting the disgraceful proceedings of 1884 Mr. C. M. Munhall is playing a bold game—a game that will assuredly bring him to grief. Outside of the question of Beaufort's eligibility, what earthly right had Mr. Munhall to lay claim to the sweepstakes? The judge was John Davidson, not C. M. Munhall, and it is just possible that Mr. John Davidson is far too good a judge to send Patti M. forth as a typical specimen when he knows for a fact that the Graphic Kennels alone have in their kennels nearly a dozen better bitches than she.

Mr. Munhall's conduct from the opening of this case has not been such as is likely to give anybody confidence in him or his methods. He started out by circulating the very plausible report that he didn't want any money; it was principle, not pounds, he was working for. The A. K. C. received his compliments with winks and nods, hailed him "a jolly good fellow," and availing itself of the opportunity to get a whack at Mason, pronounced itself a consummate ass. Principle be hanged, said Munhall as soon as he saw a chance of getting dollars, and then he judged his own dog, placed her over Nick of Naso, and impudently requested payment of the prize. Perhaps he may get it.

CHARLES H. MASON.

THE FOX-TERRIER SHOW.

THE second annual show of the American Fox-Terrier Club, held at Newport last week, was in some respects an improvement upon its predecessor. The average quality of the aged classes was better, and the puppies as a class were a long way ahead of those of last year. This is very gratifying to lovers of the breed, and speaks well for the usefulness of the club, which we trust will continue the good work until American-bred fox-terriers are able to hold their own in any company. It is to be hoped, however, that future exhibitions of the club will be better supported than have been the two held at Newport. It has been clearly demonstrated that "Providence Plantations" are wofully behind the times in all that pertains to that advanced civilization indicated by a love for "man's best friend," and the Fox-Terrier Club have shaken the dust of the benighted place from their shoes, and the "city by the sea" is left to its idols. They who put their trust in princes generally come to grief is a wise old saying singularly appropriate to the situation at Newport. Let us all unite in the earnest hope that the missionary work of the Fox-Terrier Club will yet bear fruit, and that the inhabitants of the beautiful city will soon arise as one man and go and buy a dog. A live dog is better than a dead "lion."

The dogs were benched and fed by Spratts Patent in their usual tasty and careful manner, with John Reid as superintendent. Dr. H. C. Glover acted as veterinarian. Mr. Fred Hoey, the secretary of the club, well known as an enthusiastic fancier of the breed, very acceptably performed the duties of judge, and succeeded in giving general satisfaction. He made few mistakes and was evidently at home with the dogs. Four of his dogs were on exhibition, Valet, Venetian, Pluck and Regent Virtue, the latter a recent importation. She is of good stamp with plenty of bone, not quite clean enough below the eyes and she might carry her ears better. Mr. Hoey informed us that he has just bought, by cable, of Mr. A. H. Clarke, of Nottingham, England, the dog Reckon; he was whelped Dec. 25, 1885, and is by the well known Reckoner and out of Mr. Belmont's Rachel. Reckon has done a lot of winning in England and will no doubt prove a valuable acquisition to his owner's kennel. The show was a successful one except financially. We understand that next year the show will be held in New York or the immediate vicinity, when it is to be hoped that it will meet with a generous support.

There were three entries in the champion class for smooth dogs. Lucifer, shown a trifle thin, but looking well, had an easy win, Splauger coming second. He was in better form than we have ever seen him. Belgrave Primrose was badly off in coat, and was unnoticed. In the corresponding bitch class four faced the judge. Richmond Olive won easily. She was shown too heavy and her coat was very scant. Mr. Thayer should retire her from the show bench, as she is not in condition to maintain her position much longer, and it seems a pity to see the grand old bitch take second place on account of the infirmities of age. Cornwall Duchess and Marguerite had quite a struggle for second place, Duchess finally winning, the judge stating that her better size pulled her through. Both are under size, Duchess having a trifle the best of it in this respect; Marguerite, however, is the better bitch, and should have beaten her; she has more bone and substance and shows more quality, and is much the best mover. Lyra, the other entry, except for her scars, was looking well.

There were seventeen entries in the open dog class, with Shameless Mixture, Resolute, Regent Vox and Little Swell absent. Raby Mixer, looking better than we have seen him, had an easy win over Bacchanal, shown a trifle thin, but hard and good, and much better in coat than when we saw him last. Earl Leycester made a good third, although he was not in good coat. Luke, not in blooming condition, was fourth. Reserve went to The Warren Spider, a very nice-bodied dog, with capital legs and feet. He is somewhat heavy and plain in head, has too much leather in his ears, and is a trifle wide in front. Raby Jack was vhc. He was looking well, but would not show up or he might have done better. Warren Swagger, hc., is a nicely made dog, with a plain head and too soft in coat. Beverwyck Tippler, c., is too big. Trig, unnoticed, won the special for the best dog exhibited by a lady. He is a fairly well-made dog, but lacks character.

In the bitch class first went to Mr. Belmont's recent importation Rachel, fresh from her recent victories in England, where she beat her sire, champion Result, said by good authority to be the best fox-terrier in England. Although she is a terrier and a nice one with lots of quality, she could

not get away with Lucifer for the special. She is a bit light in muzzle, fairly good in head with nice ears that are not properly carried. She is also a trifle wide in front and in consequence does not stand quite straight on her forelegs; take her all in all, however, she is a very hard one to beat. Richmond Dazzle, looking well, made a very good second. Third went to Verdict, also in good form, Warren Saucy winning fourth place. Warren Jingle, reserve, is a nice young bitch with beautiful outline, a good head and body and stands straight on her legs, her ears are badly carried, she lacks bone and is a trifle too long in loin. Richmond Myrtle, vhc., was in good condition, as was Gretchen, also vhc. Meersbrook Nan, hc., has not improved. Warren Spangle, also hc., is off in head and does not stand straight in front.

The dog puppies were an excellent lot, showing a great improvement over anything before seen in this country. Sentinel, the winner, is very good in body and legs, and stands straight on his pins. He is rather plain in head, heavy in ears, and might be better in coat and feet. The Warren Spider, second, won the reserve card in the open dog class. He was second at New York last May. Third went to Sly Mixture, a nice dog with rather heavy ears. Suffolk Trap, reserve, is too long cast and has heavy ears, which are badly carried. Warren Swagger, vhc., was hc. in the open dog class, Raby Bounce, hc., would not have disgraced another letter. He is fair in head and body, with plenty of bone, and is straight on his legs. Rustic, c., would have been higher were he straight in front. Dandy Mixture, also c., is quite a fair dog with heavy ears. Two or three others in the class will make show dogs when their legs get straight.

The bitches were not so good as the dogs. Warren Jingle, reserve, in the bitch class, had no trouble in securing first from Fraulein Mixture, a nicely made one, but too small. Third went to Beverwyck Nellie. She has a fair head, with badly carried ears, she is also slack in back and rather weak in loin. No commendations were bestowed although Clover Jilt and Rustic Beauty are both very pretty, but too young and small to show. If Jill gets straight in her legs she will do to show again.

Only two of the six entries in the wire-haired classes put in an appearance, Laddie and Meg, both well known. They were given first in their respective classes.

The veteran class brought out four. Mixture, looking well, scored an easy win. Old Royal, also looking very well for his twelve years, made a good second. Venom III. deserved a card for her gamy appearance. Jeopardy, the remaining entry, was not in good condition. All of those that were noticed in the novice class were also winners in other classes and have been already noticed.

SPECIAL PRIZES.

Mr. Thayer captured first in the stud dog stakes with Luke and Fraulein Mixture, the Messrs. Rutherfurd coming second with The Warren Spider and Warren Jingle. The battle for the challenge cup was the most important event of the show. The contest soon narrowed down to Lucifer and Rachel. After a long and careful examination the judge ordered them turned loose in the ring and with a brief comparison of their action he handed the coveted ribbon to Lucifer. He moves much the better of the two and beats the bitch in character, front and coat, while Rachel beats him behind and shows the most quality. Rachel was an easy winner of the cups for the best in the open and novice classes. Mr. Belmont showed a rare good team for the best exhibit of four in Lucifer, Bacchanal, Sentinel and Rachel, and easily captured the prize. Lucifer and Rachel also won the cup for the best brace, dog and bitch, and Lucifer won the prizes for the best in the champion classes and for the best in the show. In awarding the prize for the best puppy the judge wrongly reversed his decision in the novice class and gave the cup to Warren Jingle over Sentinel. Mr. Hoey stated to us that in this competition Jingle did show that she could carry her ears properly, but even with this improvement she is not good enough in bone and loin to beat her competitor. Following is a list of the

AWARDS.

SMOOTH.—CHAMPION—*Dogs:* 1st, Blemton Kennels' Lucifer; 2d, L. & W. Rutherfurd's Splauger. *Bitches:* 1st, J. E. Thayer's Richmond Olive; 2d, L. & W. Rutherfurd's Cornwall Duchess. Very high com., Blemton Kennels' Marguerite.—OPEN—*Dogs:* 1st, 4th and very high com., J. E. Thayer's Raby Mixer, Luke and Raby Jack; 2d, Blemton Kennels' Bacchanal; 3d, E. Kelly's Earl Leycester. Reserve and high com., L. & W. Rutherfurd's The Warren Spider and Warren Swagger. Com., Beverwyck Kennels' Beverwyck Tippler. *Bitches:* 1st, 3d and very high com., Blemton Kennels' Rachel, Verdict and Gretchen; 2d, very high com. and high com., J. E. Thayer's Richmond Dazzle, Richmond Myrtle and Meersbrook Nan; 4th, reserve and high com., L. & W. Rutherfurd's Warren Saucy, Warren Jingle and Warren Spangle. Com., Fanciers' Kennels' Nellie A.—PUPPIES—*Dogs:* 1st and com., Blemton Kennels' Sentinel and Rustic; 2d and very high com., L. & W. Rutherfurd's Warren Spider and Warren Swagger; 3d, high com. and com., J. E. Thayer's Sly Mixture, Raby Bounce and Dandy Mixture. Reserve, J. Mortimer's Suffolk Trap. Com., Beverwyck Kennels' Beverwyck Tippler. *Bitches:* 1st, L. & W. Rutherfurd's Warren Jingle; 2d, J. E. Thayer's Fraulein Mixture; 3d, Beverwyck Kennels' Beverwyck Nelly.

WIRE-HAIRED.—*Dogs:* 1st, W. M. Connors's Cheshire Laddie. *Bitches:* 1st, W. M. Connors's Meg. *Puppies:* Absent.

VETERAN CLASS.—SMOOTH OR WIRE-HAIRED—*Dogs or Bitches:* 1st, J. E. Thayer's Mixture; 2d, L. & W. Rutherfurd's Royal.

NOVICE CLASS.—SMOOTH OR WIRE-HAIRED—*Dogs or Bitches:* 1st and 2d, Blemton Kennels' Rachel and Sentinel; 3d and high com., L. & W. Rutherfurd's Warren Jingle and The Warren Spider. Reserve, very high com. and com., J. E. Thayer's Sly Mixture, Fraulein Mixture and Raby Bounce.

STUD DOG STAKES FOR 1887.—1st, J. E. Thayer's Luke and Fraulein Mixture; 2d, L. & W. Rutherfurd's The Warren Spider and Warren Jingle.

SPECIAL PRIZES.

Challenge Cup, Blemton Kennels' Lucifer; best in open classes, Blemton Kennels' Rachel; best exhibit, Blemton Kennels' Lucifer, Bacchanal, Sentinel and Rachel; brace, Blemton Kennels' Lucifer and Rachel; best in champion classes, Blemton Kennels' Lucifer; wire-haired, W. M. Connors's Cheshire Laddie; best in novice class, Blemton Kennels' Rachel; best in show, Blemton Kennels' Lucifer; best shown by a lady, Miss N. B. Dresser's Trig.

VIRGINIA FOXES AND HOUNDS.—Liberty, Va.—In the year 1877 I owned one of the best packs of dogs I ever owned in my life. During 1877-78-79 I bagged with this pack of hounds sixty-five foxes; sixty-three of them were reds; and during all that time I never saw a red fox climb a tree, although I have caught them time after time in the woods where trees were plentiful. I have run hundreds of them into holes, caves, bluffs, hollow logs, etc., but I never saw a genuine red fox take to a tree yet. We have a species of gray fox here in Virginia which I think is a cross between the red and gray fox. It is an excellent tree climber, and it resembles a red fox very much, but it is not the genuine old red that can, here in this section of country, hold a pack of the best dogs in the State from five to twelve hours in tune. I have an old foxhound dog that is 13 years old and has been at the death of over 125 foxes, and if he dies a natural death I expect to send him to Mr. Lucas, at the National Museum. —L. L. B. [The gray fox is the Southern gray fox (*Urocyon cinereo argentatus*) well known as a tree climber.]

"THE MASTIFF."—The Wacouta Kennel, of St. Paul, Minn., has published a very neatly gotten up pamphlet with this title. The work is mostly a compilation from the writings of the best known authorities, and contains anecdotes and sketches illustrative of the characteristics and noble qualities which distinguish the breed.

THE ST. BERNARD IN SWITZERLAND.

ALTHOUGH a great deal has been written of late years about the St. Bernard breed as it now exists in its native land, I believe that the interest of the subject is not yet exhausted, and therefore am induced to offer to your readers some of the results of my present visit to the Hospice. It has also seemed to me that we have hitherto received too much of personal impressions and opinions, and too little of bare facts. Not being gifted with the utter self-abnegation —I use the expression in all sincerity—of my present entertainers, I shall not be able to refrain from airing my own views and theories, but I propose to give, first, a description of the dogs now belonging to the monastery. The rest of this letter may be left unread by those who wish to form a perfectly unbiassed opinion, and my feelings will not be seriously injured if you, Mr. Editor, should think fit to suppress my subsequent remarks altogether.

It will be a shock to all who are interested in the breed to hear that the Monastery possesses at this moment at most a dozen dogs of all ages—viz., eight on St. Bernard Pass, and from two to four—the steward was not certain of the exact number—at the Simplon Hospice.

Before proceeding to describe individually the seven animals which I have just seen and handled, I will mention the points which all alike exhibit. All have eyes lighter in color than is approved of in England, as well as smooth coats and double dew-claws on both hind legs, and none have the slightest approach to a "business" fifth toe, or indeed, to a fifth toe *on the ground* at all.

1. Castor is a dog about four years old. He is good in bone, and has a well shaped head. His height, carefully taken by myself with a standard, is just over 29½in. The color of the body is a blackish orange tawny with a little white, and the head, neck, and legs are entirely white with the exception of the ears, which are spotted with a light liver color. The coat, which he is changing at present, is evidently of good smooth quality when in order.

2. Barry has a very massive body, with grand chest and bone all round; his head is also very good, being short, square, and deep in jaw. The coat is of the best quality, but is very slightly feathered under the tail, which is carried right over the back. The body has large patches of orange tawny, and the head is perfectly and evenly marked with blaze running straight through to the collar. Castor, being the largest, was the only dog I measured. Barry would be about an inch lower. He suffers from rheumatism in one hind leg, which makes him go stiff at starting, but his action, when once warmed up, is very good.

3. Pluto is an eleven months' puppy. He has good bone, substance, and symmetry, and a capital head. In color he is a rich orange tawny, with perfectly even markings and blaze running through to the collar. The left ear and the tip of the right are white, spotted with liver color, like Castor. Coat very good but for the very slightest tendency to curl over the loins.

4. Dog puppy about six months old. He is remarkable for his enormous bone and substance. In color and markings he closely resembles Pluto, and his coat shows a somewhat greater tendency to curl on the back. The root of the left ear is white and the rest of it spotted like Castor's and Pluto's.

5. This is said to be the best of the bitches, but I did not see her as she was being led down the pass by the main track while I was coming up by a short cut. I believe she was being taken to one of the valley farms in order to pup, as litters are never allowed to be born in the very low temperature which prevails all the year round at the Hospice.

6. Pallas. This bitch, though small, is very good in bone, substance and head. Her color is orange tawny, with perfectly even markings. Her age, if I remember right, is six years, but she has only reared one (her first) litter. Since then her pups have appeared with the greatest regularity, but always prematurely.

7. Bellone is another bitch with, as usual, a well-shaped head and fair bone. Her body is pale orange tawny in color, with a little white. The head, neck and legs are entirely white, with the exception of the spotted ears noticed in Castor, Pluto, the unnamed pup, and Lionne (below).

8. Lionne has the good qualities of the other bitches, but has even less color, as she is all white except small orange tawny patches on the right flank, left hip and root of tail and the spotted ears.

Having so quickly reached the end of this catalogue, one naturally endeavors to explain its brevity. Two principal causes may be mentioned for the terrible diminution in numbers of the stock. Of these I should place in-breeding first. The monk (holding the office of house-steward) from whom all my information is obtained, suggested in-breeding as responsible for certain bad points which are conspicuous in most of the dogs, and it seems more than probable that the great mortality among the puppies which has developed itself in recent years must be attributed to the same cause. But a recent disaster has accelerated the gradual diminution which has been taking place. A few weeks ago two bitches, both within a fortnight of pupping, were (maliciously, it is supposed) killed by poison. To use the monks own words, "There are *mauvais sujets* everywhere, even on the St. Bernard."

Perhaps the uses of the St. Bernard dog do not come within the province of this letter, but, nevertheless, I will venture to correct, on the best authority, the erroneous views which are so often expressed. Some people think that the dogs are occupied throughout the winter in grubbing the snowdrifts for lost travelers, and in pouring cognac down their throats when found. Others allege that the dogs were never of much real use, and that, since the St. Gothard Railway has pierced the Alps, they are of no use at all. All these persons are alike mistaken. The St. Gothard Railway being a long way further east, and the St. Bernard Pass having always been crossed in winter almost exclusively by the poorest of the poor, the number of its passengers remains virtually unchanged. As to the rescue of perishing travelers, this is a rare and occasional incident of a Hospice dog's life, but the service which he renders to humanity is quite as real, and far more frequent and arduous. His regular duty is rather to prevent the traveler from falling into danger than to save him from its consequences. To explain. For the last five miles the path to the Hospice on the Swiss side leads up a deep, narrow, and rugged valley, through which it winds from side to side, crossing and recrossing the torrent at several places. In winter vast quantities of snow accumulate in this valley, completely obliterating the path, the stream, and, in fact, almost every landmark.

These drifts are often of immense depth, covering chasms between rocks, the deep bed of the stream, precipices, and other dangers. The position of the drifts is also so often altered by furious gales of wind, which remove them from one spot and heap them up in another, that the most experienced of the monks cannot tell where it is safe to tread. In this emergency the instinct of the dog is found infallible. On every winter morning one man and one dog goes down each side of the pass to escort to the hospice the travelers who have been passing the night at the refuge below. The dog goes in front, the man humbly follows in his steps, and is never led astray. This duty is generally performed by four of the oldest and hardiest dogs (always males), the two most trusty being reserved for the severest weather. The serious state of the kennel at present is most clearly indicated by the fact that only Castor and Barry will be available next winter. Pluto will no doubt be tried, but as two years and a half is ordinarily the minimum age for going on duty, he cannot be expected to do much.

This account of the St. Bernard dog's services will not be complete until I have added that he suffers severely from his exertions, rarely escaping from rheumatism even in his first winter. The bitches and young stock are, as a rule, kept at the Hospice only during summer. This letter has now reached such an unconscionable length that, after all, you will be spared the threatened infliction of my own fads, fancies, and (perhaps) fallacies. I cannot, however, close without hinting to our "smooth men" that an opportunity now offers itself of doing the same service to the breed which was performed some twenty years ago by Herr Schumacher. It should be remembered, too, that almost all the pillars of the St. Bernard stud book came either from Herr Schumacher, or from the Hospice, after its kennel had been regenerated through his exertions. At the same time the monks show little anxiety to obtain fresh stock, being, apparently, more fearful of destroying by admixture of blood the practical qualities of their present stock than they are of losing that stock altogether by the degeneracy which results from in-breeding.—*W. O. Hughes-Hughes, in the Stock-Keeper.*

HOSPICE OF THE GREAT ST. BERNARD, Aug. 27.

NEW ENGLAND FOX HUNTING.—Providence, R. I., Sept. 3.—There is camped out near the Devil's Pond, in Rehoboth, a party of men, including Capt. Rufus Jencks, Albert and Fred Bowen, Bill Ballou and several others, who are enjoying life immensely. All of the members of the party are fox hunters, and yesterday, before sunrise, Sergeant Parker and Officers Slocum and Goodwin started for the rendezvous to join the campers and have a day at the sport. When all was ready the number of the party was found to be eleven persons, with as many guns, and nine dogs, and it seemed as if reynard was to have a day of it. The party started out, and, as a result of the day's sport, obtained four foxes, Sergeant Parker killing one of them, and this, it may be said, is considerable fox hunting for one day.... HARTFORD, Conn., Sept. 8.—In the still hours of Saturday morning, in pursuance of a previous arrangement, some members of the Hartford Fox Club, including Dr. Crary, Joe Lane and George and Wesley Deming, slipped quietly out of bed and into their hunting suits, and before they were missed by ordinary risers they were beating the bush out in the vicinity of the reservoir. They were not long in striking a fox trail, and before the dogs had got fairly started Dr. Crary had the luck to bring down a good fat fellow. Later on he had an opportunity to run his eye down along the barrel of his rifle, and, discovering that it covered another fox, he pulled the trigger and of course the animal succumbed to the Doctor's unerring aim. The medal was awarded to the Doctor until the next meeting, and he will cheerfully hand it over to the member beating this record.

STAFFORD SPRINGS DOG SHOW.—The third annual dog show of the Stafford Kennel Club will be held at Stafford Springs, Conn., Oct. 12 and 13, in connection with the Tolland County Fair. A large and convenient building has been erected for the exclusive use of the club, and it is their intention to hold a first-class show in every respect. The secretary's address is R. S. Hicks, Stafford Springs, Conn.

...BABYLON, L. I., Sept. 9.—*Editor Forest and Stream:* I was surprised on my return from Newport to find in your paper a notice signed R. S. Hicks, Sec'y, saying that arrangements had been made with me to judge "all other sporting dogs" at the Stafford Springs show. No such arrangement has ever been made with my consent, and the use of my name is entirely without authority.—JAS. MORTIMER.

A. K. C. METHODS.—*Editor Forest and Stream:* The latest freak of Secretary Vredenburgh is to call upon delegates to send in their credentials, quoting as his authority the article of the Constitution which refers to representation at the annual meeting. The meeting to be held on the 24th inst. is a quarterly meeting of the executive committee. It seems impossible for our present president and secretary to make even the simplest move without committing a blunder. More incompetent officials it would be difficult to imagine, much less obtain, and when the secretary is being paid at the rate of $100 a month for the few hours' work he does every week, I think it is high time he improved or else gave place to a man possessed of the necessary qualifications.—JAS. WATSON.

ST. PAUL DOG SHOW.—There are over 300 entries for the dog show at St. Paul this week. There are 63 setters, 17 pointers, 25 mastiffs, 22 St. Bernards, 25 spaniels, 44 terriers of the various breeds, 17 pugs, 12 greyhounds, 12 Chesapeake Bay dogs, 11 beagles, 11 collies and 6 Great Danes. The entries in other classes are light.

GRAPHIC KENNELS.—It is rumored that the Graphic Kennel partnership has been dissolved and the dogs have been divided.

KENNEL NOTES.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Nick of the Woods, Naso of Bergen, Louisette and Nanon. By G. W. McNeil, Jersey City, N. J., for pointers, two black and white dogs and lemon and white and liver and white bitches, whelped Aug. 2, 1887, by Nick of Naso (Naso II.—Pottigo) out of Temptation (Don—Maud S.).

Empire Robert Bruce, Empire Donald of Dundee and Empire Jim. By N. V. Ketchum, Savannah, Ga., for three Skye terrier dogs, whelped July 15, 1887, by Jim (Berkie—Highland Mary) out of Lass o' Gowrie (Jim—Queen Mab).

Brown Dick and Dawn. By Mignon Kennels, Cortland, N. Y., for black and tan and black, with white star on breast, cocker spaniel dogs, whelped June 15, 1887, by Oberon (A.K.R. 3315) out of Susie (Kiddlewink, A.K.R. 997—Gretchen).

Wayne Buckellew. By M. M. McMillan, Mahanoy City, Pa., for orange and white English setter dog, whelped May 19, 1887, by Buckellew (A.K.R. 30) out of Minitonka (Don Juan—Petre III.).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Dora Gladstone—Gun. Chas. York's (Bangor, Me.) English setter bitch Dora Gladstone (Boss Gladstone—Vell) to his Gun (Gladstone—May B.), Sept. 3.

Rush—Spot Dash. W. H. Beebe's (Lynn, Mass.) pointer bitch Rush (Sam—Nell) to Robt. Leslie's Spot Dash (Sir Philip Sydney—Topsy), Aug. 19.

Dinah—Ligero. W. C. Kimpton's (Washington, D. C.) spaniel bitch Dinah (Jacob—Floss) to H. L. Sprague's Ligero (A.K.R. 5197), Aug. 25.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Mignon. Mignon Kennels' (Cortland, N. Y.) cocker spaniel bitch Mignon (A.K.R. 1002), May 30, four (two dogs), by their Oberon (A.K.R. 3315).

Susie. Mignon Kennels' (Cortland, N. Y.) cocker spaniel bitch Susie (Kiddlewink, A.K.R. 997—Gretchen), June 16, four (three dogs), by their Oberon (A.K.R. 3315).

Nana. W. H. Rose's (Barrington, R. I.) beagle bitch Nana (A.K.R. 3099), Sept. 4, seven (four dogs), by his Rem (A.K.R. 2115); two dogs and one bitch since dead.

Nellie Dale II. W. A. Faxon's (Braintree, Mass.) English setter bitch Nellie Dale II. (Dash III.—Nellie Dale), Aug. 27, four (two dogs), by A. M. Tucker's Gus Bondhu (Dashing Bondhu—Novel).

Flirt. W. H. Ashburner's (Philadelphia, Pa.) beagle bitch Flirt (Ringwood—Bush), Sept. 2, five (three dogs), by his Domino (Rattler III.—Myrtle).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Nick of the Woods. Black and white pointer dog, whelped Aug. 2, 1887, by Nick of Naso out of Temptation, by Geo. W. McNeil, Jersey City, N. J., to Wm. Barnes, Philadelphia, Pa.

Spot. Brindle and white bull-terrier dog, whelped June, 1887, by Mack out of Biddie, by W. W. Silvey, Philadelphia, Pa., to James McKibbons, Pittsburgh, Pa.

Kate. Spotted Great Dane bitch, whelped September, 1886, by Markoe out of Bess, by W. W. Silvey, Philadelphia, Pa., to L. H. Schneider, Gaithersburg, Md.

Daisy I. Liver and white pointer bitch, whelped May, 1886, by Gem Beaufort out of Minnie I., by W. W. Silvey, Philadelphia, Pa., to John Lloyd, Clayton, N. J.

Dick. Stone fawn pug dog, whelped July, 1887, by George out of Lillie, by W. W. Silvey, Philadelphia, Pa., to Chas. G. Harris, same place.

George II. Stone fawn pug dog, whelped July, 1887, by George out of Lillie, by W. W. Silvey, Philadelphia, Pa., to L. W. Bicase, Charleston, S. C.

Kelpie. Stone fawn pug dog, whelped December, 1885, by Daniel out of Queen, by W. W. Silvey, Philadelphia, Pa., to Julius Trondle, same place.

Daniel. Red Irish setter dog, whelped Aug. 24, 1885 (A.K.R. 4799), by B. P. Rothrock, Williamsport, Pa., to R. S. Brown, Easton, Pa.

The Baron—Nellie (A.K.R. 4433) whelp. White bull-terrier dog, whelped June 10, 1887, by W. W. Silvey, Philadelphia, Pa., to Geo. S. Fullerton, same place.

Gun—Victoria Lavcrack whelp. Black, white and tan English setter bitch, whelped March 9, 1887, by Chas. York, Bangor, Me., to Chas. F. Manness, Scranton, Pa.

Oberon (A.K.R. 3315)—Susie whelp. Black, with white frill, cocker spaniel dog, whelped June 10, 1887, by Mignon Kennels, Cortland, N. Y., to Wm. A. Darling, Jr., New York.

IMPORTATIONS.

Royal Duke. Collie dog, color and age not given (Rutland—Ruth), by Spratts Patent, for A. R. Kyle, South Norwalk, Conn.

DEATHS.

Fannie Obo. Black cocker spaniel bitch (A.K.R. 1311), owned by H. C. Bronsdon, Boston, Mass., Sept. 5, from poison.

RANGE AND GALLERY.

THE BULLARD PRIZES.

SPRINGFIELD, Mass., Sept. 10.—*Editor Forest and Stream:* The highest team score of five men, thirty shots each, in our match No. 3, which was competed for in June, was made by the National Shooting Club, of San Francisco, Cal., who used military rifles, Sharps-Borchardt, pistol grip, open sights, and 6lb. pull, but according to our conditions they are not entitled to the handicap of 75 points. It was not our intention to exclude any military rifles with 6lb. pull and open sight. In Rule 16 of our conditions we intended to make provision for their use. The military rifles used by this club were not such "as issued by State or Government," they were pistol grip, and it is claimed by some of the competitors that there is an advantage in using such a grip that cannot be had in a straight military stock. While wishing to give the rules their broadest construction, leaving out the question of whether, as a matter of fact, the rifles were actually issued by the State or Government, we must decide that the peculiar shape of the grip on their rifles debars them from complying with the rules of the matches. The next highest team score was made by the Cincinnati Rifle Association, of Cincinnati, O., who used sporting rifles, who complied with all the conditions, and are awarded the prize, which is one of our best detachable and interchangeable barrel rifles.

In Match No. 4 was an individual contest, the highest score to win, number of shots 50, prize Bullard champion off-hand marksman's badge, a valuable gold medal, which must be won by an individual three times before it becomes his private property. The highest score in this match was made by Private A. Johnson, of the National Shooting Club of San Francisco, Cal. (Had we known the military rifles used by this club were not allowable we would have so informed them before Match No. 4 was competed for). Capt. P. A. Chisholm, of Oakland, Md., had the second highest score; he, however, fired his 50 shots on one target, while our conditions only require that 25 shots be fired on each target. The third highest score was made by Private Ed. Hovey, of the National Shooting Club, of San Francisco, Cal., who used the same kind of rifle as Private A. Johnson. Thus the three highest men are barred out for not complying with the conditions, and the prize is awarded to Mat Grindele, of Cincinnati, O., a member of the Cincinnati Rifle Association. Mr. Grindele used a sporting rifle. BULLARD REPEATING ARMS CO.

THE NEW BULLARD MATCH.

In view of the many entries and interest taken in the first series of our matches by the riflemen of the country, we desire to call the attention of all rifle clubs and military companies to our match No. 4, second series. It will be an individual match, the highest individual score to win; number of shots, 50; prize, the Bullard champion off-hand marksman's badge, a valuable gold medal, to be won by an individual three times before it becomes his private property, to be contested for twice a year, in May and October. Rules governing the match are as follows: Notice of entries and applications for targets should reach us before Oct. 8, in order that we may make necessary arrangements to supply all with targets in time. Conditions as follows: Open to all riflemen. Distance, 200yds., strictly off-hand, position standing, the elbow may rest against the body. Target, American Standard (Hinman). All practice shooting necessary allowed before match. Scoring shots, fifty. Match may be shot on any of the following days: Oct. 24, 25, 26, 27, 28, 29. Riflemen may select whichever of the above dates is most favorable for making their scores in the match. Twenty-five shots only allowed on each scoring target, and targets and score cards to be signed by the referee and president or secretary of the club, and forwarded by mail to the Bullard Repeating Arms Co., Springfield, Mass., U. S. A., not later than twenty-four hours after completion of match. Practice shots must not be made on the scoring target. No contestant will be permitted to shoot under an assumed name. Any contestant in Match No. 4 using a military rifle as issued by State or Government, 6lb. trigger pull, with same sights as issued for said rifles, will be allowed five points for each score of ten shots. The referee will test the trigger-pull of all rifles before the matches commence. All the rifles must pull 3lbs., except military which will be 6lbs. Maximum weight of target rifles, 10lbs. Ties will be shot off and dates fixed by the Bullard Repeating Arms Co. Any sights may be used for target rifles except telescope and magnifying. Military rifles must use sights issued by the State or Government for military rifles. The president of each rifle club, and commanding officer of each military company will appoint a referee, who shall see that the above rules are adhered to throughout each competition. In case of any dispute arising the referee shall decide in accordance with the above rules, and if still under protest, the referee and the contestant shall submit the matter to the Bullard Repeating Arms Co., whose decision shall be final. Targets will be furnished competing teams and individuals free by the Bullard Repeating Arms Co. on application. The individual making the highest score will be awarded the Bullard Championship Off-hand Gold Badge. The Bullard Repeating Arms Co. will fix the date in May and October of each year for the competition for the championship badge until won three time by the same person, when it becomes his private property.

CONLIN'S GALLERY.—The fall and winter season at Conlin's gallery, N.W. corner of Thirty-first street and Broadway, opened Sept. 12, with new and novel features in revolver shooting, to continue through the season. A new feature of the matches this year will be the introduction of the Wimbledon target. This target was used in the recent revolver matches of the British National Rifle Association to test the quickness as well as the accuracy of marksmen. Very considerable interest was taken in this arrangement for revolver shooting at the Wimbledon meeting this year. The target is fashioned after a rough outline of the human figure and is exposed to view only five seconds at a time, the underlying idea being that the chest is to be taken as the bullseye, while minor points are obtained by hitting the head and limbs. This idea Mr. Conlin thinks very good and practical, since it is the essence of revolver shooting, whenever it be called for in the field of war or upon other and irregular occasions, that it should be done quickly and at close quarters. Some very fair shooting was made by the Englishmen, but their scores do not seem to equal those of revolver shooters at Conlin's gallery last season; though the use of the same target will afford a better opportunity for comparison.

THE MINNESOTA RIFLE TOURNAMENT.

THE programme for the third annual tournament of the Minnesota National Guard Rifle Association, which opens on the 5th prox., has been issued, and offers a good four days' list of events. The shooting will be over the Fort Snelling Range. The officers for the present year, undor whose management the shooting will take place, are as follows: President, Lieut. A. E. Chantler; Vice-President, Lieut. E. W. Bird; Secretary and Treasurer, Lieut. C. S. Williams; Executive Officer, Lieut.-Col. W. Blakeley. The detailed list of matches runs as follows:

First Day—Wednesday.

No. 1—All-Comers' Continuous Match.—200yds., position standing, number of shots, 5, on the Creedmoor third class target, the aggregate of three scores to count for all prizes; entries unlimited; fee, 50 cents for each ticket. Prizes: The entrance money in this match will be divided into twenty cash prizes, the highest amount to go to the competitor making the three highest scores. A special target for this match will be kept open throughout the tournament.

No. 2—Skinner Match.—200, 500 and 600yds., 7 shots at each distance. First prize, military champion gold badge, to be won three times in a similar match before becoming personal property. Ten other prizes, winners' choice. Entrance fee, $2.

No. 3—Pillsbury Match.—Teams of 6 men each from a company, 7 shots each man at 200 and 500yds.; entrance, $6 each team. First prize, the Pillsbury Cup, won in 1885 by Co. D, 2d Regt., and in 1886 by Co. C, 1st Regt.

Second Day—Thursday.

The following four matches are arranged by the State and will be shot under State rules and on State targets:

No. 4—Regimental Team Match.—Teams of 10 men from each regiment of the State, 10 shots each at 100, 200, 500 and 600yds. First prize the State trophy, won in 1885 by the Second and in 1886 by the First Regiment. Entrance free.

No. 5—Company Team Match.—Teams of 7 men from each company, 7 shots each at 200 and 500yds. Three prizes to the three highest teams. Entrance free.

No. 6—Enlisted Man's Match.—Five shots each at 100, 200, 300 and 500yds. First prize gold bar, second silver bar, third bronze bar. Entrance free.

No. 7—Commissioned Officers' Match.—Ten shots each at 200, 500 and 600yds. First prize gold badge, second silver badge, third bronze badge.

Third Day—Friday.

No. 8—Reeve Match.—Open only to the commissioned officers of the National Guard, 5 shots each at 200, 500 and 600yds. First prize an elegant gold badge presented by Col. C. M. Reeve. Three cash prizes. Entrance fee $2.

No. 9—Inter-State Match.—Open to one team from each State or Territory in the United States, consisting of twelve members of the regularly organized National Guard of such State, chosen in such a manner as shall be prescribed by the military authorities thereof. Each team must be provided with a certificate from the Adjutant-General of the State it represents, certifying that each of its number is a regular member of the uniformed militia. Distances 200 and 500yds., 10 shots each distance, Creedmoor target and rules. Entrance fee $1 each man. Prize—To the team making the highest aggregate score, a large bronze and silver trophy valued at $500, presented by Hon. W. D. Washburn, to be held one year by the victorious team and then returned to the secretary of the National Guard Rifle Association of Minnesota for the next competition. (Teams from other States who intend to compete for this trophy will oblige the association by notifying Lieut. C. S. Williams, No. 327 Nicollet avenue, Minneapolis, Minn., of such intention.)

No. 10—All-Comers' Match.—Open to members of the National Guard of any State or Territory. Distances 200 and 500yds.; 10 shots at each distance. Entrance fee $2. First prize, gold badge and the championship of the Northwest. Ten cash prizes.

Fourth Day—Saturday.

No. 11—Stillwater Match.—Distances 200, 300 and 500yds., Creedmoor targets. First prize gold badge presented by the citizens of Stillwater. Ten cash prizes. Entrance fee $3.

No. 12—St. Paul Match.—Distances 200, 300, 500 and 600yds., Creedmoor targets. First prize, a handsome gold badge (valued at $100, presented by citizens of St. Paul, to be won three times before becoming personal property), and $5 in cash. Ten to 15 other cash prizes. Entrance fee $3.

A bullseye target will be kept open throughout the tournament. Matches Nos. 2, 3, 4, 5, 6, 7, 8, 11 and 12 open only to the National Guard of Minnesota. The entrance money in all matches will be divided into cash prizes. It is expected that four or five States will be represented in the inter-State team match.

A POOR STATE ARM.

NOW that the Snider has been virtually set aside in England the Canadian militiamen are more than ever restive under the regulation which retains it as the State arm. At the recent Ottawa shoot of the Dominion Rifle Association the "grievance" meeting, as the gathering of competitors is styled, went into the topic with vigor. Lieut.-Col. White, of the 43d, was in the chair when Captain Walter Macdonald, retired list, Toronto, brought up the question of abolishing the Snider in all competitions above 500yds. He pointed out the unreliability of the weapon for long distance shooting, instancing as evidence the way the cracks had fallen to pieces in distances over 500. He thought the weapon should only be used in those competitions where it would do the least possible harm. (Laughter.) He moved a resolution recommending the executive to exclude the Snider from any match at a distance over 500yds.

Major Perley (Militia Department) said in view of the complaints made in past years, the council had sought to obtain a better class of ammunition than that of English make known as IX. On inquiry, however, it was found that there were only 33,000 rounds in the country, whereas from 40,000 to 45,000 rounds of Snider were required for the annual matches. He could state as a member of two cartridge commissions that the ammunition made this year was really good. He had recently visited the factory in Quebec and ascertained from Major Prevost that the greatest care was being taken to manufacture cartridges, in fact they could not be better made. The powder now being used was the best obtainable, viz., Curtis & Harvey's. All that was wanted now was to restore confidence in the Canadian ammunition, and this he thought might be done by restoring sighting shots.

Captain Weston (Halifax) said Canadian ammunition was now on the whole fairly satisfactory. He was glad the Government was doing its utmost to remedy the defects which had existed. He thought more attention should be paid to the bullet, as he believed that any defects now existing would be found in it. He hoped the suggestion of Major Perley's that sighting shots should be allowed, would not prevail.

Major Anderson, 23d Ottawa, said no amount of confidence would explain the fact of a bullet falling 6yds. short of the target.

Captain J. Hartt (St. John's Rifles) thought Major Perley's statement was very unsatisfactory because he contended everything in the ammunition was good when the competitors knew to the contrary. He moved that in the opinion of the competitors present the Martini-Henry be in future used at the 600yds. range, owing to the general unreliability of the Snider ammunition.

Lieut.-Col. Beers, 74th Batt., Nova Scotia, said if the resolution were allowed to stand he would move in amendment that the Martini be the sole weapon used at the meetings of the D. R. A. (Applause).

Major Perley said the Snider was the arm of the volunteers of Canada, and he did not see how, with the fact staring them in the face, the resolutions of Col. Beers would have any effect.

Major Tilton believed in continuous agitation, and the following resolution adopted on the motion of Col. Beers, seconded by Lieut.-Col. Gibson: "That in the opinion of this meeting of riflemen representing all parts of the Dominion the time has arrived when the active militia should be armed with the Martini-Henry, and that a committee be appointed to wait on the Minister of Militia to urge the change."

THE CREEDMOOR MEETING.—The Creedmoor fall meeting is now in progress, with not very favorable weather in which to carry out the programme. There are some new features in the meeting beyond the old and familiar matches. The revolver has been given a definite place in a match and there is a sharpshooter's match at 800yds., which is novel. Massachusetts is the only State which has sent a worthy team to contest for the commonwealth. The following officers and men will compose this team: Maj. J. P. Frost, 2d brigade; Maj. C. W. Hinman, 1st brigade; Capt. J. B. Osborne, 2st brigade; Lieut. S. S. Bumstead, 2d infantry; Lieut. R. B. Edes, 5th infantry; Lieut. Hussey, 8th infantry; Lieut. Merritt, 2d cadets; Sergt. W. M. Merrill, 2d brigade; Priv. A. C. White, 2d infantry; Privs. M. W. Bull, F. R. Bull, Milton Farrow and L. F. Farnsworth, 2d infantry; Priv. C. Johnston, Jr., 1st cadets. Capt. Chase will act as adjutant. The team is quite as strong as that of last year, and a repetition of the victories then won is again expected. The full records of the meeting will appear in our next issue.

WORCESTER, Mass., Sept. 8.—There was a meet this week at the Broad Meadow Range of the Worcester Rifle Association. The records of the work of each man in detail are as follows:

BOSTON, Sept. 10.—There was an average attendance at the rifle matches to-day, but the weather conditions were not first-class and many scores were withdrawn unfinished. The date of the fall meeting of the Massachusetts Rifle Association has been set for Oct. 6, 7 and 8. J. B. Parker has won the bronze badge in the State militia match. Following are the best scores finished to-day:

Decimal Off-hand Match, 200yds.	
J B Fellows	8 9 7 10 10 10 10 8 7 6—85
	10 6 9 9 6 10 5 8 8 9—79

MILFORD, Mass., Sept. 8.—Company M, 6th Regiment, M. V. M., located here, had their annual target shoot this week. There were prizes for the honoraries as well as the actives of the company. The work in detail was as follows:

Honoraries	
C Whitney, of Hopedale	44343—18
E McKay	44342—17
G M Billings	00000—00
Actives	
Wm E Knight	34544—20
Walter C Steele	44343—18
Walter F Mason	22353—15
Sergt Wm J Kelley	00000—00
Thos P Kane	33443—17

The totals of other members were as follows: Capt. John T. Berrell 16, Lieut. J. R. Bennett 17, Sergt. John E. Andrew 9, Sergt. Geo. D. Kendell 5, Sergt. Perry Whitney 6, Corpl. Frederick A. Bishop 12, Capt. John F. Barrett 16, Musician Geo. A. Moore 13; Privates, Geo. E. Thayer, Napoleon E. Togus, 16; Wallace Mader, Frederick S. Wilcox, 15; Oscar F. Eldridge, 14; G. McLaughlin, Edward B. Quinn, Walter L. Togus, 13; Wm. L. Annett, John Sidle, 11; A. B. Montague Wm W. Bixby, 9; Na haniel T. Higgins, 8 George A. Kelley, Charles A. Waterhouse, 6; Joseph H. Ward, Edward Tidd, 5; Geo. McDonald 4, Silas Bradford 3, Albert Fairbanks 2.

THE VETERANS' PRIZE.—There are five organizations of veteran riflemen eligible to furnish rifle teams to compete for the valuable trophy donated by Col. Austin C. Wellington in 1885. These organizations are the 3d Massachusetts cavalry, 8th Vermont, 14th New Hampshire, 26th and 38th Massachusetts Infantry. In the first competition, held at Winchester, Va., in 1885, the trophy was won by the team of the 14th New Hampshire. Last year at Winchester, N. H., Ethan Allen stole a march on Molly Stark, the 8th riflemen winning by just four points, with the cavalry and the "old sixth" close in the rear. The holders of the trophy name the time and place of the next annual competition. Accordingly the match for this fall will come off on the 16th inst., in connection with the reunion of the 8th Vermont at White River Junction. The Green Mountain boys will entertain the teams from the other regiments. A close contest is expected as the team of the 26th has been in constant practice for the past two months and is bent on capturing that beautiful vase. Maj. E. L. Noyes, an old fighter of the 3d Cavalry, leads the team of that regiment; Capt. S. E. Howard, who was shot five times at Cedar Creek, commands the team which now holds the trophy. Capt. F. H. Buffum calls the roll of the 14th sharp shooters. Capt. Geo. A. Reed, who "marched through Baltimore" in the old 6th, is drilling the marksmen of the 26th, while Col. A. C. Wellington captain of the 38th team, but will have to put some one in his place this time as he will be in Philadelphia when the match comes off.

MASSACHUSETTS STATE SHOOT.—Col. Horace T. Rockwell, inspector-general of rifle practice, announced that the annual State rifle shoot will take place at South Framingham, on Wednesday, Oct. 5. It is proposed to have the entries for individual first prizes limited to those who make centers or better in the team contests. Competitors making these records to continue to shoot, after finishing team scores, for the prizes. This will avoid chance records.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

NEW BEDFORD, Sept. 5.—To-day the New Bedford Gun Club went to Acushnet and had a friendly shoot with the club of that place. The score was very close, the Acushnet Club winning by 3 birds. The score:

After the club contest sweepstake shooting was indulged in by the members of the teams.

BROOKLYN, Sept. 7.—The Fountain Gun Club held its regular shoot to-day at Woodlawn, L. I. The attendance was not very large, but the shooting was quite up to the mark. Out of 104 birds shot at but 27 escaped the marksmen's aim. Lake, the winner of the badge, shot in first-class style. He is comparatively young at the business. Following is the score:

J E Lake, 23	1111111—7	Capt Carver, 30	1111111—6
C Cooke, 25	00w. —0	Dr Shields, 30	1111111—7
W Stewart, 26	0111010—4	J Edwards, 23	0010111—4
L Davenport, 28	1111011—6	C Jones, 30	1101011—5

Ties for badge and first prize: J. E. Lake 1, Dr. Shields 3. Ties for second prize: L. Davenport 6, Capt. Carver 5. Referee, Mr. C. Jones. Score of sweepstakes:

Capt Carver	110—2	J E Lake	011—2
L Davenport	111—3	W Stewart	001—1
Dr Shields	111—3	H Blatchmacher	111—3
J Edwards	000—0	C Jones	000—0

Dr. Shields won on shoot off.

BOSTON, Sept. 7.—There was a large attendance of trap shooters at the range at Walnut Hill to-day. A high wind prevailed. Below are the records:

Macomber Badge Match. 10 singles.	3 pairs.	Tl.	Merchandise Match. 10 singles.	3 pairs.	Tl.
*Swift.....7	5	12	Warren...9	7	16—A
*Warren.....6	6	12	Stanton ...9	7	16—A
*Wilson.....6	5	12	Swift.....7	7	14—B
Bailey.....7	4	11	Adams....5	8	13—C
Nichols.....5	5	11	Snow.....7	6	13—C
Snow.....6	4	10	Nichols...3	3	6—D
Stanton.....5	4	9	Wilson ...7	8	15—G
Cross.....5	1	6	Non-Members.		
Adams.....4	1	5	Cross.....6	8	14—H
*Scored one point for badge.			Bailey.....7	6	13

Sweepstake event—Five clay birds, Stanton first. 2. Five clays, Stanton first. 3. Five clay birds, Stanton first. 4. Five clay birds, Nichols first. 5. Five clay birds, Stanton and Snow first. 6. Five clay birds, Snow first. 7. Six clay birds, Swift and Nichols first. 8. Three clay birds, Warren first. 9. Ten Macombers, Swift, Wilson and Bailey first. 10. Five pairs of Macombers, double, Warren first. 11. Ten clay-pigeons, Warren and Stanton first. 12. Five pair bats, double, Adams and Cross and Wilson first. 13. Six clay birds, Swift and Stanton first.

SAN FRANCISCO, Sept. 4.—The range at San Bruno to-day presented an unusually animated appearance, the occasion being the final shoot of the California Wing Club. A better day for pigeon shooting could not be wished for, and as a result, the scores throughout were excellent. In the regular club shoot at 12 birds Coffin carried off the honors by a clean score of 12 birds with only four second barrels. Robinson captured second place with 11 and DeVaull third with 10 kills to his credit. In the average for the season's shooting Coffin won the first place and DeVaull the second. Haas and Slade shot off for third place, the match resulting in the favor of Dr. Slade. Following is the score of yesterday's shoots:

Robinson	112301122111—11	Cross	122010011200— 8
Fay	100111210221— 9	Osgood	101111002000— 6
Coffin	111221121112—12	Liddie	111201100010— 7
Slade	111221100110— 9	Forde	102001000220— 5
DeVaull	112210011111—10	Shaff	210011022100— 7
Haas	011011111201— 9	Parks	112022011101— 9

At the conclusion of the regular match the members arranged a sweepstake shoot at 12 birds, $2.50 entrance, the stakes to be divided into four parts. Robinson, Fay, Coffin, DeVaull, Haas, Cross, Osgood, Fanning, Venet, Smith withdrew before the close of the match. Slade, Ford and Shaff divided first, second and third money. In the freeze-out for fourth money Hass won on the sixth bird. The pigeons supplied were strong flyers. The shooting was judged by Charles B. Smith, of Stockton.

BATON ROUGE, Sept. 5.—Following is the score made between the Manchac and St. Gabriel Clubs in a match at St. Gabriel's to-day:

Manchac Club.	Sin-gles.	Dou-bles.	Total.	St. Gabriel Club.	Sin-gles.	Dou-bles.	Total.
John Terrell	5	7	12	Joe Grassin	7	8	15
Howard Lytle	6	5	11	A A Browne	6	6	12
W B Walker	7	7	14	D D Mire	5	8	13
W S Walker	7	8	15	A J Pritchard	6	4	10
Henry Fuqua	2	5	8	Dr O G Browne	6	7	13
Henry Wolfe	7	6	13	Theo. Hingel	6	4	10
			73				73

Judges—Messrs. Mankey, Matta and James L. Lobdell; scorer, Richard Thomas.

WORCESTER, Mass., Sept 8.—At the meet this week of the Worcester Sportsmen's Club, at Coal Mine Brook Range, there was a large attendance and good shooting. The interest centered in the 100 bird race. The birds were shot in strings of five. The work of each man in detail follows:

E T Smith.....5 4 4 5 5 5 5 5 5 5 5 5 5 5 5 5 5 4 5 5 5 4 5—96
Geo Sampson.....3 5 4 5 5 5 5 5 5 5 5 4 5 5 5 5 5 5 4 5—94
W L Davis.....5 5 5 5 5 5 5 5 5 5 4 4 5 4 4 5 4 5 5 5 4—93
H W Eager.....5 5 4 5 5 4 5 3 5 5 5 5 5 5 4 5 4 4 4 5 5 4—92
Jos. Beaudry.....5 5 5 5 5 4 5 5 5 3 4 5 5 3 5 5 5 5 5 5 3—92
W D Dean.....5 5 5 4 5 5 5 3 3 4 4 4 3 4 4 5 4 4 4 5 3—84
M D Gilman.....5 2 5 5 5 5 5 2 5 4 4 4 4 3 4 5 3 4 5 5—84
Dansereau.....4 4 4 4 5 4 4 4 4 5 4 4 3 4 5 3 5 4 3 5—82
W S Perry.....5 5 5 4 5 3 5 4 4 4 2 5 5 3 5 2 2 3 4 5—80
G N Wheeler.....5 5 4 3 4 3 4 5 5 3 5 4 5 4 5 3 5 0 4 4—79

The score of Smith is said to be the best record on the grounds. The remainder of the day was spent in shooting sweepstakes, of which there were eleven events. In the 100 bird race there were two sweepstakes of 21 birds. In the first, Davis and Beaudry were first, Eager and Dean second, Holden, Smith and Whittaker third; in the second, Davis and Smith first, Beaudry and Whittaker second, Eager and Gilman third.

BROOKLYN, Sept. 8.—The Unknown Gun Club held its regular shoot at Dexter Park, L. I., to-day. There was a large attendance, but the shooting was hardly up to the mark. Sixteen members competed for the club badge, which was won by E. Vrooman, with a score of 9 out of 11 shot at. The birds were first-class, which probably accounts for the fact that only 85 were killed out of 134 shot at. The score is as follows:

J Rankine (21).....1100111—5 H Meyers (23).....1101011—5
R Stillwell (22).....1001001—3 J Boyle (21).....1010111—5
M Brown (25).....1010110—4 H Lee (23).....0110010—3
W Poulson (23).....1111110—6 A Hass (23).....0011010—3
J Tomford (25).....1011110—5 E Vrooman (25).....1111011—6
H Rathjen (25).....0011111—5 R Monsees (25).....0101110—4
H Van Staden (23).....0001111—4 H Knebel, Jr (23).....0111011—5
I Housman (25).....1110011—5 J Schroeder (25).....1010101—4

Ties for badge and first prize: W. Poulson 2, E. Vrooman 3. Ties for second prize: J. Rankine 9, J. Tomford 2, H. Rathjen 3, I. Housman 1, H. Meyers 1, J. Boyle 0, H. Knebel, Jr., 1. Referee, Mr. Van Staden; scorer, Mr. R. Stillwell.

J. C. H. GUN CLUB TOURNAMENT.—The tournament or two days' shoot of the Jersey City Heights Club was the subject of much windy discussion at the club room on Newark avenue Saturday afternoon, at which time many of the boys drop in to look over gun and dog, chaff Old South Paw, and trade fish stories and other lies. If the weather proves fair the boys expect a good time as a fair attendance has been assured from different quarters. Al Heritage has everything arranged to accommodate all who appear. The following is the programme, to be changed to suit the shooters if required. The club has five sets of clay-pigeon traps, as well as every style of the live bird traps that have appeared on the market of late years, and there is plenty of room on the grounds for three sets to work at the clay saucers. Of course when shooting at live birds but one set of five traps can be used. The fun will begin at 10 o'clock, Friday and Saturday, Sept. 16 and 17, on the club grounds at Marion, N. J. First event, 10 American clays, second, 5 pair American clays, third, 6 singles and 2 pairs, fourth, 10 single clays, fifth, 10 live birds. Saturday: First event, 10 clays, second, 5 pairs clays, third, 6 singles and 2 pairs, fourth, 8 live birds, fifth, 8 live birds. All ties at 5 clays; J. C. H. G. C. rules on live birds. There may be other sweeps besides the above should time allow.—JACOBSTAFF.

MESSINA SPRINGS, N. Y., Aug. 30.—A live sparrow shoot was held this afternoon. In the first shoot, at five birds each, Luther killed 5, Ayling 5, McCormick 5, Storrs 4 and Ayers 4. In shooting off the ties Luther and McCormick divided after three trials at three birds each. Howlett and Hookway tied in a match at three birds each. Hookway won in shooting off the tie. In the second five bird match Luther killed 5, Hookway 5, Ayling 5 and Howlett 4. In shooting off the ties Luther won by killing 5 birds straight to Hookway's 4. At ten blue rocks Luther and Howlett divided at 7 birds each, the other entries being Hookway, McCormick, Ayers and Storrs. Hookway, Luther, McCormick, Ayres and Howlett made another match at ten blue rocks, which was won by Luther with a score of 10, Ayers second with 9. Luther, Ayres and Hookway shot a match at ten blue rocks, which was won by Luther with a score of 9, Hookway second with 6. A second match between the same parties resulted in Hookway breaking 9 and Luther 8. The last match between Luther and Hookway resulted in a score of Hookway 10 and Luther 7.

NEWARK, N. J.—The Union Gun Club's shoot at Springfield on Sept. 5 for the club badge resulted as follows: Miller, 19; A. Sickly, Marshall and Haines, 16 each; Sopher, 12; Jobs, 15; Terry, 12; Pudney, 11; Roll, 9; Johnson, 14; E. Sickley, 14; Hooley, 9. Miller was awarded the gold badge, and in the shoot-off for second honors between A. Sickley, Marshall and Haines, the latter won.

....The West Newark Gun Club shot its monthly match on Sept. 5 at Peoria blackbirds, 25 each at 21yds. The result was as follows: M. Ulbright, 21; J. Adelman, 19; G. Densler, 19; C. Doty, 18; F. Hilfers, 15; P. Munn, 14; J. Weber, 14; A. Assman, 13; J. Lamb, 10; M. Adelman, 9; M. Boielmay, 7....The next monthly contest of the Essex County Sporting Association for the Essex county and Woodside trophies, will be held on the grounds of the Woodside Gun Club on Thursday, Sep. 27. An open sweep and a class shoot will follow. The Essex County Association is now composed of the South Side Gun Club, the East Orange Gun Club, the South Orange Gun Club, the Mountain Gun Club, the Nimrod Gun Club, the Mountainside Gun Club and the Woodside Gun Club.

AUGUSTA, Ga., Sept. 8.—The Augusta Gun Club were ably represented at the shooting match in Millen yesterday by Messrs. Allie Berckmans, Sam Denning and Albert Stulb, but Savannah sent up a team which carried off the medal from both Millen and Augusta, making a score of 46 out of 60 birds, while Millen made 43 and Augusta 40 in the principal match. The shooting was pretty and very close all around, but a little nervousness on the part of Mr. Stubb, who usually makes a big score, lowered his record and lost Augusta the prize. Mr. Berckmans led the score and made a fine record all day, getting in all about 36 of 44 birds, not counting ties. In the sweepstake he tied with the Savannah leader so often that they were sent back for a 60yds. rise, and as our boy only had No 9 shot, they could not carry enough force to break the birds at that distance. On some other occasion he will be ready for the big guns, and show Savannah and Millen what Augusta's champion can do. At a recent contest up in Rome he paralyzed the town by a score of 19 out of 20 birds and made a big reputation. Sam Denning made a good record, and the team with a little practice will be able to match any in the State. The delegation reports a good time among the crack shots of the low country.

WELLINGTON, Mass., Sept. 10.—The weekly shoot of the Wellington Club had a good attendance to-day, and some good scores were made at clay-pigeons, bluerocks and blackbirds. The following are the first prize winners in the several events: 1. 6 clay-pigeons—Wardwell. 2. 6 clay-pigeons—Wardwell. 3. 6 clay-pigeons—Wardwell. 4. 6 blackbirds—Wardwell. 5. 6 blackbirds—Wardwell. 6. 6 clay-pigeons—Gerry and Sanborn. 7. 6 blue rocks—Snow. 8. 6 bats—Snow and Stone. 9. 6 blue rocks—Snow and Chase. 10. 6 clay-pigeons—Wild and French. 11. 6 blue rocks—Stone, Sanborn and Gerry. 12. 6 bats—French. 13. 6 clay-pigeons—Wardwell. 14. 6 bats—Snow and Sanborn. 15. 6 blackbirds—Wardwell and Snow. 16. 6 clay-pigeons—Gerry and Sanborn. 17. 6 blackbirds—Sanborn and Melcher. 18. 6 blackbirds—Wardwell. 19. 6 bats—Sanborn. 20. 6 clay-pigeons—Snow and French.

CAMDEN GUN CLUB.—Camden, N. J., Sept. 12.—In order to bring the various gun clubs of this part of the East together, and in this manner increase the present interest displayed in amateur trap shooting, the Camden Gun Club will hold its first annual clay-pigeon tournament, Oct. 6, 7 and 8, at the Merchantville Driving Park, Merchantville, N. J. (Pensaukin Station P. R. R.). The grounds secured are roomy and in every way calculated for the purpose, besides being but a few minutes' ride from Market street ferry, Philadelphia, so that visiting teams can compete in the tournament and return to their homes same day. For programme address W. L. FORTINER, Sec., 430 Federal street, Camden, N. J.

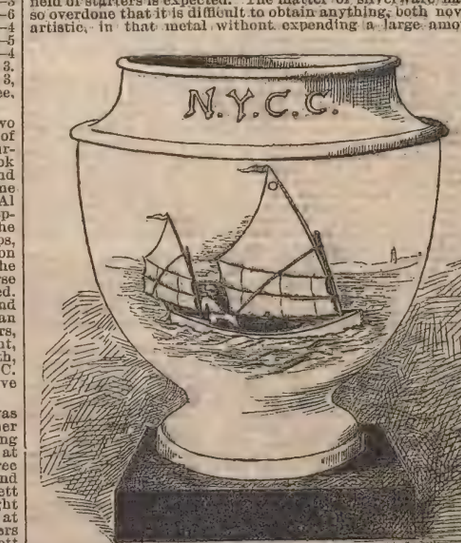
NORWICH, Conn., Sept. 10.—The High Rock Gun Club of Norwich, Conn., will hold a two days' tournament on Sept. 27 and 28, open to the world. Clay birds and bluerocks will be used. A guaranteed cash prize of $100 is offered for the best score made on 25 clay birds and 25 blue rocks.—H. POTTER, Secretary.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neide. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By J. S. Steele. Price 1.50. Four Months in a Sneakboz. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.



Commodore: R. W. Gibson.....} Albany, N. Y.
Secretary-Treasurer: F. L. Mix.....}
Vice-Com. Rear-Com. Purser.
Central Div.—Henry Stanton...R. W. Bailey.....E.W. Brown, 146 B'way, N.Y.
Eastern Div.—L. Q. Jones.....Geo. M. Barney....W. B. Davidson, Hartford.
N'thern Div.—A. D. T. McGachen, W. G. McKendrick, S. L. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses.

Persons residing in the Central Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

NEW YORK C. C. SAILING CUP.

IN order to make a race in good sailing weather, the summer regattas having been failures as far as the wind was concerned, the New York C. C. has offered a handsome trophy for a sailing race over the club course, the winner to be the permanent holder of the trophy. Invitations have been sent to other clubs, and the entries are free to all members of canoe clubs, so a good field of starters is expected. The matter of silverware has been so overdone that it is difficult to obtain anything, both novel and artistic, in that metal without expending a large amount of

money, and as the offering of valuable prizes is discouraged by clubs and the A. C. A., the New York C. C. started to find some suitable substitute for the usual homely and unsuitable pitcher or cup. In this they were aided by Mr. D. W. Granberry, of Maiden Lane, New York, whose art work is widely known. Mr. Granberry suggested an antique cup of beaten copper, and has made for the club a very handsome and artistic trophy of that metal. It is a fact not generally recognized that the baser metals so called, at the head of which stands copper with its richness of color, are far better adapted to artistic purposes than gold or silver, and lend themselves readily to the skill of the metal-worker. The cup shown above is about 5in. diameter and 5in. high, with the inscription on one side and a canoe under sail on the other. The date of the race is Oct. 8.

AN INSTANTANEOUS VIEW ON THE HUDSON.—Scene, upper end of Newburg Bay, a river steamer and a steam launch bound down. Launch passes close to canoe under sail with two men on board; canoe takes the seas broadside on, rolls over to port, then rolls over to starboard, then righted, but with only one man on board. Launch stops to aid the canoe, and the amused spectators in the steamer lose sight of them.

THE CANOES OF 1887.—II.

NEXT to the centerboard the most important detail is the rudder with its accompanying gear, a part of the equipment that has been brought to a very fair degree of perfection. The metal drop rudder is universally used, being made in several different patterns by various makers, but all on the same general plan. Those on the new Albany boats seem to be the best thus far in construction. The rudder is strong and stiff, and the connection to the boat is very good. In some instances the rudder is held far away from the sternpost and large projections of metal are found in place of small and neat castings. The Ruggles boats all have the brass tube hanging, invented by Mr. Barney, and placed by him on the old Ibis. A short piece of brass rod is also carried, to be slipped into the tube when the rudder is unshipped, to protect the tube from injury. The rudder yoke most commonly used now is of brass, with a small sheave for the hoisting line for the blade. Some of these yokes are badly secured, the head of the rudder stock twisting off under strain, but most of them are both light and strong and answer very well. Of course there is the liability to foul the mizen sheet. This is avoided in the small grooved wheel on top of the rudder and taking the rudder lines, such as Pearl and Nautilus were fitted with last year, and several of these were seen this season. The wheel makes a very strong and compact gear, the rudder can be held in backing, and the mizen sheet cannot possibly foul.

The deck yokes now are of brass, with a socket for a tiller. Some of the tillers are fitted with a short handle hinged to the tiller, so as to be in easy reach when the crew is out to windward. A very peculiar arrangement was seen on Mr. Butler's Blanche; the deck yoke was over 2ft. long, the ends being shaped into handles. Sitting on the sliding deck seat, an end of the thwartship tiller or yoke is always in reach, and if required an ordinary tiller can be shipped in a socket.

The usual connection between rudder and deck tiller is by wire rope or small chain, with a turnbuckle in each part for tightening. Some canoes had the rope finished with neat eye sockets of brass, the end of the rope being soldered into the hollow of the socket.

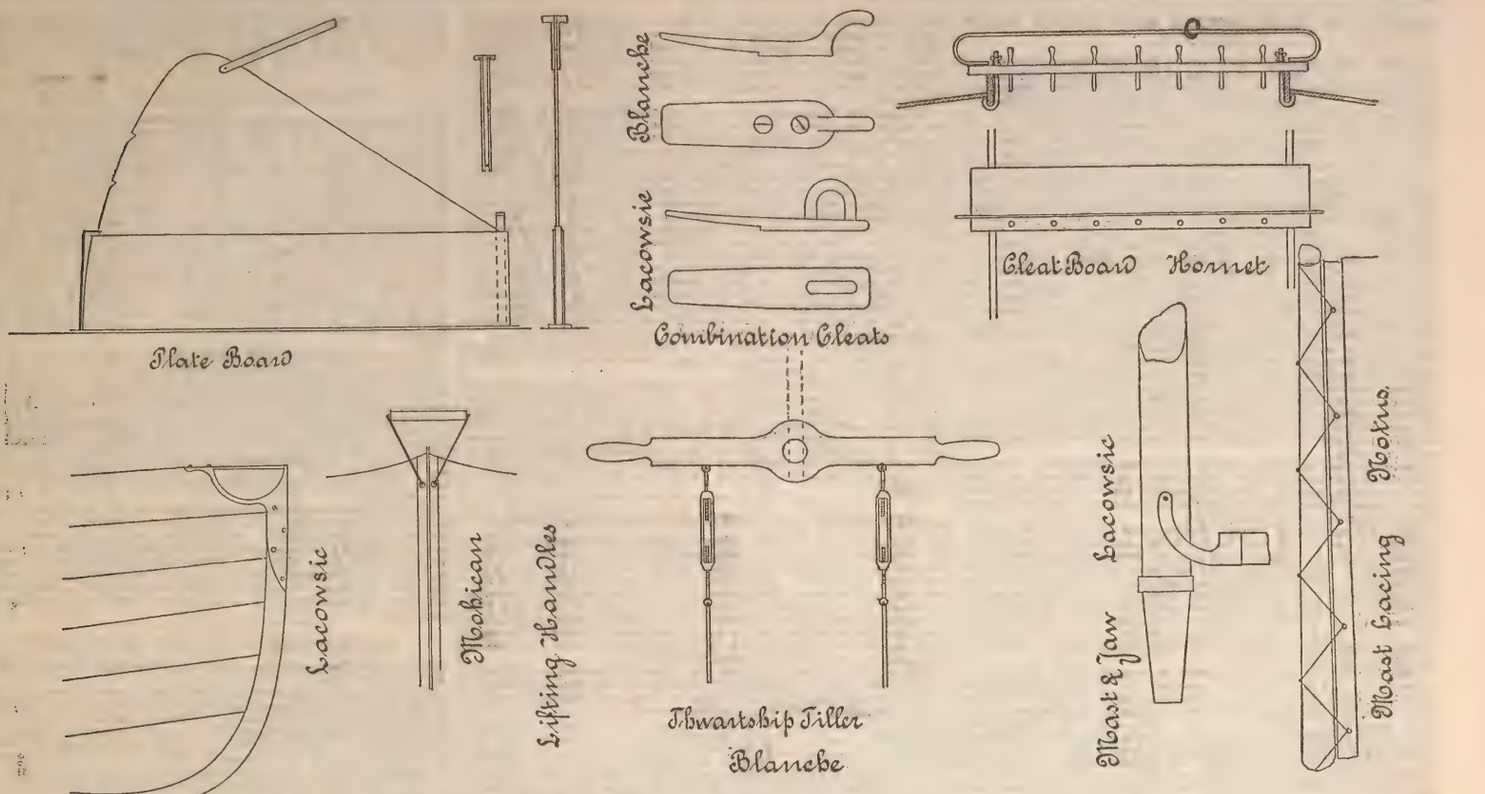
One canoe was fitted with a combination of centerboard and rudder, a balance rudder fitted in a case within 2ft. of the stern. The rudder was held by a vertical spindle by which it could be raised or lowered or turned when below the bottom.

The deck seats have largely gone out of fashion, canoeists now sitting on the side decks or hatch. They were heavy and clumsy and are well dispensed with. Blanche still uses the sliding seat described last year, but only one other was seen this season, and it is not likely they will come into general use.

The cleat board seen on the English canoes last year has been adopted by several this season, and is a good thing. All the cleats are screwed to a board about 4in. wide and long enough to run across the well, being secured by two long brass thumb screws which clamp it firmly at any point on the coaming. On this board are arranged cleats and belaying pins and in some canoes, as the Hornet, a traveler of brass rod for the main sheet is also fastened. In stowing the sail the lines are left on the cleats, the board being detached from the boat and made up with the sail. Of course it is necessary that the fastenings should be very strong, as all the pull of sail and halliards comes on them. It is well in addition to have the usual allowance of cleats on deck in case the board is not used or another sail is set; or if this is not done there should be at least four stout cleats well fastened to the deck frame for making fast painter, etc. This year two new cleats were seen, both of excellent design. The better of the two was made by Mr. Butler; one end forms a hook around which a turn may be taken and the line hauled in, jamming afterward under the other end, which is simply like the ordinary fixed jam cleat. Mr. Barney has a similar cleat but the hook is replaced by a closed eye through which the sheet is passed. Another handy little device is a jam clutch for the mizen sheet, to be placed on the deck tiller.

A very convenient thing is a handle of some kind at each end of the canoe, by which she can be easily lifted and carried. That on the Escowan is convenient but very ugly, disfiguring the boat greatly. Another form is used on the canoes of the Mohican C. C., a bail or handle of stout wire hung in brass plates screwed to the stem and sternpost. The middle part of the handle is covered with a short length of rubber tubing, giving a good grip. The handle is a fixture on the boat and is not ornamental, though little in the way. The Nautilus last year carried four handles with hook ends, and strong eyebolts were fitted on each side deck, forward and aft, by which four men could easily carry the canoe. Something of this kind, a good detachable handle, would be very convenient; it should fit in eyebolts in stem and stern, so that two men could comfortably carry the boat.

Canoe carriages and wheels have never been introduced in this country, though used in England, a very light and compact little vehicle with wheels like a bicycle being made specially for canoes. With them long portages are easily made, but for general cruising in decked canoes where portages are the exception, a very convenient substitute would be a small wheel, say 4 to 6in. diameter, with a face at least 1in. wide, mounted in a light metal frame that could be quickly attached to the forefoot of the canoe. With this in place the canoeist could lift the stern and run the boat wheelbarrow fashion without difficulty. In hauling up on stony beaches or in moving about a boat house such a plan would be far better than the usual method of dragging the canoe on its keel and bilges. This year several canoes were provided with the permanent canvas covers suggested in our comments on the last meet, in which they were quickly laced up for shipment.



The change in rigs since last season was one of the most noticeable features of the meet. The long bending yard, both of the balance lug and Mohicans has gone, but as yet it cannot be said that any one sail has taken place of either. It will be remembered that the balance lug and lateen together displaced the leg of mutton sail about seven years since, and that later the Mohican superseded the lateen in the inland waters, while the lug still retained its place on salt water. Both of these sails have been lately condemned on the ground that it is best to have all the sail abaft the mast; but this, whether true or not, does not reach the real trouble. Both have always been cut with a wide head that required a very long yard to stretch it, and this yard was unsupported for the greater part of its length. Now to make it at all stiff it had to be heavy, and if moderately light it sagged off to leeward in a disastrous manner, while at the same time the luff could not be kept taut. A long swaggering spar, high up, bending in every direction and failing to hold the peak, is bad in more ways than one; it lessens by its weight and momentum the stability of the canoe and also fails to get the maximum driving power out of the sail. In the Mohican this long yard seems to be a necessity, but in the balance lug it can easily be replaced by a lighter and stiffer spar that shall hold the peak up and the luff taut, both essentials to good windward work.

However, experiment has ceased, for a time at least, while canoeists are now off on an entirely new tack. We have mentioned that each of the old sails was superseded by something definite; but at present, in giving up the lug and Mohican, canoeists have not agreed on any one or two sails to take their place, but are experimenting in several directions. Few, if any, of the rigs at the meet were more than experiments, more or less crude and untested, if we except that on Pecowsic, which seems to have reached the highest degree of perfection and efficiency. This being the case, it is not necessary to describe all the different sails in detail, but to look at the leading characteristics in a general way. All the rigs possess two points in common; the sails are abaft the mast, and all are lighter aloft and the loftier parts of the spars better supported than in the older rigs. As to the points in which they differ, they may be divided as follows:

Sail Lashed to Mast—
- Pecowsic, leg-o'-mutton, with battens.
- Cook's, sprit sail.

Sails Fitted to Hoist and Lower—
- Hoisting on mast.
- Hoisting on gunter yard.
- Hoisting on long yard with short mast.

In the first division are the Pecowsic sails, all leg-o'-mutton in origin, but with the area increased by light battens in pockets. Each sail is permanently lashed to the mast, and can only be taken in by unshipping the mast. The sails are flat, sit well, and are very effective, while their owners seem to use them without trouble, but a sail that cannot be reefed or stowed quickly from the well is certainly not desirable for other than special uses. The rigs of the two Barney boats are simply perfect in their way, light and graceful spars, the sails laced to small eyes driven in mast and boom; and the foot of the mast, only extending about 5in. below deck, fitted with a brass ferrule, so as to turn with perfect ease, all the masts in a set, five in number, being interchangeable. The boom jaw is shown in the cut, a brass casting with a socket for the boom, a pin running through the mast and ends of jaws. Of course both mast and jaw must turn together as the sail is trimmed. The ten sails, the tent, a very good one, by the way, and all the tent pegs and poles stow in a large box which lies by the float in camp, with all sails ready to hand. They differ by about 5ft. each in area, from 20 to 40 sq. ft., so any amount may be set. There are no lines but the sheets, the two or three sails needed are taken from the box and dropped into their proper tubes, and the rigging is completed. Certainly there is much to recommend the rig on the score of simplicity.

CANOE FITTINGS.—1887.

The other rig in this class was shown at Ballast Island this year by Mr. Cook, of Chicago, who invented it. The sails are the ordinary sprits, the only difference being in the method of rigging the sprit. Instead of hoisting on the mast it is carried out about 3in. on the boom. The lower end of the sprit has a gooseneck formed of two screweyes, one screwed into the end of the sprit and the other simply hooked into its eye. The end of the loose screweye slips into a hole in the boom, thus the sprit acts to hold the boom down. The sail has a peak which is, of course, well set up by the sprit, the entire sail is flat and effective, but like the Pecowsic rig, no reefing or stowing is possible; the entire rig must be unshipped or allowed to take charge of the boat in a blow. Only one of this rig was shown at the A. C. A. meet, and that in an incomplete state, so no comparison was possible.

Of the second class of sails the first variety is that of the Notus, a leg-o'-mutton sail with two battens and the ordinary reef gear. The chief novelty in this sail was the method of attachment to the mast, an original idea of Com. Gibson's. All old canoeists will remember the trouble once experienced with the leg-o'-mutton sail and its mast rings, how they would jam in hoisting and lowering, how large they were and how far from the mast the upper part of the sail was. All this has been obviated by a very novel and simple expedient; the luff of the sail is laced to the mast by a double lacing, shown in the cut, something like one row of the meshes in an ordinary hammock or net. When the halliard is cast off these meshes at once loosen and the sail lowers freely, but as soon as the sail is hoisted and the final pull taken on the halliard, the meshes lengthen and bind the sail closely to the mast. All the weight and trouble of the rings is done away with. The rig of Notus is about 108ft. in area, 70 and 38ft., the mainmast being over 15ft. above deck, but as light and tapering as a fishing rod. The weight aloft is reduced to almost nothing, and every ounce of the canoeist's weight on the gunwale goes to balancing the wind pressure alone.

The larger number of the sails present came into the family of gunters, known of old to canoeists before the days even of the leg-o'-mutton, for the gunter rig was the first from which practical results in canoe sailing were obtained by Mr. Baden-Powell. The old gunter brass is now discarded, but the same principle is employed, a short mast with a light spar set as a topmast, the sail being laced to the latter. In reality the Mohican sail with its yard and battens has simply been shifted so that it is entirely abaft the mast, the luff and head now forming one continuous line, the hoisting gear being much the same but with the addition of a jaw of some sort on the heel of the yard to hold it to the mast. The rig may easily be made from an old Mohican sail by cutting the throat of the sail away so that the angle between luff and head disappears, and then adding the jaws to the yard. This makes a very good sail, the yard is held better than formerly and there is properly no peak but a head like a leg-o'-mutton. Reefing is as easy as in the Mohican, the same gear being used.

The third variety under this class is of much the same shape as the last mentioned but has, with the short mast, a long yard extending from the deck to the head of the sail, and hoisted and lowered by a halliard. Of course the sail cannot be reefed as in the preceding, but another method is resorted to in one of these sails, the joint effort of Messrs. Whitlock and Ward. The sail has a batten radiating from the tack where it is hinged to a compound jaw, a special forging of steel that takes the fore end of the boom and batten as well as the heel of the yard. The batten is fitted with reef gear by which it may be hauled down to the boom, making a lateen sail. A second jaw, of the usual lateen form, is placed about 18in. in on the boom, and by lowering the halliard as the reef is taken in sail may be set as a lateen of reduced area. A special feature of the rig is the double halliard. With the usual single halliard and block at masthead the yard cannot be hauled up close to the mast. To obviate this difficulty the halliard is double, with two cheek blocks at masthead, one on each side, and two similar blocks at the deck. The halliard is doubled in the middle, the bight is placed around the yard, and then the two ends are rove one through each of the blocks at masthead and then through the corresponding block at deck. The two parts are hauled on together, raising the yard and bringing it chock up against the mast, where it is firmly held. When set as a lateen the two parts are slacked off together until the yard is low enough. The entire arrangement is very neat and ingenious but the details are not yet completed and the sail has not been thoroughly tested.

Besides the Pecowsic and Lacowsic rigs before mentioned the rig of the Notus is noticeable for its finish and perfection, while with it came the rig of the Rat, not used in the races, though present at camp. This rig was of the second variety, a hoisting yard with reefing battens, the brasswork and all details being worked out by the owner. The rig was by far the most perfect of its kind at the meet, the workmanship of all parts being of the best and highly creditable to the young amateur who built and rigged the boat. One little point is worth special mention, the grommets in the sails for lacing lines were replaced by small brass rings ¼in. diameter, sewn to the hem, through which the lacing lines were run.

The collection of sails and gear at the meet was both interesting and instructive, much was to be learned and many valuable suggestions could be gathered for future work; but those who went expecting to see some perfect sail which they might copy blindly were disappointed. None of the rigs present filled the bill, all had some weak points, but many valuable hints and special features could be had by a little observation; while as a whole the exhibit gave most encouraging evidence of earnest work by a large number and of many substantial improvements, as well as a comprehension of the main disadvantages of the present rigs, which must result in something far better in a short time. Never before were so many men interested in the question of rig. But a short time since nearly all were content to follow the lead of a few, but now is the time for individual experiment and general work by the many for better rigs, and while many are going over old ground and some are wasting time, the main result will be in every way favorable to canoeing.

A HINT IN TOWING.—In towing another canoe or a heavy object when paddling it is sometimes best to make fast the towline to the middle of the paddle handle. All strain and jerking on the canoe is thus avoided and the leverage of the paddle serves directly to propel the tow. With a little practice the painter may be kept taut and almost a steady pull given to the tow, while the unsteady motion of the canoe under the strong stroke necessary is entirely avoided.

A. C. A. MEMBERSHIP.—The following named gentlemen have applied for membership in the A. C. A.: F. W. Burritt, F. B. Hayes, W. H. P. Weston, Toronto, Canada; F. H. Dobbins, F. K. Fee, J. C. Harstone, J. H. Hart, W. C. Herriman, R. B. Sylvester, Lindsay, Canada; H. S. Kisley, R. Kingan, D. J. Lundy, H. Newbald, G. A. Reid, R. J. Stenson, Peterboro, Canada; Alexis Martin, Hamilton, Canada.—WM. M. CARTER, Sec.

A. C. A. MEMBERSHIP, CENTRAL DIVISION.—The following gentlemen residing in the Central Division have applied for membership in the A. C. A.: James R. Steers, Jr., Wm. M. Brownell, New York; Rev. Frederick B. Savage, Newburg, N. Y.—EDWARD W. BROWN, Purser, Central Division.

TORONTO C. C.—On Sept. 3 a race was sailed over a 7-mile course with six entries. Dawn, W. A. Leys, won, with Dotterell, D. B. Jaques, second; Una, Colin Fraser, third; Isabel, Robert Tyson, fourth; Ripple, W. A. Cooke, was disabled and withdrew; Wanda, W. H. Weston, did not finish.

PHOTOS TO EXCHANGE.—Mr. Louis Sahm, No. 451 North Alabama street, Indianapolis, Ind., wishes to exchange canoe and yacht photos with other amateurs.

THE TRIAL RACES.

INSIDE COURSE, SEPT. 13.

THAT the trial races which in previous years have created hardly less excitement than the Cup contests, should this season be comparatively devoid of interest is probably due to the facts that the competition is limited to but two boats, by the same designer, and that the superiority of the newer of these and the fact that she will in all probability be selected, are both generally conceded. While there are many who are still warm adherents of last year's champion, it is evident that she is not handled to the same advantage as by her first owner, as might be expected in new hands; and her performance in all the meetings that have taken place between her and Volunteer, has shown that the latter is the surest champion to intrust with the defense of the Cup. Indeed after the cruise a selection could safely be made without trial races, but Mayflower's owner was desirous of further trial, the boat having been raced under great disadvantages, and it would not have been fair to him to dispense with the trial races. The owners of the three other boats could see plainly that they had no chance and so declined to enter, but Mr. Morgan at once went to work to put his craft in the best possible shape. Some repairs were made, the bottom thoroughly polished and a new suit of larger sails were made, so that Mayflower came to the line in fine form. She was out last week at the screw dock and was cleaned and potleaded, a piece being added to her rudder at the same time. Volunteer also hauled out at South Brooklyn on Friday and was scraped and smoothed down, being painted on the bottom. Time and the weather did not permit a coat of potlead, so she sailed on a bottom of red lead only. While hauled out she was visited by thousands of people, the piers and streets being crowded all the time she was on the dock. She was launched on Monday afternoon, in readiness for Tuesday's race, though as stated the bottom was not finished. Some delay was caused by the action of the trades union, the ship painters refusing to allow the yacht's regular crew to assist in painting. Her new boom has not yet been slung, and she carried her old mainsail.

The first race was set for Tuesday, over the New York Y. C. course, and at 10 A. M. both boats were under way from their anchorage off Bay Ridge, with clubtopsails aloft and both balloon and ordinary jibtopsails in stops on the double topmast stays. The Electra, with the committee on board, anchored off Buoy 18, and at 10:30 the first gun was fired. The weather had been cloudy all the morning, with a thin haze over the Bay and a very light wind from N. E., and under the same conditions the yachts came for the line. The tide was more than half run out when the starting gun sounded at 10:40, and with its help and the light breeze the two crossed well together, the times being: Volunteer, 10:41:02s; Mayflower, 10:41:37. Mayflower was to the eastward by a couple of hundred yards as the two broke out balloon jibtopsails and started off side by side.

From the first the new steel boat began to leave her older sister, gaining until she was several lengths in advance, though both were moving very slowly. As they crossed the line Thistle, with Mr. and Mrs. Bell and Mr. Watson on board, got her anchor and stood out from Tompkinsville with squareheader aloft and racing mainsail set, but under small jibtopsail and lower headsails only. She approached the racers near the Narrows, but by this time there was a calm, and the three were motionless save for the tide. At length a catspaw sent them away again, Volunteer jibing her boom to port, while Mayflower merely jibed her ballooner and boomed it out to port. Volunteer hauled across for the Staten Island shore for more wind, but failed to find it. At 11:20 she set her spinaker to starboard, but only carried it for a quarter of an hour. Thistle had sailed back and forth, out of the way of the pair, but at noon, when they were well clear of the Narrows, she was as far in advance and going as fast as either of the racing yachts. She evidently did not intend to lead them, and went far over to the eastward, lying motionless for a time. Just at noon Mayflower lowered balloon jibtopsail and set a small one over her jib and staysail, taking a light breeze at the same time from S. E. She began to leave Volunteer, but as soon as the breeze filled the latter's ballooner she too started away, and soon had a lead of 200yds. or more. At 12:20 Volunteer passed Buoy 12, but an hour later the two were still above Buoy No. 10, in a flat calm and barely able to stem the strong flood that was running.

Another hour passed with nothing to note but a little telegraphing with jibs and jibtopsails, a spit of rain that drove all on the attendant steamers under shelter for ten minutes, and a constant lengthening of the intervals of calm that had prevailed all day. The hope of a breeze from southward or eastward was gone, the boats drifted nearly up to Buoy 8½, Volunteer still ahead, and then the strong tide carried them well up toward the Shrewsbury until at 2:45 anchors were dropped when just abreast West Beacon and very close in to the shore of the Hook. The Electra dropped her small launch, which steamed off to the racers and returned, when the signals were broken out, "Race postponed." Each yacht took a tug and hurried away home, and the fleet of steamers followed in the same direction. Thistle had gone down the Swash Channel in company with Atlantic, but started for home before the race was abandoned. The drift was unsatisfactory to the last degree, but as far as any result was evident, Volunteer took the lead on every occasion and showed herself a better drifter than Mayflower. Volunteer was sailed by Captain Haff and Mayflower by Captain Craven. Captain Joseph Ellsworth was on board the latter boat at Mr. Morgan's request.

It was decided not to resail the race, but to continue the original programme with a race to-day, twenty miles out and back from Sandy Hook. The following notice has been issued by the regatta committee:

"In regard to the outside trial race, to be held on Thursday, the 15th inst., we may think it not necessary to sail the entire twenty miles to windward and to leeward and back; therefore, if after the start we should wish to shorten the course, or after a certain time during the race to change the direction of the course, we have adopted for that day the following list of special signals: The numbers 1, 8, 4 and 2 will be large red numbers on a white ground.

"The letters for the points of the compass are copied from the International Code.

"You will greatly oblige the committee if you will hoist your answering pennant as soon as you have read your signals from the Electra, the setting of which will always, of course, be preceded by the firing of a gun.

SPECIAL SIGNALS.

"1. Run up to flagship and lay to.
"8. Pass to leeward of flagship when gun fires and steer ——.
"4. The trial is over.
"2. Come within hailing distance of the flagship."

In view of the crowding on the course by vessels of all kinds, which is the same this year as it always has been and always will be, the following touching appeal is rather amusing:

"You will greatly oblige the Committee of the America Cup, and especially the Regatta Committee of the New York Y. C., if, through the columns of your paper, you will call the attention of all captains and owners of vessels, and especially of all steam vessels, to the great importance and absolute necessity of keeping a long distance to leeward of the yachts competing in the Cup races. A steamer passing close to a yacht will often give a back draught of wind, together with a wash of sea, both interfering with her speed. The cutting in close ahead or astern should likewise be avoided.

"This appeal would hardly seem necessary if the experience of former Cup races did not warrant it.

"The fairest kind of fair play should be given to both challenger and challenged, and we feel it is but necessary to call the attention of the public to this matter in order to insure that fair play which we so much desire.

"Yours, respectfully,
"THE AMERICA CUP COMMITTEE."

If past experience goes for anything, this is apt to be about as effective as an address to all steamboat captains delivered from the top of Liberty's torch would be. If the inside course is to be retained for any races it should be so changed as to start outside the Narrows, but for an important match even this is too little; the only way to avoid a part of the crowding is to start at Sandy Hook Lightship, where the smaller boats will not follow.

GOELET CUP RACE.—A revision of the official time of the Goelet Cup race of last month makes Volunteer ahead of Puritan by 9m. 38s., and Mayflower ahead of Puritan by 58s. Puritan beats Atlantic by 55s, instead of being 20s. astern of the latter, as at first announced.

AMERICAN NEWSPAPERS AND UNCLE SAM'S GUESTS.

IN the wild scramble for news by the American newspapers, which began when the report of the Clyde challenge first arrived, there have been absolutely no limits to the blind ignorance displayed, nor the utter disregard of all courtesies due to the gentlemen who visit us this year in a fair and friendly effort to win the Cup. The attempt to secure the lines of the Thistle and the fictitious drawings published last winter and exposed at the time by the FOREST AND STREAM, stands as a good example, and the ridiculous "air bubble" yarn, given gravely a short time since by an evening paper, was an equal display of ignorance, but both have been capped by the exploit of the New York *World*, which last Thursday night sent a diver down to flounder and grope about in the darkness to get the lines of the yacht. The report of the journalistic exploit was given in last Sunday's *World*. In the four columns which are devoted to the details, more or less imaginary, of this wonderful trip, just ten short lines are given to a description of what was seen of the Thistle. This descriptive matter is supplemented by illustrations, "lines" in fact; two crude sketches that look about as much like Thistle as the pictures of pigs or cats which children draw with their eyes closed are like to the objects they purport to represent. The sheer plan does not even resemble the parts of the Thistle's hull which are now visible above water, while her depth is given as 20ft.

Without placing too much credence in any part of the story, it is at least probable that a diver was actually hired and made a descent somewhere near the Thistle, and that the *World* spent several hundred dollars on the expedition; but as for any results, there are plenty of boys around New York, interested in yachting, who could draw off-hand a far more correct sketch of what the Thistle probably is than the crude scrawl for which the *World* paid so much.

As to the lack of good taste in the whole proceeding there can be but one opinion, and had the intruders been detected and given the reception usually accorded to river pirates they would have had no more than a just reward for a most impudent and unwarranted intrusion on private rights.

Since the arrival of Messrs. Watson and Bell last week the interviewers have been out in full force, and had the two visitors talked steadily ever since their arrival they could not have given utterance to half the stuff that has been credited to them in the daily papers. With a delicacy beyond the comprehension of the average reporter, Mr. Watson has declined to visit Mayflower or Volunteer, but the papers of Thursday and Friday generally described him as hurrying away to Brooklyn to see Volunteer as soon as he landed from the City of Rome. A Boston paper this week revamps the old story as to "copying American models" in the following words:

"Mr. Watson thought that Boston was worthy of a visit, and he came here. He made no announcement to that effect, but made his visit under the guise of a gentleman of leisure and information. Mr. Watson made a call at the office of Mr. Burgess while that gentleman was out of town, went down to Beverly and viewed the Mayflower and visited Lawley's yard at South Boston, where the Puritan and Mayflower had been built and where the Volunteer was afterward built. He walked slowly through the yards without saying anything, 'taking everything in.' He inspected the models of all parts of the big American boats and went away fully prepared to compete with Mr. Burgess in the designing of a cup winner. At New York, too, Mr. Watson had every opportunity for a close inspection of the models of the Puritan and Mayflower, as they are on exhibition in the club house of the New York Y. C. Later on, after it was announced that Mr. Watson had designed the Thistle to compete for the America's cup, Mr. Burgess wrote to Scotland, asking for the dimensions of the Thistle, but Mr. Watson refused to give them or any other particulars concerning his boat. Ever since there has been the utmost secrecy concerning the boat, and it is more than probable that the information gained by Mr. Watson on his visit to Boston was a great aid to him in the construction of the Scotch wonder. What little is known of the Thistle's keel confirms the suspicion that it is more American than Scotch, for it is very similar to that of the Volunteer, Instead of being of wood it is of iron with lead run in for ballast, while the Volunteer's is of wood [steel?] with the same kind of ballast. Many Bostonians think that Mr. Watson has taken advantage of Mr. Burgess and will not therefore be surprised if the cup is lost. If Mr. Burgess had only known beforehand of the unfair advantage which Mr. Watson was going to take of him he would have gone ahead one year, and instead of designing the Volunteer would have designed the boat which he will design next season that will leave the Volunteer as far behind in progression as the Volunteer has left the Mayflower and Puritan."

We only give space to such stuff as a fair sample of much that has of late appeared in many papers, an attempt to hedge on the chances of a possible defeat by making Mr. Watson a copyist of Mr. Burgess, when that sense of fair play which all Americans lay claim to should dictate an open and manly avowal of the truth, that whatever chance resemblance there may be between Thistle and Volunteer is due to the fact that Mr. Burgess has derived his inspirations from the English cutter rather than the American sloop. Forgetting that Thistle was built before Volunteer was yet on paper all are ready to cry, "How much she resembles Volunteer." Referring to the extract above, the writer displays his utter ignorance by comparing the keel construction of Thistle to Volunteer, when Mr. Watson built Vanduara in exactly the same manner, a hollow metal trough filled with lead, seven years ago, or before Mr. Burgess took up his profession of yacht designer.

How Mr. Watson has taken an unfair advantage of Mr. Burgess the writer does not show. The first proposal of the Scotch challengers was that both parties should agree on a common length of waterline, each building its best boat thereon, thus avoiding any chance of either outbuilding the other, but this fair proposal was passed without notice by American yachtsmen; now what right have they to complain if the Clyde yachtsmen keep their dimensions to themselves? Much has been said about the secrecy attending the building of the Thistle, but it does not seem to have occurred to any one that Mr. Burgess is not giving away much more about Volunteer and Mayflower than Mr. Watson has about Thistle. To be sure, neither was built under lock and key; but what reason was there for so doing? Mayflower and Volunteer were both built to meet boats already afloat and well-known, while Thistle was begun with the absolute certainty that a new yacht would be built to meet her, and that this yacht would approach still nearer to the English cutter than either Puritan or Mayflower.

How much authentic information has the public about Mayflower or Volunteer; how much has Mr. Burgess revealed about either boat? Thanks to the omnipresent and inquisitive American reporter some of the dimensions of spars and sails have been wormed out, but the really valuable points—the displacement, weight in keel and inside, area of midship section, area of immersed surface, centers of buoyancy, effort and lateral resistance, and areas of sails—are still as little known as in the Thistle. Mr. Burgess is not to blame for this; it is his private property, the tools with which he works, and it is not to be expected that he will place them in the hands of his business rivals. But why should Mr. Watson be asked to do the same thing? It is in no way discreditable to Mr Burgess that he should adopt a good idea wherever he sees it, but it is a fact that he is indebted to the English cutter for almost every detail of design and construction of his yachts, except in the three points of beam, centerboard and laced mainsail. These are very important points, it is true; but what are the three against the hundred details, many of them fully as important, which are clearly of English origin? And, further, in these three he has departed far from American practice. In beam he has far less than the American sloop; the centerboard he is ready to discard wherever the depth of water permits, and his laced mainsails all have an English outhaul in place of a rigid lacing and fixed clew.

He would not be a Yankee if he did not improve on an idea however obtained, and this is fully shown in his boats. Untrammeled by rules, he has taken more beam than has of late been allowed the British designer; seeing the small need of reefing a bowsprit in ordinary racing service, and the weakness of the English bobstay fall, he has improved on both in his later boats. Appreciating fully the many advantages of the cutter rig he has retained them, but strengthened some of the weak points.

Speaking of copying, we do not know where the idea of the long spans on Volunteer's gaff originated, but it is worth while noting that while they had never been seen on the older Burgess boats, or in fact on any other American yacht, they appeared on Volunteer a short while after the first photos of Thistle, showing plainly the same novel feature, were on sale in America.

It is curious to see the gradual working of the idea so long advanced by the FOREST AND STREAM and so long combatted by every journal in America and by most American yachtsmen, that the keel is at least the equal of the centerboard for speed. Of late the question of a keel boat creeps up wherever yachting is under discussion; and, following Mr. Burgess's lead, that public opinion which has so long stood as a bar to American progress in yachting is now ready to take up the keel boat as the proper thing, provided it be allowed to do so with the assumption that the keel is an American invention. The skill, enterprise and ingenuity which have brought success to Messrs. Paine and Burgess in Puritan and Mayflower, taught them long ago that the lead keel of the English yacht was necessary in modern boats, and further that the possibilities for speed were with the keel rather than the centerboard craft; but had they proposed in 1884 to defend the cup with a keel boat they would have been ridiculed and abused by the same public which to-day is accusing Mr. Watson of copying Volunteer and Mayflower.

We had Mr. Watson's word personally last fall that he did not see either Mayflower, Puritan, Priscilla or Atlantic, though he made a call on Mr. Burgess when in Boston. Further than this, he stated then that he had sketched out a preliminary draft before leaving for America, leaving it in the hands of his assistants to complete the details, and that after all he had learned on his visit it was not likely that he would change this plan. This should set the matter at rest for all time unless something better than anonymous gossip appears to the contrary. If any one still believes that he copied the Burgess boats, let them contrast the yachts themselves. How much does Mayflower's stern, far less Volunteer's shapeless excrescence, resemble Thistle; what likeness is there between the fair, regular sheer of Puritan and Mayflower and the peculiar Watson sheer, familiar before Mr. Burgess designed his first yacht; what is there in the way of workmanship on Volunteer that is not far better done on Thistle? Volunteer may prove faster and better than Thistle, but we would be sorry to see her go abroad as a specimen of American handicraft.

We venture this prediction: If Thistle wins the Cup, the next Burgess boat will resemble her more than it does either Volunteer, Mayflower or Puritan.

The Scotch yachtsmen have shown themselves to be gentlemen sportsmen who are not only fully able but well content to mind their own business; building the best boat they can and sailing her as fast as she will go, without further regard to the boat that may be put against them. As guests of the nation they are entitled to courteous and gentlemanly treatment, and neither a strong feeling of patriotism nor the pushing competition of American journalism will serve as an excuse for a hostile and rude reception.

LARCHMONT Y. C. SPECIAL REGATTA, SEPT. 10.

IT is unfortunate that the liberal offer by the Larchmont Y. C. of a $1,000 cup failed to bring about sufficient entries, but Volunteer and Mayflower were both on the railways preparing for the race of Tuesday, Priscilla was on her way home from Bar Harbor, and neither Atlantic nor Puritan entered; so the race was given up for the present. The offer of two prizes of $250 and $100 for second class resulted in sufficient starters to make a race, but owing to the weather this attempt too was a failure. The race was started on Sept. 10, but failed to finish within the limit of eight hours; so it will be resailed on Sept. 17.

The special course laid out was from off Larchmont, around Matinnicock Buoy, thence around mark-boat off Captain's Island, thence around mark-boat off Eaton's Neck, and home over same course, 38 miles. Only four yachts entered.

Titania	C. O. Iselin	Allows.
Shamrock	J. R. Maxwell	1m. 10s.
Fanny	T. P. Fiske	3m. 56s.
Mischief	Messrs. Auchincloss	7m. 31s.

The regatta committee, Messrs. Willard, Griffiths and Foreman, had as guests on their tug Messrs. William York and Robert Wylie, of the Royal Clyde Y. C., while Mr. Watson sailed on Shamrock.

When the first whistle blew at 11:30 the wind was from N.W. moderate, with tide half up. With booms to starboard and spinnakers on stops to port the four went over as follows, the whistle being given at 11:35, Titania tearing her spinnaker and being obliged to take it in for hasty repairs, resetting it again:

Fanny	11 38 37	Shamrock	11 38 52
Titania	11 38 42	Mischief	11 39 17

Balloon jibtopsails were also broken out and soon did more good than the spinnakers, the wind going to north a little, so the latter were taken in. Titania soon passed from under Mischief's lee, where she found herself at the start, though she was obliged to go astern to do so. When once clear she ran ahead of the fleet, the times at Matinnicock being:

Titania	12 14 15	Shamrock	12 15 05
Mischief	12 14 56	Fanny	12 16 53

Across Captain's Island the wind was dead, but it had fallen so light by this time that the race was a drift, Fanny being badly left by the dying breeze. The times at Captain's Island were:

Titania	1 29 00	Shamrock	1 33 52
Mischief	1 32 12	Fanny	1 51 25

For nearly four hours the quartette drifted about, Fanny working in nearest to the Connecticut shore and dodging the tide, finally coming out second boat when the breeze reached them. The times at Eaton's Neck mark boat were:

Shamrock	5 17 00	Titania	5 29 41
Fanny	5 24 52	Mischief	5 32 00

The wind increased a little and better time was made to Captain's Island mark, which was turned thus:

Shamrock	6 53 52	Titania	7 00 20

The spinnakers while the tug, only waiting to time Titania, ran across to Matinnicock to show the way, displaying red lights when at the buoy. Titania gained rapidly on this run, the times being:

Shamrock	7 35 39	Titania	7 36 49

The other two were not timed, and it is uncertain whether Mischief turned the spar buoy, as it was by this time quite dark. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Shamrock	11 38 52	8 15 32	8 36 40	8 35 30
Titania	11 38 42	8 17 13	8 38 31	8 38 31
Fanny	11 38 37	Not timed.		
Mischief	11 39 17	8 18 40	8 39 23	8 31 52

Fanny was not timed and Mischief's finish, so close to the leaders, makes it doubtful whether she did not mistake the course in the dark. Altogether the finish was very unsatisfactory, and as stated before, the race will be resailed.

KNICKERBOCKER Y. C. FALL REGATTA.

THE annual fall regatta of the Knickerbocker Y. C. was sailed on Sept. 8 over the regular course, from Port Morris around the Gangway Buoy, in a strong N.W. wind, the smaller boats carrying reefs over part of the course. The club has a fashion of making up a very imposing entry list by including every yacht enrolled as entered for its regattas, and this year the total ran up in the seventies; but when the signal was given only twenty-one yachts started. Dora and Wacondah had some sharp work over the first half of the course, the latter finally gaining a little at the turn, which was timed:

Lizzie R.	12 27 30	Zena	12 41 00
Duster	12 30 56	Undine	12 41 30
Truant	12 34 04	John Demarest	12 43 14
Wacondah	12 35 30	Charles Wilde	12 44 10
Dora	12 35 40	Black Hawk	12 44 35
Adelaide	12 37 12	Rover	12 44 55
Culprit Fay	12 37 45	White Cap	12 48 40
Mayotta	12 38 30	Ariel	12 49 10
Melvina	12 40 00	Gil Blas	12 49 35

Coming home before the wind the Culprit Fay headed both of them and finished first, though losing to Undine on corrected time. The full times were:

CLASS 1—CABIN SLOOPS AND CUTTERS 32ft. AND OVER.

	Start.	Finish.	Elapsed.	Corrected.
Undine	11 11 51	2 18 03	3 06 12	2 48 15
Chas. Welde	11 15 00	2 20 48	3 05 48	2 47 38
Culprit Fay	11 12 34	2 14 06	3 01 32	2 47 59½
Wacondah	11 12 10	2 14 30	3 02 20	2 48 15
J. Demarest	11 11 51	2 24 10	3 12 19	2 51 26½
Melvina	11 14 10	2 30 45	3 16 35	3 16 35
Dora	11 12 22	2 16 24	3 04 02	2 50 54½
Ariel	11 12 51	2 54 10	3 42 09	3 17 09

CLASS 2—CABIN SLOOPS AND CUTTERS UNDER 32 AND OVER 26FT.

Rover	11 12 50	2 26 50	3 14 00	3 14 00
Black Hawk	11 11 09	2 24 22	3 13 13	3 20 18
Gil Blas	11 13 27	2 47 33	3 34 06	3 29 28½

CLASS 3—CABIN SLOOPS 26FT. AND UNDER.

White Cap	11 12 10	2 35 57	3 23 47	3 23 47
Swan	11 12 49	2 57 25	3 44 36	3 43 48½
Thisbe	11 12 01	2 49 24	3 37 23	3 29 58
Ianthe	11 12 20	3 03 45	3 51 35	3 41 27½

CLASS 4—OPEN SLOOPS OVER 26FT.

Adelaide	11 06 53	2 21 49	3 14 56	3 14 56
Zena	11 06 19	2 22 38	3 16 19	3 06 09

CLASS 5—JIB AND MAINSAIL UNDER 26FT.

Duster	11 06 53	2 06 24	2 59 32	2 59 32

CLASS 6—CAT-RIGGED 23FT. AND OVER.

Lizzie R.	11 01 32	2 04 22	3 02 50	3 02 50
Mayotta	11 02 53	2 24 27	3 21 34	3 09 40½
Truant	11 03 12	2 14 40	3 11 28	3 57 38

Undine beats Charles Welde 4m. 21s., Rover beats Black Hawk 6m., White Cap beats Thisbe 6m. 11s., Zena beats Adelaide 8m. 47s., Duster had a walk over and wins special prize for fastest time over course, Truant beats Lizzie R. 5m. 13s.

A prize was offered for steam and naphtha launches, but out of eight entries only the Chic, Mr. John Hyslop's new steam launch, came to the line, so the race fell through. The regatta committee included Messrs. A. Varian, W. Alexander and John Allen, and the judges, Messrs. A. A. Briggs, H. C. De Witt and J. C. Summers.

CINDERELLA-ANACONDA MATCH.

THE match mentioned last week between Cinderella, owned by William E. Iselin, and Anaconda, owned by J. G. Prague, 15 miles to windward, for $250 a side, was sailed Sept. 12 in weather such as few yacht races in a season are favored with. The wind blew half a gale from the east, with a very heavy sea, while rain fell all day, but the few that were out had a fine piece of sailing, though seasoned with plenty of salt water. The course was laid out from off Flagler's Point at Larchmont to Lloyd's Neck, 15 miles and return, the first half a dead beat. At 11:51 the start was given from the tug W. Goodwin, on which were Messrs. Willard and Griffiths, of the regatta committee of the Larchmont Y. C. Cinderella, under two-reefed mainsail and No. 2 jib, with Mr. C. S. Lee at the wheel, and Mr. Thomas Power on board as representative of Mr. Prague, went over the line just 43s. later. Anaconda had three reefs and a reefed jib, the representative of Mr. Iselin on board being Mr. F. E. Towle. Above the line her main heet fouled on the spinaker boom on deck, and she did not cross until 1:52:25.

The Goodwin followed the racers as they beat out through the heavy seas, taking them herself fore and aft. A plate finally washed from a bunker hole and flooded the hold to a dangerous degree; so that she had to put back to harbor in a hurry, the water being nearly up to her fires when she anchored. Cinderella made her way through the seas handily, but Anaconda's skipper was evidently not a water serpent. With head paid off under the reefed jib and carrying a strong lee helm, Anaconda bobbed up and down, but failed to get anywhere, and after some four miles of this work she turned tail and vanished in the direction of Larchmont with a celerity that would have done credit to the great original sea serpent.

Cinderella rounded the weather mark at 2:57, as timed by Anaconda's representative, and reached the finish at 4:11:57, her elapsed time being 4:20:14. Anaconda is a boat with a mission, she was not built for pleasure only, but to prove the value of high, or inside ballast, great beam, and the sloop rig, especially the single jib. During the season thus far she has failed to make a record, but after this race it cannot be said that she has not done so in a manner satisfactory to those on one side of the disputed question.

CORINTHIAN Y. C. OF NEW YORK.

THE following notice has been sent out by the Corinthian Y. C of New York:

"In pursuance of its effort to obtain the most trustworthy data for the adoption of a fair system of measurement and believing with this object in view a series of match races would be more valuable than ordinary races with many competing yachts, the Corinthian Y. C. of New York offers to sail against all comers between 38 and 43ft. on the load waterline, a cutter from among its enrolled yachts. The match or matches to be sailed between the fifteenth day of September and the first day of October, 1887, without restriction as to sail or crew, except that the crew shall not exceed in number one man for every 5ft. length on deck or fractional part thereof, over the course of the Corinthian Y. C. provided for the fourth class yachts and under its sailing regulations, but under the measurement and time allowance of the New York Y. C. The prize to each winning yacht will be a silver cup of the size and design of the Corinthian Y. C. mugs. The owner of any sloop or cutter willing to accept this offer will please communicate with the secretary of the Corinthian Y. C., Mr. Roosevelt Schuyler, No. 55 Beaver street, New York."

The following response has been made:

Mr. Roosevelt Schuyler, Esq., Secretary Corinthian Y. C., New York City:

DEAR SIR—Referring to the offer of the Corinthian Y. C., published in this morning's papers, I would say that the class therein stated prevents my accepting the offer, although I should like to do so. The Fanita is what may be called a typical "American centerboard sloop," load waterline 45ft. 6in. If you will make the offer so as to include boats of Fanita's size, say 38 to 50ft. waterline, it will give me a great deal of pleasure to accept it, and I have no doubt but that the matches would prove interesting to the admirers of both the sloop and cutter type of yacht.

F. H. HATCH, Sloop Yacht Fanita.

CORINTHIAN Y. C., MARBLEHEAD, SEPT. 5.—On Sept. 5 the second championship race of the Corinthian Y. C. was sailed over the following courses: For the first and second classes—From judges' line, leaving buoys 5 and 3 on starboard; buoy off Tom Moore's rocks on starboard; can buoy on the outer breaker off Pig rocks on port; Half-way rock on port; buoys 3 and 5 on port, to judges' line; 10 miles. For the third class—From judges' line to buoy on Chappel's ledge, leaving it on starboard; buoy on Gooseberry ledge on starboard; stakeboat one-half mile south of Marblehead rock, leaving it on starboard; buoys 3 and 5 on port, to judges' line; six miles. The start was made at 1:05 P. M. for first class, with 5 minutes between each class. The weather was clear and warm with a moderate southeast wind. The times were:

Tramp, C. Aiken, Jr.	1 23 45	Broke down.		
Eagle, G. R. Plummer	1 22 46	4 30 59	3 08 13	2 57 47

Classes four and five start, passing between judges' boat and stake boat off club house to and around stake boat southwest of Bullock's Point wharf; thence around Black Spar buoy off Gaspee Point; thence around Black Spar buoy between Squantum wharf and north end of Starve Goat Island; thence around stake boat off Bullock's Point wharf; thence around buoy off Gaspee Point back to the starting point, turning stakes to be left on starboard. Distance 10 miles:

FOURTH CLASS—CATS 18FT. AND UNDER 23FT.

Elaine, A. P. Ketchum	1 29 05	3 16 04	1 46 59	1 46 21
Rose, E. Stokes	1 26 59	3 04 07	1 38 08	1 36 58
Vision, H. D. Salisbury	1 28 03	3 14 17	1 46 14	1 39 56
Josephine, A. Greene	1 25 32	Did not finish.		
Denzell, Wm. Huntom	1 27 45	3 13 12	1 45 27	1 42 28
Playmate, H. B. Nickerson	1 28 11	3 05 10	1 36 59	1 36 02
Ideal, W. E. Simmous	1 26 41	3 02 01	1 35 20	1 35 20
Arnold, E. A. Rogers	1 27 37	3 15 38	1 48 01	1 42 24
Sunshine, J. C. Pudgett	1 25 48	3 14 37	1 48 49	1 42 31
Echo, A. Baker	1 27 49	3 03 34	1 35 45	1 35 45

FIFTH CLASS—CATS UNDER 18FT.

Glimpse, O. Tafs	1 32 09	3 23 07	1 50 58	1 50 58
Moya, B. J. Potter	1 31 52	3 23 43	1 51 51	1 50 14
Jaunty, J. T. B. Bucklin	1 31 50	3 23 43	1 51 53	1 51 01

Winners of prizes—class one, first Perl, second Mabel F. Swift; class two, first Annie, second Mascot; class three, first Climax, second Surprise, third Wanderer; class four, first Ideal, second Echo, third Playmate; class five, first Moya, second Glimpse, Mabel F. Swift got silk pennant for fastest actual time over course. Regatta Committee, E. Howard Wright, P. Herbert Carver, F. P. Eddy, E. S. Arnold, C. C. Manchester.

CORINTHIAN Y. C.—On Sept. 10 the Corinthian Y. C., of Marblehead, sailed a successful race in spite of a drift at the start, as there was a fresh northwest breeze after the first part. The courses were: For first and second classes—From line leaving buoys 5 and 3 on starboard, buoy off Tom Moore's rock on starboard, can buoy on the outer breaker off Pig rocks on port, Halfway rock on port, buoys 3 and 5 on port, 11 miles. Third class—From line, leaving buoys 5 and 3 on starboard, stakeboat one-half mile south of Marblehead rock on port, buoy on Gooseberry ledge on port, buoy on Chappel's ledge on port, 6 miles. The times were:

Atalanta wins the pennant in her class for the second time and retains it. Trudette and Ione have each one leg in first class keels, and will sail off the tie shortly. In second class centerboards Sprite wins the pennant. Witch wins in second class keels and holds the pennant. In third class Viva, Mabel and Banshee have each a leg. Vera gets the pennant in third class centerboards. Judges, G. W. Jackson, William Eady and Charles E. Andrews.

COHASSET Y. C. OPEN REGATTA.—On Sept. 5 the Cohasset Y. C. sailed an open race in a moderate east wind, the courses being: First class (sloops) to Chittendon's buoy, thence to Grampus buoy, thence to Davis Ledge buoy, leaving each on starboard, thence to starting point; two circuits of the course; 9 nautical miles. Second class (catboats) around Davis Ledge buoy, leaving it on starboard, and return; two circuits; 8 nautical miles. Third class (spritsails) around Hogshead Rock westerly buoy, leaving it on port; two circuits; 4½ nautical miles:

QUEBEC Y. C.—On Sept. 5 a race was sailed over a 36-mile course, the result being: Osprey, first prize, $125; Bernardet, second prize, $50. Second class: Montagnais, first prize, $100, and Iolanthe, second prize, $50.

MONTGOMERY SAILING CLUB.—Sixteenth cruise, Sept. 1, from Norristown to Indian Creek and return; distance, 5 miles. Weather cloudy and cool. Wind, strong E.N.E. Current, ½ mile per hour:

	Length.	Start.	Finish.	Corrected.
Flying Scud, J. Berndt	15.00	9 00 00	10 23 33	1 23 33
Igidious, Wm. Rochell	15.00	9 00 00	10 24 09	1 25 59
Priscilla, E. Stanley	15.00	9 00 00	10 24 15	1 26 05
Ino, W. Sullivan	15.00	9 00 00	10 33 44	1 30 09
Lulu, Jas. Frith	15.00	9 00 00	10 31 10	1 30 26
H. S. Scott, W. Carnathan	15.00	9 00 00	10 32 43	1 31 10
Pennsylvania, J. Adams	16.00	9 11 00	10 31 51	1 32 51
E. C. Potts, Parker Bros	15.00	9 00 00	Withdrew.	
Elsie, E. MacAllister	15.00	9 00 00	Withdrew.	

Winner of champion pennant, Flying Eagle.

This is the first race in which the hiker Pennsylvania has finished and made a record. She carries a mainsail of about 300ft. and has started in five races, and has never shown sufficient speed to overcome her handicap of 12m. over the tuckups with 180ft. of sail. The Frank and Willie Playford, tuckup, was ruled out for carrying a professional crew from the Delaware. Tuckup No. 7, of Bridgeport, was also sailed over the course by an expert skipper from the Delaware. Their times are as follows:

	Start.	Finish.	Actual.
Frank and Willie Playford	9 00 00	10 12 04	1 12 04
No. 7 Tuckup	9 10 00	10 23 42	1 13 42

It appears from this record that the professional skippers of the Delaware are ahead of the amateurs of the M. S. C. fully 2m. to the mile. Judge, Joseph E. Boucot.

GREAT HEAD Y. C.—A race was sailed on Sept. 10, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Nellie D., Ed. Dixon	22.05	1 19 39	0 58 35
Etta May, A. H. Lawrence	21.03	1 21 33	0 59 44
Great Scott, C. B. Belcher	25.10	1 23 17	1 04 53

SECOND CLASS.

Trouble, Mason Brothers	20.01	1 24 00	1 01 02
Idler, H. W. Floyd	18.08	Withdrawn.	

THIRD CLASS.

Agnes, J. Osborne	16.10	1 42 15	1 20 26
Thera, Geo. Bryden	15.09	1 46 17	1 23 25
Elf, A. H. Josiin	15.07	Withdrawn.	

MONATIQUOT Y. C.—The 9th race of this club was sailed on Sept. 10, resulting as follows:

FIRST CLASS.

	Length.	Actual.	Corrected.
Folly, J. G. Sheppard	25.08	2 30 01	2 11 45
Posy, R. Hunt	22.03	2 40 10	2 11 54

SECOND CLASS.

Diadem, L. Hayward	18.02	2 39 19	2 06 17
Spray, C. F. White		Time not taken.	
Spider		Time not taken.	

THIRD CLASS.

Flora Lee, E. B. Glover	17.05	2 30 00	1 57 27
Helen Snow, A. Lane	16.06	2 36 51	2 10 56
Nifti, E. F. Linton	17.01	2 46 10	2 19 36
Rocket, H. M. Faxon		Withdrawn.	

ONONDAGA Y. C.—Regatta Aug. 24. Course, start from buoy off Salina Pier, to buoy 5 miles to N. N. W. off outlet Jetties, to Salina Pier, distance 10 miles. Weather cold and cloudy, wind northwest:

	Length.	Start.	Finish.	Elapsed.	Cor.
Eclipse, Dibble & Schneider	25.05	2 25 00			
Cricket, Jos. Mautz & Co	24.02	2 32 18	4 23 57	2 01 39	2 02 14
Aimee, Klube Bros	23.04	2 32 14	5 15 00		
Henrietta, Thos. Finch	30.00	2 21 50	4 17 20	1 55 50	
Crow, F. L. Steveus	15.08	2 24 03			

Henrietta won by 6m. 24s. The wind was blowing hard and puffy, and the Eclipse and Crow were unable to go over the course. Prize, silk pennant presented by lady friends. Regatta committee: Vice-Com. C. R. Nott, H. L. Kennedy, E. C. Stearm, J. J. Keefe, J. G. Warner. Judges: C. R. Nott, H. L. Kennedy.

HULL Y. C.—The first race of the Hull Y. C. was sailed on Sept. 10, the times being:

SECOND CLASS—KEELS.

	Length.	Elapsed.	Corrected.
Banneret, J. F. Brown	25.02	1 47 26	1 28 18
Thelga, H. S. Johnson	22.01	1 52 38	1 31 11

THIRD CLASS—CENTERBOARDS.

Em-Ell-Eye, P. M. Bond	19.05	1 50 24	1 26 50
Coyote, Walter Abbott	20.03	1 53 40	1 30 50

FOURTH CLASS.

Victor, S. A. Freeman	17.05	1 52 57	1 27 24
Zoe, W. A. M. Field	18.01	1 54 02	1 28 18
Wildfire, H. A. Keith	17.03	Not taken.	

Banneret wins championship in her class and Em-Ell-Eye is hers. In fourth class Victor wins championship, Zoe wins cash prize of $10.

AMERICAN Y. C.—A race was sailed off Newburyport on Sept. 10 in a light N. W. wind, increasing to a strong blow. The times were:

	Elapsed.	Corrected.
White Cloud, Rodigrass Bros	2 40 20	2 38 19
Thorn, L. S. Coffin	2 49 37	2 44 48
Budge, Paul J. Lowell	2 42 20	2 38 44
Freak, W. C. Thompson	2 51 49	2 51 49
Teaser, W. J. Teel	2 45 13	2 44 06
Surprise, Howard and Ellis	2 54 52	2 51 35
Kid, Morgan Bros	Withdrawn.	

Out of the series White Cloud has twice taken first place and twice second; Thorn twice first, once second and once fourth; Budge three times second and once fourth, and Teaser twice third and twice fourth.

QUINCY Y. C., THIRD CHAMPIONSHIP, SEPT. 8.—This race was sailed in a strong N.W. wind, the times being:

THIRD CLASS.

	Length.	Elapsed.	Corrected.
Rocket, H. M. Faxon	16.02	1 06 43	0 49 52
Wildfire, H. A. Keith	17.02	1 06 30	0 50 41
Flora Lee, E. B. Grover	16.09	Withdrew.	

Flora Lee was disabled and withdrew. Rocket, Mirage and Wildfire have each won a leg, so a sail off is necessary.

BAYHEAD CHAMPIONSHIP PENNANT.—In the race of Sept. 8, in a puffy N.S. wind, only four boats started, and one, the Foam, parted main sheet and withdrew. The times were:

	Length.	Start.	Finish.	Actual.	Corrected.
Snipe	22.08	3 03 33	4 46 28	1 42 55	1 42 55
Edith	20.09	3 03 13	4 45 58	1 42 45	1 40 50
Spray	18.04	3 05 06	4 52 17	1 47 11	1 42 51
Foam	18.00	3 03 38	Did not finish.		

Edith thus takes the pennant.

SHADOW.—Mr. N. G. Herreshoff writes to the New Bedford *Standard*: "My attention has been called to an article in your issue of Aug. 10, over signature of Lewis Temple, in which the invention of the yacht Shadow's lines is claimed for Dr. Sisson. I am not usually swayed by what is printed in newspapers, nor do I think this claim, false as it is, will be credited by any yachtsman; but this seems a case where one's duty to the public and self demands that the truth should be known. I modelled the Shadow in each and every particular, and her then peculiar lines had been in process of development in my mind for more than a year before I knew that such a person as Dr. Sisson existed. One year before the Shadow was built I cut two preliminary ones of her same character—notably a schooner yacht about 90ft. long, which model can now be seen. If I remember rightly her name, Shadow, was suggested by Mr. John B. Hussey, of your city, some time before she was launched. It is true that there was a time of dissatisfaction on the part of Dr. Sisson when the Shadow was finished and about to be delivered. He at first refused to accept the yacht because her builders had departed so far from the usual type, or to use his words as I remember them, 'Were experimenting at his expense.'"

ROYAL CANADIAN Y. C.—The 27th annual race for the Prince of Wales Cup, on Sept. 7, brought out only Aileen and Oriole. The course was from off Exhibition wharf to buoy five miles southwest of bell buoy, thence five miles north by east to buoy off Victoria Park, and thence to bell buoy, off the starting point, two rounds, 34 miles. The wind was strong, west by north, but the two were far behind at the start. 10 A. M., Oriole crossing at 10:15 and Aileen at 10:22. The turn of the Lake buoy was: Oriole, 10:56; Aileen, 11:05; both jibed and ran with wind over port quarter for the next mark under lower sails, the wind on shore registering 42 miles. The time here was: Oriole, 11:32; Aileen, 11:48. Here Aileen withdrew and Oriole sailed the second round alone, making the course in 4h. 15m.

PLEON Y. C.—The sixth and last race of this club was held on Sept. 6 in a fresh S.W. wind, 8 yachts starting over a 5½ mile course. The winners were: First class centerboards, Reba; first class keels, Glide; second class centerboards, Snail; second class keels, Monarch. Reba lost her bobstay and sailed a part of the course under mainsail alone; Annie lost her boom; Brownie went to the rescue of a man overboard from a dory, and Clara was run down by a schooner.

THISTLE.—On Friday last the City of Rome arrived at New York, bringing Mr. James Bell and wife, Mr. G. L. Watson, Messrs. Wm. Yorke and Robert Wylie, of the Royal Clyde Y. C., and Mr. Ratsey, of Lapthorne & Ratsey, who, with two of his men who came with him, will look after Thistle's sails. Mr. Bell was quite ill on his arrival, and went at once to a hotel, but is now better and has taken up his quarters on board the yacht. Mr. Watson has been aboard the Thistle, and on Saturday sailed on the Shamrock at Larchmont. He has declined to inspect either Volunteer or Mayflower, though both were out of water and open to inspection.

CAPSIZE OF AN OPEN BOAT IN ENGLAND.—Some weeks since the cable brought news of the upset of two boats on the English coast and the drowning of a number of persons, which news was elaborated by some American papers into the capsizing of two cutter yachts. The facts of the case, as brought out at a recent inquest, show that a large open sailboat, carrying twenty-three passengers and handled by a crew of two, capsized after a jibe in a strong wind. The boat was wide and of limited depth, and being entirely open, went down stern first on capsizing.

DEATH OF A PHILADELPHIA YACHTSMAN.—Mr. W. J. Walker, who lately died in Philadelphia, was one of the oldest members of the Cooper's Point and Quaker City, as well as the Delaware River and C. P. Cor. clubs. As a local yachtsman he was far in advance of his time, a man of progress and an advocate of low weights, low center of effort, less beam and more depth. He was specially expert in the handling of light canvas. Always active and energetic in the promotion of yachting, his loss will long be felt along the Delaware.

TORONTO Y. C. CRUISING RACE, SEPT. 3.—On Sept. 3 the annual fall cruising race of the Toronto Y. C. was sailed from off the club house, Toronto, to the entrance of Burlington Bay. The starters were Cyprus, Cygnet, Condor, Verve, Escape, Whitewings and Rivet. The wind was strong S.W. at start, but fell lighter later on, finally freshening up at night. Whitewings won easily, the rest of the fleet being becalmed until late. Cygnet was second in.

DALY AND SYRINGE MATCH.—A match for a trophy to cost $100 was sailed on Sept. 8 between the Lizzie F. Daly and the Syringe, the course being eight miles to windward and return, starting from Commercial Wharf, Boston. On the run to the whistling buoy Lizzie F. Daly led by 6min., but beating home in a strong N. W. wind Syringe overtook her. The finish was a drift, Syringe winning finally by 8s.

YACHT RACE AT CANSO.—The race of Aug. 31, which was several times postponed, was sailed on Sept. 7 in a strong S.W. wind. Mayflower won first prize, $50; H. L. F., second prize, $20; Minnie A., third prize, $10. All the prizes were given by the Commercial Cable Co., which also presented $5 to each of the losers.

COOPER'S POINT CORINTHIAN Y. C.—Tenth tri-weekly race, Sept. 6, over the club course, five boats in class started at 2:44. Wind fresh S. W. Wilkins, second class, finished 3:56. Cook, third class, 4:05.

ULIDIA AND FANITA.—A match is reported between these boats, to be sailed from Sandy Hook Lightship around Long Island.

NEW ROCHELLE Y. C.—We have received a copy of the neat little club book lately issued by this young but prosperous club.

GITANA AND AMERICA.—A match will be sailed on Sept. 17 from off Marblehead, 20 miles out and back, for $1,000.

WEST LYNN Y. C.—A race was sailed on Sept. 10 over a 7-mile course, the winners being Inez and Twilight.

COHASSET Y. C.—The race of Sept. 10 was a failure, as there was no wind. It will be resailed on Sept. 24.

BEVERLY Y. C.—A race was sailed on Sept. 5, the winners being Mattie, Mist and Petrel.

BEVERLY Y. C.—A race was sailed on Sept. 10, the winners being Mollie, Mist and Petrel.

STEAM YACHTING.

INSPECTION OF YACHTS AND LAUNCHES.

THE U. S. Treasury Department has lately issued the following circular concerning the inspection of small steam craft:

"In view of the many applications made to this office by the owners and builders of small steam yachts, and persons contemplating building such vessels, for information as to whether they are liable to the provisions of Title 52, Regulations of Steam Vessels, Revised Statutes of the United States, applicants are informed that under Section 4,426, Revised Statutes, the hull and boiler of every yacht, or other craft of like character, propelled by steam, without regard to size of vessel, provided it can be used in navigation, must be inspected, the boiler being subjected to the hydrostatic test required by law. The pilot and engineer must also be licensed, and such other provisions of the law complied with as may be applicable to the particular vessel under examination.

"There must be provided for each person on board a life-preserver, containing at least six pounds of good block cork, adjustable to the body in the manner of a belt or jacket, with shoulder straps.

"All open steam launches or other steam vessels of five tons burden or less, carrying passengers, may dispense with a lifeboat when such vessels are provided with metallic air chambers placed under the seats and in the ends of said vessels of sufficient capacity to float the inert weight of said vessel, including her boilers and machinery, * * * and every such steam vessel carrying fifteen passengers or less shall carry at least two fire buckets and one axe. (Rules and Regulations, Section 23, Rule III.)

"A license as 'special engineer' for small steam yachts or pleasure vessels will be granted to any person of good character who has sufficient experience to manage the boiler and machinery safely. A similar 'special license' as pilot for such vessels will be granted to any person of like good character who is familiar with the navigation in which they are to be employed, understands the pilot rules, and has had sufficient experience in handling this or other similar vessels. The master of the vessel of this class does not require license."

A STEAM YACHT ON THE STAGE.—In the play "A Dark Secret," now running in Philadelphia, one scene represents a regatta at Henley, on the Thames. A tank of water covers the entire stage, in which float canoes and rowboats. The chief feature, however, is a steam launch, built by Mr. Rushton, for the play, which steams about the stage. It is 14ft. long, propelled by an oil engine, "with real smoke."

BOOKS RECEIVED.

THE FISHERY QUESTION; its origin, history and present situation. With a map of the Anglo-American fishing grounds and a short bibliography. By Charles Isham, New York; G. P. Putnam's Sons, 1887.

This is a historical summary of the subject, tracing the development of the fisheries and their international relations from the time of their discovery to the present. The book forms one of Putnam's Questions of the Day series. Cloth, 89 pages, price 75 cents.

According to the statistical report of the Ministry of Agriculture Austria still offers splendid shooting to Nimrods. There were killed last year throughout the empire 11,708 stags, 58,067 deer, 6,911 chamois, 2,566 boars, 1,319,098 hares, 60,907 rabbits, 455 marmots, 12,764 woodcocks, 9,931 hazel hens, 100,954 pheasants, 1,166,104 partridges, 83,067 quails, 48,150 snipes, 1,165 wild geese, and 55,187 wild ducks. In addition the hunt after animals of prey was no less successful, there having been killed 32 bears, 122 wolves, 27 lynxes, 25,242 foxes, 27,306 polecats, 1,005 otters, 2,459 badgers, 970 eagles, 119,798 hawks, and 1,156 owls. The El Dorado for hunters, however, is Dalmatia, where the chase is open to all, and no claims for damages caused by game of any kind are demanded.—*Paris American Register.*

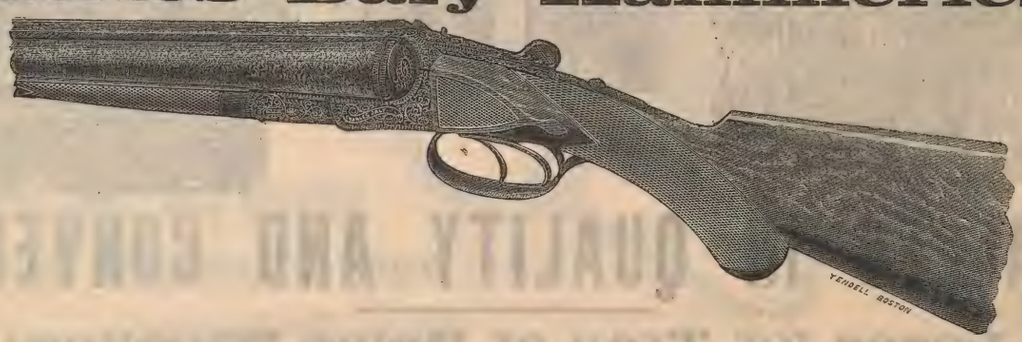
CHARLES DALY 3-BARREL.



The success of this gun introduced last year has exceeded our expectations. The maker's name is a guarantee of perfection in workmanship and every other desirable quality in a gun. The rifle barrel is rifled on a new system, which gives perfect results. The barrels are put together (a difficult thing in a three-barrel gun) with perfect accuracy. IT IS A GREAT CONVENIENCE TO ALWAYS HAVE A RIFLE WITH YOU. THE EXTRA WEIGHT IS NEXT TO NOTHING.

12-Gauge are made with rifle barrel, .32 W. C. F., .32 Marlin, .38 Marlin, .40 Ballard, .45 Government. Price, $5.00
10-Gauge " " " " " .38 Marlin, .40 Ballard, .45 Government. - - - - " 95.00

THE SHOT BARRELS ARE FINE DAMASCUS.

Charles Daly Hammerless.

As an evidence of the worth and increasing popularity of this "Best of the Hammerless," the sales this spring have been nearly double those of any former spring season. Alongside of any other make, costing 50 per cent. more, they excel in every respect. Especially in the remarkable close hitting and consequent solidity and lasting quality, and long-distance shooting. Here is a letter from one of the best shots in the South, who, like hundreds of others, believes the Daly is the ONLY gun:

WASHINGTON, D. C., June 18, 1887.

MR. WM. WAGNER, Agent Daly Shotgun.—DEAR SIR: I have been constantly using the Daly Breechloading Shotgun that I bought of you nine years ago—to my great satisfaction and pleasure—and I now desire to add my testimony to the hundreds who are already on record as being partial to this deservedly popular make of gun. Its construction, make-up and finish is of the highest order of workmanship and good form. It is a strong and reliable shooter, carries long distance charges without strain or recoil, targets beautifully, and may be implicitly depended upon under all circumstances and conditions, and I am free to say that thirty years' experience with the shotgun confirms me in the belief that it is the best gun in the market to-day, and I so recommend it to my friends.—Yours truly, W. H. HOCKE.

Manhattan Hammerless.

12-Gauge, $75.00. 10-Gauge, $80.00.

Thoroughly well made, fine quality, Damascus barrels, shooting unsurpassed. The best hammerless for the money. It is not a cheap made gun, but elegantly made and beautifully finished at a low price.

SEND FOR ILLUSTRATED CATALOGUE OF THE ABOVE GUNS, EMBRACING ALSO PIEPER B. L. GUNS, MANHATTAN ARMS CO. B. L. GUNS, TOLLEY HAMMERLESS, SHATTUCK SINGLE GUNS.

Large crown 8vo., 380 pages and 16 large folding plates.

Price, Postpaid, $3.50.

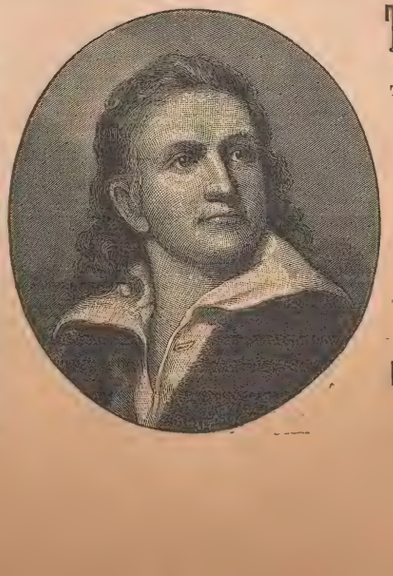
FOREST AND STREAM PUBLISHING CO.,
39 Park Row, New York.

WOODCRAFT.

By "NESSMUK."

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

FOREST AND STREAM PUBLISHING CO., 39 Park Row, New York.



"Forest and Stream" Fables.

BY AWAHSOOSE.

1. The Puppies Who Didn't Know It Was Loaded.
2. The Wise and Foolish Pike.
3. The Fox and His Guests.
4. The Foolish Fish.
5. The Robin and the Pewee.
6. The Unlucky Bass.
7. The Shrike and the Hawk.

A series of seven fables in prose and to every one a picture. All of them have pith and point best appreciated by anglers and sportsmen, but not a one of them is without a moral for the wise and foolish of the world in general. Price 10 cents. For sale by all newsdealers.

FOREST AND STREAM

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SEPTEMBER 22, 1887.

VOL. XXIX.—No. 9. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

THE NATIONAL PARK IN 1887.

THE Yellowstone Park Association is a corporation composed chiefly of individuals largely interested in the Northern Pacific Railroad. They have privileges in the National Park which, though not exclusive, enable them to secure the lion's share of the hotel business there. Employed by them is the transportation company, of which Mr. Wakefield is the head and front.

The hotels this year are by no means so well managed as they were last, and with one or two exceptions the managers and employes are very unsatisfactory. Economy seems to be the only thing considered, and the comfort of the travelers is a secondary matter.

As the Y. P. A. is substantially the Northern Pacific Railroad, and as the transportation company is so closely connected with the Association and shares its profits, both unite to discourage any travel except on the "coupon" tickets issued by the railroad. The profits of transportation are not in the stage lines through the Park, but are chiefly in the travel from St. Paul or Portland to Cinnabar. The cost of a ticket to Cinnabar is at present very high, whereas a ticket to Cinnabar and return, with coupons through the Park, is relatively low. Thus, most persons are induced to purchase "coupon" tickets. As a consequence, most of the travelers are hustled through the Park at a rate which prevents them from enjoying fully the wonderful beauties of the region.

In their efforts to discourage independent and individual travel, the Y. P. A. and the transportation company act sometimes in a very high-handed way. A case which recently occurred may be cited as an example. A young man who was passing through the Park tried to get a saddle horse from Wakefield, but was told that he had none. The young fellow did not care to ride in the stage with a lot of people whom he did not know, so got a horse from Clark. On arriving at Norris Basin he had great difficulty in inducing any one to take care of the animal. They finally did so, however; but on his arrival at the Firehole he was unable to get any care whatever for his horse, and was obliged to picket him out and take care of him himself.

This is the account of the affair as it came to us from private sources some little time since. More recently we have the story as told in the *Evening Post* by the gentleman who rode the horse: "I made my trip on a horse; and thereby hangs a tale. * * * The Yellowstone Park is not at present a part of our republic, but it is a monarchy, and the king's name is Wakefield. Mr. Wakefield owns the stage line, and the object of the present arrangements is to make each passenger buy a round-trip stage ticket, no matter how much or how little of the Park he wishes to see. If he endeavors to avoid this compulsion, he is deliberately subjected to various disadvantages and indignities. Having made up my mind to take a horse, I applied for one to King Wakefield, but was told that there was none to be had for a week or two. Then I went to Clark's and got a horse there. But when I arrived at one of the hotels and asked to have my horse fed, I was told that it could not be done because it was not a 'Wakefield horse!' In some places I arranged matters by humbly apologizing for not having a Wakefield horse, and by explaining that I tried in vain to get one. But at one of the hotels even this apology failed of its effect. At the Firehole they absolutely refused to take care of my horse for any price! The visitors all agreed that it was the greatest outrage they had ever heard of."

Strong language, but none too strong; for when a company, which has a lease and transportation privileges, declines to take care of a gentleman's horse, it is about time matters were inquired into. It is impossible to say who is directly responsible for this outrage, but when all is said, the Y. P. A. must be held to account. They have the power to prevent such acts.

Everything is done to prevent people from going in any other way than by the stage on the regular route. Camping parties are very few. In fact camping is practically stopped, simply because it is discouraged in every possible way, and men who could outfit and guide camping parties have been, until within a short time, kept out of the Park. And yet, if the public did but know it, a camping trip is by far the most delightful way of seeing the Park, and it is a wonder that more of the tourists who visit it do not pass through it in that way.

The policy of the Y. P. A. seems to be to drive all business, except that which they are conducting, out of the Park. They regard themselves as able to hire any one to do work of any kind for them, and thus they endeavor to supplant every one else by employes of their own. Even the old Swede, who has coated specimens there ever since the Park has been visited by tourists, is not allowed to conduct any business on his own account. The Syndicate have swallowed him up. They hire him at so much per month and prohibit him selling anything.

There has been great improvement on the hotel terrace at the Springs. All the sage bush has been pulled up, the trees trimmed and the place thoroughly cleaned.

It is reported that in the Upper Geyser Basin sixty green trees have been cut away by the employes of the Y. P. A., because, forsooth, they interfered with the view of some of the Geysers from the hotel piazza. This, if true, is a crying outrage and calls for action on the part of Captain Harris and of the Interior Department. There is little enough green timber in the Upper Geyser Basin, and that these trees should have been cut away just to save indolent tourists a few steps is a crying shame.

From all this it will be observed that while in many respects the Park has been well cared for this year, there are some abuses which require looking after. It seems highly probable that next year there will be more competition in the Park than there has been in the past. The Union Pacific Railroad will no longer be content with sending passengers in by stage from Beaver Cañon as in the past. Mr. Charles Francis Adams, President of the U. P., who was in the Park this summer for the first time, is known to have said that the Union Pacific had been very remiss in their action about the Park, and we may say on excellent authority proposes immediately to have surveys made for a railway to the border, and by the first of next season to have a first-class stage route running from the terminus of the road to the Upper or Lower Basin with good stock. When this railroad shall take hold of the matter with vigor it will be greatly to the advantage of the Park.

A BIG blow, a free course, no fluke, and may the best boat win.

A CAUTION TO SHOAL YACHTS.

THE British yachtsmen now in New York for the international races have been well entertained by Americans, and they have been shown most of the sights about New York, but it certainly was not in the programme that they should witness the capsize of one of the larger centerboard yachts in ordinary weather. That they did not do so, however, is due only to good luck; but Lieut. Henn and those of the Scotch yachtsmen who were at Larchmont on Tuesday will have plenty to tell when they return home. In smooth water and a moderate breeze a yacht of 70ft. waterline came so near to a capsize that all hope of her righting was given up by those on board, and they were undressing for a swim when she finally came up. There was no gale, no "twister," only an ordinary fresh puff that was perhaps unnoticed until it struck. Only one man was drowned, no damage was done to the yacht save the loss of a few sails, and the matter will pass with little notice here, where such occurrences are by no means uncommon; but the effect on the visitors will be different. It would be very unfortunate just now while American yachting is on exhibition before the world, if our visitors should be treated to another Mohawk disaster before their eyes. It is late in the season, the winds are growing stronger, and those who will sail shoal centerboard yachts had better sail them very carefully or leave them at anchor until the visitors have departed.

SNAP SHOTS.

AT the annual meeting of the American Forestry Congress just held at Springfield, Ill., the convention adopted a memorial to Congress urging the adoption of measures to provide for the protection of the forests; the withdrawal of forest land from entry under existing laws; the classification of forest lands; the creation of forest reserves; the sale of timber on Government land; the creation of a Commissioner of Forests in the Department of the Interior and four assistant commissioners; the organization of a force of inspectors, and an appropriation of $500,000.

Hon. Warner Miller has leased for fifty years a tract of 50,000 acres of timber land in the Adirondacks, which he will protect as a game preserve. Senator Miller has not been noted for any abnormally developed squeamishness about jacking deer out of season on public waters; now that he has a game preserve of his own it is to be hoped that he will let his little candle cast abroad its feeble ray, that Adirondack visitors who are not so fortunate as to own great hunting tracts may recognize and emulate his zealous regard for the laws of the land.

The sport of dog swimming races has been carried to a state of high perfection in Canada, where it has been practiced for a number of years. New York once tried it in mid-summer, but the interest proved transient. This year Boston has addressed itself to the pastime with all the enthusiasm of a boy with a new plaything; and the journals of the Hub give long accounts of races in which Newfoundlands, setters, collies and dogs of no special breed whatever contend for honors.

The Montana Legislative Assembly last winter authorized bounties of ten cents per head on prairie dogs and five cents for ground squirrels. Since the law went into effect the Territory has paid over $41,000 for 698,971 squirrels and 153,709 prairie dogs, and the treasury funds having given out, a special assembly has been held to repeal the law. The prairie dog is a comical little creature, but Montana residents do not see the humorous side of him. Neither do those of Wyoming who are in precisely the same fix, being ruined by a similar tax.

Deer hounding in the Adirondacks is practiced to some extent all the year around by natives and visitors. Four Troy "sports" were recently arrested on the south branch of the Moose River, and were find $50 each. That region has been a paradise for fellows of this kidney, and they have gone so long unmolested by the district game protector that they imagined they had reasonable hope of lasting immunity.

The Virginia Field Sports Association is growing rapidly, numbering now over 400 of the leading sportsmen of Virginia. It has a bright future for good work.

The Sportsman Tourist.

Address all communications to the Forest and Stream Pub. Co

YELLOWSTONE PARK NOTES.

YELLOWSTONE NATIONAL PARK, Sept. 10.—*Editor Forest and Stream:* The weather here is fall-like, reminding me that winter will soon be here. Some of the days are quite hot, with cold rains and wind in the evening, the rain being snow on the mountains. The drifts of new snow on the higher peaks have come to stay until next spring. Some of them are already 5ft. deep. With all the unpleasant weather this is the most enjoyable time to visit the Park and will be for a month or six weeks.

I have little to report about the game in the Park. Antelope are seen every day on Mount Evarts by residents of Gardiner. Porters have reported seeing buffalo and elk in the Queen's Laundry Basin.

The topographers connected with the Geological Survey, whose special work this year has been to make surveys of the Geyser Basins and Mammoth Hot Springs, are camped at the Norris Basin, having completed the survey of the Upper and Lower Basins. The scale on which the work is being done will accurately show the situation of every geyser, spring and pool. These properly named and mapped out will do much to prevent the confusion of names so indiscriminately applied, and if enough of the maps are published, one can be placed in the hands of every visitor, doing away with the unsightly signs that now deface so many points of interest and remind one of advertisements, and the labeled objects in one of Mrs. Jarley's wax work shows.

The geologists of the Survey are at work on the east side of the Yellowstone Lake. This season will enable them to about finish their work in the Park.

A party of specialists, with Prof. Ward in charge have been at work in the East Fork country on the petrified woods and plants to be found there in great abundance. Their work for a short season shows some 800 pounds of specimens. Road Superintendent Lamartine has been out with a party to locate a wagon road from the Upper Geyser Basin, following the Fire Hole River past the Lone Star Geyser, across the Continental Divide to the Shoshone Geyser Basin, along the south shore of the Shoshone Lake to the east end, then recrossing the Divide to the west arm of the Yellowstone Lake, striking the lake at the Lake Shore Springs and Geysers, and following the shore of the lake to the outlet. This road is part of a system contemplated by Captain D. C. Kingman, when he was in charge of improvements in the Park. Congress neglecting to appropriate any money for the purpose, no work has been done at these points. As most of the country over which this road would be built is open parks, a comparatively small sum would be required to do the work, which would open up a most interesting part of the Park scarcely ever visited by tourists.

Travel in the Park by stages is falling off. Travel by wagons and camping parties from neighboring territories is quite heavy. This popular manner of visiting the Park increases in favor every year.

Cooke City and Gardiner, Montana, the two towns close to the northern boundary line of the Park, are almost depopulated by the stampede to Nye City and Castle, two new mining camps in Montana. H.

CAMPING OUT.

Editor Forest and Stream:

Having just returned from a summering in the Adirondacks I read with peculiar pleasure your editorial in the current number of FOREST AND STREAM, on the subject of camping out. Those parodies upon woods life—the so-called camps, formed of fanciful, well-built cottages, some of them as costly in their appointments as a town residence need be—are gradually encroaching upon the wilderness until one who is a lover of nature undefiled is compelled to seek other haunts each year deeper in the forest, in order to escape the dude with the skull cap and penitentiary suit, and the novel-reading, be-rouged and be-powdered female, who play at camp, as it were, in a house furnished with luxurious tête-à-têtes and downy beds. Each recurring summer these people journey with their Saratogas to the wilderness, play billiards and lawn tennis, swing in hammocks for a few months, do little fishing and hunting by proxy, clothed in immaculate linen and flashy jewelry, and in the fall return to their city homes to boast of having spent the summer in camp in the North Woods. Very seldom can you find among them one who can appreciate the beauty, grandeur or delight of a broad view from the mountain top, or a pedestrian trip through the virgin thicket with its endless succession of surprises. Not one of them ever experienced, or have the capacity to experience, the subtle pleasures that lie in the rod and the gun, the lonely camp and the bath in the sparkling waters of the brook, the homely meal prepared by the guests who eat and the healthful appetite that is earned by exercise, the song of the nightingale and the cry of the lynx, the dash of the deer and the play of the trout, and the dreamless sleep by the camp-fire and under the shining stars. No, they have no idea of the glorious life a true camper leads. They gather up their dog-carts and four-in-hands and journey to the wilderness merely to be in the fashion. Thank heaven! there are some portions of the Adirondacks yet to be reached only by the stream and the trail.

Mr. Wing in FOREST AND STREAM of July 28, under the caption "Hard Lines in the Adirondacks," gives a touch of the discomforts attending a life in the wilderness. But probably he went in too early in the season to avoid the annoyance of the mosquito and the fly, for I was not greatly troubled with them. I surrendered more blood to the mosquitoes in one night in a hotel at Toledo than I shed during my five weeks in camp.

Another thing: Mr. Wing doubtless pushed ahead too far each day and wearied himself by excessive labor. One should travel moderately at the start, increasing the extent of the day's journeys as the muscles harden to the work, and at the end of a week or two he will be surprised at the distance he can travel and the hardships he can undergo in that bracing atmosphere without fatigue. I mention this because I know that Mr. Wing does not complain under ordinary difficulties. Years ago while I was encamped upon one of the wilder islands of the St. Lawrence, I peeped out from my tent one midnight and saw a pale-faced boy lying upon the ground near by rolled in blankets and sleeping in the moonlight without other covering than the starry vault of heaven. It was this same plucky Ralph Wing, who had paddled along the margins of the great lakes in a little canoe with meager outfit, and was cheerfully roughing it to a degree that would have disheartened many a veteran of the woods. During the years that have intervened since then, in our respective canoebial wanderings our eccentric orbits have several times undesignedly crossed each other and we two have briefly renewed our fragmentary acquaintanceship. This year we missed striking hands in the Adirondacks by probably a day or two.

Western canoeists must cruise more extensively than their paddling brethren of the East. Wherever I go in my canoe, east, west, north or south, I see the flash on some quiet lake or mountain stream of a Western double blade, but to see an Eastern canoeist I must go to the East. The tendency of the East is toward racing, that of the West toward cruising, although there are notable exceptions to the rule. The cruise of the Western man seldom gets into type; the racing of the Easterner is his commonplace event. The perfect canoeist that is to be evolved in the coming years must combine the qualities of a perfect cruiser with those of a perfect racer; but seldom do we see them united in one person in these days of the infancy of canoeing. ORANGE FRAZER.

WILMINGTON, O., Sept. 12.

WACHAPREAGUE.

Editor Forest and Stream:

"Where the deuce is Wachapreague?" I have heard said more than once. I propose to tell through your valuable journal and also some of the attractions and advantages it presents for sportsmen. Virginia owns two counties on the Lower Peninsula, bounded by the Atlantic on the east and the Chesapeake Bay on the west. Cape Charles is the lowest point on the Peninsula. The New York, Philadelphia & Norfolk Railroad runs the entire length of the two counties, with two trains daily each way. We have a daily mail, and New York, Philadelphia and Baltimore papers reach us the day they are published. There is also daily (except Sunday) communication with Baltimore by the Eastern Shore Steamboat Co. to Onancock (ten miles) and to Bogg's Wharf (eight miles).

The nearest stations on the railroad are Only (seven miles), Milford (three miles), and Keller (five miles).

Wachapreague is on the river of the same name that runs in from the ocean—the ocean is distant about three miles in a straight line and some six by the river, as the river has many turns. Vessels passing up and down the coast are in plain sight of the town. The tide rises and falls some 5ft.; you can carry 10ft. some three miles up the river at mean tide, I mean above Wachapreague. There are some 300 inhabitants, mostly oystermen and fishermen.

There is not a healthier place on earth. We are not troubled with mosquitoes, and during the past summer, when Long Branch, Atlantic City, etc., were rendered almost uninhabitable by them, we had none. Malaria is unknown.

Wildfowl, *i. e.*, black ducks, blackheads, brant and geese, etc., are plentiful, but difficult to come up with, as the people are not conversant with sinkbox shooting and the waters are too extensive and the tides rise and fall so as to make bush blinds inconvenient. To sum it up, to one accustomed to the convenience of the Chesapeake Bay shooting above Baltimore, as I have been, ducking here is too hard work. However, with scows and batteries, such as they use at Havre de Grace, the wildfowl shooting should be excellent. Quail are abundant, but later in the season, after being shot at, they become wild and take to the woods. There is not a tolerably decent bird dog either in or near the town.

The fishing is unsurpassed on the Atlantic coast, north of Florida. It commences the latter part of April and lasts until late in November. We have weakfish, spots and pigfish, the last the best pan fish in the world, also sheepshead, black and red drum. The sheepshead do not take the hook kindly, but it is great fun to strike them with grains at night with a light. I have killed nineteen of a tide, and others many more. The weakfish, spot and pigfish are taken inside, in the many channels and branches of the river and in the broad water between the islands and the mainland. The black drum are caught principally in the surf.

But from the middle of September until the run of fish south ceases, is the time for our great fun, when we go out on the ocean. I have never caught a tarpon, but there is far worse sport than to be fast to 30, 40 or over 50lb. red drum on a 300yd. 15-thread line. I have sometimes been over an hour bringing them to gaff. They make quite as good a fight as a striped bass, and what is better, drum of that size are plenty while striped bass are not. Of course drum can be caught outside as early as June, but the sharks and dogfish bother you. It is great fun to go after shark properly rigged for it.

In October the big weakfish of 10 and 12lbs. commence to run, and then the man with the rod and reel is in his glory. The people here use the hand line exclusively, as they can catch more, which is an object to them, as they salt them for winter use. Until the Accomac Club bought a place here I had the only rods and reels in the county. You would have laughed to have heard the comments of the natives on the 15-thread line. "Dou you 'spect to ketch a drum on that? Why, he'll tare you up." It so happened the first time I went out, with two companions, I struck the first drum. "Give him line." "let him run," and lots more of advice. I was not a novice with the rod and reel, but it was by far the biggest fish I was ever fast to. I quietly remarked, "My friends, this is my private funeral; please let me alone." After taking viciously some 200yds. of line, the fish circled around the boat, twice making the line hiss as it cut through the water; then he weakened, and in some thirty minutes I had him side up at the boat. One of the men grabbed him by the gills and slid him over the gunwale. To say I was proud but feebly expresses it, and I was made more so by such comments from my companions as "Well, if I hadn't a seen it I'd never believed it," and "it sartinly beats anything I ever seed." I caught two that day, one of 30lbs. the other of 52lbs.

The shore or beach bird shooting is excellent and close at hand, but the birds are not near so plenty as a few years ago. There are no finer oysters in the world, and in any quantity. Hard clams abound, as do scollops; there are very few soft shell clams, and hard crabs are plenty, but not much used except for bait. For some unaccountable reason nearly all the crabs are she ones, the big Jimmy crabs going up the bay shore.

After giving this far from exhausting account of the attractions of this place for persons fond of outdoor sports, I will now tell you what is the principal cause of this communication. My place is about an acre in extent, running down to the river. Next door to me is another place rather larger than mine, with a new house (four years old) on it, and all necessary outbuildings. It is the property of a person nearly eighty years old and his wife, not much younger. Their children are not willing for them to live there by themselves, and the place is for either rent or sale. Now, Mr. Editor, I have not one cent of pecuniary interest in this place, but I do desire, as is quite natural, to have a congenial and companionable neighbor or neighbors. The house has some eight good-sized rooms to it, with porches back and front, it has some really architectural merit. The yard, like mine, runs to the river, and there is an excellent garden of more than an acre adjoining that can be rented with the place, not bought. The drinking water is most excellent.

By thus bringing the place to the notice of your subscribers, I am in hopes that some of them may be tempted to join together or individually rent or buy one of the most desirable places for shooting and fishing I know of. The fishing being mostly in smooth water and inside, is equally as desirable for ladies as for gentlemen. There is still-bathing within 100yds. of the house, and surf bathing a short distance off. The rent asked (also the purchase money) is so ridiculously low to a "city man" that I prefer giving it by private correspondence. Of course after either renting or purchasing they can make their expenses what they please in the way of furniture, table, etc.

There are two clubs in the county now; one the Accomac club of some twenty members, about four miles down the river (Mr. Wood, of tarpon fame, is a member of it), the other is at Revels Island and has some one hundred members, I believe, from all parts of the country. It is very inaccessible, being a long sail to it. Mr. Hamilton Disston, of Philadelphia, owns, I think, several shares in it, and his steam yacht Manatee is a frequent visitor to our waters for shooting and fishing.

Of course no one would rent or buy simply on my representations and without visiting the property. I assure any proposing renter or purchaser that I have very poorly presented the desirability of the place to those fond of outdoor amusements.

I will be happy to correspond with any one who may desire to know more particularly about it, and give them the price and rent, which is trifling, but I request any correspondent will be so kind as to give me either New York, Philadelphia or Baltimore references. My desire for this must be evident. If satisfactory I will be glad for any proposing visitor while inspecting the place to be my guest.

Any letter addressed to "Wachapreague, Accomac Co., Va.," and inclosed to the FOREST AND STREAM, will be promptly forwarded to me.

THE AMERICAN BADGER AND ITS CONGENERS.

BY R. W. SHUFELDT, U. S. ARMY.

SIR WILLIAM HENRY FLOWER, F. R. S., Superintendent of the Natural History Collections in the British Museum, in his classification of the Mammalia, divides his SECTION ARCTOIDEA into four families, viz.: the *Mustelidæ*, the *Procyonidæ*, the *Ailuridæ*, and the *Ursidæ*. In the present connection we have to do but with the first of these, the *Mustelidæ*, and this family Professor Flower divides into three sub-families with their genera as shown in the following arrangement:

LUTRINÆ.

Lutra—The Otters.
Aonyx—Species from South Africa and Java.
Enhydriodon—Extinct.
Enhydra—Sea Otters.

MELINÆ.

Mephitis—The Skunks.
Arctonyx—The Sand Bears.
Mydaus—The Teledu.
Meles—European and Asiatic Badgers.
Taxidea—American Badgers.
Mellivora—The Ratels.
Helicitis—Species from Asia.
Ictonyx—The Cape Polecat and others.

MUSTELINÆ.

Galictis—The Grison: the Tayra, etc.
Mustela—Martens and Sables.
Putorius—Weasels, Polecats, Ferrets, Mink, etc.
Gulo—The Glutton or Wolverine.

According to this eminent authority we see, then, that Badgers and Badger-like animals fall into the subfamily *Melinæ*, of the Family MUSTELIDÆ, of the SECTION ARCTOIDEA.

Mr. F. W. True, the Curator of the Department of Mammals of the U. S. National Museum, presents us with a somewhat different arrangement from this. Mr. True divides the ORDER CARNIVORA into two suborders, the *Pinnipedia* (with three families) containing the Sea Lions and Seals; and the suborder *Fissipedia* or Terrestrial Carnivores, with five families, the third of which being the Mustelidæ, containing the genera representing in the main the three subfamilies of Professor Flower, given above.

In our United States mammalian fauna we have two species of Badgers, the American Badger (*Taxidea americana americana*), the subject of the present article, and the Mexican Badger (*T. a. berlandieri*), the latter being found upon our southwestern border, from whence it extends into Mexico.

Upon glancing at either of the above schemes of classification, it will at once be observed that the nearest kin

to our Badgers is the European Badger (*Meles taxus*), and certain Asiatic and Japanese species (*M. leucurus, M. chiensis* and *M. anakuma* of Japan). And, more remotely affined to these, we find our several species of skunks (*Mephitis*); the Sand Bear of the mountainous regions of Assam and northeastern Hindostan, where it is called the Bear Pig (*Bhalú-soor*); and those interesting animals from India and south and west Africa, known as the Ratels (as *M. indica* and *M. ratel*).

For a long time, and some writers do still, confound our species (*Taxidea*) with the European Badger (*Meles*), but in reality they are very distinct animals. (See art. "Badger," Brit. Encyclo., 9th ed., for a recent example of retaining our species in the genus *Meles*.) Professor Baird has remarked that, "This genus is so strikingly different from *Meles* as to render it a matter of astonishment that the typical species were ever combined." (Mamm. N. Amer., p. 201). If one will compare the head of the American Badger here given in Figure 1, with my drawing of the head of a European specimen in Figure 2, it will be seen at once how different, both in form and coloration, these parts alone are; and further, these differences are fully supported by the remainder of the economies of the two species.

Our Badgers then are plantigrade carnivora, and the best and most elaborate account of the form, structure, and habits of the American Badger, that the writer knows anything about, is given in that very excellent work, the "Fur-Bearing Animals," by Professor Elliott Coues. Omitting the more lengthy parts of this eminent authority's description, and briefly quoting the essential characters for our purpose here, the American Badger may be said to have the "top of head darker than other upper parts, with a median white stripe; sides of head below the eyes, and its under surface, white, with a dark patch before the ear; limbs blackish; body-coloration above a grizzle of blackish with white, gray or tawny, or all of these; below uniform whitish, shaded or not with gray or tawny. Form stout, thick-set, indicative of great strength and little agility; body broad, depressed; head flattened, conoidal; tail and limbs short; feet broad and flat [five toes on each foot]; fore claws enormous, highly fossorial. Pelage of body and tail [which is short] long, loose, shaggy, and of coarse texture; shorter and closer on the head and feet."

The American Badger is found in this country from Texas, Iowa and Wisconsin to the westward, and used to occur much further east.

Prof. J. A. Allen found marked differences in the skulls of Badgers from specimens collected in widely separated northern and southern districts, and anatomically the animal presents us with much that is highly interesting. Another writer tells us that "the Badger differs from all other mammals in having the lower jaw so articulated to the upper, by means of a transverse condyle firmly locked into a long cavity of the cranium, that dislocation of the jaw is all but impossible, and this enables those creatures to maintain their hold with the utmost tenacity."

We must also note that Badgers vary both in color and size, depending upon the locality in which the specimens are collected; but these variations imperceptibly merge as we come to compare series from all parts of the geographical area over which the species is known to range.

For the past three years the present writer has resided at Fort Wingate, New Mexico, and during this time has seen a number of Badgers which were collected in the vicinity, and for a long time had a fine one in captivity. But the largest of all the specimens of the American Badger that I ever saw or read about was a specimen recently captured here (Aug. 14) by Mr. M. B. Miller of Philadelphia. This animal actually measured, from "the tip of his nose to the tip of his tail" 32in., and was a splendid adult male, of correspondingly magnificent proportions. I was permitted to make a photograph of this specimen, and from this, by a method which rendered an absolute accurate copy, I made the drawing presented in Fig. 1, which will give the reader an excellent idea of the general form and coloration of our Badger. It represents him in the very act of commencing to burrow, which captive adult specimens will do at first whenever the opportunity offers, and it is truly remarkable to see how rapidly they will make a sizable excavation in the ground, absolutely making the earth fly with their powerful claws during the operation.

As comparison enhances all study in animal forms, I made also two other drawings (Figs. 2 and 3) for this article; one of the head of the European Badger (*M. taxus*), and the head of an Indian Badger or Sand Bear, alluded to above (*Arctomyx collaris*). These figures show the predisposition to black and white longitudinal banding in all badgers.

This Sand Bear with its long piglike tail and snout, and standing, as it does, higher on its legs, presents us with a very good combination of a bear, a pig, and a badger; but the limitations of space will prevent me from entering upon any description of the habits of this highly interesting representative of our group, from India.

Badgers subsist upon a very varied diet, consuming indiscriminately fruit, birds' eggs, insects, frogs, small mammals, nuts, and roots; our American Badger, however, has been found to be far more carnivorous in its tastes than its European cousin.

These animals spend most of their time during the day in the deep and extensive burrows which they are so eminently fitted by nature to excavate. They come abroad and feed chiefly at night, and it is the rarest thing in the world to find a pair of them together on either occasion; for some reason or other the sexes pursue their avocations usually apart. In sections where they are plenty, however, we may occasionally catch an old fellow away from his stronghold, when he will be seen to literally flatten himself out and endeavor to creep back unobserved to his ho'e. Seven or eight years ago, while hunting through Wyoming, I once surprised a large Badger in this very way, and did not sight him until he was within about 20ft. of his burrow, when, my gun being loaded with buckshot (as I in turn was also being hunted!), I opened upon him, and distinctly saw that he was struck in several places by the balls. He absolutely made the dust and stones fly in his rage, and bit himself as he rolled over and over in his agony; notwithstanding this he recovered himself sufficiently to reach his burrow before I could head him off, or thought it necessary to deliver him another shot.

Sometimes when one runs into his burrow he may in a moment or two suddenly appear at its entrance again to inspect the intruder, and I've seen Indians take advantage of this habit by running up suddenly to the entrance and deliberately kill the animal with a pistol shot as he showed his head. Indians frequently capture them, too, by running upon them mounted on horseback, and dismounting as near them as possible, complete the chase and capture them on foot.

Few animals, however, prey upon or even molest the Badger, and man proves to be his worst enemy; indeed, they are strong and determined fighters, and even wolves and coyotes do not care to interfere with them, and generally offer a wide berth when they chance in their way.

FIG. 1.—THE AMERICAN BADGER (*T. a. americana*).—ADULT MALE.

Fig. 2.

RIGHT LATERAL VIEW OF THE HEAD OF A SPECIMEN OF THE EUROPEAN BADGER (*M. taxus*).

Fig. 3.

SAME VIEW OF THE HEAD OF THE SAND BEAR OR BADGER OF INDIA (*A. collaris*). BOTH FIGURES DRAWN AND REDUCED BY THE AUTHOR.

Our Badger is very fond of young "prairie dogs" (*Cynomis*), and undoubtedly feeds also upon many other small mammals which inhabit the same regions, gophers and mice. Audubon figured his Badger with a horned lark (*Otocoris alpestris*) in its claws, but we must believe that the animal captured, in this case, was a sitting bird, for it by no means possesses the requisite agility to take birds in any other way. It has not been satisfactorily proven that the American Badger is as fond of honey as the European species is long known to be, which latter will dig up bees' nests to obtain the luxury. The taste, however, runs in the family, as the generic name of the Ratel will indicate (*Mellivora capensis*).

So far as trapping Badgers goes, the writer has no experience with it, but I have often wondered how a very ingenious trap the Indians have for the "prairie dogs" would work. The Indians will take a small barrel with both ends knocked out, and stand it up on end so as to include the entrance to the burrow; they then fill it with sand, and continue to do so until it ceases to run down the slanting descent of the burrow, and the barrel itself is full. The "prairie dog" soon wishing to get out, comes up to the entrance, and finding it filled with sand loses no time in scratching his way through it and through the sand in the barrel, but this material immediately fills in behind him as he digs, and upon appearing on the sand on the outside and on top of the barrel the waiting Indian makes a rush for him. The doomed animal quickly turns and endeavors to find his way back through the sand to his burrow, but the Indian wheels the barrel one side, and running his *bared arm* down through the loose sand in it firmly grasps the struggling marmot and drags him once more into the light of day, when he ignominiously knocks him on the head, as the good quality of the flesh of this ground squirrel is well known to most Indians. It would interest me very much to see this tried on some wily old Badger just to see how he would take it, but I would advise the wearing of cast-iron gloves while engaged in fumbling in the sand in the barrel to ascertain "if the bar was thar."

My captive Badger, an old one, soon became quite tame, and when in a good humor allowed one to stroke and even handle him. He was fed principally upon raw meat, but ate nearly anything and everything that was offered him. They are very fond of water and drink a good deal. Incidentally I would like to remark here that I have kept tame "prairie dogs" too, and have a most engaging little pet of one now, and it is a very prevalent and very erroneous notion that they do not drink water, for they are more than fond of it, and at once show the effects when they cannot obtain their regular supply. These little animals will also eat almost everything they can get a hold of, and I have already published in *Science* their fondness for raw meat, but some people would smile to see mine sit up on his haunches and enjoy a slice of oyster pie. But we are digressing, and to return to our Badger, I would, before closing, call attention to some of the economic uses of the animal, and to do this I cannot present the matter in better form than to quote from Coues's admirable account already alluded to; this distinguished mammalogist says that "The flesh of the Badger, like that of the Skunk, is eatable, and doubtless often eaten by savage tribes, though not to be recommended to a cultivated palate."

The specimens I have skinned, even the young one before mentioned in this article, emitted during the process such rank and foul odor as to be simply disgusting. The Badger yields a valuable and at times fashionable fur, used for robes, and for muffs, tippets and trimmings. Thousands of shaving-brushes are said to be annually made from the long hairs, which are also extensively used in the manufacture of artists' materials, one of which is a "badger-blender." In 1873 the London sales of Badger skins by the Hudson's Bay Company were 2,700, at prices varying from one to seven shillings, averaging 1s. 6d. The leading American journal of the fur trade in 1876 quoted Badger skins at $1 for prime, 50 cents for "seconds," and 10 cents for "thirds." The colors of the Badger pelt, though not striking, are pleasing, being an intimate and harmonious blending of gray, tawny, black, and white, the colors ringed in alternation on individual hairs. The gray predominates, the general "tone" or effect being a grizzled gray, which has given rise to the well-known adage "as gray as a Badger." ("Fur-Bearing Animals," pp. 288-289.)

We still stand in great need of concise accounts of the more obscure habits of our Badger, and so far as I am aware, there are no published accounts of accurate and reliable details of the reproduction of the species, nor the periods of gestation and lactation, subjects as yet, I believe, unknown to science.

And, those who may be residing in parts of the country where Badgers are plenty, can make a very acceptable contribution to our knowledge of American mammals by collecting and making careful observations on these subjects and duly publishing them.

SPARROWS DRIVEN OUT BY WORMS.—Sing Sing, N. Y. —Until two or three day since a brood of English sparrows have had their roosting place in a Virginia creeper, just outside a window of the room where I am writing. This year the web caterpillars have been unusually abundant in the neighborhood of Sing Sing. They are found crawling everywhere in the village. After they had stripped a mulberry tree—that grows at the end of the piazza—they seized upon this Virginia creeper. A number of them are now denuding it, and at length have exposed the covered angle of the chimney, where the sparrows had their cosy roosts. Such behavior on the part of the caterpillars has been too much for the sparrows. They have had to give way and move off. This time the sparrows have been driven out by the worms.—A. H. G.

Our extinct volcano has always been the admiration of our townspeople and of the strangers who have come within our gates. Rising by a graceful elevation on one side, from its long cape stretching far out into the western waves, displaying at its top the perfect rim of its crater leaning gently over toward the town, and its other side running abruptly into a ridge of peaks that drop down lower and lower till they are lost in the interminable mass of mountains to the north, it stands a most notable landmark, and beautiful background to the island-gemmed bay of Sitka. We have often heard it compared to Vesuvius, and the bay to that of Naples, by travelers who had seen the glory of the Mediterranean, and we have given our fancies play in picturing the grand effect that must have illuminated these rugged peaks, and the tumultuous billows of the dark Pacific, when Edgecombe was sending forth his volcanic flames.—*Sitka Alaskan.*

TIGE.

HOW the changing season brings changing moods! With the soft April winds, with the willows growing green down by the spring came the impulse to get rods and reels in shape; now with the air sharp and keen with September frosts, and the willows withering in the cold winds that will soon leave their long gaunt arms swinging in the winter blasts, rods and reels are forgotten and our twelve-bore is brought from its resting place.

This has been a season of disappointment to me, and bright anticipations have been turned to sad experiences and painful realities. When about ready to start for the Mastigouche Lakes a great shadow filled those June days, and through its darkness I carried a dear friend to her long home. September came, which I had looked forward to for my Canada trip, and found me bolstered up in bed. As I lay there I found pleasure in living over again pleasant days spent in camp; remembering how beautiful were the woods, how bright the waters that hurried down from their fountains hidden far back among the hills to swell the waters of Pine Creek, as it too hastened to the sea.

We had broken camp; a lumberman with his ox team had come to take us out to our new camping place some ten miles away by the roundabout wood road, while across the mountain it was hardly half the distance. Dana and Jake, my companions around many a camp fire, started with the team, while I concluded to go over the mountain, promising to meet them at the lumberman's house, from which we were to start in the morning for our new hunting grounds. I strapped my blanket on my shoulder and taking my rifle started on the tramp, first taking a good look at my compass that was to be my only guide through the pathless woods. A long walk brought me to the summit; a forest fire had killed the timber and it would have been a desolate place only that the fire as it burned the great trees away opened up a vista as beautiful as I had ever looked upon. Away toward the Susquehanna the hills lay dark in their own shadows; to the east, the mountain tops reflected the golden light of the setting sun. I stood on a carpet of crimson and green, where the polished leaves partly hid the bright wintergreen berries, and looked upon the beautiful picture quite forgetful of the long walk before me. At last a great deep shadow came over the mountain and filled the valley; the sun dropped out of sight, no twilight seemed to stand between the day and the night; and before I realized it I was shut in by the darkness. It was too dark to think of going further, so finding a large pine, that after fighting flame and storm had been beaten to the ground, I started a fire, piling against the trunk the limbs that were scattered near. Eating a piece of jerked venison that fortunatly I had in my pocket and for dessert a handful of berries, I wrapped my blanket around me and was soon asleep, tired out with my tramp; it was that full resting that only a tired hunter—one who loves the woods—ever enjoys.

Soundly I slept, and only awoke as the gray dawn told of the coming day. But where was I? In my dreams I had forgotton the experience of the day before; all around me was the ocean; as far as I could see was the slow, still motion of its waves; no shore in sight as it stretched out until it met the sky; here and there were little islands, just such as the one on which I stood. For some moments I gazed and wondered. A little flame started up from the embers of my fire, then I remembered that not long ago, somewhere, I had started a fire against a great log; there was the log nearly burned through; in the flickering flame I saw my rifle covered over with a strip of bark; little by little I unravelled the mystery; as I wound up the tangled thread the sun lighted up the heavens and touched the top of the waves until they burned like fire opals; higher and higher it rose, and as it sent its warm rays deeper and deeper, this great sea of fog lifted and floated away in fleecy clouds; the little islands, on one of which I stood, were the tops of the hills that had lifted their heads above the mist, and all night long had been looking up to the twinkling stars. Along the valley of the big creek the fog lingered, and by these white signal flags I could trace its way to the river. A walk of an hour brought me to the little clearing. "Well, we thougt you were lost" was the greeting of my friends.

While eating our breakfast we discussed our plans and wondered how we would make out with our footsore dogs, whose feet were so tender, running on the frozen ground (for the good name of the party, let me say we only used them for 'ridging;" they were broken to come back after starting the deer and never ran longer than a half hour), and the little tracking snow was fast disappearing. Our host told us he had a good dog, and if we would spend the day with him he would show us a deer in an hour. He was a whole-souled fellow, and the generous way in which his invitation came decided us at once. His long, full-stocked rifle was taken down from behind a pair of great spreading antlers, and we started for the log shed to get the dog. As he pulled the pin a great surly brindle bulldog pushed his way through the door, and only after a cuff from his master did he cover his teeth that he had been showing to the strangers. Our surprise was only increased when, with a laugh, John said, "There, boys, is Tige, the best deer dog in the country." We had our doubts about it, but thought by sundown we would know for ourselves.

Across the creek and into the woods we filed and hastened up the ascent until we reached a bench half way up the mountain, stretching along its side for a long way. North of us, and in a sag of the mountain, was "Dark Hollow," where our guide told us he would start the deer. Dana was to take his place on the other side of the bench; Jake was to stay near where we stood, while I was ordered to go on through a piece of large timber to find a knoll, and there to take my stand. I noticed John was very particular in his instructions to me; and as he turned to leave us there was a smile on his face as he said, "Young fellow, keep your eye out." In a minute he was hid by the bushes, his brindle dog close at his heels.

I hurried on and soon found the grove of great trees, and on the other side the little knoll where I was to take my place. The air was cold and chilly under the shadow of the tall pines, although the bright sunshine came sifting through their tops. Soon I had a fire built; standing against the tree I kept a keen watch. Somehow I had a presentment that a deer was to come that way and he was to be my venison. Far away through the timber I caught a glimpse of something on the move. I hardly had time to reach my rifle before a noble buck came bounding into sight. He kept a straight course toward me until within a hundred yards, when he quickly turned at right angles. I threw my rifle into an open space ahead of him, and as soon as I saw hair, I pulled. As the smoke lifted I saw him floundering on the ground. I loaded my rifle as I walked toward him. Once or twice he rose up on his hindlegs, but could not straighten up in front. I felt quite sure I had broken his shoulder; but what was my surprise to see him jump up, and before he fairly started the brindle dog Tige had him by the nose. The most savage fight I ever saw was between this great buck and the fierce dog; they were so "mixed" I was unable to get a shot, until the deer with his antlers was pressing the life out of the dog as he held him down; a quick shot and he rolled over dead. I took out my knife and walked up to cut his throat, when the dog turned his blood-shot eyes toward me, and with an ugly growl gave me to understand he claimed this meat and to keep hands off. Soon echoing through the woods came the words, "Let him alone, let him alone." I thought there was little need of his making quite so much noise or telling me so often what I had already found out. Soon John came in sight. After cutting a great ox goad he walked up to his dog and ordered him away; but only after using the whip could he make him mind; several times I thought he would fly at his master. This I found to be an old trick, and with every deer he pulled down his master had to give him a like thrashing.

The rest of the party hearing the shots soon found us and the story was told. Dana calls out, "Shot twice, did you miss once?" "No sir!" "Well, there is but one ball hole." There the deer lay stretched out showing the side that was toward me at both shots; I was puzzled. We noticed one of his horns was off, but thought that in the fight it had been broken. We turned him over and there was only the mark of one ball as it passed out. "Here it is," and Jake showed where the first ball had plowed a groove along the skull and cut half the horn away at the very base; so the shot I thought had broken his shoulder had only stunned him and he was getting his senses as the dog came up. We soon had him dressed. John as he brings the pole on which we were to carry our game calls out, "Say, fellers, I s'pose it is pretty late, but I guess I ort to have told you, my dog never barks; he runs swift and orful still." I then brought to mind how swiftly that deer ran when he came into my sight, how every hair seemed to stand on end as I first walked up to him, frightened an hundred fold more by this wolflike enemy than a hound baying on his track. As we hung him up in the shed that afternoon we found he weighed 195lbs., the largest deer I ever killed. I tried to make friends with old Tige as I fed him, and all voted that "he was the best dog in the country." SPICEWOOD.

CENTRALIA, Pa.

MAINE WOODCOCK SHOOTING.

WOODCOCK shooting in Maine is something of a novelty, and yet under game protection there begins to be something of a chance for that best of sport. In locations where twenty or thirty years ago such a bird as a woodcock was not known there is pretty fair shooting to-day. This pertains to portions of the State not more than forty or fifty miles from the seashore, since in the interior and the more northerly portions of the State the climate is thought to be too severe for the woodcock to thrive. My attention has been called quite forcibly to the possibilities in regard to this bird in that State within a few days. The 5th day of September was a legal holiday in Massachusetts, and it was possible for me to get away to the woods. With work finished on Saturday evening, 7 o'clock found me on board the cars on the Boston & Maine, bound for Lewiston, and then up into Oxford county, where the grouse are fairly plenty. No thought had been given to woodcock, though the open season had begun on those birds on Sept. 1, the same as on the partridge. By 2 o'clock A. M. I was at Lewiston. A few hours of needed rest were taken, but shortly after daybreak I had started, gun in hand and on foot, for Hebron, a town fifteen miles to the north of Lewiston. My gun was in the case, for it was Sunday morning, a legal close time, in all seasons, on game in the Pine Tree State. But the beauties of that September morning I shall not soon forget. The weather was perfect. Not a breath of wind, and yet the air was crisp and frosty. All Lewiston and Auburn, cities including some 40,000 or 50,000 inhabitants, was as silent as the morning itself. As I left the town almost a feeling of loneliness crept over me, and I thought perhaps I might see even a social dog, but no dog came in sight. A single Thomas cat made a leap from a front yard fence as I passed, and ran after a rival, catching him astern and administering a drubbing that made a good deal of fur fly, even if it hurt no further.

I had started out for a long walk, though I by no means intended to walk the whole distance to Hebron; for an arrangement had previously been made for Horatio to start with the team at about the same time that I left the town, and to drive toward Lewiston, on the new road, till he met me. But this new road proved to be just what I wanted. It has been built but a few years and for a number of miles there are no dwellings on it. It runs up the valley, beside the pond and mainly through the woods. The first human being I met was a milkman on the road to Auburn with his cans and a quantity of sweet corn and other vegetables, evidently for the Sunday dinner of some of his customers. He saw my gun, though in its case and he accosted me with:

"Going to try the woodcock to-day?"

"No; possibly I may try them to-morrow. But it is close time in your State on Sunday."

"That's so; thought possible that you didn't know it. But seein' it's you, you can really get some woodcock up the valley to-morrow and not go mor'n five miles from Lewiston. The corn canning shops are all running about here just now and the gunners are nearly all at work; so that the birds are undisturbed. I went out only an hour the next day after the law was off and I got four."

"Well," thought I, "that is pretty good for a milkman's shooting." I had hardly gone half a mile further when I met another milkman.

"Going woodcock shooting to-day?" he asked, with a peculiar emphasis on to-day.

"Not to-day," I replied. "May try them to-morrow. Have quite a long walk up the valley."

"Well, you'll see some woodcock at this time in the morning. I saw two coming down."

Soon I came up with a team; not a milkman evidently, for he had no cans in his wagon. But there was something suspiciously covered under the seat. He had met another team. Both were placing their teams outside of the roadway and one had begun detaching his horse from the wagon. I accosted them with:

"Going up the road my way?"

"No," gruffly, "going back."

"I did not know but what you were going my way, and if so, I might be after riding with you; provided we could agree."

"Not by a dum sight! You're out after woodcock, and it's agin the law to shoot them Sunday. I wouldn't carry you, not if I was going up the road!"

But I had discovered what I was sure was the butt of a gun under the old buffalo robe in the bottom of the wagon belonging to the spokesman of the two. I was satisfied that I knew the errand of my two earnest defenders of the game law, and a moment after my convictions were fixed when I saw the old quilt or horseblanket in the other wagon move. There was a dog under it. I had surprised two gunners rather early in the morning. Evidently they had not expected to see anybody till they could get well out of the road with their teams. Then they would "try the woodcock." I resolved to try them further:

"But I have a long walk. Evidently the boy who was to meet me has failed to start. Wouldn't you give me a lift for four or five miles if I would give you a couple of dollars?"

The eyes of the man who had said but little glistened at the mention of a couple of dollars, but the other put an end to the conversation:

"No, we're not particularly anxious to earn money. But you'd better be purty dum careful how you shoot woodcock about here on Sunday!"

My curiosity was satisfied and I bid the men good morning, but they only returned the salutation with a grunt. I learned the next day that there are a number of excellent shots and first-class sportsmen at Lewiston and Auburn, and that they not only respect the game laws of the State, but that they also require it of others. Hence I came to the conclusion that the chaps with the wagons beside the road at 5 o'clock in the morning were really poachers, and that they either thought they had found a poacher themselves, or that they feared that I was on the watch for them, and that the gun I carried in a case was only a ruse to allay their suspicions. I trudged onward. Evidently Horatio had made a mistake, for I was now at least four miles out. But the novelty of this early morning walk, intermixed with a spice of the workings of the Maine game laws, was inspiration enough to keep up my courage. The woods was dense on both sides of the road. There was not a house in sight. Indeed, I had not seen one for three or four miles. There were no teams on the road, and, judging from the tracks, none had been along since the evening before. Should I not see a grouse? These were grouse woods, and the morning was crisp and frosty. Ah! here are ripe blackberries beside the road. One leap and I am across the ditch.

"Whir-r-r! Buzz-r-r! Whir-r-r!" One, two, three, four, five! Actually five grouse were right in the brush before me! I heard the noise of their wings suddenly cease. They had flown only a rod or two to the cover. I could find them in a moment, and I knew it. Was ever a poor fellow tempted to unlimber his gun from its case?

But I moved on a few rods further. Up popped another temptation, straight into the air. "A woodcock, as sure as you are born; but oh, it is Sunday morning!" Besides, those fellows with the wagons, where are they? The bird showed me a chance for a fine shot, only to be followed by another, a moment later. Truly I was in the midst of the game I had been dreaming of for six months, but alas! it was Sunday morning. I was now satisfied that Horatio had failed to come to time, but I was resolved to get a team at the next house, if possible. Soon I came to the open fields and a house hove in sight. At this house the farmer's horse was lame; but at the next house I succeeded in enlisting a good old tiller of the soil, with really a fine mare, for a trip eight miles further on up among the hills of old Hebron. I learned from him that the potato crop was a failure; that the apple crop did not amount to much; that partridges were quite plenty. He had heard about "them 'ere woodcock," but be hanged if he had ever seen one, though he had lived on the same farm for thirty years. Still a couple of fellars came up from Lewiston, the day that the law was off, and with "one of them pesky red setter dogs, be hanged if they didn't get six of them long-billed critters. But it's no use for me; I can't see 'em, and besides I haint fired my old gun for fifteen years, and there she stands loaded, just as I left her. Guess I shall fire her off some day. Don't s'pose that she's rusted, do ye?"

I thought that she might be, but just then I was more particularly interested in admiring several trees loaded down with Baldwin apples, and noting the beautiful picture they made in the glorious morning sun. Eight miles further and I was at my destination. Was that breakfast good? Ask one who has tried fifteen miles of outing on a glorious morning in September, and then sat down to a well-filled table. Horatio had started after me, but at about the same point where I had engaged the services of the farmer he had become disheartened, and thinking that I was not coming, he had turned back, reaching home before me. The boy was a little chagrined, but his atonement in the shape of telling me where there were several flocks of partridges, not yet disturbed, was accepted. We longed for the next day to dawn, but even before that day was done, together with my brother and Frank and Budge, we had visited Streaked Mountain, a walk of five miles out and back. Here are Hebron Heights, Buckfield Heights and Paris Heights, some 2,000ft. above sea level, and yet not more than 50 miles from the coast line, which line is plainly visible on a clear day, even to the extent that the masts of a vessel may be counted with a good glass. On our way, both up and down, the dog Peter, a most beautiful and affectionate Irish setter, but untrained, started flocks of grouse. Still we longed for the morrow. It came at last, and with the early birds we were off with guns and dog. Little Frank, only nine years old, distinguished himself by waking as early as any of us, and insisting upon going with us. He is a chip of the old block. He is famous for a record of some fifty brook trout caught this summer, without the assistance of any one. Still it might be mentioned that his Uncle Rolly did scare all the trout in the brook at Frank's grandfather's in Sumner—scare them all up stream and away from the bridge, against the summer vacation, when Frank should be up there and ready with hook and line. He scared them up the river in order that some other boys might not get them.

We had been out but a short time when the setter put up a flock of partridges, and came to a handsome point, for a green dog. My brother secured the bird, but at the noise of the gun the dog lost interest, not thoroughly gun shy, but it took some urging to make him believe that the noise was not rather loud. Soon another bird sprang from a tree right in front of me, giving me a snap shot in the brush, which only drew a few feathers. But we made a glorious morning of it. My brother secured two birds, with one for myself and one for Horatio. Little Frank, though carrying no gun, was as full of enthusiasm as the best of us. We were home to a late breakfast, fully determined on a full day's sport; but alas for labor that must be done. The express had not come to time with some material, and we were obliged to spend the afternoon upon what might have been completed early in the day, but for the stupidity of a stage driver. But Lewiston was reached in season for the 11:30 train, and the morning found me back to business. Thus I spent Labor Day, my only holiday for many months, and if I have spun a long yarn about it, I have tried to show the readers of our good FOREST AND STREAM how that woodcock are actually on the increase in Maine, and how that the game law is being generally obeyed in Androscoggin and Oxford counties. One thing may be observed in regard to the grouse, and that is that they are more plenty than usual, but that they are remarkably shy for that State, affording, when flushed, only the most difficult of snap shots. SPECIAL.

A TEXAS CAMP HUNT.

ON the 15th of August, Mr. Lusk and myself, with a negro boy, Joe, as cook and driver, left Belton with a two-horse wagon and a two-horse hack, loaded with all the necessaries pertaining to a camping outfit, for a three weeks' hunt, on the head waters of the Llano River in Kimball county, Texas, distant 175 miles. We arrived at the Kuykendall ranch on the head of Cherokee on the third day out, having on the trip killed several squirrels and caught some fish. Here we rested for a day. We were informed by the Kuykendall brothers, who have large pastures inclosed with wire, that there were several bunches of deer in the pastures, so early next morning Alvah K. and myself set out for the top of a high hill one mile distant. The hill is partly open at the top with bunches of live oak, and below the summit is covered with scrub live oak and sumac, about as high as a man's head. We had passed over the top and were looking down into a valley below, which was partly prairie and hammocks here and there, when we saw about 80yds. away four fine bucks, intently looking at us. Alvah was armed with my new Winchester .45-75, and I had a Sharps carbine .50. We both fired about the same time, and as we were shooting down hill, overshot, and both missed. The deer and cattle then ran with a terrible noise over the rocky ground, and I fired at the hindmost buck, but with the same result. To say we felt badly will not describe it, we asked ourselves the question, why did we fire so hurriedly? why did we not drop down and take a rest on our knees? I abused myself more than I did the gun, for I was aware I had fired too hurriedly. There we were looking at the fast receding deer, going south with the wind.

We then made a wide detour to the west, hoping to come up abreast of the same bunch, but after tramping many miles we returned to the ranch to find a good dinner of baked squirrels that had been killed in the pecan grove near the ranch. After a rest James K. McL. and myself started out about 4 o'clock in another direction. Some two miles south of the ranch we came across three bucks that ran off before we got near them; we then divided and followed up until dark, but failed to come up with them or any others; so tired and hungry we returned to the ranch.

The next morning we started to the San Saba River, eighteen miles distant. We left home without a squirrel dog and camp dog, but Mr. Lusk in some mysterious manner went to a window's house on the bank of the creek, who had three dogs, and after talking with her for some time, he was seen coming to the wagons with a fine black dog called Faro. And I must say this dog was a valuable adjunct to the camp in keeping off cattle and running lizards and prairie dogs while on the march. We were sadly disappointed on reaching the San Saba River to find it almost dry; the long drought had told severely on both streams and grass. The fish had gone with the water to deeper holes below.

We remained on the river Sunday and moved our camp to a pond of water some fifteen miles S.W. in the more open prairie, hoping to find deer around the pond; but after hunting one day without success, I sent the wagon back to the ranch and concluded to hunt there for some days and not go further west, as the drought had dried up the streams and burned up the grass. I took the hack and Joe and started for Mason, to attend to some business, distant thirty-five miles. The only water I found on the road was at Barton's Spring, sixteen miles east from Mason. Here we rested for a time, watered our horses and put out for Mason over a hot sandy brushy road. Arrived at Mason we left at daylight the next morning for the ranch, which we reached at dark through a heavy rain, the first for two months. It continued to rain all of the next day which kept us in doors.

The second day Mr. Lovell K. and myself concluded to look up a small herd of antelope that used on the open foothills some miles north of the ranch, and try it on horseback. We had to travel four miles east to get out of the gate, where we turned directly to the north. For several miles the country is very rocky and covered with scrubby live oak and sumac. We had gone about two miles near Hext water hole, when we caught a glimpse of two deer, we could not tell whether bucks or does. I dismounted and gave my horse to Lovell, and followed in the direction the deer had taken, about one and a half miles to the top of a hill mostly covered with rock and cactus. While waiting for my horse, which was coming, I noticed Lovell's horse shy off, and he called to me that there was a large rattlesnake. I went to him and after smashing down a bunch of cactus with stones we killed the snake which had on nine rattles which we cut off.

We hunted the open high rolling prairie until dark, but found no sign of the antelope, and returned to the ranch to find hanging in the yard from a pecan tree a fine spike buck, killed by Mr. Jas. K., south of the ranch. We enjoyed a portion of that deer for supper if we were not at the taking.

The following morning we concluded to hunt singly, three of us after deer, the rest for squirrels. I started south and tramped for miles without seeing anything but jack rabbits until evening. As I was returning to camp a heavy rain set in, and I got under a live oak tree for shelter, and while there saw the caudal appendix of a fine buck which was going on a trail in the direction of the ranch. I followed, regardless of the rain, and tracked him in the soft earth to near camp, when darkness set in, and so I returned as I went, except that I was more tired and somewhat hungry. All had returned before me empty-handed, except Lovell, who had just come in and informed us that, as he was returning, he had killed a fine six-prong buck, and wounded another, about two miles down in the pasture. Joe took sacks to carry the meat and a lantern, and mounting a horse set out with Lovell for the deer. In about two hours they returned with the meat and as fine a pair of antlers as ever graced a buck's head.

The next morning we moved camp further down the creek and camped in a pasture belonging to W. J. Kuykendall, a generous and truly hospitable gentleman, and whose good wife was so mindful of our wants that she sent us butter, milk, tomatoes and peaches enough to last some time. Then several good jovial hunters came to our camp and spent the night with us, and after a splendid supper we sat around a blazing camp-fire made of live oak stumps and dry elm logs, told stories of hunting and camp life, and how the deer were plenty years ago, and when the buffalo were numerous in the winter.

The next morning being Monday we hunted faithfully both early and late, but got nothing, though we sighted several deer. On Tuesday morning while we were packing up in the rain to start home, a man came to the camp and informed us that two deer had been in his corn during the night, not one-fourth of a mile from us. The temptation was too great, and we suspended operations for a while, shouldered our guns, and took a look at the field. We found where they had jumped the fence, and going to the brushy prairie, followed their tracks for some time, but failed to come up with them. We therefore returned to camp and struck out for home in the mud and rain, and reached the Colorado in the evening, to find it booming and very muddy. Great logs were going down with the drift, making it dangerous to ferry, but we crossed in safety, and in looking back saw our Mr. Lusk's dog Faro running up and down the stream; he had failed to get on the boat. He tried the river a short distance and went back, but after we had gone some distance Faro came up to us, perfectly delighted to see us. He had swum the broad swift river. We returned home on Thursday night, the 1st of September, having been gone seventeen days, during which time we had not slept in a house or eaten at a table except at the ranch.

While we were not as lucky as some hunters, yet we were not discouraged. JAMES BOYD.

BELTON, Texas, Sept. 6.

HUNTING IN THE SHOSHONE.

Editor Forest and Stream:

What object Mr. Archibald Rogers can have in rushing into print to accuse one of whom he knows nothing, of having violated a most necessary law, I cannot think.

Because I happen to speak of elk steak at Heart Lake, Mr. R. is kind enough to take it for granted that the game was killed in the Park. Almost any sportsman could tell Mr. R. that the only way to secure really eatable meat on a hunting excursion, is to hang it in the sun and then smoke it a little. If strung up in a cool place where the outfit camps, meat so treated will improve in keeping for two or three weeks.

Mr. R. next cries aloud about the cruelty of trapping bear. In the article I refer to, I mention that on my last trip I shot eight, all in the open. My party only trapped two out of twelve. But it seems to me a little late in the day to cry out about the needless cruelty of it. Almost all the fur-bearing animals are trapped in a precisely similar way. The traps used are almost identical with bear traps, only of course they are of all sizes. These animals, too, are often harmless, and if Mr. R. had been much in the West, he would know that the bounty offered for bear skins in all sections of the country indicates the common opinion, a very decided one, that bruin must go.

As to bear trapping entailing more destruction of game than the usual method of hunting. If Mr. R. will allow me to say so, he speaks ignorantly. Let him ask any man who has hunted bear and he will undoubtedly assure him that at least three out of five are shot at a bait, at early morning or evening. All bear hunters kill game in order to kill bear. You do stumble on him sometimes. Four of the eight killed by me in '86 I so shot, but this was unusual luck.

One more correction Mr. R.'s letter requires. Heart Lake is not anywhere near the center of the Yellowstone Park, but eight miles from its southern border.

I trust the next time Mr. Rogers writes to your paper he will be sure of his facts and a little more courteous in his spirit. W. S. RAINSFORD.

SEPT. 14.

THE FISHER'S ISLAND HARES.—Hoboken, N. J., Sept. 14.—In answer to your query whether there are any European hares on Fisher's Island, I am hardly able to give an intelligent answer to-day. Our club members found but few last season, not over a dozen have been shot by us since we put them there. I have bagged two only, and have shot oftener there than any other member, I believe, yet I find they are rarely met with, the reason being that the people on the island insist upon confounding them with the wild rabbit that has done so much damage in Australia, and, in consequence of this, destroy them with every possible means. A few, I suppose; can be again found this fall, and I hope to meet one or two of those noble fellows, if only for the grand sight of their magnificent burst of speed.—MAX WENZEL.

IN THE BRUSH.—II.

"GOOD morning, Domine." "Good morning, Captain, get out and tie, and sit down and let's have a chat." "That's just what I'm going to do."

We fall to work reviewing old times. "Ah me," says the Domine with a sigh that speaks volumes, "what would the Judge and your father think of shooting nowadays."

I know the old man's thoughts are forty years away, so I call on him for an old-time story.

"Well, ah yes; have you heard from the Gov'nor?" By this appellation the Domine means my elder brother, who has gone out for a "tramp in the Rockies" at a time of life when most men would shrink at the bare idea of such a trip. "I hope the grizzlies and the Injins won't get a hold of him."

"Oh no, I guess not," and Dan's face softens at the possibility of any harm coming to his old hunting companion.*

Then the Domine went on: "It seems to me as though it was only the other day with your father and the Gov'nor. How well I remember that day we went over on a tramp round Black Pond. You know, Captain, woodcock were very thick round there then. Jim Bilyou rowed us over, and we struck across lots and over the hills and came in up to the north end of the pond. Your brother had a new single-barreled gun which your father had just given him. He was mighty proud of his new gun and very much in a hurry to fire it off. We started to go across some loose logs that had floated down the stream, and when we got half way across gave it up as a bad job and started to go back. The Gov'nor's gun somehow or other went off like a rocket, jumped out of his hand and went down 'kerchug' into ten feet of water. Here was a pretty how d'ye do. Never expected to see that gun again. The Gov'nor thought he'd lost it sure. The gun was mounted with German silver, and as I looked down in the water I see it shine, and I says to your father, 'I guess I can get it." So I cut a stick with a hook to it, and pokes down and around, and by gracious! I hooks on to her and fetches her up. Hurrah! So we got ashore and took her to pieces and cleaned her out and went on. Only I says to him, 'Don't you get more game than you can get in your bag.' "

"Well, Dan, how about your getting shot: tell us about that."

"That wasn't at Black Pond; that was up to Hairy Face Dave's, up there by Wirtemberg. You know where the schoolhouse stands. Well, we got into the swamp. My! how thick the birds were. I was overseer. You see your father was mighty particular. 'Why,' I says, 'I won't shoot the boy.' 'Oh, I'm not afraid of your hitting him; I'm only afraid he will hit you.' So you see up at the north end of the swamp I had just shot a bird, and was stooping to pick him up, when up gets a bird, and flies right toward me. The Gov'nor he ups and pulls on him, down comes the bird, and bim comes the charge right through my shirt. Gov'nor sings out, 'I've got the bird.' 'Yes, and I've got the charge right in my back." My, how sorry the boy was. Now I says to him, 'Look a here, nobody's hurt, it was only an accident; don't you go for to say a word to your father about this; if you do, he will stop your shooting sure.' So I went circling round toward the wagon and went to work to get my shirt off. You see I felt like as if a swarm of bees had lit on me. Presently up comes your father. 'Dan, what's the matter?' and I'm blamed if the Gov'nor didn't up and tell him all about it! Certainly. However, I explained it all right, though I was dreadful afraid the Gov'nor's shooting was ended; and we went on and filled up our game bags. That's the only time I ever got hit."

"Was that up in Traver's Swamp?"

"Yes! and I'll te'l you a story about that same swamp. There was lots of birds up there. You see the swamp wasn't all cut away and cleared up then as it is now. Why there must have been nigh on to a hundred acres in there. Prettiest ground for woodcock you ever see! So I hired Squire Hinchman's old Buckskin; you recollect the old horse; and I give your father an invitation to go along and have a hunt. You know how very careful he was; he wouldn't go out a shooting with any man but me, cause he knowed I was equally careful. We started off bright and early one morning, for we had a long drive and a lazy horse. I cut a gad for to wake him up, and your father he drove. 'Don't 'pear to mind the whip much, Dan?' 'No, he don't mind nothing 'cept firecrackers,' says I. With that your father puts his hand in his vest pocket, draws out some caps and says to me, 'Try them.' Well, I put one on and snapped it off, and you just oughter seen that old horse go. He put down the road for two hundred yards or more like a colt. By and by he held up a little. 'Give him another, Domine, caps are cheap,' says the old gentleman to me, and I'm blest if that old horse didn't make first-rate time all the way up. As we got up near our hunting ground I kinder got lost, and your father, who was, you know, a very polite man, says, 'Domine, I'll ask the way.' We come up to a man and your father says, 'Can you tell me if you please, sir, where Mr. David B. Traver lives?'

"Man shakes his head, says 'No.' 'Never heard of him?' says your father? 'Never heard of him,' says the man. Well, he asked two or three, so I up and says, 'Let me try.' 'Go ahead.' We come to four or five men a working in a hay field, says I, 'Say! Hello! where does Hairyface Dave live?' 'Turn down that 'ere lane and keep on over the hill and you'll see the house close by.' 'Well,' says your father, 'Domine! Don't that beat the devil! Here these men lived right by him and don't know who David B. Traver is from Adam! Never mind sir, here we are,' and we tied up and got ready to go to work. I says to your father, 'Now he's a cross old chap, for I used to shoe for him; you just put me outside so as to manage him.' The first thing the old black dog comes a pitching into my dog and giving him a terrible shaking. Up comes old Dave limping along with his cane. 'Here! I don't allow no shooting in this swamp!' 'Very sorry, Mr. Traver. I know you!—Didn't think you'd mind it.' 'Well, I don't know you.' 'Well, I'll tell you who I be. I'm the Domine.' So your father comes out of the swamp and I give him an introduction to Dave. I'm blessed if your father didn't turn round on me sharp and quick, 'Oh, Domine, why didn't you tell me this man didn't allow any shooting in his swamp, you ought not to have brought me up here, you ought not to have done it!' I thought I should have died! Now you see, Captain, I knew old Hairy-face Dave much better than your father did, so I steps out to the wagon and brings out a soda water bottle chock full of something I'd mixed up a purpose for the old feller."

History repeats itself; my mind went back to my fishing on old Macedony and the dose I fixed up there for the old fellow, but I knew better than to interrupt Domine in his story and he went on.

"So I says 'Mr. Traver, it's a very hot day, where's there a good spring around here?' 'Why, right by the house, here,' says he. 'It's a very hot day,' says I, 'try a little of this old French brandy.' So we sat down by the spring and had a drink. You see I handed him the bottle first, 'cause I knowed him. Then your father says 'Here's luck,' and I did the same. Well, after a little while I see the medicine was beginning to work and I says, 'Take another nip, Mr. T.' With that he just waves his hand to me and says, 'You and your friend can hunt here whenever you like, I'm a going into the house.' I guess he went in and laid down for a nap," said the Domine, with a most comical expression of countenance, "for we never see no more of him that day. So we went in, and of all the shooting I ever see, that beat it. The birds was that thick you could almost head on them, get up like bees, six or seven in the air at a time; you'd think they was blackbirds; only the day before they said some fellers from Rhinebeck had been in there and got eighty. Well, we quit with birds enough at noon and went up to the wagon for our lunch. I hauled off my game bag and I took and counted out twenty-five woodcock, and your father says, 'Gad, Domine, I guess I can beat you,' and he threw out twenty-six. 'Beat you one bird, Dan.' "

"Well, Domine, you started out to tell me all about your killing so many birds straight, round Delamater's Pond, and you've switched off on to another story."

"Let me see, where was I?"

"Never mind, old boy. I'll come down again and you shall tell me the story some other time." So thinking on the old time sport these hunters had and how little game there was now, I jumped into my gig, clucked to old Blackie and drove off home. CAPT. CLAYTON.

*And lo! as I write my little girl comes trotting in with a postal: "Saturday, Aug. 20, 1887.—My Dear Boy: We arrived in camp last evening. Swan Lake. Thermometer this A. M. 34°. Snow all around on the mountains. Are off in an hour. All well, love to all. Yours affectionately—GOV'NOR." How familiarly this voice from "the Rockies" sounds.

SHOOTING NOTES.

THERE have been plenty of sora rail with a scattering of Virginia rail in the reeds opposite Mauricetown, Cumberland county, N. J., during last week. Although the run of tides were in the morning, the boats averaged from forty to one hundred birds each. Among those who shot one or more tides were: J. Holladay, P. C. Converry, A. Fuller, Chas. Fuller, Wm. Mackay, Harry Hinkle, Gus. A. Muller, J. C. Whitney, John J. Gibbons, George Weaver, M. F. Bonzana, A. Cummings, W. R. Gaulbert, Geo. A. Kroom, Wm. Campion, Merideth Baily, H. H. Wise and Wm. Kates.

As the public is interested in knowing who are the best pushers in the Mauricetown and Port Elizabeth districts, I name a few I can recommend. They are: Edward Elliott, Alex Phrampus, Fred Phrampus, Lincoln Wills, Stephen Reeves, John Lore, Chas. Lore, Wm. Mason, Norman Pinkard, Chas. Compton, John Prichard, Harold Hinson and Frank Vanaman. If there are any birds on the marsh these men, who know where to look, will find them. The reeds are now beginning to be broken down, yet the pushing in some of the best ground is hard work, owing to the stumps.

So little is known of this great inland rail and and reedbird shooting ground, that I will give its history which is seasonable at this time: The great September gale of 1876 swept away much of the bank on the west side of the Maurice River, and although an attempt was made to substantially replace it, it was unsuccessful. Then followed the gale of October, 1878, which permanently opened great breaches all along the west bank, and since that time the meadows, which formerly were either cultivated or used as pastures, have been grown up with wild oats and become the finest rail shooting grounds in New Jersey. For several years after the storms referred to from one hundred thousand to one hundred and twenty-five thousand rail were killed annually opposite Port Elizabeth alone. A party of nine Philadelphians killed two thousand one hundred birds on one tide. The best season's work by one man was accomplished by David Lore, who killed ten thousand rail. The big one-day scores made some years since were: George Bowen, 405; Pete Lane, 365; Charles McAllister, the celebrated amateur pigeon shot, 270; Sam Camp, 220, and Billy Kates, 90. George Weaver killed 126 in one tide three years ago, and boated 302 on four tides. These statements are facts, and can be abundantly verified. For several years after the big storms, before the oats grew up too thick and the meadows began to fill in, the section between Port Norris to above Port Elizabeth was the best rail grounds in the United States. It was shot over almost exclusively by Philadelphians, the most of whom were careful to keep their rail find to themselves. For this reason the shooting public did not know what was going on along Maurice River, and the only sportsmen that I ever met who hailed from these parts were Frank Satterthwaite, of Newark, N. J., and John H. Abeel, Jr., of this city.

Mr. Jules Reynal, of White Plains, N. Y., who is an accomplished and enthusiastic sportsman and the owner of a kennel of well-bred and broken dogs, has just returned from a visit to Cape Vincent. When there he went out shooting one morning without a dog and killed fifteen partridges. He says the birds were quite abundant and in fine condition.

A large flight of black ducks settled in the streams of the South Side Sportsmen's Club of Long Island last week and commenced to gobble up the trout fry. They were doing considerable damage, and some of the angling members of the club wanted to have the ducks killed. As the law, however, prohibits the shooting of wildfowl on Long Island until Oct. 1, and as the South Side members maintain a position of shining examples in the sportsman's world, the ducks have been left unmolested. On Oct. 1, however, the shooting members will wade down the beautiful streams that traverse the grand preserve, and enjoy the sport of killing at close, towering rises, the trout destroyers. Shooting fowl in this way is a most delightful pastime, and beats to death sitting all day cramped and frozen in a blind watching a lot of bobbing wooden stools in front of one.

Mr. Robert Barnwell Roosevelt, of this city, is a strong advocate of summer woodcock shooting, which he assures every one is cure for the gout. For my own part I prefer gout to death by sunstroke, nor can I see much fun in being honey-combed by mosquitoes for the sake of killing a few hen birds with eggs in them. I have spoken to a score of representative sportsmen recently who are residents of New Jersey, and we are going to put our shoulders to the wheel this winter to have summer woodcock shooting stopped in New Jersey; at least in the northern counties.

For the information of the Staten Island robin gunners, who are at sea as to when they can pot that quondam bird of sport, I will say they can load their cartridges for Oct. 15. This sort of shooting is chiefly carried on by either young boys or antique relics of sportsmanship. The transition of the latter may thus be versed:

When cruel time bestows
Adipose,
Cock shooting and all those
He outgrows.
Then saunteringly he goes
To where the robins sit in rows,
And them with heavy charges mows
Until it snows.

Speaking of snows reminds me to say that the much lower temperature of last Friday night was anticipated by a small flight of male woodcock to the mountains of Sussex county, N. J. Of course, the two Warwick gunners who report this flight are awaiting the first of next month to be up and at these longbills.

Noticing several reports in the Philadelphia papers of the fine bay snipe shooting in Cape May county, N. J., this season, I asked a friend of mine, who spent the summer there in search of sport, what he had done. Being a truthful man not connected with any of the daily papers, he said that only a few brown and ringtailed marlin, a very few willet and yellowlegs had been shot there this season. He supposed about half a dozen birds daily would be about the average of the bags made. On the Newark and Elizabethtown meadows some small yellowlegs, krekers and oxeyes have been shot by the market gunners, who are continually prowling over this large strip of salt-water marsh land.

Since writing the above I have had word from the Augustine marshes at Port Penn, on the Delaware, that owing to the filling in of the lowlands at that place its once glorious rail shooting has departed forever. Mr. S. Lord of that place now advocates Maurice River. He says that every "old liner" knows that this will be rail week, and those who desire reliable information had better call at John Krider's gun store, N.E. corner of Walnut and Second streets, Philadelphia, where the latest news from the rail grounds on the Delaware River is always on tap. The old rail shooters, however, ask no man for information but get up and go when the moon goes into perigee, at such times they never fail to get good tides. It is only at this time that big bags of rail are ever made.

I am one of a very few in a position to state that within a short time a very fine exhibition will be held in this city of all the different birds of the world that are utilized either for sport or profit. The collection will include the Queen's falcons, and some remarkable fishing cormorants.

There are some English snipe and black ducks on the meadows at Pine Brook, N. J. Two Montclair gunners shot nine ducks and eleven snipe there one day last week.

My prediction that we would have an early fall now turns out to have not been a bad one. THE WISEACRE.

NEW YORK, Sept. 19.

DUCK SHOOTING WITH THE ABENAKI.

ON the northern side of the St. John River and about sixty miles from its mouth stretches a region of lake and swamp, inviting to the feathered tribes by its vastness and solitude. On a bleak October day the eye wanders over thousands of acres of withered rushes, browned and seared by the first touch of the almost Arctic winter, which is soon to hush all sound of animal life and change the landscape of mere and fen into a carpet of glistening, dazzling white; fit mirror for the rays of a sickly winter sun or the ghostly beams of the Northern Lights.

But in the fall, especially on one of those perfect days of the Indian summer, bird and animal life is plentiful enough. Black duck and teal are there by hundreds, and occasionally that most beautiful of winged fowl, a wood drake, accompanied by his mate, flashes over the tops of the tall aquatic plants, seeking food and shelter. Musquash, too, are extremely abundant, and their quaint calls and cries, while working industriously banking their house against winter and his hosts, serve to amuse and occupy the attention of the lonely sportsman, lying low in his birch bark, awaiting the evening flight.

Toward this sporting paradise I found myself last autumn making my way, in company with an old Indian, one of the few remaining members of the tribe claiming pure Indian blood, for the Abenaki are now but a remnant of what was once a powerful nation, numbering thousands of warriors, in the days when the noble Lady Latour was holding her fort at the mouth of the river against all comers, the Fleur de Lis waving defiance from tower and rampart. Indeed, most of those that remain are Indians in little more than name. Old Noël, however, stoutly claims to be "all Indian," and his high cheek bones, straight black hair and absence of beard would seem to bear him out in his assertion. If so, the mixture of white blood has certainly not improved the race, for a more honest man than Noël it would be hard to find—or greater blackguards than his half-bred kinsmen.

We had paddled quietly along a narrow lane of water for some two miles, called the "Thoroughfare," when we arrived at the camping place. A pleasant bank of greensward stretched to the water's edge, crowned by a growth of alders, with a few rock maple as a background. Here we landed, pitched the little tent well within the shelter of the bushes, and beside a roaring fire proceeded to make ourselves comfortable for the night. As I lay smoking the last pipe of the day, borne on the low evening breeze over the waste came the low cries of distant wildfowl calling to one another and splashing and feeding in the soft ooze. These sounds, coupled with the dreary, desolate surroundings, had a strange fascination for me, as they always have, for often have I in days gone by on the

other side of the "pond," tramped many a weary mile between night and morning, to get a few shots and enjoy the strange weird sounds only to be heard on the saltings of a winter's night. At last a faint light to the eastward proclaims the approaching day, and we quietly carry our canoe over the narrow neck of land which separates the "Thoroughfare" from the waters of lower Timber Lake, and steal slowly along through the rushes propelled by Noël's noiseless strokes, while I sit on the forward bar with gun at full cock, trying eagerly to pierce the gloom, but in vain, and many a vigorous black duck or blue-wing teal do we start out of the reeds without getting a shot, until at last the brightening light gives a better chance, and one unwary bird allows us to come nearer than usual, and presenting too fair a mark, pays the penalty with his life. As the dull boom of the heavy charge breaks the stillness of the scene, hundreds of ducks spring from their feeding ground in alarm, and after circling round the lake, start for some of the distant ponds which stud the back country in every direction; and in some of these most of the fowl pass the day, returning to their feeding grounds at evening. However, we run the canoe into some high rushes, having open water to the eastward and wait, and in a short time a flock of innocent teal, fresh from their northern breeding grounds, give an opportunity to empty the murderous barrels into the midst of them, adding five victims to the list. Then the climbing sun warns us it is time to return to camp and give the lake a rest until the evening flight.

The setting sun finds us, however, once more safely ensconsed under our disguise of rushes, and soon the fun begins. Now a small flock, now a solitary bird, makes a dart at the open water to our front, only to be greeted with heavy charges of single B, delivered at short range, generally causing them to leave some of their number stark and stiff upon the surface of the unruffled water. But all good things must come to an end, and soon it becomes impossible to see the birds through the gathering gloom, and nothing remains but to retrieve the spoils and work our way as best we may through the reeds and lily pads back to the landing, and so to camp. Once there a fry of black duck with "fixings" puts us in an angelic frame of mind, and swapping yarns over our pipes we gradually yield to the drowsy god.

There is also other game in these regions to vary the monotony of *toujours canard*. Snipe and woodcock are to be found, the former on the meadows which surround the lake, the latter in the dense fringe of alders that line the thoroughfare. In fact in most years there is a considerable amount of rough sport to be obtained at and around Timber Lake, but of course like all wildfowl shooting, it varies greatly from year to year. Take it all in all, however, and I think the reader will agree with me, that many a worse way exists of "putting in" a week or two in the fall than to pass that period duck shooting with the Abenaki. C. A. B.

Fredericton, N. B.

LOADING.

Editor Forest and Stream:

I have a 12-gauge gun, 8¼lbs. weight, 32in. barrels, choke bore, from which I secure very satisfactory results with the following charge, using brass shells and No. 10 wads: 4drs. Dupont's FFg powder with one cardboard and one pink-edge wad, ¾oz. shot and one pink-edge wad, the charge compactly placed.

Should this meet the eye of your last week's correspondent "J. H. B." before he has the choke taken out of his 32in. barrels, I hope he will try it and report results.

I load my own shells and with my loading outfit keep a half pint of common dark shellac in a strong bottle with wooden stopper that can be loosened and withdrawn easily, also an empty primer box and a piece of wire 6in. long. After loading shells I pour a couple of spoonsful of shellac in box, and with wire held as a pen dip into it. With the drop adhering I draw segment at angle of shell and shot wad, repeating till circle is complete. Thus a ring is formed adhering to both shell and wad, preventing charge from jarring loose or falling out. Being of an elastic nature it does not endanger shell or gun, and burns at discharge, leaving no trace. Before adopting this method I received many a "kick" from loosened charges, but since I have found the minimum of recoil and uniformity always. I also have an iron rammer turned to fit the shell exactly. With this I start the wad through a Barkly tube following as far as springs will permit; withdrawing it, I insert common rammer and push wads home. Removing, I again insert iron rammer, and a few smart taps of wooden mallet sets wads flat and smooth, leaving no turned up or crumpled edges, as when placed with rammer smaller than shell.

Four drams of powder will doubtless to many be suggestive of enormous recoil, and such would be the result if 1¼ or even 1oz. of shot were used, but as the shot charge is diminished the recoil is also and the penetration increased. It is the theory of strong powder charge, light bullet and flat trajectory in rifle shooting and applied to shotguns and has the advantage that lighter shot can be used and, therefore, closer pattern obtained. Davis.

Duncannon, Pa., Aug. 22.

New York Meadows Alive with Game.—A few days ago, while proceeding with a survey over the Dykeman Meadows, at Kings Bridge, at the extreme upper end of Manhattan Island, where the new ship canal is to pass, we had the pleasure of coming in range and raising three woodcock, five meadowlarks and two snipe. On Sept. 17, when engaged on the line of the old aqueduct, passing through the grounds of Mr. Lewis G. Morris, at Fordham, we marked down fifteen fine, fat, plump meadowlarks within a line of 200yds. of the old aqueduct, which is there quite secluded by a cedar wall environment. Again in various meadows on the river line the like pleasant things occur, with a continuous call note from morn till nightfall, and erewhile the night moon sheds its modest silver rays upon the gloaming, we hear the most welcome call of King Bob White.—Canonicus (Westchester, Sept. 17).

Fredericton, N. B., Sept. 10.—A. A. Nason, of New Maryland, while on his way to Fredericton, Friday morning, came upon a deer by the roadside, about three miles from town. He reports deer quite plentiful in that locality, which, he says, ought to afford some fine sport for some of the city's sportsmen. Two deer were seen the other day grazing in Henry Morgan's back fields in New Maryland. This is the result of better protection in Maine.—C. A. B.

The Man Target.—Chicago, Ill., Sept. 17.—A Laramie, Wyoming, dispatch says: "A young Englishman, A. W. Whitehouse, while out hunting antelope last evening, near Howard Windham's Twin Mountain ranch, shot and instantly killed his companion, George H. Gordon. The two were graduates of Oxford College and the sons of wealthy English parents. They arrived in America three weeks ago and came West to engage in the stock business. Yesterday, while at Windham's ranch, they saw two antelopes, and, with their rifles, started in pursuit. They soon lost sight of one of the animals, but finally located the other in a gulch. Gordon started up one side and Whitehouse crept along the bottom. It was now dusk. Suddenly Whitehouse caught sight of an object moving in the sage brush about 100yds. ahead of him. After watching it for some time he decided that it was a mountain lion and fired. The object fell. Fearing that it was only wounded, and having heard of the ferocious nature of these animals when in that condition, he fired three times more, and then parting the bush approached the spot where the object had fallen. He was struck dumb with horror on finding that one of his bullets had entered the temple of young Gordon and that life was extinct."

Dories for Coot Shooting.—I have just read "S. de R.'s" note in Forest and Stream of Sept. 15 with regard to dories for coot shooting on the New England coast. I have shot coots from dories, small keel rowboats, and on one or two occasions from a two-masted whaleboat. The decoys, which were strung out, were eight in number, and the birds would come down to them as if there was not a boat within half a mile. Moreover, the decoys were not more than forty or forty-five yards from the boat. I agree with "S. de R." that the dory is the best boat to shoot coots from, on the whole, along the New England coast.—J. W., Jr.

North Carolina Game.—Belvidere, N. C., Sept. 12.—The prospect for quail shooting was never more promising than at present, and we hope after the 15th of October to find the delicious little fellows in abundance. The call of Bob White is resounding on every side, and the coveys are generally fine and well grown for the season. Bears have been playing havoc with the cattle, killing from two to five a week, but the water has continued so high in the swamps that we could not hunt them with any degree of success. Hope soon, though, to "hit them a hard lick." Deer are scarce, and growing more so.—A. F. R.

Railbirds are rather scarce on the South River marshes. Poor tides and a heavy growth of weeds, reeds and oats make their pursuit too laborious for pleasure. An easterly storm is needed to remedy this.—J. L. K. (Perth Amboy, N. J., Sept. 19).

QUEBEC CLOSE SEASONS.

47 Victoria, Ch. 25. 50 Victoria, Ch. 16.

Caribou and deer, from Jan. 1 to Oct. 1. Moose (male and female) at any time until Oct. 1, 1890. The hunting of moose, caribou or deer with dogs or by means of snares, traps, etc., is prohibited. No person (white man or Indian) has a right, during one season's hunting, to kill or take alive—unless he has previously obtained a permit from the Commissioner of Crown Lands for that purpose—more than 3 caribou and 4 deer. After the first ten days of the close season, all railways and steamboat companies and public carriers are forbidden to carry the whole or any part of (except the skin) of any moose, caribou or deer, without being authorized thereto by the Commissioner of Crown Lands.

Beaver, mink, otter, martin, pekan, from April 1 to Nov. 1.

Hare, from Feb. 1 to Nov. 1.

Muskrat (only in the counties of Maskinongé, Yamaska, Richelieu and Berthier), from May 1 to April 1 following.

Woodcock, snipe, partridge of any kind, from Feb. 1 to Sept. 1.

Black duck, teal, wild duck of any kind (except shelldrake and gull), from April 15 to Sept. 1. And at any time of the year, between one hour after sunset and one hour before sunrise, and also forbidden to keep exposed, during such prohibited hours, lures or decoys, etc. N. B.—Nevertheless in that part of the Province to the east and north of the counties of Bellechasse and Montmorency, the inhabitants may, at all seasons of the year, but only for the purpose of procuring food, etc., shoot any of the birds mentioned in this paragraph.

Birds known as perchers, such as swallows, kingbirds, warblers, flycatchers, woodpeckers, whippoorwills, finches (song sparrows, redbirds, indigo birds, etc.), cow-buntings, titmice, goldfinches, grives (robins, woodthrushes, etc.), kinglets, bobolinks, grakles, grosbeaks, hummingbirds, cuckoos, owls, etc., except eagles, falcons, hawks and other birds of the falconidæ, wild pigeons, kingfishers, crows, ravens, waxwings (*récollets*), shrikes, jays, magpies, sparrows and starlings, from March 1 to Sept. 1.

To take nests or eggs of wild birds forbidden at any time of the year. Fine of $2 to $100, or imprisonment in default of payment.

No person who is not domiciled in the Province of Quebec, nor in that of Ontario can, at any time, hunt in this Province without having previously obtained a license to that effect from the Commissioner of Crown Lands. Such permit is not transferable.

Sea and River Fishing.

WEWAHITCKA.

Columbia, Ala., Sept. 12.—Some time in May last I penned an article for your journal, the object of which was to call the attention of anglers and sportsmen to one of the finest fishing and hunting grounds in Florida, Lake Wewahitcka, or Chipola, Calhoun county, West Florida.

From all physical appearances the lake was formed by a rapid channel, or cut-off, from the broad, deep Apalachicola River, precipitated across the smaller sluggish Chipola River, which for miles runs nearly parallel with and only two or five miles from the larger stream, depositing debris and mud across the broad swamp and forming a levee or dam which has forced the waters of Chipola on itself some four miles wide and twenty miles long. The lake is bordered by a dense growth of cypress, which in places extend 200yds. into the lake. The open water is interspersed with innumerable submerged islets of cypress; these break the force of the waves caused by the constant sea breeze which is ever rippling the open water. Here from October till June the fishing is simply superb. An ardent sportsman is often cloyed by the profusion and variety of the catch. Nature has evidently provided this lake as a great hatching ground for all the species of fishes common to Southern waters. The black bass, trout, pike (or jack), catfish, striped bass (or rockfish), suckers, bream, goggle-eyed perch, shellcracker (a large speckled perch), all grow here to perfection, and are of the finest flavor. The water is clear and pure, fed by clear, limpid streams. I also think that owing to its nearness to the Gulf of Mexico many varieties of the anadromous fishes come here to spawn. Of these there are several varieties of the mullet. Many of the fish take the eel worm, catawba, June or May-fly, with an eagerness which shows that their tastes have not been cultivated. Trout, bass and jack take the troll spinner or bait freely.

Hunting on and around the lakes in season is always good. Deer are plentiful. There are a few bears. Squirrels and smaller game in great plenty. During winter months many varieties of ducks and other water fowl are here in abundance.

Around the lakes at intervals are sparse settlements where the hunter or fisher always finds a hearty welcome, and guides in every direction whose love of sport is sufficient compensation. Board can be had on the lake at from $12 to $15 per month, every comfort at hand; or if the sportsman wishes to rough it, he can do so with only an expense of breadstuff to meet. The days are warm, but always tempered with a cool breeze from the sea; nights cool and bracing. Health is as good as in any lake region in the South; in fact, splendid. Several extensive orange groves along its borders give a pleasing variety to its natural attractions. You will find plenty of good stout skiffs, and in several places sailboats, for lake navigation. Mosquitoes are only troublesome after nightfall, and are always shielded from your person by the ordinary net; in fact I have slept many nights within one-quarter of a mile from the lake without any protection whatever.

I wish to correct an error that your able correspondent, Mr. Charles Hallock, has fallen into, namely, that the lake is landlocked. It has one large and many smaller streams that empty directly into it, and is formed and fed by a deep branch from its larger neighbor, the Apalachicola River.

The ingenuous theory advanced by your correspondent that landlocked lakes can be stocked with the Salmonidæ and other migratory fish is fully sustained in this instance, because if there was no direct communication with the ocean, yet there would be free communication by reason of freshets along the Apalachicola River, which once in every three or four years, and sometimes oftener, submerge many thousand acres of low, swampy lands that lie between the river and lake.

Any information that the sportsman or angler may need can be had of James A. Glenn or Richard McCarty, Iola, Fla., either of whom will show you the characteristic and cordial welcome so common to all lovers of the Forest and Stream. Viator.

CARP AND BUFFALO FISH.

Camden, Carroll County, Ind., Sept. 12.—Oftentimes I see in your paper inquiries about carp and how to catch them, and I desire to give you a bit of my experience in catching carp and buffalo fish.

I was fishing in two ponds, one of which contained scale and mirror carp, while the other only held large buffalo. My tackle consisted of a spool of thread, size 36, and a minnow or fly-hook baited with bread. I held the spool in my left hand so that the spool turned toward me and the thread ran out between my second and third fingers, guiding the thread with my right hand. The first fish I caught was a scale carp, 1lb. in weight, which took the bait from off the bottom of the pond. My next catch was a mirror carp of this year's spawn, and it took the bait just under the surface and in about the same manner as a black bass would, except there was no jerk. It weighed 8oz. At the buffalo pond I caught with this same tackle a buffalo weighing on the scales 7lbs. 2oz. The thread burned my fingers some as it ran out, but I stuck to him and landed him after eight minutes' fight. He fought very well, except there was an absence of the quick, lightning-like movements of our black bass, and it reminded me more of a dogfish than anything else, but gave up much quicker than they will. The carp were much quicker in their movements than the buffalo; and the mirror carp would rise to the surface, but not so with the scale carp nor buffalo, which seemed to feed on the bottom. Of the three fishes, the buffalo is shyest and hardest to catch. I am going to try for the 8 and 9lb. carp, using the same tackle, as it is much lighter than my reel lines, and the hook just the thing if you strike easily and plant the hook in the tough part of the mouth. A very light strike is sufficient to bury the tiny barb. Let some of your readers try it and see how much fun can be got out of a spool of thread and a fly-hook.

Our black bass fishing is good, no trouble being found in taking from fifteen to twenty-five a day. We fish in Deer Creek, a small stream of cold water, along which large boulders prevent much successful seining, and in the deep pools we find many large bass, some 4 or 5lbs. in weight, and lots of them from 1 to 4. J. P. H.

The Dungarvon Hooper.—"What is the Dungarvon hooper?" asked my friend and fellow angler, T., one dark night as we camped on the headwaters of this noble stream. It was a question not easily answered, and I could relate only a few facts noted down from time to time as given by guides on the Miramichi. To begin, I never could learn whether he was a biped or quadruped, feathered or hairy, but I assumed long since that he must be a ferocious animal whose wails have frequently been heard from Dungarvon River to McKeel Bank on the S. W. Miramichi. The veteran salmon fisher, Abe Munn, once caught a glimpse of his tail bounding through the woods, swaying the tall pines from side to side, and his howl deafened him for days. The nearest victims of his fearful wrath were a party of four woodsmen on the Miramichi (the names I have forgotten) who were overtaken one dark night on Rocky Brook by the terrible monster. The horses were lathered to foam in making their escape, and but for a friendly hovel that intercepted his mad career these four men would never have lived to tell the tale. They were never again seen out at night on Rocky Brook. It was the Dungarvon hooper.—L. (Fredericton, N. B., Canada). [The existence of the Dungarvon hooper is firmly believed by residents on Miramichi waters, and is a standing bit of fun to all anglers and hunters frequenting these waters.]

Mackerel in the Great South Bay.—A few mackerel were recently netted in the Great South Bay, something which the oldest fishermen never have heard of before. There never has been such fishing in this sheet of water as they have had this year. One boat went out a few days ago in the morning, and by 2 o'clock had 94 bluefish, and then gave it up, tired out. A boat going through the channel took one on a line carelessly thrown overboard.

FISH AND PROTECTION.

THE wider the extent of territory the more difficult it becomes to make close seasons for the protection of fish found in that territory. Certain edible fish have circumscribed limits, as the whitefish of the lakes, but other fish, such as the salmon, shad and bass, are migrants, and come and go just as do the birds, seeking at particular seasons the open sea and then returning to their first habitat, the rivers. The main reason, paramount to all others, why there are close seasons is to give to the feræ naturæ the chance to propagate their kind and to protect them during the breeding period. It is this, the common sense view of the thing, which outrides all others. By a law of nature it is at the exact time when the salmon or the shad ascend the rivers to reproduce their kind that they are, however, caught. You cannot take salmon or shad, excepting in an accidental way, outside of the rivers. Nature intended these fish to be used at this precise time, for they are then in their best condition. The fish have left the fresh water for a year or more and found in the sea the food requisite for their better development. They have been prepared for that drain on their organisms which comes with the reproduction of their kind. Fish are, then, at that season sent us to be caught and to serve man's purposes for food; but the question is, "How many of them should be caught?" We are not looking at fish which are nomadic, as the mackerel, in regard to which the most stupid of laws and the unfairest have been made by the legislators at Washington. We direct our remarks at the present only toward shad and salmon.

It has been frequently stated in the *Times*, and is repeated now, that if it was thought worth while, 99 out of every 100 shad which ascend the North River could be caught. If it would pay to take all the shad, they would be taken, or, if not taken, could be prevented from ascending the river. Any company of fishermen, freed from legislative restrictions, with sufficient capital, could stretch a series of nets which, for all practical purposes, would intercept the shad ascending either the North River or the Connecticut River. With salmon, if nets were used without let or hindrance, no fish could ascend the Penobscot or the Restigouche. In Oregon, where nets are used on the Columbia River, the effects on the salmon are already discernible in a diminishing supply, and the Columbia is among the largest of American streams.

Mankind, at least a large portion of it, is singularly ignorant of what its true interests, and in gaining a livelihood it gleans all it can to-day, quite indifferent of the morrow. It is exaggerating a natural impulse to call the wholesale capture of fish something actuated by greed alone. The fisherman is no more greedy than the farmer or the man of general business; but the farmer knows what are the limits of production and something about the laws which regulate it. The fisherman does not. If we wish to be precise and accurate as far as fish are concerned, the wisest ichthyologist, even the present admirable head of the United States Fish Commission, would be chary, as to giving the reason why shad are plenty one year and not the next, or why salmon are rare during certain periods. If you were to ask Prof. Goode why bluefish have been present in quantity late this season and menhaden have been wanting, he would answer that "he did not know." He might express the idea that in years to come we may get some inkling about it, that it was among the most important of questions, but that to-day he and all the most learned of men were quite at sea about it. It is probable, however, that if the Fish Commission were consulted, whose interests in regard to the food fishes are of a general kind, looking not to the fish of one section, but of all of them, they would be opposed to any legal restrictions directed toward sea fish, while they would be quite positive that certain enactments should be made and rigorously carried out toward indiscriminate fishing at all seasons in our lakes and rivers. Their argument, like that of all who understand the question, is this, that if the anadromous fish, such as the shad or salmon, are not allowed to ascend the streams to deposit their eggs, the stock of such fish must sensibly diminish and in time disappear. We must, however, catch the fish as they ascend the rivers. Taking that for granted, nevertheless the opportunity should be allowed for some of the fish to escape the toils set for them. It is for this reason that on certain days of the week during the shad season the fish have some twenty-four hours' grace given them. The last Legislature passed a law compelling the taking of shad nets out of the Hudson on Saturdays at sundown, and not to be replaced until Monday at sunrise. Shad can then ascend the stream, at least near New York, but whether they escape the toils higher up the river is not so positive. State Fish Commissioners spend the money of the State for restocking the rivers with shad. Were it not for their labors it is probable that there would be a dearth of fish in the North River, but their work, judiciously carried on though it may be, must be rendered perfectly ineffectual were there not some slight restrictions imposed on fishing.

The difficulties in the way of Fish Commissioners in the State of New York are somewhat lessened because the Hudson runs for the major parts within the territory of the State, but when a stream to be stocked flows through various States it seems as if it were utterly impossible to unite general interests. If it be shad or salmon, the young fry have to be put in the river at its source, A. But those who live at A have no interest in the fish, because when mature it is those who live at B who will catch them. Why should a State at A pay money for the benefit of others who will catch and sell or eat the salmon at B, which is another State? B is delighted with A's endeavors, but will not contribute a penny toward the expenses. Legislatures will not unite for general benefit, and on the question of protection two States divided by a river are often entirely at variance. As an example of this, what is a matter of moment for the State of New York is a subject of utter indifference to New Jersey.

No better instance of this can be given than the law passed in regard to lobsters. It was evident from the catch of lobsters coming into New York and Boston in the past that they were diminishing in size and quantity. The loss in quantity could be accounted for. All the female lobsters, with their eggs attached to them, were being destroyed. It would not have been possible to make laws or to have them carried out prohibiting lobsterers from taking the mother shellfish. What was done, mainly through the exertions of the American Fishcultural Society, was to have a law passed in this State prohibiting the sale of lobsters below a certain standard of size, but New Jersey would not sanction such a law. Jersey City then became the market for lobsters of all sizes, and cargoes were diverted from New York. The New York supply of lobsters was cut off. During the time when the law was operative in New York State thousands of young lobsters under the legal size and liable to seizure were thrown alive into the waters of the bay. This season the lobster men in the vicinity of New York from Hurl Gate to Sandy Hook have caught innumerable lobsters. These are the lobsters which had been taken off the Maine coast or elsewhere. Through some peculiar but misguided influences, in the face of the protest of our Fish Commissioners, the law in regard to lobsters in this State was repealed, and to-day you can catch and sell a lobster of any size in the market. The consequence has been that for the season lobsters too small to eat have been taken in amazing quantity, which are sold at prices which bring no remuneration to the lobsterer or the commission house selling them. Such lobsters as are of good size are reduced in prices as the poorer grades are in such quantity as to bring down the price of the full-sized fish. There is apparently some benefit to the public. We are buying food cheaper than in former seasons, be it good or bad food, but as certainly as the day is followed by the night, next season there will be fewer lobsters; and we will go diminishing our supply until in a few years lobsters will be higher and scarcer than ever they were before.

The beneficial effects of any law, be it for the protection of man or fish, is not appreciable in a single year, or in a few years. As to the lobster law, the good it did would not have been apparent at the beginning, for it was not operative along the whole New England coast. Imperfect as it was on this account, it would have taken fully 10 years, maybe 20, before we could have judged of its effects. But as it is to-day—though all prophecies about fish are hazardous—it is believed by those who have studied the subject, looking at it in a general and not a special way, that the repeal of the lobster law was a blunder.

There are certain considerations in regard to legislative action which should be presented, and these are the claims of the people for food when opposed to the amusement of the sportsman. Stanhope declared that in many of the English shires "the rabbit is now the best ally of the English Radical." Such antagonism has never yet existed in the United States. Trout is a fish which has been very thoroughly protected. It is not only illegal to catch trout out of season, but the dealer placing trout on his stand during the close season is liable to a heavy fine, no matter where his fish come from, whether they had been caught out of the country, or had been taken during the legal season, the fish having been preserved for a year on ice. Though this law has been rigidly enforced, there are many acute lawyers who believe that if a test case was carried to the highest courts local jurisdiction would be worsted. We are only questioning its legality, not the benefits derived from the rigorous carrying out of the law. It is possible, but for the fear of a money penalty that there would be but few streams having trout in them which would not be fished out to-day. Fortunately for the community, trout is rather a luxury than otherwise. Its quantity is too small when compared with other fish, as to not materially affect the supply of fish in any way. If all trout culture were abandoned and the supply not forthcoming, the general price of fish would not be augmented. In the legislative action of the State in regard to fish two influences are felt. One is the essentially ignorant one, clamorous for the right to fish in and out of season, who will not brook any idea of a close season, and who want to catch fish where they please, how they please, and when they please. The river shore, some of the most clamorous represent, has a length of, say, five miles, and they entirely ignore the rights of those who live along a shore which has an extent of 495 miles. It is not that these people are selfish, but their horizon is limited. They are the constituents of some legislator who regards their claims as an important factor in his next election. These representatives consider the whole matter of but little importance whether it can be carried or not; still they do their best for their friends, and they become blocks standing in the way of consistent and general legislation in regard to fish. There are frequently at Albany a dozen members, every one with a particular scheme in regard to fish who knows far less about fish than does his wife, who buys the shad or the striped bass for his table.

A second element, and by no means an unimportant one, is that which represents what is called "the angler rights," if he has any rights which others are not permitted to enjoy. Often legislators are sportsmen themselves, and are none the worse, but all the better for that. These have, however, particular hobbies of their own. They will legislate for a peculiar branch or creek running in the proximity of their own farm or country seat, and will sometimes succeed in passing an iron-bound law for their little rivulet which, because of its sweeping character, affects seriously the food supply of New York. Some years ago an article published in the *Times* apparently hit the nail on the head and, though written in a laughing way, was tak n in a serious light. But its effects were excellent. Of late years, we are pleased to state, the character of sportsmen's and anglers' clubs have materially changed, and they have learned that it was not by special, but by general legislative action that their interests or their pleasures should be respected. The latter influence exerted by these clubs has been excellent, because it has lost its former officiousness. For the real good they have done their smaller errors are to be forgiven. Without them to-day the general public would have remained uneducated as to what are the natural laws governing beasts, birds and fish. They have had for their maxim, "Waste not, want not," and paradoxical as it may seem, they will give lessons of humanity in condemning cruelty to God's creatures.

There is as far as fish are concerned, a third set of men, few in number, who are the Commissioners of the State. They receive no emolument, but devote a great deal of labor to the fishing interests of the State. It is anomalous when one remembers that these persons are appointed by the State to their positions because considered to have the greatest experience in such subjects that their counsel is rarely asked or their admonitions thought worthy of consideration. It is not alone in Albany, but in Washington, that the opinions of leading experts have been overslaughed by an ignorent majority.

A notable case of this kind was that legislation passed to come soon into effect in regard to all mackerel caught on the broad seas. From Huxley, in England, down to the last addition to the United States Fish Commission all were of the opinion that any laws directed toward the catching of mackerel were utterly useless. Huxley showed that in a single day the predaceous fish, with the birds, consumed more mackerel than man could take with all his implements in a season. The highest authority on the subject of mackerel, the present Fish Commissioner, Prof. G. Brown Goode, explained how futile had been these restrictive enactments, and, tracing their history, showed that they were first promulgated in regard to mackerel in New England in the seventeenth century. But legislators of to-day take no heed of the blunders of 1698, and in the face of all those who really know something about it, restrictive measures in regard to mackerel fishing were passed. When this law is carried out it will benefit a few fishermen in Maine, a good many other fishermen in Canada, and will paralyze a great industry in the rest of New England, and must enhance the price of ordinary fish food at the very time when most wanted—that is, at the beginning of spring. Many thousands of dollars expended in fishing smacks will bring no returns. A large sum paid out in wages in former years will no longer be earned, and poor people will go hungry because legislators will meddle with things about which they know less than nothing.

Fishculture and legislation must follow one another. If the State furnishes money to increase the supply of fish it has the right to protect the fish. It may therefore happen that additional legislative action may be directed toward such new fish as are placed in our State waters.

The Hudson River is beginning to be a salmon-producing stream. In 1886 some fifty good-sized salmon were taken. This year there have been 100 fish caught. These fish were placed in the Hudson River some five years ago. The eggs were from the Penobscot River, and were sent by the United States Fish Commissioner to Mr. E. G. Blackford, our State Fish Commissioner, and the young fish were hatched at Cold Spring Harbor, Long Island. The last Legislature made an appropriation for the construction of a fishway at Troy, so that when it is built there will be no trouble in the adult fish ascending the Hudson so as to deposit their spawn in the upper regions of the river. In order to have a stock of salmon in the Hudson, protection will be necessary.

There is no fish more difficult to legislate about than salmon, because it is an important article of food, which trout, as has been shown, is not. But the trouble about it is that, more than the trout, it is as anglers know the most attractive of all fish to catch. Were supplies of fresh salmon to come only from the Atlantic side the question of protection as far as prohibiting the sale of salmon during the close season might become possible; but to-day as many salmon come from the Western and from the Eastern rivers. Salmon caught in the Penobscot scarcely enter as a factor in the supply which reaches New York. Taking all the salmon sent to this market from Nova Scotia, New Brunswick or elsewhere to be generally designated as Atlantic salmon, the season opens about the 20th of May and closes on the 20th of July. For the sixty days the total receipts are something like 118,000 pounds. When the last of the Atlantic salmon have been marketed in the Eastern States, then from August to April of the next year the California and Pacific salmon come in. The quantity of fish sent during these eight months is close on to 800,000 pounds, and as railroad or other communications are multiplied, the receipts from new and heretofore unfished rivers will be likely to increase the total quantity. Certain kinds of Pacific salmon have not been rated as highly as the Atlantic fish, but of late there have been forwarded Chinnock salmon, from Puget Sound, Washington Territory, which are in every respect as fine as the best Restigouche salmon. Methods of packing have been careful, and by means of refrigerating cars the Pacific salmon reach the Eastern market as expeditiously and in quite as good a condition as Atlantic fish. It is only a question of price which regulates the supply and quality.

We do not see, then, how the same methods of protection as are applicable to trout as prohibiting the sale of salmon during the close season could be carried out. Though there are distinctive traits in the Atlantic and Pacific salmon which to the ichthyologist are at once discernible, to ordinary eyes these could not be appreciated. The only way salmon in the Hudson could be protected would be by means of a close season as regards fishing, and the establishing of certain fixed days during the salmon run when no nets could be drawn in the river. The subject is one, however, of a very complex character because of shad fishing, which takes place in the Hudson at the same time as the salmon are running. How salmon in the Hudson are to be cared for we leave the Fish Commissioners to determine, but we are satisfied that the same methods of legislation as have been directed toward trout could not be used.—*New York Times.*

THE EVENING SMUDGE.

WHEN "Pard" and I were enjoying our annual outing along the trout streams of Sullivan county, Pa., last June, the mosquitoes, punkies, black flies, dumb flies and other pestiverous insects seemed uncommonly numerous, and the pathetic sight of whole families of mountaineers gathered in the gloaming about a dense smudge had such an effect upon us that we resolved upon our return to invoke the muse and endeavor in the realms of poesy to do the subject justice. Here are our united efforts:

MOTHER LIGHT THE EVENING SMUDGE.

The sun is sinkin', mother,
And the skeeter's in the air,
While the punky and the sandfly
Begin to rip and tear.
Fetch a bunch of green ferns, mother,
Then to your chip pile trudge,
Bring an armful of dry kindlin's,
Mother light the evenin' smudge.

The whipperwill is singin',
And the dumb fly's layin' low,
The burdock leaves be bringin'
To make the fire burn slow.
The gnats are tarnal frisky,
Gin the babe they've got a grudge,
While I take a drop of whisky,
Mother light the evenin' smudge.

Remove your corncob pipe, mother,
Lay it softly on the chair,
Inflate your leathery lungs, mother,
With this glorious mountain air.
Blow you spark to swift ignition,
(Thanks, another drop of budge),
Make it hum like all perdition.
Mother light the evenin' smudge.

For I see beyond the clearin'
Them anglers drawin' nigh,
The two with fancy gearin'
Who fish for trout with fly;
They're steerin' for the cabin,
By gosh, or I'm no judge,
Git a match and stop your gabbin',
Or you'll never light the smudge.

Jest 'fore I quit a-choppin'
Down there below the mill,
Darn if they wa'ant a-stoppin'
Their brier pipes to fill.
When from out one feller's basket
There flopped (give Pete a nudge)
A trout. How big? Don't ask it,
But hurry up the smudge.

Well, boys, what luck a-fishin';
Are they bitin' well to-day?
Not much, eh? Well, hec's wishin'
You may ketch lots while you stay.
That's darn good backer, fellers,
Beats my twenty-cent old sludge,
It feels good in my smellers,
Mother light the evening smudge.

In explanation of the foregoing, let me say that to the ordinary observer the last clause of the third line and the whole of the fourth would convey the impression that the fishermen at that juncture had tendered a bottle to the old settler and that before imbibing he had wished them good luck. This is not so, however, and the careful reader will note by the tenor of the rest of the verse that it was only his tobacco pouch that the parson offered. The closing verse is purely ideal, based on an intimate knowledge of mountaineer peculiarities possessed by "Pard" and myself through many years wandering over the Sullivan county mountains.

"A dry crowd for the mountains
Them chaps that just passed by,
They'd rather drink at fountains
Than to rassle with old rye.
But I hear the clock a-strikin'
Eight. To bed let's quickly trudge,
For water now be pikin',
Mother douse the evening smudge." H. W. D. L.

DANSVILLE, N. Y.

QUEBEC CLOSE SEASON.

Salmon (angling), from Sept. 1 to May 1. (Ristigouche River, Aug. 15 to May 1.)
Speckled trout (*Salmo fontinalis*), Oct. 1 to Jan. 1.
Large gray trout, lunge and winninish, Oct. 15 to Dec. 1.
Pickerel, April 15 to May 15.
Bass and maskinongé, April 15 to June 15.
Whitefish, Nov. 10 to Dec. 1.
Fine of $5 to $20, or imprisonment in default of payment.
N. B.—Angling by hand (with hook and line), is the only means permitted to be used for taking fish in the waters of the lakes and rivers under the control of the Government of the Province of Quebec.
No person, who is not domiciled in the Province of Quebec, can, at any time, fish in the lakes or rivers of this Province, not actually under lease, without having previously obtained a permit to that effect from the Commissioner of Crown Lands. Such permit is valuable for a fishing season, and is not transferable.

KEOKUK, Ia., Aug. 31, 1887.

J. F. Breitenstein, President of Keokuk Gun Club:

DEAR SIR—The two boxes of paper shells, "Climax," U. S. Cartridge Co., which you so kindly handed me, have been thoroughly tested, and I, after my long experience as an expert amateur, without hesitation pronounce them the best shells made, being perfection for wet and dry shooting. They cannot be excelled. Knowing perfectly well what I am writing about, I subscribe myself, yours truly, (Signed) H. A. KINNAMAN. Adv.

Fisheulture.

CANADIAN FISHERIES DEPARTMENT.

THE appendix of the report which we noticed last week contains a report of Mr. Samuel Wilmot, Superintendent of Fisheulture for the Dominion of Canada, 1886.

The kind of fish operated upon at the several fisheries of the Dominion includes the following, namely: Of the salt water *Salmonidæ*, two of the *Oncorhynchus* family of the Pacific waters, the "quinnat" (*Chonica*) and the suck-eye (*Nerka*) are utilized at the Frazer River hatchery in British Columbia. In the Eastern or Atlantic Provinces the hatcheries are supplied with eggs of the *Salmo salar*, which is the only description of sea salmon indigenous to the rivers of the maritime provinces. Of fresh water *Salmonidæ*, such as the salmon trout of the great lakes (*Namaycush*), the speckled trout of the streams (*Salvelinus fontinalis*); and the whitefish of the lakes (*Coregonus albus*); these are cultivated almost wholly at the Newcastle establishment in Ontario. Of the Percidæ family the *Lucioperca*, commonly called pickerel (doré), wall-eyed pike, and pike-perch, large numbers are bred at the Sandwich hatchery in Ontario.

In former years black bass (*Micropterus dolomici*) and carp (*Cyprinus carpio*) were handled in a small way at the Newcastle hatchery, with a view to their artificial propagation. The experiments with the former were quite satisfactory; with the later the trials were merely nominal; operations with the bass and carp have been discontinued for the want of properly constructed ponds, which are found to be essentially necessary for the successful breeding and keeping of these fish. It is extremely desirable that arrangements should be made by which bass and carp should be propagated in large numbers at such of the nurseries as may be found to possess the greatest convenience for carrying out the work; especially as the demands are becoming very numerous from persons in various sections of the country where the waters, from high temperature and impurities, are adapted only for these kind of fish, and in which the salmonoid species, from the same causes, cannot now exist

In connection with this subject, and in view of the impending destruction and evident annihilation of the sea or striped bass (*Roccus lineatus*) still frequenting the estuaries of some of the rivers in the maritime provinces, it is advisable that efforts should be put forth to maintain, as far as possible in those waters, this highly valuable fish, by an application of the artificial methods of propagation. With the now general use of automatic fish-egg incubators for the hatching of the smaller and lighter descriptions of ova (not dissimilar to those of the striped bass) it might be safely assumed that success would attend the undertaking, more particularly on the Miramichi River, where these fish are yet taken in considerable numbers in the immediate vicinity where the Miramichi salmon hatchery is now established, and in which experimental trials could be readily and economically made.

Pursuing this subject still further, in the endeavor to restore to some of the great rivers in the lower provinces, a portion, at least, of the fisheries wealth, which in former years was so fully developed in them, and witnessing the almost incredible success which has attended the work of Prof. Baird, United States Fish Commissioner, in restocking many of the rivers in that country which had become quite depleted of shad (*Clupea sapidissima*) and learning that this valuable commercial fish inhabited the rivers of the Bay of Fundy and other parts of the coast of New Brunswick and Nova Scotia in former years in great abundance, it now becomes a question whether efforts of a like nature as those instituted by the United States to rehabilitate their rivers with this fish wealth, should not be undertaken in Canada.

The breeding of speckled trout has not been entered into extensively hitherto; only moderate numbers of eggs of this fish have been obtained during the past few years. The demand for trout fry has now become very great indeed, and the numerous applications could not be filled. Hitherto a few thousand trout ova have been collected at Tadoussac hatchery in Quebec; these, when semi-hatched, were forwarded to the Newcastle nursery, and when fully hatched the fry have been distributed ratably among the several applicants; but the proportions allotted have necessarily been so small that expressions of discontent have been freely uttered as to why speckled trout should not be more largely cultivated at the Newcastle hatchery, and in such numbers as would bear a more favorable comparison with the many millions of salmon trout and whitefish fry, which are annually turned out of this hatchery.

The invariable reply to this question has been, that as the hatchery is a public or governmental establishment, the main object was to produce from it such descriptions of fish as would be most suitable for commercial purposes, and from which the general public would derive the greatest amount of good, in foreign and home traffic, and for domestic use. That speckled trout, although highly prized for their edible and gamy qualities, did not come up to this estimate for benefitting the country from a commercial point of view, in like manner as the salmon trout and whitefish, which are undoubtedly the standard for fish wealth in the inland lakes, and other fresh waters of Canada.

The rearing and general distribution of the salmon trout and whitefish having now reached a satisfactory position by practical application and systematic arrangements, it should be held advisable to turn attention to the production of other kinds of fish, especially the speckled trout, in order to meet the generally expressed wishes of numerous applicants who desire to restock streams and other waters with this very desirable fish.

Strong efforts were made to collect large quantities of the eggs of the speckled trout during the past season, which have not resulted as satisfactorily as wished for. From the Tadoussac hatchery in Quebec, only a moderate supply was obtained; from the Restigouche, where it was confidently expected a million or more would have been secured, only a few thousand were collected; and from an expedition fitted out to collect these eggs in the Muskoka waters, where it was supposed unlimited quantities could be got, failure was the result; but from causes, which the officer who made the attempt reports can be remedied in getting satisfactory numbers of ova another year. Renewed efforts should be made another season to obtain a satisfactory supply of trout eggs, and in addition to the species, natives of Ontario and the Atlantic Provinces, exertions should be made to procure supplies of eggs of the California and other descriptions of trout inhabiting the streams of the Pacific Slope, as it is now held by many fisheulturists in the United States that these trout are better adapted for the higher temperature of the water in our streams than our own native trout.

DISTIBUTION OF FRY HATCHED IN 1886.

There were planted in the waters of Canada from the several fish hatcheries, in the aggregate 76,724,000 young fish of various kinds during the season of 1886. They consisted of the following species, namely:

Atlantic salmon (*Salmo salar*).....	7,857,000
Pacific salmon (*Salmo quinnat*).....	2,625,000
Lake salmon trout (*Salmo namaycush*)	7,391,000
Lake whitefish (*Coregonus albus*).....	43,800,000
Lake pickerel or doré (*Lucioperca*)....	15,000,000
Speckled trout (*Salmo fontinalis*).....	51,000
Grand total.....	76,724,000

Mr. Alex Mowatt, the officer in charge of the Ristigouche hatchery in the Provinces of Quebec and New Brunswick, reports the catch of salmon in the Bay des Chaleurs and Ristigouche River to be fully as good as in 1885; 1,470,000 salmon eggs were deposited in the hatchery in the fall of 1885, from which 1,380,000 fry were successfully hatched and planted in the following streams:

Ristigouche and Kedgewick Rivers.....	770,000
Matapedia River.....	200,000
Upsalquitch River.....	200,000
Nipissiquit River.....	200,000
Twelve Mile Lake, in rear of Campbellton..	10,000
	1,380,000

A portion of the fry taken to the Nipissiquit River arrived there in poor condition. I have urged upon the Department several times the fact, gained from long experience, that it is almost useless to transport fry such a long distance with the hope of realizing the anticipated benefits which artificial fisheulture is so fully entitled to receive. Should it be the intention of the Department to continue the system of further stocking the Nipissiquit River with fry from this hatchery, I would suggest that instead of carrying the young fish such a long distance at great risk, as has been evidenced heretofore, that a small inexpensive hatchery be constructed of hewn logs or other material in a suitable place, some fifteen or twenty miles up the Nipissiquit River, and the ova transferred to it in the spring months of April and May. An establishment of this kind would only require to be operated about three months in the year, and the fry hatched in this way could be distributed throughout the length of the river in a fine healthy condition. I am strong in the belief that each salmon river should be restocked from its own fish where found practicable to do so.

The fry for the Ristigouche River, and its branches, were conveyed as usual in open cribs, supplied with a constant flow of pure water, and towed sixty-five miles above the hatchery up river into both branches and deposited in fine condition, as the superintendent (Mr. Wilmot) and many other anglers who were on the river at the time can testify to. Some ten thousand fry were planted in a large lake twelve miles from Campbellton. Numbers of these little fish were seen in the lake later in the fall months. I would urge that a continuation of planting fry in this lake be kept up for some years, as the experiment would afford further evidence of the success of artificial fisheulture.

The department's net was set at Tide Head on the 1st of June last, this date being as early as the freshet in the river would admit. There were 130 fish caught in this net, and 277 purchased from neighboring fishermen. Seventy-six of these fish died after being deposited in the reservoir, having been injured in capturing, and conveying them from the nets to the pond; leaving a total of 331 fish, 170 females, and 161 males, from which was collected 1,700,000 eggs. Spawning commenced on the 20th of October, and ended on the 5th of November. All the females gave sound ova, and were liberated in good condition. At the present time the eggs in the hatchery are looking very well, the embryos being quite visible.

In order that the supply of parent fish for the hatchery may be increased in future; or in other words to obtain 600 or 700 salmon, it will be necessary that a small flat bottomed steam barge or scow, be purchased for this service, for towing the cribs with the parent fish from the nets to the retaining pond. Under the present system the cribs are towed by horses some six or seven miles, and this can only be accomplished at certain times and during favorable weather, while at times of adverse winds, and freshets, it is impossible to reach many of the nets with a horse; whereas a small steam tug could collect these fish at any time, and travel over a much larger field in one-half the time, thereby saving much labor and expense, and preventing the loss of many salmon, which unavoidably takes place under the present system. In fact to make a thorough success in collecting fish from the nets, it will necessitate the procuring of some sort of craft of the kind above referred to. A boat or scow for this purpose could be got for some four or five hundred dollars. In this way we could be enabled to obtain a portion of the parent salmon from stations at and below Campbellton if necessary, and from other stations where it is impossible to get them with our present means.

The new retaining pond at Tide Head was prepared in early spring, and constructed of stakes, the lattice work with bars some 2in. apart, which allows the water to flow through freely. This plan gave perfect satisfaction. The fish did better than under the former system, and the pond, with its great length and current of water, is quite capable of containing upward of one thousand salmon. Complaint is made by certain individuals who, with hidden policy, pretend to be in favor of fishculture, but yet find fault with the whole system as pursued on the Ristigouche. This retaining pond, they say, is situated too low down on the river, asserting that the salt water is injurious to the fish, and that it would be much better if the pond were located at Matapedia. Now, although the tide regularly ebbs and flows into this pond, the water, nevertheless, is equally fresh as the water far up the stream. It is to be deplored that the water is not quite saline, for then the fish would not be subject to fungoid disease, as has been proved to be the case in the pure salt water ponds at Tadoussac and other places. I have merely quoted the above to show the ignorance and envy of certain parties who visited this pond in October last, and decried it in every possible manner, and circulated many falsehoods in connection with it, and even went so far as to put forth the wicked idea that lime could be thrown into the pond, which would quickly destroy the fish. Such malicious expressions coming from parties holding responsible positions, and from whom better should be looked for, are, I fear, forebodings of evil intent.

Mr. Philip Vibert, officer in charge, reports of his salmon hatching as follows:

The ova in this establishment proved very good last winter. The loss was only fifty thousand, or a little over eight per cent. The greatest loss was in the month of May while the fry were hatching. The number of eggs recorded as having been removed or picked out in that month being 15,646. The young fish commenced hatching on the 9th of May. April was remarkably warm and fine, and no doubt hastened the hatching of the fry. The removal of the young fish was commenced on the 9th of June and finished on the 10th of July. The following is the number of fry placed in each river.

Dartmouth River, above Falls.....		200,000
" " below "		106,000
York "		120,000
St. John "		150,000
Total.....		576,000

A young lady, whose home is on Grand Isle, La., has been making a collection of the bright-plumaged birds found on the island, whose habitat, beyond question, is somewhere in the tropics. The theory is that these birds have been blown out into the Gulf during the prevalence of gales and wafted upon the Louisiana shore. It is doubtful if so beautiful a collection of birds could be made at any other point in the country than that of which we speak. A box containing fourteen specimens which were trapped and prepared for mounting by this young lady, revealed when opened a most gorgeous spectacle, the colors ranging from the brightest scarlet—a scarlet beside which that of the cardinal or red bird seems quite dull—down to the palest of pinks and blues. Some of the specimens were of the loveliest shade of yellow—one of them plumaged in black and yellow akin to the oriole. Grand Isle presents a splendid field for amateur ornithologists and collectors.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 20 to 23.—Fourth Show of the New Jersey Kennel Club, Waverly, N. J. Percy C. Ohl, Secretary, 44 Broadway, N. Y.

Sept. 20 to 23.—Wisconsin Kennel Club's Annual Show, Milwaukee, Wis. A. M. Grau, Secretary, 552 East Water street.

Sept. 27 to 30.—Annual Show of the Southern Ohio Fair Association, at Dayton, O. M. A. Nippen, Secretary.

Oct. 4 to 7.—Fifth Annual Dog Show of the Danbury Agricultural Society, Danbury, Conn. B. C. Lynes, Secretary.

Oct. 12 and 13.—Th rd Annual Show of the Stafford Kennel Club, Stafford Springs, Conn. R. S. Hicks, Secretary.

Feb. 21 to 24.—Twelfth Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Oct. 17 to 22.—Second Annual Meeting of the American Coursing Club, at Great Bend, Kan. G. I. Royce, Secretary, Topeka, Kan.

Oct. 31.—First Annual Field Trials of the Indiana Kennel Club at Bicknell, Ind. Open to dogs owned in Indiana. P. T. Madison, Secretary, Lock Box 4, Indianapolis, Ind.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

Jan. 10, 1888.—Second Annual Field Trials of the Texas Field Trials Club, at Marshall, Tex. W. L. Thomas, Secretary, Marshall, Tex.

Jan. 16.—Fifth Annual Field Trials of the Pacific Coast Field Trial Club, near Kingsburgh, Cal. N. P. Sheldon, Secretary, 320 Sansome street, San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5400.**

SAMUEL PRICE.

OF the well-known pointer breeder, Mr. Samuel Price, of Bow, England, who died Aug. 31, the *Kennel Gazette* says:

Those very pleasant reunions of the past in connection with field trials will be recalled to the memory of many by the announcement of the death of one who has not been missed from those gatherings for nearly twenty years. Sam Price, as we have been accustomed to hear him called, was a worthy Devonshire sportsman, of somewhat the old type, as from a lad he had been habituated to the rough shooting of Devon, and to sport in those valleys and along those hillsides for pheasant, woodcock, snipe, or rabbit, or whatever turned up, and the hard work threw a charm into the pastime. To shoot without a dog, in Sam Price's opinion, would have been an infliction, and no matter what modern ideas had to do with the matter, this fine sportsman shot over pointers, and very high rangers, too, from the first of September until close time. He was a capital shot, liked one companion in his shooting rambles, who had as much appreciation of a dog's work as he had, and he liked to see the work done without the restraint of whipcord and whistle and to witness all the beautiful qualities of a dog. Those who have visited his kennels at Bow, near Exeter, have been surprised to see the freedom he allowed his young dogs. They would bound over the first fence and go straight away, and the more pluck or wildness they showed the better their owner liked them. That can all be rectified, he would say, but you cannot put it into them, and when speaking of Mike he always spoke in great pride of his hardness and endurance. He would run from Exeter to Land's End, he would declare, and hunt every field in the way.

Mr. Price's first public appearance was at Shrewsbury in 1871, when he took two puppies to that meeting called Bang and Beppo. They both ran very well, but did not win, and the general impression from their work was that the last named was the best. However, Mr. Price did not think so, as Bang from the first was his favorite, and as time went on the reputation of the owner and dog grew, as it were, together. In local circles it was talked of that Sam Price had a clinking good pointer, and the Devon pointers were coming out just now, as Mr. Francis, of Exeter, had crossed some old Devon blood with up-country strains; and Brockton's Bounce, the first field trial pointer of note, was represented by Sancho to uphold the honor of Devonshire. A bitch called Vesta, sister to Sancho, fell into the hands of Mr. Price, through the late Rev. Tom Pearce (Idstone), and he bred her to Mr. Coham's Bang, a son of Hamlet. This breeding produced Bang and Beppo, the puppies above mentioned, and Bang developed into the famous world-wide celebrity. He ran in the Cornish Trials in 1872, being then a second-season dog, and although a lemon and white dog called Rock, of Elias Bishop's, ran him fairly close, and a pointer of Mr. Coryton's ran well too, Bang won in grand style, and was the talk of the meeting by reason of the grand points he made. Mr. Price confined him to the honors of his county the next season by running him at Newton Abbot, first of all in the braces with a daughter that did not match him, and then in the All-Aged Stake, in which Bang got a terrible beating from Brakenbury's Romp, the dam of Mr. Salter's noted little bitch; and no one acknowledged more heartily than Mr. Price did that Bang on that occasion had found his master. The next year Mr. Price brought out Mike, a son of Bang, and the work of the two at the Cornish trials we shall never forget. Those who saw them declared at once that they were the best brace of pointers in the world, and from the laudations bestowed upon them Mr. Price was induced to take them to Shrewsbury for the great brace stake. This they won, beating the best pointers and setters in England, and for three successive years no brace was found good enough to dispute their supremacy. In the meantime all the greatest bench honors of the day fell to Bang, who was very soon a champion, and in the smaller sized classes Mike also cleared the boards. Two such successful pointers in the field and on the bench have not been known, but both at home and abroad the fame of Bang has been the most marked at the stud. He was the sire of Bow Bells, Bow, Mike, Young Bang, and a host of others that have made names for themselves; and it is not saying too much when we assert that the Price's Bang line of pointers has a greater and more world-wide reputation than any other strain of dog, no matter of what breed.

In private life there was no man in Devonshire more respected than Mr. Price. He was hail fellow well met with every one, the best of company, as honest as the sun, and perhaps one of the best-natured men living. As a Devon worthy he will rank very high, and the Western county has been noted for its sportsmen to include Jack Russell, Charles Trelawny, Otter Davies, *cum multis aliis*. We regret the loss of Sam Price as a friend, as one of the best pointer judges in England, and as a link of the past when we used to look forward to the field trial meetings in a way difficult perhaps now to understand.

MANITOBA FIELD TRIALS.

[Special Report.]

THE second annual field trials of the Manitoba Field Trial Club took place at Morris, 42 miles southwest of Winnipeg. The trials commenced on Tuesday morning, Sept. 6, and were finished on Thursday morning by 10 o'clock. Birds were numerous and lay well to the dogs. Mr. W. B. Wells, of Chatham, Ont., was judge, and to him is principally due the quickness in which the trials were got through. At 6:30 A. M., he would give out the night previous, the first brace must be down—and he meant it—or would put down the next brace. The committee furnished him with horse and rig to ride, but he preferred walking, keeping the handlers close to him, one on each side. He gave an exhibition of his pedestrian abilities in the heat with Paddy and Fanny M. Paddy was seen on a point fully a half mile away. The handler of Paddy (Mr. Thos. Johnson) prides himself on his running powers, although his weight is 220lbs. Seeing Paddy on a point, off he went at a four-minute gait and the judge after him. After a short distance had been traversed the judge got even with him. Nothing was said between them, but from the manner they were going each had evidently made up his mind to "get there." The terrific speed was maintained for about a quarter of a mile, when the weight began to tell on the handler. He was noticed to wobble somewhat similar to a dog with a "slack loin." Paddy was now drawing on his birds, which meant a flush unless his handler could get up in time to steady him. Seeing this he made a last desperate effort, but the pace had been too hot, and down he went. The judge magnanimously stopped and tried to assist him to his feet, but there lay a solid 220lbs. of helplessness, which was too much for the judge in his breathless condition to lift up. He tried to encourage him by saying "Come on, or Paddy will flush." "Let him flush!" gasped the handler, which Paddy did.

The Derby was run first and was won by C. A. Boxer's Duck (Dime—Forest II.). The Manitoba Kennels taking second, third, and fourth prizes with Morris, Birtle and Gretna. The Derby entries were not a brilliant lot; this is, however, not to be wondered at when only six days before the trials you can shoot game in Manitoba, consequently they lacked experience.

THE DERBY.—ENTRIES.

C. N. Williams's Gordon setter dog Kildonan (Turk—Gyp II.).
Thos. Johnson's pointer bitch Birtle (Croxteth—Bella).
Thos. Johnson's setter dog Morris (Cable—Bredna).
H. Galt's English setter dog Great Expectations (Dashing Bondhu—Duchess).
C. A. Boxer's English setter dog Duck (Dime—Flash).
Manitoba Kennels' English setter dog Morden (Mark J.—Bredna).
Manitoba Kennels' English setter bitch Regina (Mark J.—Bredna).
Thos. Moore's English setter bitch Gretna (Mark J.—Bredna).

SUMMARY.

Duck won first.
Morris won second.
Birtle won third.
Gretna won fourth.

The interest centered in the All-Aged Stake for pointers and setters. The entries were as follows:

ALL-AGED STAKE.

Manitoba Kennels' English setter bitch Manitoba Belle (Pride of Dundee—Jeanette).
C. W. Armstrong's white and black English setter bitch Flirt A. (Dan—Qu'Appelle Belle).
C. A. Boxer's black, white and tan English setter bitch Qu'Appelle Belle (Mark J.—Betsey).
Thos. Johnson's blue belton English setter bitch Cambria (Cambridge—Pet Laverack).
Thos. Moore's liver and white pointer dog Bert (Brandy—Maggie).
S. W. Trott's English setter dog Paddy (Ginger—Duchess Dolly).
Dr. W. M. Evan's English setter dog Pedro (Cambridge—Belle).
Manitoba Kennels' English setter bitch Winnipeg Belle (Rocketer—Manitoba Belle).
Geo. Tempest's liver and white pointer dog Saskatchewan (Bang Bang—Phœbe).
H. Galt's orange and white setter dog Swift (Dan—Qu'Appelle Belle).
D. Smith's orange and white setter bitch Fannie M. (Count Noble—Prairie Belle).
Major Bedson's black and tan setter dog Shot (Dan—Lilly).
Thos. Johnson's orange and white English setter dog Dash B. (Dash Bryson—Lucy).

SUMMARY.

First Series.

Manitoba Belle beat Flirt A.
Qu'Apelle Belle beat Bert.
Cambria beat Shot.
Paddy beat Fannie M.
Dash B., a bye.

Second Series.

Qu'Appelle Belle beat Dash B.
Cambria beat Paddy.
Manitoba Belle, a bye.

Third Series.

Qu'Appelle Belle beat Manitoba Belle.
Cambria a bye.

(Cambria ran a side heat under A. F. T. Club's new rules while the two Belles were running. This rule did not work very well in this case, as it made Cambria have to run three heats in succession.)

Final for First Prize.

Cambria beat Qu'Appelle Belle and won first.

A test heat was now run with Paddy and Shot, as to which should run with Qu'Apelle Belle for second place.

Final for Second Prize.

Shot beat Paddy.
Qu'Appelle Belle beat Shot and won second.

This gave first prize, a W. W. Greener gun and $50 cash by the club, also the championship collar for the year, to Thomas Johnson's blue belton English setter bitch Cambria, by Cambridge (Gladstone—Clip) out of Pet Laverack (Thunder—Peeress). Second prize, a $50 silver cup and $25 cash by the club, to C. A. Boxer's black, white and tan English setter bitch Qu'Appelle Belle, by Mark J. (Druid—Star) out of Betsy (Ranger II.—Princess Belle). Third prize, a breechloading gun and $10 to Manitoba Kennels' English setter bitch Manitoba Belle (Pride of Dundee—Jeanette). Fourth prize, a Vulcan stove, to C.W. Armstrong's English setter bitch Flirt A. (Dan—Qu'Appelle Belle).

The championship collar is a very handsome one, being made from the first silver taken from the Rabid Mountain Silver Mine. It consists of eleven solid silver links, 2in. square, each link engraved with portraits of celebrated dogs, Gladstone being the central one, also Bang Bang, the pointer, and hunting views. It has to be won two years in succession to become the property of the winner. The winner of this collar, Cambria, is no disgrace to her noted grandsires, old champion Gladstone and champion Thunder, being a fine upstanding bitch, with tremendous speed, going at her game straight, and looking about twice her size when on one of her stylish points. Mr. L. H. Smith, of Strathroy, Ont., who was present, pronounced her one of the grandest bitches he ever saw.

The winner of second, Qu'Appelle Belle, is a black, white and tan, compact little setter, and winner of this prize last year. She has a splendid nose, is very staunch and stylish on point, but lacks that "get there" vim and dash of the winner.

Manitoba Belle, winner of third, is a very handsome lemon belton and tan bitch, winner of the Eastern Field Trials Club medal at Madison Square Garden this year. She is a grand bitch in the field, and beat herself by her extreme jealousy of the other dogs. Later in the season she would keep Cambria hustling.

Flirt A., winner of fourth, is a black, white and tan bitch, and will make the best of them look to their laurels another year, being one of the most stylish roaders your correspondent ever saw.

At the conclusion of the trials the judge and visitors were invited to stay over for a shoot, the winning dogs being placed at their service. A fusilade was kept up for a couple of days, when the party returned to town loaded with game, everybody satisfied, even the losers, but with a grim determination and a look in the eye that plainly said, "Look out for me next year." MANITOBA.

SPANIELS FOR BENCH AND FIELD.

Editor Forest and Stream:

Is it not time that the cocker breeders of America were making a move to decide what is to be our standard for breeding? Are we to have one type of cocker for the field and another type for the bench? There is no doubt that we are fast drifting away from the English standard. Is this wise? To be sure there is no reason why we should hold to hard and fast rules because they are laid down by our brother fanciers in the "Old Country," but decidedly it is time we took some steps in this matter, either to draw back before it is too late and breed our dogs up to the English standard, or to adopt another for ourselves that we may all have one object in view, and discarding all not approaching this standard from our breeding kennels, thus raise the cocker of this country to a level with other standard sporting dogs. At present we are "a house divided against itself," and we are sure to come to grief sooner or later. The first question to decide and the one on which there is the greatest diversity of opinion is that of height in proportion to the length of the body. Are we to breed dogs for the bench that will be next to worthless in the field, or are we to have two distinct varieties—and we are fast drifting that way—one for show purposes and another for working?

A controversy was commenced in your columns by Mr. Charlesworth's attack upon a Detroit gentleman, because the latter undertook to praise the qualities of a rival breeder's dogs. Surely the gentleman in question had a right to express his opinion and if it savored too much of the "ad.," it was for you to decide. If he lauded this type and a certain breeder he did not do it at the expense of any one else. A discussion opened with so much evident ill feeling can do no good—rather the reverse. What we want is the fair and honest opinion of breeders who have had some experience, given coolly and not written on the spur of the moment or in a temper because we imagine some one has "tread on the tail of me coat" and in a "knock the chip from my shoulder" style. If our breeders will open up through your columns a discussion on the subject and treat it in as friendly a manner as the one going on at present on "Beagles for Bench and Field," I guarantee that the American Spaniel Club will awaken from its lethargy and we will in the end get a standard to breed to that will be satisfactory to all parties and one that our judges will stick to; but as long as judges recognize and award the highest honors to dogs that cannot work—and I guarantee that few of our prize winners would stand many days hard running on the stubble or in the brush—there will necessarily be dissatisfaction. I have to plead guilty to breeding these short-legged cockers, but why; simply because our judges recognize them, and until some rule is given to go by, who can say they are wrong, and as long as they continue to breed them, "for we might as well be out of the world as out of fashion," but at the same time I shall be glad to see a change.

To satisfy myself as to the opinion of the majority of our breeders, I have lately taken upon myself to send to them a copy of the inclosed circular and scale for measurement, to be returned. These are coming in slowly, but those already received show the difference of their views and the necessity for a fixed mark at which to aim in our breeding. For instance, the length from stop to root of tail and the height at shoulder vary all the way from 28in. and 10in. to 25in. and 14in. Now, there must be a great difference in two dogs corresponding to these measurements. Many have not yet returned the scale, and I beg them, through your columns, to do so; others who may not have received the forms will confer a favor by making out a form and forwarding it, and as a result I hope to furnish some interesting memoranda collected in this way, but cannot do so until I get a larger return. I would not ask them to fix the standard at either of the extremes I have given, but to strike a happy medium that will give us a strong, hardy little fellow, which is at the same time beautiful to the eye. I wish some of our breeders would give their opinions; but please do not jump down my throat because I have ventured to open my mouth.

Another point on which we differ from the English standard is the amount of feather. The latter says, "Sufficient feather of the right sort * * * but not too profuse," while our present guide reads, "ears well clothed with long silky hair; chest, legs and tail well feathered." There is no doubt that the very abundant feather makes a handsomer appearing dog, but is it not a drawback in the field? Here again we must decide, are they to be sporting or bench dogs, for do not our judges give the first places to those dogs—other points being equal—which have the longest and most abundant feathering?

Now, we have a spaniel club and it is their place to regulate these things, but by all means let us hear the opinion of all our fanciers. CHAS. M. NELLES.

BRANTFORD, Canada, Sept. 8.

[COPY OF CIRCULAR.]

BRANTFORD, Sept. 1, 1887.—Dear Sir: In order to get the views of the various breeders of cockers in the country as to the proper height, etc., I take the liberty of asking you to fill out the inclosed form and forward it to me. In giving the measurements kindly have in view what you consider to be a "typical cocker." I would also be much pleased if you would add any remarks that you consider essential or appropriate in view of the much-talked-of question of bench vs. working cockers. Hoping that I am not trespassing too much on your time, believe me, yours sincerely, CHAS. M. NELLES.

MEASUREMENTS OF A TYPICAL COCKER.

	Inches.
Tip of nose to stop	"
Stop to occiput	"
Stop to root of tail	"
Shoulder to ground	"
From ear to ear (root)	"
Tip to tip of ear	"
Root of tail to ground	"
Forearm to elbow	"

DEATH OF FAUST.—The well-known pointer dog Faust died recently in St. Louis. He was whelped in May, 1875, and imported from England by the St. Louis Kennel Club in 1879. He was a grand dog, both on the bench and in the field, and has left a large number of descendants to perpetuate his memory.

THE ST. PAUL SHOW.

ST. PAUL, Minn., Sept. 17.—The first show of the St. Paul and Minnesota Kennel Club was held here Sept. 13 to 16. The club scored a great success. The entries numbered 355. The St. Paul papers were friendly to the show and did much to boom it. A good attendance paid in so much gate money that the exhibition was a financial success. This is encouraging, and the club are in for another exhibition next year. All did their share, but Supt. Chas. Weil deserves a big lot of the credit. His duties were multifarious, but he never for a moment lost his head. Everything was done when it ought to be done, and as it ought to be done. The exhibitors appreciated his work, and got up a generous purse as a testimonial.

The dogs were well cared for. The olfactories of the visitors had due regard, and no bad smells offended the most fastidious. Everything went smoothly. It was just as if St. Paul had had a bench show every year since bench shows were known. But public interest was of the sort given to novelties. They did not get enough of the show in the time allotted, so it was held over until this afternoon.

The judges were John Davidson, Monroe, Mich., for pointers, setters, foxhounds, greyhounds, deerhounds, beagles, dachshunde, Irish water spaniels, Chesapeakes, Scotch, Dandie Dinmont and Skye terriers; and J. F. Kirk, Toronto, Can., all other classes. No dissatisfaction was expressed with the awards; there was no "kicking."

AWARDS.

MASTIFFS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, Wacouta Kennels' Wacouta Nap; 2d, H. J. Moreton's Prince Cole. Reserve, G. Markert, Jr.'s Victor Hugo. Very high com., W. G. Whitehead's Marco II. High com., Wacouta Kennels' Corsair. Com., Miss A. Thompson's Turk. *Bitches:* 1st, 2d, reserve and very high com., Wacouta Kennels' Wacouta Rose, Phædra, Persephone and Tamora. High com., Dr. R. H. Patterson's Tonka. Com., J. McIntosh's Elfrida and D. Macpherson's Chispa. *Puppies:* 1st and 2d, C. E. Thompson's Tiger Royal and King Homer. Very high com., Mrs. S. M. Barnes's Flo. Com., J. J. Ahern's Bruno.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—*Dog:* R. J. Sawyer's Sir Charles. *Bitch:* R. J. Sawyer's Swiss Beda.—OPEN—*Dogs:* 1st, W. H. Dent's Folko; 2d, Coughcura Med. Co.'s Otto II. Very high com., J. H. Schulze's Bismarck. *Bitches:* 1st, Mohawk Kennels' Noma; 2d and very high com., R. J. Sawyer's Floss and Priscilla. High com., W. H. Dent's Barrina.—SMOOTH-COATED—1st, G. W. Bohn's Elcho.

LEONBERGS.—1st, very high com. and com., Miss M. Wellesley's Monarch, Cæzar and Sultan; 2d, J. H. Schulze's Rab.

NEWFOUNDLANDS.—1st, D. O'Shea's Leo; 2d, C. McDonald's Major. High com., C. M. Bunker's Prince.

GREAT DANES.—CHAMPION—Osceola Kennels' Don Cæsar.—OPEN—*Dogs:* 1st, H. Wright's Nero; 2d, Osceola Kennels' Alligator. *Bitches:* 1st and 2d, Osceola Kenuels' Donna Minka and Narka. *Puppies:* 1st and 2d, Osceola Kennels' Alligator and Nushka.

DEERHOUNDS.—1st, W. Staples's Scott; 2d, C. Ammundson's Jumbo.

GREYHOUNDS.—CHAMPION—Abbott Kennels' Sister in Black'—OPEN—*Dogs:* 1st, Abbott Kennels' Rake; 2d, J. O'Connor's Prince. Very high com., A. C. Over's Ormonde. High com., W. F. Peet's Launcelot. Com., T. H. Jones's Max; G. H. Brown's Ned. *Bitches:* 1st, Abbott Kennels' Hawthorne Belle; 2d, Miss Ida A. Jones's La Gitana. Very high com., O. F. Thomas's Pearly. Com., R. B. Bushnell's Maud. *Puppies:* 1st, O. F. Thomas's Don; 2d, E. Marshall's Tip-Top.

CHESAPEAKE BAY DOGS.—ROUGH—*Dogs:* 1st and 2d, G. W. Kirkstead's Monday and Barnum. *Bitches:* 1st, 2d, very high com., high com., and com., G. W. Kirkstead's Gympsie, Nan, Wave, Nellie and Shan. Very high com., Osceola Kennels' Misfortune.—SMOOTH—*Dogs:* 1st, B. Beaupre's Seal; 2d, Osceola Kennels' Drake. *Bitches:* 1st and 2d, Osceola Kennels' Dundee and Traitress. *Puppies:* 1st, J. W. Stevens's Dick; 2d, Osceola Kennels' Waif.

POINTERS.—LARGE—CHAMPION—*Dog:* Detroit Kennel Club's King Bow. *Bitch:* No entries.—OPEN—*Dogs:* 1st, R. Schmidt's Bow Faust; 2d, Detroit Kennel Club's Fleet. Very high com., J. C. Pratt's Chum. Com., O. Adler's Bello. *Bitches:* 1st and 2d, T. Donoghue's Queen and Rose Croxteth. Very high com., W. H. Strickland's Cute. Com., H. A. Hokemeyer's Pluto.—SMALL—CHAMPION—*Dog:* J. H. Kraft's Robin Adair.—OPEN—*Dogs:* 1st, T. Donoghue's Vanguard; 2d, W. P. Warner's Don. Very high com., H. A. Wetmore's Chester. *Bitches:* 1st, T. Donoghue's Juno S.; 2d, G. T. Schurmeier's Floss. Com., A. M. Young's Molly Maguire.—PUPPIES—*Dogs:* 1st, E. S. Burridge's Flash; 2d, A. J. Klofanda's Western Bang Bang. *Bitches:* 1st, E. S. Burridge's Flight.

ENGLISH SETTERS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, J. S. Hudson's Dan Wilson; 2d, R. T. Kennedy's Prince Royal H. Very high com., W. F. Bickel's Kid, T. G. Davey's Knight of Snowden, T. Donoghue's Duke Gladstone. High com., J. S. Schneider's Spot, T. Donoghue's Druid Spot. Com., W. P. Warner's Prince, D. O'Shea's Brant. *Bitches:* 1st, D. O'Shea's Belle; 2d, T. Donoghue's Blue Cubas. Very high com., A. A. Bogen's Dashing Flora, W. H. Robinson's Lady F., T. Donoghue's Dictator's Queen. High com., E. Edmund's Puppie E. Com., H. A. Hokemeier's Sporty.—PUPPIES—*Dogs:* 1st, T. Donoghue's Noble Boy; 2d, D. O'Shea's Sport. Very high com., T. Donoghue's Duke Gladstone's Boy. High com. and com., W. R. Burkhard's Bob and Don. *Bitches:* 1st, A. Bogen's Western Queen; 2d and very high com., T. Donoghue's Noble Girl and Blue Hornet. Com., J. S. Schneider's Queen.

IRISH SETTERS.—CHAMPION—J. A. Sprague's Brush.—OPEN—*Dogs:* 1st, D. L. Carmichael's Mac; 2d, E. Mahar's Larry S. Very high com., Hanly Bros.' Red River Glencho, W. F. Bickel's Dan. High com., J. Pfister's Spy and Dan, Hanly Bros.' Pat. Com., F. F. Loomis's Grouse, J. H. Naylor's Frank. *Bitches:* 1st, J. A. Sprague's Megora; 2d, I. H. Roberts's Jessie. Very high com., Hanly Bros.' Red River Jessie, T. Donoghue's Irish Maud. High com., W. O'Brien's Fanny, J. A. Sprague's Lorraine. Com., A. H. Boxrud's Nellie and Osceola Kennels' Fly.—PUPPIES—*Dogs:* 1st, Hanly Bros.' Red River Glencho; 2d, J. Pfister's Jeff. *Bitches:* 1st, Hanly Bros.' Red River Jessie.

BLACK AND TAN SETTERS.—CHAMPION—*Dog:* W. L. Hammett's Royal Duke.—*Bitch:* W. L. Hammett's Rose.—OPEN—*Dogs:* 1st, A. H. Christ's Alp; 2d, Winslow & Klofanda's Rory. Very high com., H. Blackwood's Frost. High com., H. P. Watson's Dot. *Bitches:* 1st, R. Blackwood's Flattery.

IRISH WATER SPANIELS.—CHAMPION—T. Donoghue's Count Bendigo.—OPEN—1st, J. J. Johnson's Dan Johnson; 2d, M. A. Calhoun's O'Leary.

FIELD SPANIELS.—*Dogs:* 1st, Osceola Kennels' Joe-Joe. *Bitches:* 1st, J. A. Roche's Fan; 2d, J. Smith's Topsey.

COCKER SPANIELS.—OTHER THAN BLACK—1st, C. M. Nelles's Rufus; 2d and very high com., Osceola Kennels' Brownie and Alta. High com., E. Atwater's Nell II. Com., E. W. Peet's Dora.—BLACK—*Dogs:* 1st, C. M. Nelles's Mike; 2d, J. W. Stevens's Black Ben. High com., Campbell & Blake's Nob. *Bitches:* 1st, C. M. Nelles's Juno W.; 2d, high com. and com., Osceola Kennels' Night, Darkness and Black Sis. *Puppies:* 1st, 2d and high com., Osceola Kennels' Barto, Tannie and Patter.

BEAGLES.—CHAMPION—D. O'Shea's Rattler.—OPEN—*Dogs:* 1st, J. Bross's Dexter; 2d, D. O'Shea's Tomboy. *Bitches:* 1st, J. Bross's Roxy; 2d, D. O'Shea's Fairmaid. Very high com., J. J. Ahern's Pansy, J. Bross's Flora II. High com., J. Bross's Bell and Reta, D. O'Shea's Music.

DACHSHUNDE.—1st, I. S. Haack's Grit; 2d, J. A. Graham's Witch. Very high com., Mrs. L. M. Barnes's Otto.

FOXHOUNDS.—*Dogs:* 1st, D. O'Shea's Ranger; 3d, C. B. Richmond's Heck. *Bitches:* 1st, D. O'Shea's Roxey II.; 2d, J. H. Naylor's Lady Stewart. *Puppies:* 1st and 2d, J. H. Naylor's Stormer II. and Blossom.

COLLIES.—CHAMPION—*Dog:* Chestnut Hill Kennels' Dublin Scot.—OPEN—*Dogs:* 1st, Chestnut Hill Kennels' Bonnie Huntroon; 2d, J. A. Long's Clifton Hero. *Bitches:* 1st and 2d, Chestnut Hill Kennels' Spoiled Miss and Luella. High com. and com., J. A. Long's Sparkle and Miss Sooty Scott. *Puppies:* 1st, E. W. Peet's Don II.

BULLDOGS.—*Dogs:* 1st, J. Teague's Toro; 2d, J. W. Niblette's The Judge. *Bitches:* 1st, W. W. Silvey's Duchess of Kent. *Puppies:* 1st, Mrs. C. W. Ryder's Fly.

BULL-TERRIERS.—CHAMPION—F. F. Dole's Count.—OPEN OVER 25LBS.—1st and high com., W. Mariner's Lady in White and Nimble; 2d and high com., F. F. Dole's Young Venom and Countess. Reserve, A. J. Woolley's Turk. Very high com., D. O'Shea's Silly. High com., J. W. Kennedy's Nellie.—UNDER 25LBS.—*Dogs:* 1st, F. F. Dole's Barton; 2d, W. Mariner's Cribb. *Bitches:* 1st, W.

Mariner's Nectar II; 2d, A. C. Over's Kit. *Puppies:* 1st, W Mariner's Cribb.

FOX-TERRIERS.—*Dogs:* 1st, E. Lever's Little Swell; 2d, E. A. Killett's Dart. High com., W. R. Merriam's Jim. *Bitches:* 1st, I. H. Shepherd's Lady Winnie; 2d, L. F. Black's Minnie IV. Com., E. Lever's Varsity. *Puppies:* 1st and 2d, Mr. A. J. Lytle's Topsey and Fritz.

SCOTCH TERRIERS.—*Dogs:* 1st, 2d and very high com., J. H. Naylor's Glenlyon and Lowrie, Dunbar, Glengarry and Glen Glow. *Bitches:* 1st and 2d, J. H. Naylor's Rosie and Fanny Fern.

Whitehead's Tiny; Italian greyhound, Mrs. C. W. Ryder's Lady.

THE WAVERLY DOG SHOW.

THE fourth dog show of the New Jersey Kennel Club, held at Waverly this week, is not nearly up to its predecessors in point of numbers. None of the classes have filled well, although the spaniels are fairly well represented in numbers and are of excellent quality. The attendance on Tuesday and Wednesday was about the same as on the corresponding days last year. Judging began shortly before 12 o'clock on Tuesday and was finished before midnight. Following is a complete list of the

AWARDS.

THE AMERICAN FIELD TRIALS CLUB.

THE first annual field trials of the American Field Trials Club will begin on Monday, Dec. 12, at Florence, Ala. The grounds selected are ample and well-stocked. Three events are on the card. The All-Aged Stake, free to all except winners of any all-aged stake with $300 to first, $250 to second and $200 to third. Entrance $10 with $20 additional to start. Entries close Oct. 10. The prizes are the same for the Derby, which closed with 61 nominations, 44 setters and 17 pointers. Thr Champion Stake, open to winners of first in any all-aged stake, including those of this year. Purse, $200, entrance $50. Entries close Oct. 10 for previous winners and at finish of All-Aged Stake for winner.

The list of entries for the American Field Trials Club Derby, published May 1g, was incomplete, the following having been lost in the mail:

NELLIE B. (W. H. Wallingford), black, white and tan English setter bitch (Sam Sterrit—Zoe W.), July 4.

NELLIE W. (W. H. Wallingford), black, white and tan English setter bitch (Sam Sterritt—Zoe W.), July 4.

OTTO M. (Dr. Otto Mobus), white and lemon English setter dog (Dashing Lincoln—Buck Campbell).

ROMEO (John S. Wise), liver and white pointer dog (Graphic—Seph).

BEAUFORT—PATTI M.

JERSEY CITY, Sept. 13.—*Editor Forest and Stream:* Will you kindly permit me to trespass upon your valuable space by publishing the inclosed open letter to Mr. C. M. Munhall, in answer to his letter in your issue of Sept. 8, and very much oblige, very truly, C. J. PESHALL.

C. M. Munhall, Esq., Cleveland, Ohio: DEAR SIR—Bosh. Very respectfully, C. J. PESHALL.

CHESTNUT HILL KENNELS.—Mr. James Lindsay has resigned his position with the Chestnut Hill Kennels, and will be succeeded by Mr. John Masters, who has had charge of Mr. J. Van Schaick's dogs since last spring. Mr. Masters is undoubtedly well qualified to fill his position, as he was for some time kennel man for Mr. W. R. Dockrell, London, Eng., the breeder of several of the cracks now owned by the Chestnut Hill Kennels, which were raised under the care of Mr. Masters.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the September number of the *American Kennel Register:*

PHILADELPHIA FIELD TRIALS.—The fourth annual field trials of the Philadelphia Kennel Club, open to all pointers and setters owned by members of the club, will be held at Frederica, Delaware, commencing Nov. 15. The following stakes will be run: Derby, open to all dogs whelped after Jan. 1, 1886, professional handlers allowed. All-Aged, professional handlers allowed. Members', in which all entries shall be handled by their owners. An entrance fee of $5 will be charged for each entry. Entries close Nov. 1. Rules of the Eastern Field Trials Club to govern. It is the expectation of the committee to give three prizes in each stake, but the committee will be governed by the number of entries in any stake.—WM. H. CHILD, Chairman.

PHILADELPHIA SHOW.—Sept. 19.—*Editor Forest and Stream:* At a meeting of the club held this evening, Feb. 28 and 29, and March 1 and 2, were claimed as the dates for our next bench show.—I. H. ROBERTS, Secretary of the Meeting.

NEW HAVEN DOG SHOW.—A dog show will be held at New Haven, Conn., early next spring, under the auspices of the New Haven Kennel Club.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Otto, Tom Thumb II. and Midget. By Geo. W. Fisher, Catawissa, Pa., for two stone fawn pug dogs and one golden fawn bitch, whelped June 30, 1887, by Tom Thumb (imported Bogie—Darkey) out of imported Bijou (Dandy—Little Nell).

Pete Obo. By G. F. Willard, Charlestown, Mass., for black cocker spaniel dog, whelped April 23, 1886, by Black Pete (Obo, Jr., A.K.R. 1481—Phonsie, A.K.R. 1482) out of Miss Ginger (Obo II., A.R.R. 439—Blackie III., A.K.R. 428).

Gretchen. By A. Perrin, Cambridge, Mass., for white, with black and tan markings, fox-terrier bitch, whelped April 16, 1887, by Mephisto out of Trifle (Raby Tyrant—Judy).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Media—Resolute. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Media (Arius—Nancy Lee) to their Resolute (Result—Diadem), Aug. 29.

Gaunna—Lucifer. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Gaunna (Bacchanal—Delta) to their Lucifer (Splinter—Kohinoor), Sept. 2.

Warren Spangle—Bacchanal. L. & W. Rutherfurd's (New York) fox-terrier bitch Warren Spangle (Splauger—Wrangle) to Blemton Kennels' Bacchanal (Belgravian—Bedlamite). Sept. 16.

Warren Jingle—Resolute. L. & W. Rutherfurd's (New York) fox-terrier bitch Warren Jingle (Splauger—Jostle) to Blemton Kennels' Resolute (Result—Diadem), Sept. 2.

Regent Virtue—Lucifer. Fred Hooy's (Long Branch, N. J.) fox-terrier bitch Regent Virtue (Roysterer———) to Blemton Kennels' Lucifer (Splinter—Kohinoor), Sept. 15.

Nettie—Resolute. G. W. Bush, Jr.'s (Wilmington, Del.) fox-terrier bitch Nettie (Vicar—Gypsy) to Blemton Kennels' Resolute (Result—Diadem), Sept. 3.

Lillie—Boss. F. B. Zimmer's (Springfield, Mass.) mastiff bitch Lillie (A.K.R. 2981) to J. L. Winchell's Boss (A.K.R. 2218), Sept. 12.

Keno—Tom Thumber. Abbott Kennels' (Pontiac, Mich.) pug bitch Keno to Geo. W. Fisher's Tom Thumb (Boggie—Darkey), July 10.

Fussie—Tom Thumb. Marion E. Bannister's (Crawford, N. J.) pug bitch Fussie (Fritz—Tiny) to Geo. W. Fisher's Tom Thumb (Boggie—Darkey), July 28.

Juno IV.—Brant. Chas. M. Nelles's (Brantford, Ont.) cocker spaniel bitch Juno W. (A.K.R. 2190) to his Brant (Obo II.—Blackie 2190), Aug. 24.

Bradford Lill—Fearnought. P. H. Coombs's (Bangor, Me.) Yorkshire terrier bitch Bradford Lill (A.K.R. 4121) to his Fearnought (A.K.R. 5206), Aug. 21.

Pink—Fearnought. E. G. Carleton's (Chelsea, Mass.) Yorkshire terrier bitch Pink (Jack—Minnie) to P. H. Coombs's Fearnought (A.K.R. 5206), Aug. 25.

Puss—Baronet. A. Perrin's (Cambridge, Mass.) bull-terrier bitch Puss (A.K.R. 4484) to his Baronet (A.K.R. 4480), Sept. 13.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Flossie. F. M. Shelley's (Sheridan, N. Y.) beagle bitch Flossie (Prince—Maida), Sept. 4, two dogs, by his Speculation (Ringwood—Fannie).

Darkie. P. Cullen's (Salmon Falls, N. H.) cocker spaniel bitch Darkie (A.K.R. 259), July 16, five (four dogs), by J. P. Willey's Obo II. (A.K.R. 432).

Bijou. Geo. W. Fisher's (Catawissa, Pa.) pug bitch Bijou (Dandy—Little Nell), June 20, three (two dogs), by his Tom Thumb (Boggie—Darkey).

Votary. Ed. Kelly's (New York) fox-terrier bitch Votary (Bacchanal—Delta), Aug. 18, three dogs, by his Earl of Leycester (Spice—Dame).

Diadem. Blemton Kennels' (Hempstead L. I.) fox-terrier bitch Diadem (Dugdale Joe—Diamond Dust), Aug. 26, three (two dogs), by A. H. Clarke's Result (Roys'erer—Ruse).

Belgrave Viola. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Belgrave Viola (Belgrave Joe—Viola), Sept. 11, three (one dog), by their Resolute (Result—Diadem).

Blemton Tiara. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Blemton Tiara (Result—Diadem), Aug. 24, three (one dog), by J. C. Tinne's New Forest (Splinter—Olive II.); dog since dead.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Pete Obo. Black cocker spaniel dog, whelped April 23, 1886, by Black Pete (A.K.R. 3071) out of Miss Ginger (A.K.R. 1470), by J. P. Willey, Salmon Falls, N. H., to Geo. F. Willard, Charlestown, Mass.

Mike. Black cocker spaniel bitch, whelped June, 1887, by Frank out of Nellie, by J. S. C. Shaw, Kingston, Ont., to C. M. Nelles, Brantford, Ont.

Zura. Lemon and white pointer bitch, whelped April 10, 1886, by Bang Bang out of Zanetta, by Wm. F. Todd, Portland, Me., to F. C. Hume, Galveston, Tex.

Gretchen. White, black and tan markings, fox-terrier bitch, whelped April 16, 1887, by Mephisto out of Trifle, by Alfred Foster, Hyde Park, Mass., to A. Perrin, Cambridge, Mass.

Fairy. Fox-terrier bitch, whelped Feb. 28, 1887 (A.K.R. 3025), by Jesse D. Welch, New Haven, Conn., to W. D. Baxter, Stoneham, Mass.

Vim. Golden fawn pug dog, whelped May 26, 1887, by Mo out of Flirt, by Jesse D. Welch, New Haven, Conn., to A. S. Bosley, Baltimore, Md.

Daisy. Apricot fawn pug bitch, whelped Feb. 28, 1887, by Smut out of Susie, by Jesse D. Welch, New Haven, Conn., to A. E. Adams, Clyde, N. Y.

Chris. Fawn pug dog, whelped May 26, 1887, by Mo out of Flirt, by Jesse D. Welch, New Haven, Conn., to Miss Jenny Chaffee, Ansonia, Conn.

Bobby—Fairy (A.K.R. 3024) whelps. White, black and tan head, fox-terrier bitches, whelped March 7, 1887, by Jesse D. Welch, New Haven, Conn., one each to W. D. Baxter, Stoneham, Mass., and J. F. Shea, Holyoke, Mass.

Mo—Flirt whelps. Pugs, whelped May 26, 1887, by Jesse D. Welch, New Haven, Conn., a light fawn dog to Alex. Wiley, New York city; a stone fawn dog to Robert Sawer, Birmingham, Conn., and a fawn bitch to D. A. Nichols, Monroe, Conn.

Otto. Stone fawn pug dog, whelped June 20, 1887, by Tom Thumb out of Bijou, by Geo. W. Fisher, Catawissa, Pa., to Dr. S. Fleet Speir, Brooklyn, N. Y.

The Kid. Stone fawn pug bitch, whelped Dec. 20, 1886, by Tom Thumb out of Bijou, by Geo. W. Fisher, Catawissa, Pa., to Dr. S. Fleet Speir, Brooklyn, N. Y.

Dictator. Fawn, black points, mastiff dog, whelped July 4, 1884 (A.K.R. 1503), by John Clary, Westfield, Mass., to F. B. Zimmer, Springfield, Mass.

Ranger. Black cocker spaniel dog, whelped April 3, 1885 (A.K.R. 4592), by W. J. Furness, Ogdensburg, N. Y., to W. G. Peckham, New York.

Barney. Red Irish terrier dog, whelped Sept. 4, 1886 (A.K.R. 4603), by W. T. Reynolds, Poughkeepsie, N. Y., to Associated Fanciers, Philadelphia, Pa.

Garry. Red Irish terrier dog, whelped Sept. 14, 1884 (A.K.R. 2193), by W. T. Reynolds, Poughkeepsie, N. Y., to H. H. Child, East Walpole, Mass.

Naso of Kippen—Dela whelp. Liver and white pointer dog, whelped May 8, 1887, by Chas. H. Newell, Portland, Me., to R. M. Hutchings, Galveston, Tex.

DEATHS.

Nora. Gordon setter bitch, whelped March, 1884 (Sport—Clara), owned by J. L. Campbell, Simcoe, Ont., Sept. 6; accidental hanging.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

TREATMENT FOR WORMS.

Editor Forest and Stream:

I should like your opinion of the following recipes for worms in dogs. On page 229 of "The Management and Diseases of the Dog," by John Woodroffe Hill, are the following prescriptions: "Areca nut, 30 to 60grs., santonin, 1 to 3 drs." Now, when a man buys a book of this kind he does it for a purpose, and when he follows the directions of such a book and kills his dog, I think it is his duty to warn others against doing likewise. From the book I gave the recipe of areca nut to a friend who had a valuable setter. He gave him less than 60grs., and the result was a dead dog. Some time after this my cocker spaniel was troubled with worms, and remembering the effect that the areca nut had, and knowing that santonin was the worm medicine for children, I thought I was safe in giving him the dose prescribed in the book—1 to 3drs. I split the difference, and to be on the safe side, I weighed the santonin myself and gave him 2drs. I followed this fifteen minutes later with 2oz. castor oil. Result, in half an hour the dog had an operation, passing small white worms. Then he commenced to act strangely. He barked, and his head began to shake and his teeth to chatter, just as a person will with a bad chill. I made up my mind at once that I had got to work to save his life. He seemed to be in great pain, suffering very much. I called my wife, and I think she saved his life. She remembered a friend who had a dog poisoned, and the dog got one of her plants called cyperus (more commonly known as umbrella plant) and ate it, and vomited the poison and saved his life. As we had one of these plants we got it, and it would have done your heart good to see the little fellow devour it. He seemed to know that his life depended upon it, and after he had eaten about half of the plant he vomited freely. I then gave him about 2oz. castor oil, and rubbed him and worked over him from 10 o'clock in the morning until 4 in the afternoon. All the time he was suffering, and seemed to see visions. This happened in January. At 4 o'clock I took him out in the snow and gave him a run, and the oil began to get in its work, but he did not fully recover for 48 hours.

Here is a clipping from the July *Druggists' Circular*, page 158: "An Excessive Dose of Santonin.—G. R. A., Kingston, Mo., was asked to put up the following for a girl eight years old:

Hyd. chlor. mitis	gr. viij.
Santonin	gr. x.

Make two capsules.

Sig: To be taken 3 hours apart.

He refused to fill the prescription and asks if he was correct. Undoubtedly. As the maximum dose for an adult is set down by recognized authority as 4 grains, no prudent apothecary would think of dispensing the foregoing prescription without further and very strong light as to the doctor and patient." Four grains to an adult, yet Mr. John Woodroffe Hill prescribes for a dog 60 to 180 grains, forty times as much as a child can stand. It is safe to say that 90 grains will kill any dog that stands. At this writing my little cocker lies at my feet, and when I tell you that money would not buy him you can imagine how much I think of him and how I feel in this matter. I think it a good plan to keep one of these plants in the house, as it takes the place of witch grass, which dogs cannot get when snow is on the ground. They will eat it when they feel the need of it just as they do the grass.

I have no doubt that if I had given a reasonable dose of santonin, say 6 or 8 grains, it would have accomplished the desired result.

JOHN HOOD.

Ans. The dose of santonin for an adult dog is from 2 to 8 grains. The flowers are used in doses from 10 to 30 grains, but the active principle santonin is the only preparation used here. Areca nut powered in doses from 20 to 60 grains is a safe remedy. Among other remedies are turpentine, oil of wormseed, filix mas, etc.

SUBSCRIBER, Philadelphia.—Dog suffered from round worms. Should have been treated for them. An emetic might have dislodged the worm in the windpipe.

J. S. A., Westerly, R. I.—My setter has five raw sores on his lower jaw. I have tried carbolic soap, vaseline and whitch hazel without success. Please advise me what to do. Ans. Apply the following night and morning:

℞ Hdrarg oleat	ʒ i
Balsam peru	ʒ i
Vaseline	ʒ iss

Mix. Sig. External.

W. L. B., Smithburg, N. J.—Will you please tell me what to do for my pointer puppy, 10 weeks old? Appetite is generally very good, at times ravenous, but he is very thin and weak. I think he is troubled with worms, as he will sometimes pass a few. Ans. Give a teaspoonful of castor oil. Follow this in three hours with a santonin troche, and give three troches daily for three days. On the fourth day give two teaspoonsful of castor oil. You can get the troches at your druggist. You may powder or dissolve them.

R. J., Worcester, Mass.—Irish setter bitch about one year old has a discharge from both eyes every night. Is in apparently good health otherwise, coat good, bowels free, fed once a day. Will eat horse manure, which makes her sick. Will generally vomit after. Eyes a little inflamed. Ans. Give a five-grain quinine pill night and morning. You can conceal it in a bit of meat. Give syrup of buckthorn in teaspoonful doses to keep the bowels regular and sponge the eyes two or three times daily with borax and warm water. Look for worms.

W.—My Irish setter bitch, three years old, has had a running of matter from the eyes for about three weeks. I have given quinine with no apparent effect. Her nose is cold and moist, appetite good and she gets plenty of exercise. She has never been sick. Please prescribe. Ans. Give 5grs. calomel, sponge the eyes with borax, glycerine and water morning and evening.

℞ Sodii biborat	ʒ ss
Glycerine	ʒ ss
Aq	ʒ iv

Mix. Sig. External.

A. H. C., Albany.—I have a brown water spaniel dog, one year old, that has occasional fits or is overcome by the heat. I exercise him every evening and Sundays during the day and it is always in the daytime during the heat that he is affected. During the day at home he is kept in a yard. Being a young dog, when he does go out he runs a great deal more than necessary. When I go to let him out he is perfectly crazy. When he has these spells he falls right over, stiffens his legs, sets his teeth. A little salt brings him out all right, makes him throw up and then he is better. I have fed him Spratts dog cake. It may be he does not have exercise enough. Ans. Give a teaspoonful of syrup of buckthorn every morning for a week. Put 5 drops of Fowler's solution of arsenic in his food night and morning, and give more exercise.

JO., Wellsville, O.—I inclose you several specimens of an insect which is troubling an Irish setter bitch about seven months old. It eats through and imbeds itself in the skin underneath the coat, causing the hair to come out and gives the bitch considerable suffering. Its attacks are confined principally to the head, but a few may be found on other portions of the body. Applications of carbolic and sulphur soaps and other preparations recommended by druggists, have proved of no benefit. Can you suggest a suitable remedy? Ans. Apply oleate of mercury after having washed with juniper tar soap and dried thoroughly. You can comb the oleate in with a coarse comb. A strong solution of carbolic acid will kill the lice. They are apt to return, so that treatment must be kept up after they have apparently disappeared.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE CREEDMOOR MEETING.

DURING the past week the fifteenth annual meeting of the National Rifle Association was held on the Creedmoor range. The gathering was at once a success and a failure. There were few marksmen and there were tiptop scores. In many of the annual matches the record was beaten, and 1887 stood at the head of the list. The regulars were there, a team of them, but met with indifferent success. Three States sent teams, despite the fact that the big Philadelphia display was drawing to itself every possible man in uniform.

The meeting opened with very stormy weather on Monday and the elements were so rude that the shooting for that day was declared off. The weather for the remainder of the week almost made up the difference, and on some of the days the conditions were very good, and Major H. C. Brown, the executive officer, had not the nuisance of weather-bound matches to bother him. The machinery of the meeting worked well, and Saturday night found the programme completed and each of the nineteen matches out of the way. In some the rivalry was keen and sharp; in others the winners had virtual walk-overs.

The handicapping in the matches to bring the various styles of rifles on an equality at the firing point made much delay in working out the records. It is a question which the directors of the N. R. A., in common with all practical range managers, find forced upon them. How it has worked a glance at the full score record will show. On this point it would be well for the management to insist upon having the score card show all that is possible about the weapon used. "M. B. L." means nothing on Creedmoor range, nor does "Sp. mil." particularly. In the many changes through which military arms are put to improve their shooting qualities, it is a fine question just now to say when a rifle is in the same condition as issued. No doubt there is a good deal of practical infraction of the rules going on, but it would require a gunsmith in many cases to get at the facts.

The meeting brought two protests. The first was in the Inter-State military match, where Sergt. Dolan, of the N. Y. team, fired his 600yds. score from the back position, whereas the conditions required the "prone" position. Much confusion was created by the action of the executive office in deciding that the score of Dolan should be thrown, then by deciding that the back position was in reality a "prone" position and allowing the score, and finally sending a telegram from his house to the range, in which he returned to his original position and sustained the protest of the Massachusetts men. The matter was so simple that it is surprising to think that anybody should have a second opinion on the subject. The several definitions of "standing," "kneeling," "prone" and "any" positions are now well established, and Brown showed himself very green in the whole case.

Another protest was about the revolver score of H. V. Brower He is a son of the range keeper, and his scores were made after first horn sound and before the second horn had given the order to start the firing. Young Brower had charge of the telephone service, and hence he shot at this time when no one was present at the revolver target but the marker and scorer. He recorded two scores of 47 and one of 48, and on an unusually windy day, and as some of the acknowledged best revolver shots of the country were unable to score but 44 in calm weather, the patrons of this match were suspicious that the scores were not genuine, and protests were filed, which were allowed. Mr. Brower has appealed to the executive committee, but it will be surprising indeed if the scores are allowed under all the circumstances.

It will be well if competitors will study the rules carefully and every point in the conditions of each match entered. It would save much wrangling and ill-feeling, while for the directors to permit the least infraction of any condition of a match would be a virtual reduction of the whole meeting to a go-as-you-please skirmish fire.

Under all the conditions of rain and subsequent high winds, and with the careful avoidance of publicity which the directors now so carefully follow, the success of the meeting has been noteworthy. The full record of the meeting stands:

No. 1. Directors' Match.—200yds., open only to directors of the N. R. A.; rounds, 5; standing; any military rifle, including specials; entrance fee, $1; re-entries allowed. Prize: The Directors' Championship Gold Badge, shot for annually, and held by the winner during the year; 7 entries:

G W Wingate.....5 5 5 4 3—22

No. 2. Judd Match.—Offered annually, open to all comers, any military rifle, including specials; Remington rifles, State model, .50-cal., will be allowed one point on each score; 200yds.; standing; rounds, 7; entries and re-entries, $1 each; only three entries allowed to be shot on each day; match to occupy two days; the aggregate of two scores to count for the first five prizes, the winners to have the choice of prizes in the order of merit of their scores. First prize, a fine silver watch, value $30, presented by Messrs. Benedict Bros., of No. 171 Broadway; 25 cash prizes, viz., $25, $20, $15, $10, six of $8, seven of $6 and eight of $5 each; 259 entries.

No. 6. The Tiffany Match—All-comers' continuous match, 200yds. Number of shots 7, on the American standard target. Any rifle within the rules. The allowance for special military rifles will be 3 points, for other military rifles 4 points, and for the Remington State model, .50-cal., 5 points on each string. Cleaning allowed between shots for rifles other than military or special military. The first prize will be a silver vase presented by Messrs. Tiffany & Co. Thirty-one cash prizes aggregating $264, viz., $50, $25, $20, $15, 5 of $10, 7 of $7 and 15 of $5 each. The aggregate of three scores to count for all prizes. The allowance for military and special military rifles will be added to the total scores made. In case of ties the tie in each case will be decided in favor of the competitor having the fewest shots of low value. Extra prizes of $5, $3 and $2 will be awarded each day to the competitors making the three highest single scores. Entries unlimited; fee $1 each ticket or three for $2 if taken at one time. Four hundred and ninty-eight entries.

No. 9. Hilton Trophy Match.—Open to teams of twelve from the following: 1. The United States of America. A. The army of the United States, one team from the troops stationed within each of the three military divisions—Atlantic, Pacific and Missouri (three teams in all). B. The United States Navy (one team). C. The national guard or un-uniformed militia of the several States and Territories, including the District of Columbia (one from each State or Territory). 2. Other countries. England, Ireland, Scotland, and each of the Provinces of Great Britain, each of the Provinces of Canada, and all other countries, one team each from the following: A. The regular army. B. The militia. C. The volunteers (separate teams may be sent out when the organizations are separate). D. The navy of any country. The members of each team to be officers or enlisted men, and active members of the corps or organization which they represent, and to use rifles of the authorized uniform (full dress or fatigue) thereof. They shall be selected in such manner as shall be prescribed by the military authorities of the country or State they represent, and shall, if required, be certified to by them as being their authorized representatives. 200, 500 and 600yds. Rounds, 7 at each distance. Position, standing at 200yds.; any at 500 and 600yds. Any military rifle which has been adopted, authorized or issued as an official arm by any State or government. Ammunition, any. Entrance fee, $2 each man. Prize—A trophy, presented by Hon. Henry Hilton, of New York, to be shot for annually at Creedmoor, or such other range as the National Rifle Association of America shall select, to be held during the year by the head of the corps or organization whose team may win it, to be returned to the N. R. A. at the expiration thereof; value, $3,000; 4 teams entered. Also a medal to each member of the winning team; won in 1876 and 1879 by State of New York; in 1880 by Division of the Missouri U. S. A.; in 1881 by State of New York; in 1882 by State of Pennsylvania; in 1883 by State of Michigan; in 1884 and 1885 by Division of the Atlantic U. S. A.; in 1886 by State of Massachusetts.

No. 10. Short Range Team Match.—Open to teams of four, from any regularly organized rifle club or association or military organization, no limit to number of teams from one organization, but no competitor can shoot in two teams. Ten shots at 200yds., position standing. Rifles, any within the rules. Cleaning allowed between shots for rifles other than military or special military. Target, the American Standard. Teams using the Remington rifle, State model 50 calibre will be allowed 28 points and 16 points will be allowed to teams using other military or special military rifles. The allowance for military and special military rifles will be added to the total scores made. In case of ties the tie in each case will be decided in favor of the competitor having the fewest shots of low value, according to the principles on which sections 2 and 3 of Article XII are based. Entrance fee, $5 per team, re-entries allowed, but only the highest score to count. Four prizes, viz.: $40, $30, $20, and $10. Each member of a team will be allowed to use any rifle within the rules and will be entitled to an allowance as above noted. Twelve teams entered.

No. 11. Inter-State Military Match.—Open to one team from each State or Territory in the United States, consisting of 12 members of the regularly organized and uniformed National Guard or militia of such State or Territory, chosen in such manner as shall be prescribed by the military authorities thereof. Each team must be provided with a certificate from the Adjutant-General of the State it represents, certifying that each of its number is a regular member of their uniformed militia, in good standing, and was such on the first day of June, 1887. They shall appear in the uniform of their corps; 200 and 500yds., position at 200yds., standing; at 500yds., prone; any military rifle which has been adopted, authorized or issued as an official arm by any State or Government. In cases where the State has adopted no particular model (which must be certified to by the Adjutant-General), the team will be allowed to use the rifle in use by the regular army of the United States or by the uniformed militia of any other State. Rounds, 10 at each distance. Entrance fee, $2 each man. Prize: To the team making the highest aggregate score, a large bronze "Soldier of Marathon," presented by the Commander-in-Chief, on behalf of the State of New York, to be shot for annually at Creedmoor, and to be held during the year by the Adjutant-General of the State whose team may win it; value $350; 3 teams entered; also medal to each member of the winning team. Won in 1876 by New York, 1876 by Connecticut, 1877 by California, 1878 and 1879 by New York, 1880 by New Jersey, 1881 by New York, 1882 by Pennsylvania, 1883 by Michigan, 1884 and 1885 by Pennsylvania, 1886 by Massachusetts.

No. 12. Inter-State Long Range Match.—Open to teams of four from all rifle associations or clubs in any State or Territory in the United States. Members of the various teams participating must at the time of shooting be residents and must have resided in the State represented for at least three months prior to the date of the match; 800, 900 and 1,000yds., 15 shots at each distance, any rifle within the rules, entrance fee $10 each team. Prize a trophy to be held for the year by the successful team, which shall be deposited in some central place in the State whose team may win it. Also a medal to each member of the winning team. Won in 1877 by Amateur Rifle Club, N. Y.; in 1878 by Massachusetts Rifle Association; in 1879 by New Jersey State Rifle Association; in 1880 by Empire Rifle Club, N. Y.; in 1881, '82 and '83 by Ilion Rifle Club; in 1884 by Amateur Rifle Club, N. Y. No subsequent entries.

No. 13. New York State National Guard Match.—Open to teams of twelve from each regiment, battalion or separate company of infantry of the National Guard of the State of New York, each man being certified by his commanding officer to be eligible to compete under the restrictions laid down in Par. 372 of the State regulations. All competitors must appear in the uniform of their corps (full dress or fatigue), 200 and 500yds., standing at 200, prone at 500yds., the Remington rifle, State model, .50cal., or such other rifle as may be issued or authorized by the State, 5 rounds at each distance. Entrance fee, $1 each man. Prize, a trophy, presented by the State of New York, value $300; four teams entered.

No. 16. General Sheridan's Skirmishers' Match.—Open to teams of six from the regular army, navy, marine corps, National guard, volunteer, or militia of any country, State or Territory. Any number of teams may enter from each organization, but no competitor may shoot in more than one team. All competitors to be regularly commissioned or enlisted members in good standing of the regiment, battalion, corps, troop or company they represent, and to have been such on August 1, 1887, and to appear in the uniform (jacket, cap, trousers, belt and cartridge box, or belt) of the organization they represent. Distances, 600 to 200yds. and return. Second class targets. Weapon, the military rifle with which the organization has been regularly armed, unless such be a magazine gun, in which case any military rifle which has been adopted as an official arm by any State or Government. Entrance fee, $5 for each team. A commanding officer or coach may be allowed in rear of each team, or as a member on the firing line. The first prize in this match is a trophy presented by S. D. Schuyler, Esq. Value $150. This prize is to be won three times before becoming the property of the winner. It will be held for a year by the officer commanding the winning corps. Also a bronze medal to each member of the winning team. Won in 1884 and 1885 by 4th Artillery, U. S. A., in 1886 by Engineer Corps, U. S. A. Two entries.

No. 19. Military Sharpshooters' Match.—Open to all; any military or special military rifle; 800yds.; ammunition, any suitable for service; the bullet must be firmly seated in the shell at least ⅔ of its diameter and no lubricant to be exposed above the shell; number of shots 32, the first two not to count; between the first 17 shots any method of cleaning allowed that will not delay the match. No cleaning or blowing through the rifle will be allowed during the firing of the last 15 shots and competitors must not extract the shell until ordered to load and fire. Repeated violations of this condition will invalidate the score. The firing throughout the match will be under the control and by command of an officer in charge who, as soon as the targets are clear, shall command "load and fire;" at the expiration of one minute he will command "cease firing;" any competitor firing after this order will be liable to be scored a miss at the discretion of the officer in charge. But one competitor will be allowed at a firing point during the firing of a score. No challenging of shots except at the discretion of the officer in charge. No change of ammunition permitted during the match. Prizes $15, $10, and five of $5 each. Entries, $1; 16 entries.

VERNON, Vt. Sept. 8.—The annual meeting of the National Rifle Club closed here to-day. The winners in the various strings of 10 shots each were as follows:

1st String.	Sept. 6.	2d String.
N S Brockway	$7^{6}/_{16}$in.	Wm V Lowe	$7^{10}/_{16}$in.
H W Smith	8 in.	J R Moore	$8^{12}/_{16}$in.
L Park	$10^{1}/_{16}$in.	N S Brockway	11 in.

Sept. 7.

3d String.	4th String.	5th String.
J R Moore	$11^{8}/_{16}$ in.	N Brockway	$11^{0}/_{16}$ in.	R C Cussy	$10^{2}/_{16}$ in.
H Warner	$11^{8}/_{16}$ in.	D A Brown	$12^{12}/_{16}$ in.	J R Moore	$10^{9}/_{16}$ in.
Wm V Lowe	$12^{12}/_{16}$in.	Wm V Lowe	$13^{15}/_{16}$in.	H F Hout	$11^{14}/_{16}$in.

Mr. J. Robert Moore won the medal given for the shortest string for 50 shots, $57^{1}/_{16}$in.

A. M. String.	Sept. 8.	P. M. String.
J R Moore	$11^{2}/_{16}$ in.	Wm V Lowe	8 in.
H F Hart	$11^{4}/_{16}$ in.	J R Moore	$8^{4}/_{16}$in.
H Warner	$12^{11}/_{16}$in.	H Warner	$11^{7}/_{16}$in.

The shooting was all at distance of 40 rods, with heavy muzzle-loading rifles, using a telescopic sight and rifle shot from double rest. The meeting was largely attended and was enjoyed very much. Said one leading marksman: "These meetings are valuable educators for riflemen, and would well repay riflemen to visit and participate in them for the points they would fish up. For the very finest shooting the muzzleloader is ahead now as it has always been. In nine cases out of ten those persons who sneer at the muzzleloader are wholly unacquainted with the muzzle-loader of to-day, and have no adequate conception of what it is like or how accurate they are. To all such the very best thing they could do would be to attend one of these meetings and see and judge for themselves. They may rest assured that they will be treated with courtesy and generosity. There has been considerable talk of breech vs. muzzleloader, and the breechloaders have been given several opportunities to shoot matches with the muzzleloaders, but for some reason these matches have all fallen through; the breechloading men did not have spunk to shoot, probably because they did not have confidence in their guns. To all who are desirous of being posted on rifle matters, it would be well for them to attend the various meetings held by the telescopic rifle clubs through the country. They will be well repaid in the amount of information they will obtain. I hope some time to find a man who has spunk enough and confidence enough to shoot a breechloader in direct competition with a muzzleloader, but from present indications we are likely to all grow gray in the service before such an event takes place."

BOSTON, Sept. 7.—There was a large meeting of riflemen at the range at Walnut Hill to-day, and some excellent scores were completed. During the day a fresh wind prevailed. The fall meeting of the Massachusetts Rifle Association will be held at the range Oct. 6, 7 and 8. Appended are the scores: Creedmoor practice match—W. O. Burnite, 43; F. W. Reynolds, 42; M. G. Witham, 42; W. T. Lambert, 40. State militia match—J. B. Parker, 20, 20, 20, 20, 21, 21, 22, 23; W. T. Goodwin, 20, 20, 20, 21, 22, 22, 22; M. G. Wilhelm, 21; G. Rement, 18. Decimal off-hand match—O. M. Jewell, 86; W. O. Burnite, 82; W. H. Oler, 80; A. Law, 75; D. L. Chase, 71; J. P. Bates, 61; S. B. Read, 55. Rest match—D. L. Chase, 114; W. V. Lowe, 113; J. H. Munroe, 112, W. Chester, 111; J. N. Frye, 110; John Gunn, 108; B. G. Barker, 102; Mr. Eames, 89; Hancock, 85, Savage, 83. Standing of the competitors in the rest match:

J Francis	110	111	113	114	116—564	D L Chase	109	109	110	110	110—548	
J N Frye	111	113	112	112	113—560	J Munroe	107	108	108	110	110—543	
S Wilder	109	110	110	112	115—556	Washburn	105	105	106	107	107—530	

The decimal off-hand match will close Oct. 1. Following is the standing of the competitors who have filled the required number of scores:

A. D. Elliot	70	73	77	80	82—382	+30—412
A N Frye	66	70	71	72	74—353	+25—378
William Fisher	67	67	68	70	79—351	+25—376

SAN FRANCISCO, Sept. 11.—The California Creedmoor Rifle Team held a reunion at Shell Mound Park to-day. Ten years ago there was a competition in rifle shooting in San Francisco to select 12 men to go East and shoot for a bronze trophy, which was won by the California team against Connecticut, New York and New Jersey. To-day being the anniversary of that event it was celebrated by a shoot of the old team. Eight of the members who went East shot and scored 82 per cent., being 1 per cent., less than when they won the trophy in New York. The members feel jubilant over their successful shooting. The members shot 10 rounds each at 500 and 200yds. respectively. Appended is the grand total of the shots scored, including both ranges: J. H. Warren 80, C. Nash 87, H. Hook 84, T. E. Carson 87, A. H. Hentz 64, A. F. Klose 80, C. P. le Breton 78, C. N. Shook 80, C. F. Waltham 84, S. I. Kellogg 83, W. E. Erben 73, M. Doane 70, W. Wright 84, J. Maher 85, W. Lenaman 87, L. Townsend 78, T. Murphy 81, L. Barrsie 84, H. C. Burns 78, James Welsh 63, T. E. Klein 88, Col. Grannis 38, P. H. McEllinry 58, A. D. Yarrington 50, Philo Jacoby 87, H. H. Burrell 80, S. J. Pembroke 42.

The eleventh annual target excursion and picnic of the Independent Rifles was held at Shell Mound Park so-day. Fifty-eight men of the company shot for prizes, and only four missed the target. For an independent military organization the shooting was fair. Following is the score made by the best shots at 200yds.:

J Tonnermacher	44445—21	C L West	33433—16
Capt Schmallholz	44454—21	H Staude	34333—16
F Staude	44444—20	T Sauer	43243—16
W Gleason	34444—19	P Steadmann	44422—16
Hy Gaetzen	34354—19	R Uther	33423—15
H Fiege	43543—19	G Seyden	44322—15
H Beaverson	33435—18	F Kronn	03444—15
O T Huber	34443—18	C Meyer	44043—15
H Wilkins	24434—17	Dr V A Chaigneaur	22435—14
J Wortmann	33524—17	J Moenichmann	32244—14
C Stauder	33334—16	C A Schultz	25232—14

The company gives prizes for the judges, who scored as follows:

Capt A Huber	45455—23
Capt J F Klein	45545—23
Major A F Klose	44534—20

LYNN VS. CAMBRIDGE.—The telegraphic match at 200yds. between teams representing the non-commissioned officers of City Guard, of Cambridge, and Company D, 8th Regiment, of Lynn, was held Saturday afternoon, Sept. 10, each team shooting on its own range and telegraphing the result to the other. The City Guard team made the highest team score ever made in a match by a Cambridge rifle team, but even that score was not enough to defeat the team from the city of shoes, which rolled up a grand total of 191.

Company B, 5th Regiment.		Company D, 8th Regiment.	
Sergt Chase	5454454—31	Sergt Balmer	4544535—30

Sergt A P Pope	20 15 11—46	Sergt G H Devoll	13 19 0—32
Sergt A T Howland	18 16 10—44	Priv't F Loomis	16 00 10—26

CREEDMOOR IN OCTOBER.—The range will be open on Saturdays, Oct. 1, 15, and 22, and on election day, Nov. 8, for the regular marksman badge matches and for the qualification match. The last named date will bring the shooting season to a close.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

ST. PAUL, Minn., Sept. 13.—There was a very large number of sportsmen from all over the State took part in the St. Paul Gun Club tournament on the Fair grounds to-day. Five events were contested, with the following results. First event, ten single Peorias; entrance $1.50: Skinner 7, Shaft 8, Van Slyke 4, Chantler 8, Block 8, Balsom 9, M. F. Kennedy 7, Davis 7, Stearns 9, Jewell 7, Van Saun 8, Clark 8, Catamaran 7, Tuttle 6, Quane 6, Ruble 6, Gordon 7, Rogers 5, Stoltze 6, Blakeley 9, Durant 6, Anderson 9, Stokes 5, Thompson 5, Ensign 9, Noreen 7, James 8, Sisson 7, Thomas 6, Baldwin 7, Hanna 6, Newton 4, Johnson 5, Carpenter 9, Pfister 8. First money divided between Balsom, Stearns, Blakeley, Anderson, Ensign and Carpenter. Second money divided between Shaft, Chantler, Van Saun, Block, James, Pfister and Clark. Third money divided between Skinner, Davis and Sisson. Fourth money divided between Ruble and Curant.

Second event, 15 single Peorias, entrance $2.50: Gordon 9, Noreen 10, Clark 5, Shaft 13, Kennedy 10, Stearns 9, Tuttle 9, Chantler 8, Pfister 8, Stoltze 10, Thompson 7, Stokes 7, Van Slyke 13, Sisson 15, Balsom 15, Anderson 13, Baldwin 9, Black 12, Thomas 10, Skinner 12, Rogers 8, Newton 8, Davis 13, Van Saun 14, Ensign 11, Zincke 7, Catamaran 12, Johnston 12, James 12, Quane 7, Hanna 9, Blakeley 13, Durant 12, Arland 9, Ruble 12, Jewell 11, Carpenter 11. First money, Balsom and Sisson; second money, Van Saun; third money, Shaft, Van Slyke, Anderson, Davis, Blakeley; fourth money, James.

Third event, 6 singles and 2 pair Peorias, entrance $2: Block 3, Balsom 7, Sisson 8, Skinner 8, Tuttle 6, Thompson 6, Stokes 4, Van Slyke 5, Pfister 8, Stearns 6, Jewell 7, Baldwin 9, Hayes 5, Gordon 6, Stoltze 8, Newton 7, Paulson 4, Kennedy 7, Ensign 8, Noreen 8, Lincke 6, Davis 9, Rogers 3, James 10, Chantler 4, Blakeley 9, White 8, Anderson 9, Thomas 6, Johnson 7, Carpenter 8, Shaft 8, Durant 6, Clark 6, Van Saun 6, Ruble 8, Snyder 6. First money, James; second, Baldwin, Davis, Blakeley and Anderson; third, Block and Noreen; fourth, Balsom.

Fourth event, 10 singles, 5 pair, Peorias, entrance $3: Gordon 11, Tuttle 8, Noreen 14, Chantler 13, Sisson 15, Thomas 15, Snyder 17, Van Slyke 14, Anderson 16, Lincke 15, Van Saun 12, Johnson 11, Ruble 15, Skinner 16, Stoltze 16, Pfister 12, Stearns 13, Kennedy 15, Jewell 15, Newton 9, Ensign 10, White 13, James 12, Carpenter 14, Balsom 15, Durant 10, Stokes 8, Arland 16, Block 19, Baldwin 15, Hayes 12, Shaft 17, Thompson 13, Davis 14, Blakeley 15, Marshall 10. First money and special prize of one-half keg of powder, by Austin Powder Company, to Block; second Snyder and Shaft, third Anderson, Skinner, Stoltze and Arland, fourth Jewell.

Fifth event, 10 single Peorias, entrance $1.50: Pfister 7, Ruble 6, Skinner 6, Catamaran 8, Marshall 6, Lincke 7, Van Saun 7, Van Slyke 6, Thomas 7, Block 9, Hayes 3, Tuttle 6, Sisson 9, Chantler 9, Snyder 8, Arland 6, Anderson 9, Ensign 8, Jewell 8, Stoltze 6, Baldwin 9, Kennedy 5, Newton 7, Blakeley 9, Durant 7, James 6, Davis 7, Gordon 5, Carpenter 10, Stearns 7, Noreen 4, Balsom 9, Johnson 6, Shaft 7. Carpenter first, Block and Blakeley second, Catamaran, Snyder, Ensign and Jewell third, Van Saun fourth.

Special prize for best total score on all events of the day—200 shells loaded with Kings quickshot powder, donated by the King's Great Western Powder Co., awarded to Block and Anderson. The scores being poorer than usual may be accounted for by the high side wind prevailing during the entire day.

Sept. 15.—In the gun club shoot to-day G. W. Baldwin won the State championship badge. There is still a great deal of interest in the tournament. The following is the score: First shoot, five pairs Peorias; entrance $2: Skinner 8, Jewell 6. Baldwin 10, Van Saun 9, Block 7, Shaft 6, Durant 6, Carpenter 9, Balsom 8, Kennedy 4, Anderson 8, Blakely 9, Dennis 4, Smith 7, Chantler 4, Thomas 5, Pfister 9, Stoltze 4, Williams 5, Rogers 4, Ensign 1, Ruble 6, Sisson 6, Davis 8. First money, Baldwin; second, Van Saun, Carpenter, Blakely, Pfister; third Skinner, fourth, Block and Smith.

Second shoot, fifteen single Peorias; entrance $2.50: Skinner 13, Jewell 9, Carpenter 10, Block 11, Durant 11, Anderson 11, Chantler 11, Smith 4, Kennedy 11, Sisson 13, Ensign 11, Pfister 13, Balsom 12, Williams 7, Van Slyke 11, Van Saun 9, Shaft 13, Baldwin 15, Davis 13, Thomas 12, Hanson 9, Hay 12, Dennis 7, Ruble 11, Perry 11, Stoltze 10, Blakeley 14. First money, Baldwin; second, Blakeley; third, Pfister and Davis; fourth, Hay.

Third Shoot.—Individual State championship. Chamber of Commerce diamond badge. Twenty-six Macomber metal birds; twelve pairs Peorias. Entrance, $7.50:

	Met'l.	Peor's.	Total.		Met'l.	Peor's.	Total.
Paine	22	17	39	M F Kennedy	18	13	31
Shaft	19	20	39	Davis	21	12	33
Baldwin	19	21	40	Pfister	19	12	31
Smith	13	16	29	Sisson	17	13	30
Anderson	18	20	38	Hanson	15	20	35
Blakeley	18	13	32	Carpenter	17	14	31
Wann	16	9	25	Block	22	15	37

G W. Baldwin, of St. Paul, winning the badge by a score of 40. T. M. Paine, of Bird Island, winner of the badge last year, received $70 of entrance money from this contest, it being the rule to award to each winner of this badge $5 for each man shooting in the next season's contest.

Fourth Shoot.—Thirteenth event, fifteen single Peorias; entrance $3: Corey 15, Kent 11, Shaft 14, Skinner 13, Jewell 13, Durant 11, Van Slyke 13, Pfister 13, Chantler 12, Balsom 13, Stoltze 10, Anderson 13, Jones 5, Ruble 11, Hay 13, Sisson 9, Van Saun 12, Thomas 10, Harrison 8, Hanson 12. Williams 14, Blakely 13, Carpenter 4, Davis 11, Baldwin 13, Kennedy 10, Block 13. First money, Corey; second, Shaft and Williams; third, Jewell, Baldwin and Block; fourth, Hanson.

WASHINGTON, D. C., Sept. 14.—Birds very ordinary, second barrel counts ½, live birds, 2 traps, 24 and 26yds. rise, 80yds. bound, sweeps and medal.

Match 1:

J Curtin	1 1 1 1 0—4	W S Thompson	1 0 0 0 0—1
E Godey	0 1 1 1 1—4	Simpson	0 0 0 1 1—2
S Cunningham	1 0 1 1 ½—3½	Tyler	1 0 1 0 w—2
Holmead	1 1 ½ 1 1—4½	J M Green	1 1 1 1 0—4

Holmead won first and medal, Godey and Green second.

Match 2, same conditions:

Mills	1 1 ½ 1 ½—4	Godey	1 ½ 1 1 1—4½
Tyler	1 ½ 0 1 1—3½	Cunningham	0 1 0 1 1—3
Jones	0 1 1 1 1—4	Curtin	1 1 0 1 1—4
Simpson	½ 1 1 ½ 0—4	Holmead	1 1 1 1 1—5
Green	1 0 1 1 0—3		

Holmead first, Mills and Curtin second.

Match 3, Miss and Out, live birds: Jones 2, Tyler 3, Mills 4, Simpson 3, Cunningham 5, Green 1, Curtin 3, Godey 0, Holmead 4, Thompson 0, Cunningham won.

Match 4, clay-pigeons:

Mills	1111110011101111—13
Cunningham	0101111111111101—13
Holmead	0000010000100000—2

Mills and Cunningham divided.

Sept. 16.—Match for a club badge, hereafter subject only to individual challenge, match at Ligowsky clay-pigeons. 5 traps, N. G. A. rules:

Williams	0111101101101011111—15
Cunningham	0111011110011001001—12
Du Bois	1100101111000010011—11
Woodbridge	0111001111101011111—15

Ties on 15:

Woodbridge	01111—4	Williams	01101—3

Sept. 17.—Sweeps:

Cunningham	01111	11111	11111—14
Green	00010	00101	10001— 5
Woodbridge	10100	11110	01101— 8
Sheester	01101	11110	00101— 9

Doubies:

Green	11 11 11 01 11 10—10	Sheester	11 00 11 10 11 01— 8
Woodbridge	11 11 01 11 00 01— 8		

TIM BERDOODLE.

BROOKLYN, Sept. 14.—The regular shoot of the Coney Island Rod and Gun Club at Woodhaven, to-day, was better attended than any of the previous ones this season. Seventeen members shot for the club badge and four prizes. Out of 156 birds shot at 118 were killed. J. E. Lake, a comparatively young shooter, made the fine score of 11 straight kills from the 25-yard mark and won the club badge and first prize. H. Eames won the second, F. Lenzer the third and J. Simpson the fourth. Darkness prevented any sweepstake shooting. Score of shoot:

H McLaughlin (25)	1111111—7	G Edwards (24)	0101101—4
A Schwartz (29)	1011111—6	N Zirkel (25)	1001111—5
E A Holland (22)	0111101—5	H Battmacher (24)	0110111—5
R Moore (30)	1011110—5	J Shevlin (24)	10010w—2
F Lanzer (25)	1010111—5	J Simpson (29)	0110110—4
W Stuart (29)	1101101—5	H Eames (27)	1110111—6
J E Lake (25)	1111111—7	E Fesler (21)	1101100—4
L Davenport (29)	1111117—7	J Burgess (25)	0111111—6
C Wheeler (21)	0101111—5		

Ties for badge: H. McLaughlin 2, J. E. Lake 4, L. Duryea 4. Ties for second prize: A. Schwartz 2, H. Eames 3. Ties for third prize: E. Holland 1, R. Moore 2, F. Lanzer 3, W. Stuart 1, H. Blattmacher 1, E. Zirkell 1. Ties for fourth prize: G. Edwards 2, J. Simpson 3, E. Fesler 1. Referee, Mr. H. McLaughlin.

BROOKLYN, Sept. 13.—The regular shoot of the Acme Gun Club, Dexter Park, was somewhat unique. To win the first prize the shooter had to kill a majority of live pigeons and break the largest number of clay-pigeons. This was done by J. Short, after tieing with J. Link. Keppell, 24yds.; rest 21yds. The score is as follows:

	Live Birds.	Clay-Pigeons.
H Keppell	1001000110—4	0000000100—1
J Short	1010111101—7	0011111111—8
G Wassell	0111100110—6	1111110000—4
H Kunzweiler	1110011111—8	1010011010—5
J Kolmar	1111100110—7	0000011011—4
C Schottler	1110011111—8	0010101000—3
J Link	1010011111—6	1011111111—9
W Stuart (29)	1010111—5	0010111101—6
C Carolan	1001111010—6	0010011101—5
J Delthoff	1110100000—4	0010001000—2

Ties for club badge:

	Live.	Clays.	Final shoot at clays:	
T Short	7	8—15	T Short	11111111111—12
J Link	6	9—15	J Link	11111111110—11

Referee, W. Mills.

LEONIA, N. J., Sept. 17.—Boiling Springs Gun Club, of Rutherford, N. J., vs. Leonia Gun Club, on Leonia Gun Club's ground, at American clay birds, 5 American clay bird traps, National Association rules:

Boiling Springs Gun Club.		Leonia Gun Club.	
Capt Coe	1100111111100011—11	Capt Goesser	1110100111111111—12
Vogelsang	1010100100100111— 9	Wells	0111001001011— 9
Lendsey	1111011111111114	Beam	1111111101011110—12

	92		71

SACRAMENTO, Cal., Sept. 11.—The Pacific Gun Club held its regular pigeon shoot to-day at Agricultural Park, eleven of the members participating in the contest for the gold medal. Some excellent scores were made, as will be seen by the following record. The figure 2 shows where the second barrel was used, and a * indicates that the bird died out of bounds:

Morrison	1122211221111—12
Damm	121*10110*10— 7
Kunz	1121221212222—12
C Flohr	**101121112*— 8
Gotobed	1011222*1121—10
Reeber	1001211002110— 7
Mannix	0101020210210— 7
Foss	*0011002211— 6
Parrot	1211221122011—11
Vaughn	2122110221*— 9
Nicolaus	1212121220010— 9

Messrs. Kunz and Morrison shot off their tie on twelve straight, and the former won with a clean score, Mr. Morrison losing his first bird, which fell dead outside. As this was the third time Mr. Kunz had won the medal, it became his personal property. After the medal shoot there was pool shooting, in which Messrs. Todd and Gotobed were the most successful.

TAUNTON, Mass., Sept. 17.—Taunton Fish and Game Protective Association shoot at 10 clay-pigeons and 10 bluerocks and 10 bats every Saturday for four weeks for club prizes. Score for first week:

	Blue-Clays.	Rocks.	Bats.		Blue-Clays.	Rocks.	Bats.
I T Hall	7	7	9—23	J Davis	4	8	7—19
E Leonard	6	7	9—22	F S Keith	6	7	8—21
G L Smith	3	6	8—17	W Barstow	6	6	10—22
C T Snow	7	9	6—22	Staples	1	3	5— 9
E Bowen	6	5	7—18	F Scudder	4	5	5—14
P Slater	5	3	5—13	G H Davis	5	8	8—21
A Hardy	6	5	7—16	C Hill	7	5	6—18

PEORIA, Ill., will have a shooting tournament Sept. 27, 28 and 29, live birds and inanimate targets. The committee are H. M. Nash and H. Conner.

NEW BEDFORD, Mass., Sept. 10.—In the contest between the Ridge Hill Gun Club and the New Bedford Gun Club at Raynham to-day the latter team won by a score of 73 to 66 as follows:

New Bedford Gun Club.	Rocks.	Clays.	Total	Ridge Hill Gun Club.	Rocks.	Clays.	Total
Post	5	7	12	A Hall	7	7	14
Plummer	7	9	16	A A Lincoln	4	4	8
Homer	2	8	10	C Robinson	7	9	16
Smith	4	7	11	F L Lowell	6	4	10
Hooper	9	5	14	I Hall	4	7	11
Snow	5	5	10	S A Lincoln	4	3	7

Both before and after the match sweepstake shooting was indulged in to quite an extent. The day, which opened in rather unpromising fashion, proved to be fine, and the visiting club enjoyed themselves very much. A return match will be shot at New Bedford shortly.

THE LATE JOHN M. GILL.—Utica, N. Y. Sept. 4.—*Editor Forest and Stream:* Absence and sickness have delayed the announcement to you that Mr. John M. Gill, who died suddenly in Aberdeen, Dakota, Aug. 7, was the well-known amateur wing shot who appeared under the *nom de plume* of "E. M. Hammond," and whose triumphs in the New York Gun Club contests with Col. Butler, in the Brooklyn club shoots, and other events over the country, have been recorded in the FOREST AND STREAM. He had a record of 100 straight birds. Mr. Gill removed from Chicago to Omaha about two months ago with his wife and two children. He was in the employ of the Brush Electric Light Co., of Cleveland, when he was stricken down with heart disease on Aug. 4, and died Sunday, Aug. 7. Brother commercial travelers proved to be good Samaritans, nursed him, performed the last offices for their stranger friend, closed his eyes, had religious services, adopted resolutions of sympathy and condolence, placed a modest floral cross in the casket, and sent the remains to the widow at the home of her mother, Mrs. John J. Flanagan, Utica, N. Y. All the earthly remains of John M. Gill now lie in the beautiful Forest Hill Cemetery in this city. A good man and a true and honorable sportsman is at rest. The deceased was an honorary member of many of the gun clubs of the country, of the Lambs Club of New York and the Oneida County Sportsmen's Club of this city, to which he gave one of his finest trophies.—J. J. F.

ESSEX COUNTY GUN ASSOCIATION.—The next monthly competition for the prizes of the Essex County Gun Association will take place on the grounds of the Woodside Gun Club, North Newark, N. J., on Thursday, Sept. 29, at 2 o'clock. This will be the ninth contest, the first six having been won by the South Side Gun Club, the seventh by the Mountainside and the eighth is under protest. Four club prizes and an individual prize constitute the "day out." Several different names have been given in recent issues of your paper to this organization, whose real title is the Essex County Gun Association. The association was organized Dec. 23, 1886, and is composed of the South Side Gun Club of Newark, the Mountain of Orange Valley, the Mountainside of South Orange, East Orange of East Orange, Nimrod of Newark, and Woodside of Newark. The officers are Lewis Bush (Nimrod) President; J. R. Burnett (Mountainside), Secretary and Treasurer; W. R. Hobart (South Side), Manager. The objects of the association are contests for a silver cup and other prizes, the shoots taking place once a month on the grounds of the several clubs in Essex county. The organizers had in mind the probability of their example being followed in other counties, with the hope of a State Association in the near future. This would make some very interesting contests possible.—W. R. HOBART.

WELLINGTON, Sept. 17.—There was a good attendance of gunners at the grounds of the Wellington club to-day, and some good scores were made at clay-pigeons, blue rocks and blackbirds. Following are the first prize winners in the several events: 1. 6 clay-pigeons, Richards. 2. 6 blue rocks, Evans and Gerry. 3. 6 bats, Adams and Sanborn. 4. 6 clay-pigeons, Gerry, Adams and Wardwell. 5. 6 blackbirds, Gerry and Snow. 6. 6 bats, Edwards and Sanborn. 7. 6 blackbirds, Gerry, Snow and Wardwell. 8. 6 clay-pigeons, Sanborn. 9. 6 bats, Gerry, Wardwell and Sanborn. 10. 6 clay-pigeons, Baxter. 11. 6 blackbirds, Snow and Adams. 12. 6 clay-pigeons, Edwards, Snow and Warren. 13. 6 bats, Snow. 14. 6 blackbirds, Gerry and Sanborn. 15. 6 clay-pigeons, Snow. 16. 3 pairs blackbirds, Adams. 17. 6 bats, Gerry, Adams and Stone. 18. 3 pairs clay-pigeons, Warren and Snow. 19. 6 blackbirds, Baxter, Wardwell and Warren. 20. 6 blackbirds, Melcher. An all-day shoot will be held Sept. 20, when the Climax diamond badge, now held by Stanton, will be contested for.

NEW BEDFORD, Sept. 17.—The Acushnet Gun Club was defeated by the New Bedford Gun Club to-day. The score: New Bedford—Plummer 14, Post 15, Homer 13, Snow 12, Bryant 13, Hooper 13, Smith 13, Pierce 12. Acushnets—Whalon 11, Kenyon 14, Gray 9, Job Spooner 6, Durfee 7, W. Whalon 7, G. Spooner 10, A. Whalon 16. A return match will be shot soon. The clubs are now a tie, each having won one match.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

AMERICAN CANOE ASSOCIATION.

Commodore: R. W. GIBSON..... } Albany, N. Y.
Secretary-Treasurer: F. L. MIX. }
Vice-Com. *Rear-Com.* *Purser.*
Central Div..Henry Stanton...R. W. Bailey.....E. W. Brown, 146 B'way, N.Y.
Eastern Div..L. Q. Jones.....Geo. M. Barney....W. B. Davidson, Hartford.
N'thern Div..A. D. T. McGachen. W. G. McKendrick. S. L. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Central Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

THE FIRST BRITISH CANOE MEET.

THE London *Field* gives the account of the canoe meet lately held on the Norfolk Broads, the first of its kind on the other side of the Atlantic. Now that British canoeists have learned how pleasant such a camp may be, and how useful to canoeists, we hope it may become a permanent institution like our own meets. A correspondent writes us of our Canadian friend "Mac" that he "gained the affections of everybody, and it says much for him that nobody kinder hated him for engrossing all the attentions of the ladies' wherry." The *Field* says: Canoeing in England became an established sport long before it was received with favor in America; yet to-day, when the list of canoe clubs in the United Kingdom is but seven, with a gross total of enrolled members of about two hundred and fifty or three hundred, the canoe clubs of the United States and Canada number over one hundred and twenty, with a membership of thousands where we count hundreds. Apart from the greater natural advantages offered by the lakes and rivers of the American continent, one thing that has caused canoeing to make such rapid strides in America has been the formation of the American Canoe Association, promoting meets for cruising and racing, where its members have been able to enjoy the sport in company, to compare types of boats and rigs, and renew their enthusiasm for the sport. For some years past there have been rumors of coming canoe meets each season, but until the present moment the idea has not taken form and practical shape.

This year, through the co-operation of the Royal C. C., the Mersey C. C., the Humber Yawl Club, the Wear C. C., and some unattached canoeists, a combined cruise was held on the Norfolk Broads during the first fortnight in August.

It is very probable that this meet may have a very important influence on the future of canoeing in England. *Ce n'est que le premier pas qui coûte*; and a meet having been held once and all the arrangements having been carried out with success, a new departure has been made and there is practical experience on which to lay the plans for still larger and more successful gatherings in the future.

The question has often been raised, why have we no British

Canoe Association? and probably the correct answer is that there has never been any gathering of a sufficient body of canoeists from different localities and of different clubs at which such an association could be formed.

Very soon after the opening of the combined cruise, it became evident that most of those present were anxious to see a British Canoe Association formed; and at the very first meeting of the whole camp, convened by the officer in charge of the cruise to discuss and vote upon the proposed programme of movements and camps, as soon as that business was over, the formation of an association was mooted and the discussion was taken up with such fervor and at such length that the matter had to be adjourned.

At the next meeting a series of resolutions were passed unanimously, the main points being:

The formation of a "British Canoe Association," of which all present enrolled themselves members, the object of the association being the promotion of cruises and meets similar to the one then in progress. It was decided that the subscription to the association should be 10s. annually, and as there will be no boat houses or other standing charges to support, this sum will probably be found quite sufficient, and no prizes other than flags or other honorary tokens of nominal value will be given as prizes for races, thus following the lines of the American Canoe Association, whose dues are $2, or 8s., annually, and whose prizes are only flags.

It was decided to refer the drafting of a constitution to a committee, in whose hands the conduct of the association's affairs should be vested until the next general meeting, at a cruise to be held on the Clyde during the first fortnight of August, 1888.

Mr. Percy Nisbit was appointed honorary secretary and treasurer, and the following gentlemen were elected to form the committee, Messrs. W. Baden-Powell and E. B. Tredwen for the Thames, Chas. Livingston for the Mersey, G. F. Holmes for the Humber, T. H. Holding for the Wear, H. M. Bromhead for the Clyde, and Mr. Scott for the eastern counties, with power to add to their number should the committee thus formed consider that any other centre required representation on the committee; the meetings of the committee to be held alternately in the different centers, as may be found most convenient.

The formation of this association of canoists, it is hoped, will assist greatly in promoting the sport, by bringing together canoeists who would otherwise never come into contact with one another. The annual cruise and camps will show all the possibilities and advantages of the sport at its best, and thus induce many to take it up who otherwise would not. Many of the men who join the association will probably follow that step by joining the canoe club of the center in which they reside, so that they may have a local rallying point, with the advantages of boat house, etc. In this way the B. C. A. will assist the existing clubs, and will not in any way be opposed to or competing with them.

This was the outcome of the cruise, and now to the cruise itself.

The preliminary arrangements for the cruise had been undertaken by the Royal U. C., and the camp sites had all been prospected and arranged for in advance by Mr. H. Wilmer and Mr. E. B. Tredwen.

It had been decided to charter a wherry (the yacht of the Broads) for the accommodation of ladies, and six ladies availed themselves of this opportunity of joining the cruise. The ladies' wherry proved a most acceptable adjunct to the trip, and many weary canoeists during a long day's run were glad to accept the invitations to tea or dinner on it. The ladies, too, appeared to be having a good time, for there was always great competition for the pleasure of their company by those (and they were many) who had canoes or canoe yawls that would carry more than the one person that the canoe is usually supposed to carry.

The cruise embraced Oulton Broad, with the two days' regatta of the Norfolk and Suffolk Yacht Club, at which two very handsome prizes were kindly offered by the ladies of the Norfolk and Suffolk Yacht Club for a race among the canoes of the fleet, the first prize falling to Mr. W. Stewart's Charm, and the second to Mr. C. Livingston's Daisy; a trip to Beccles and back, Oulton to Acle, via Yarmouth; up the Muck Fleet to those grand Broads, Ormesby, Rollesby, and Filby; Acle to Hickling, where two days were spent, during which a visit was paid to Horsey Mere; Hickling to St. Benet's Abbey, thence to Wroxham; Wroxham to Acle, Acle to Oulton.

On the suggestion of Mr. Day, the whole body of canoeists on several occasions agreed to have a combined "stew" prepared for supper, thus saving each individual the trouble of cooking; and very pleasant these meals were, served in a long tent formed by joining two tents together, where after the meal the whole company held their musical and business meetings. Many were the concerts held on board the wherry, where there was a piano, a guitar, and other instruments, and plentiful was the vocal talent thus brought out. Every one present expressed a determination to join the cruise next year, so pleasant was this gathering.

Every type of canoe that has any pretensions to being a cruiser was represented, from the racing canoe Charm, whose luggage was carried on the wherry and in various canoes of a roomy type, to the largest Mersey yawl, which could carry the stores of two or three men and could accommodate a crew of four or five. These various types deserve some remark, and comment upon them, with descriptions of their various advantages or disadvantages, will be given on a future occasion.

Some men slept in their canoes, ashore or afloat, others had shore tents of various kinds, and these camping appliances, with the many varieties of cooking apparatus, are all of interest to canoeists, and will be treated of in due time.

The number of men present during the cruise from first to last was thirty-six, and there were never less than twenty in camp at one time.

MAST RINGS FOR CANOE SAILS,—Boston, Sept. 16, 1886.—*Editor Forest and Stream:* Having been, among others, bothered by rings sticking when used on a light sail, I have devised a ring which I think is very near perfection. The rings are wound up of spring brass and cut off a little long, so that one end may be bent up at a right angle and the other down, the ends being sewed to the luff of the sail. In practice, the instant the luff tautens the rings stick out at right angles and remain so, allowing the sail to slide up and down very easily. Since using these I have not had occasion for a single cuss word, so that the average canoeist will stand a much greater show of reaching the happy hunting grounds than with the old rings.—MUSQUASH. [We have used rings made in this way of wire, and found them to answer, but the rings must be so large that they fit very loosely on the head of the mast. The lacing seems to answer best in all ways.]

IANTHE C. C. REGATTA.—The third annual regatta of the Ianthe C. C. will be held off club house, foot of Grafton avenue, Woodside, N. J., on Sept. 24, at 1:30 P. M. The races will be open to any canoeist. Programme: 1. Sailing, class B. 2. Paddling, class I. 3. Sailing, man overboard. 4. Paddling, class IV. 5. Paddling, standing. 6. Paddling, tandem. 7. Hurry-scurry race. 8. Tub race. The Woodside station of the Erie Railroad is but 30min. from New York. Trains leave Chambers street 12:45, 2:00, 3:20 and 4:20 P. M. Trains leave Woodside for New York 3:52, 5:21, 6:22, 8:02 P. M.

NEW YORK C. C. RACE, Oct. 8.—Owing to the detention of the canal boat with the canoes from Bow-Arrow Point, it has been found necessary to postpone the race for the N. Y. C. C. Sailing Trophy until Oct. 8. The course will be on New York Bay, about 9 miles. Canoes may be shipped to care of New York C. C., Tompkinsville, Staten Island, via Staten Island Rapid Transit R. R. Co., Pier 1, East River. They will be cared for on arrival at Staten Island.

A. C. A. MEMBERSHIP, CENTRAL DIVISION.—The following gentlemen residing in Central Division have applied for membership in A. C. A.: Wm. McK. Miller, New York.—E. W. BROWN, Purser, C. D.

Yachting.

Address all communications to the Forest and Stream Pub. Co

FIXTURES.

SEPTEMBER.

24. Great Head.
24. Monatiquot Club, Weymouth
25. Quaker City, last Cruise, Del. River.
26. Cooper's Point, Corinthian.
27. Cruise up Delaware River.
27. America's Cup Match, N. Y.
29. America's Cup Match, N. Y.

OCTOBER.

1. America's Cup Match, N. Y.

NEW ROCHELLE Y. C.—On Sept. 17 the race for the Commodore's Cup was sailed over a course around Execution Light, 17 miles, in a light and variable wind, the starters being Arab, Amazon and Maida. Maida gave up, the others being timed:

	Start.	Finish.	Elapsed.	Corr'ted.
Arab	11 45 55	6 38 30	6 52 35	6 52 35
Amazon	11 41 05	7 18 35	7 37 30	7 33 35

On Sept. 24 a race for catboats will be sailed.

THE TRIAL RACES, SEPT. 15, 16.

BAD as was the weather on Tuesday, it was still worse on Thursday, when the second of the trial races was to be sailed. On the former occasion there was a little breeze and an attempt at a race, but Thursday was an ideal September day, the most perfect weather of the year, except for yachting. Clear blue skies, warmth without oppressive heat, and a fresh bracing atmosphere, after the close and muggy days of the earlier part of the week. The course was outside the Hook, to windward or leeward, and by 11 A. M. the usual fleet of yachts, steamers and tugs was ready off the Scotland Lightship. The great crowd of the first day was not present, the many small craft stayed inside the Bay, and there was plenty of room for the maneuvers of the racers. Not a breath of air was stirring, however. Hour after hour passed, and the sea still lay calm and unruffled, until at 3 o'clock the signal for a postponement was hoisted on the flagship, and the fleet started for home. Thistle was escorted down in the morning by her consort, the handsome Mohican, and the latter towed her home at night.

During the night there came up a breeze from N.W. that whistled merrily through the rigging of the fleet off Staten Island and Bay Ridge, and tore through the telegraph wires and around the street corners in town, carrying the welcome news of a race on the morrow; and the ones who essayed a third trial after two days of disappointment were well repaid in the end. In the morning the wind was N.W. by N. in the upper Bay, blowing with moderate strength, and the racers started down early in tow of the markboat B. T. Haviland, Electra following at a good jog. Thistle under sail was passed on the way down, and below the Lower Island the sloop Florida passed up, carrying only jib and two-reefed mainsail, and lopping down badly under even this short canvas. This is about her first appearance under canvas since she was built last fall, and from the display she made then, as well as again in the evening when she passed down under the same reduced sail, there seems little probability that the bright anticipations of a fabulous speed that heralded her launch, will ever be realized, or that she will find a place in the racing fleet. The wind at this time was quite moderate, but she staggered along under reduced sail and showed an alarming lack of stability.

At 10 A. M. the flagship was off the Scotland Lightship, a fresh breeze was blowing from N.W. by N., and the two racers were sailing about under mainsails and jibs, with Thistle in company. Never before was the committee of the New York Y. C. so well fitted with all the machinery for conducting a race as this season, and it seems wonderful now they ever made out as well as they did in the past when the contrast between the old-time tugboat and the Electra is considered. The Luckenbach was probably the best boat for the work that the club has ever had, but in no respect could she compare with the fine steam yacht that now does duty as flagship. The difference between the two is well illustrated by one point, in the tug there was always a vexatious delay, especially with a down wind start, while the anchor was clumsily got in by hand, with much noise and bustle and some remarks from the mate. On the flagship, as soon as the last starter is timed, the anchor is off the ground by steam to the pipe of the boatswain's whistle, and all is done without a word or an order being heard. Not only are the yacht and commercial codes utilized to the full extent of their capabilities, but a special set of numerical flags is carried for extra signals adapted to racing needs. The two guns of the yacht are used for all the starts, and this week they were fitted with electrical firing apparatus, by which the starter on the bridge had them under perfect control. The chart room gives such facilities for work as no tugboat can possibly have, down to the very convenient cyclostyle, by which manifold copies of all orders are quickly prepared, while the steam launch at the davits is always ready to deliver orders to the fleet. In this race the importance of such conveniences was fully shown, as it was found necessary to vary the programme at times, numerous orders being given and read by the racing yachts without an error.

Why, when the committee boat is ready at the line and there is a good breeze, the competing yachts will at once get as far away as possible, is a thing that has never been explained, and this was always the case, and Friday was no exception. The committee decided to start the race on a course S.E. by S. 10 miles, or dead to leeward, where the yachts would find the markboat with a red ball displayed, after which the course would be signalled from the Electra. Instructions to this effect were written in duplicate and given to the markboat to deliver to Volunteer and Mayflower, but after running far in toward the Hook to find the former, the tug had to start and run a mile or two Spainward to catch Mayflower, now well out to sea. This took some time, and it was just 11 A. M. when one of the ladies on the bridge of the flagship touched a button and fired the gun.

Volunteer was then on the starboard tack, standing in toward the Hook, having set her clubtopsail and staysail shortly before and dropped her spinaker boom overboard. Mayflower had first a jib-header mastheaded, but following Volunteer sent her clubtopsail aloft over the other, she by this time being near the line, to-windward of Volunteer. Thistle had run down a mile or more to leeward, and was waiting for the start, her spinaker boom being halfway down on port side. At 11:10 the gun gave the start and Volunteer came for the line, breaking out spinaker and balloon jibtopsail and lowering working headsails. The balloon jibtopsail, contrary to the general belief, is not of silk, but of linen the same as always used abroad for light sails until the introduction of the new "Union silk," and is a bright yellow color. Mayflower, a little astern, set the same canvas as she came for the line, the times being:

Volunteer, 11:15:57; Mayflower, 11:16:10.

The two postponements had made the time very short, and the committee was desirous of making a decision on this race rather than risking another day lost by calm weather, so a peculiar course was decided on. For fear of the wind shifting to southward and making a run out and in, as was by no means improbable, it was decided to run 10 miles free while the wind held, then to lay off about the same distance with wind abeam, returning over the same course. Thus a certain variety was insured, and as events proved the boats were seen on every point of sailing. As Volunteer ran down on Thistle there was some question as to what the latter's tactics were, but when the pair were just abreast all doubts were quickly dispelled. The crew of the Scotch boat was gathered about the mast, and as Volunteer came up all walked away aft with the spinaker halliards, the sail came up through its fore hatch, and as soon as it was clear of the coamings the sheet was manned and the sail was drawing to the last inch. Not only was the hard white sail round and full as it could be, a beautiful sight, but the way in which it was set, quietly and quickly and without a hitch, was beyond criticism. Of course the conditions between the boats were not such as to permit any fair comparison. Thistle has not been docked since her trip across, she had both boats at the davits and the dinghy in tow, and she was carrying only working topsail and jibtopsail with small spinaker, compared with Volunteer's clubtopsail and big balloon sail. Furthermore, there is no telling how she was sailed throughout the day, but it is more than probable that while she was able to gauge to a fairly reliable degree the performance of the other two, she did not have no more of her own heels than suited her, leaving the rest for the actual racing. For a time she seemed to hold Volunteer fairly well and then she dropped astern, finally bearing away to keep her spinaker full and at last running to leeward of the mark and waiting to see the others turn.

Mayflower held Volunteer very evenly for a time, but as the wind went a little more to the east the spinakers failed to draw as they had at first. Volunteer and Thistle, too, set the booms well forward until the headsails were becalmed and the spinakers were over the topmast stay, but Mayflower ran by the lee sufficiently to keep hers full, and so held a better pace. Finally Volunteer, at 11:53, took in hers and allowed the balloon jibtopsail to belly out until it appeared to do all the pulling. Just at noon Volunteer set her jib and staysail and Mayflower took in spinaker, but as she did so her balloon jibtopsail went into ribbons, flying out from the stay, seeing which, Volunteer soon took in hers. Mayflower cleared the wreck and set a jibtopsail, while Volunteer continued under working headsails only over the short distance now left to the mark. Meanwhile the flagship had stopped and was signaling for a course W.S.W., 9 miles, thus bringing the wind nearly abeam. The times were:

Volunteer.....12 17 43 Mayflower.....12 20 07

Thus Mayflower had gained 22s. in the run of 10 miles.

Volunteer jibed with jibtopsail aloft in stops, while Mayflower lowered hers as she came on the new course. At the start there had been little sea, but now there was quite a tumble, and all the boats were going into it. Volunteer doing the best. She heeled at times, but carried her sail well and toed and heeled through the seas as though she liked it. The wind was now much heavier and both were lying down at times to a very cuttery angle. At 12:30 Volunteer lowered her clubtopsail and at 12:38 Mayflower followed her example. At 12:45 Thistle struck her topsail and housed topmast. She had been going along at a good gait, but sailing as she was no fair comparison with Volunteer was possible. Volunteer, under working topsail, after lowering the jibtopsail she had hoisted at the mark but had not broken out, went straight on her course for the flagship, now ahead of the lot and running for Ocean Grove. When 8 miles were logged the Electra stopped and took a range with a building on shore, while the yachts came under her stern to tack and return over the same course. Mayflower was luffed out until she was far to windward both of Volunteer and her own course, the result being that she had to case off a good deal to get down to the mark. They turned:

Volunteer.....1 03 23 Mayflower.....1 07 10

Volunteer had added 1m. 23s. to the lead she had at the preceding mark, the distance being 8 to 9 miles, a reach in a strong breeze. Volunteer was able to carry her topsail home, but Mayflower evidently had more wind than she wanted. She luffed out for a time, and took the puffs as easily as possible, but the topsail was too much for her, and at 1:15 it came in, and as soon as possible the topmast was housed. She and Thistle, both under lower sail now, had a rub all the way to the next mark, the sailing being very even. Steadily Volunteer gained, and as she ran through a fleet of dories around a solitary fishing smack, and again passed the Haviland, she had piled up two minutes more to her credit. The times were: Volunteer 1:50:32, Mayflower 1:56:18.

The wind was now blowing dead down the last leg, and there was still plenty of weight in it as Volunteer luffed up at the mark and started on the first tack for home. She held this, the port tack, only for a few minutes, then she tacked in toward the Jersey beach. Meanwhile both Mayflower and Thistle held the port tack out to sea, and Volunteer soon came about again well to windward of them on the same tack. At 2:12 Volunteer went on starboard tack again, making a long leg of it, while Mayflower, now beaten beyond hope, held out on a seaward tack. The leader was still carrying her working topsail and carrying it well, but Mayflower was under low sails and with topmast still housed. There was still quite a sea running, rougher water than most races are sailed in, but it did not trouble Volunteer seriously. Steadily she gained on Mayflower until when the gun from Electra saluted her when she crossed the line she had a lead of 19m. Mayflower and Thistle came up nearly together, though the latter was plainly playing around during the last part of the beat. The times were:

Volunteer.....3 32 46 Mayflower.....3 51 34

Thus Volunteer beats Mayflower 19m. 2s. over a course of 38 miles, and of this 13m. was made in the 10-mile beat to windward. As a test the course and weather were all that could be asked and there is fortunately no doubt as to the committee's decision, made at once after the finish. That Volunteer is faster and stiffer in a blow is beyond doubt, but the exact measure of her superiority has not yet been obtained. Remembering the previous work of Mayflower and Puritan it is too much to expect that she is better by the full amount of the figures, 13m., but it is more than likely that Mayflower paid heavily for her extra sail area, lately added. It was evident last year that she was none too stiff at best, and now she is lugging still more canvas. We have no exact figures as to the force of the wind, but it did not seem any heavier than in the June race at Marblehead, when she did well with topsail set all day, but since then sails and spars have been increased. Again, she was sailed then by her original crew and owner, and before accepting the figures of the present race it is worth while to consider what would have been the relative positions had Gen. Paine and Mr. Burgess been aboard Mayflower and her crew aboard Volunteer. Comparisons are odious, but it is generally admitted that none of the large class have been handled at any time in such form as Puritan, Mayflower and Volunteer have in succession in the hands of these gentlemen and the able associates they have gathered about them that it is no reflection on Mayflower's owner and crew to lay part of the loss to the handling. Mayflower was sailed, and very well sailed too, by Capt. Louis Downs, an old pilot and skillful yacht skipper, but his hand was new to the wheel. Would Mayflower of last June or September have been beaten as badly by Volunteer? We think not, but even if it were so it is plain that the new boat is the swifter and surer vessel to defend the Cup. This was the prompt decision of the committee and the following letters were at once despatched to the yachts:

ON BOARD FLAGSHIP ELECTRA,
OFF SANDY HOOK, Sept. 16, 1887.

To Gen. Paine, Sloop Yacht Volunteer:

SIR—The America Cup Committee have decided to select the Volunteer as the defender of the America's Cup in the international races, the challenger for the cup being the Thistle.

You are requested to be ready for the races upon Sept. 27, 29 and (if necessary) Oct. 1, 1887. Very respectfully,

JAMES D. SMITH,
Chairman of the Committee.

ON BOARD FLAGSHIP ELECTRA,
OFF SANDY HOOK, Sept. 16, 1887.

To Rear-Commodore Morgan, N. Y. Y. C., Sloop Yacht Mayflower:

SIR—The America Cup Committee have decided to select the Volunteer as the defender of the America's Cup in the international races, the challenger for the cup being the Thistle.

The committee desire to express their thanks and obligations to yourself personally for the splendid display of yachting skill in trial of to day. Very respectfully,

JAMES D. SMITH,
Chairman of the Committee.

After the finish the two were taken in tow, while Thistle sailed home alone. Nothing now remains but to put Volunteer in the best possible shape for the first contest on Tuesday next. Mayflower was stripped Saturday and will lay up at once at Port Jefferson.

KEEP OFF THE COURSE.

THE races of Tuesday, Thursday and perhaps Saturday will be by all odds the most important contests that have ever taken place in the history of yachting, and it is specially desirable that the results shall not be due to anything but superiority in the yachts and their handling. To this end it is most important that attending vessels of all kinds shall keep far distant from the racers. In the past two years instances of serious interference with the yachts by steam vessels have been of too frequent occurrence, but in view of the special importance of the races this year it is hoped that the captains of all vessels, including steam yachts as well as tugs and steamers, will give attention to the following circular:

ON BOARD FLAGSHIP ELECTRA,
SEPT. 15, 1887.

Editor Forest and Stream:

You will greatly oblige the Committee of the America Cup and especially the Regatta Committee of the New York Y. C. if, through the columns of your paper, you will call the attention of all captains and owners of vessels, and especially of all steam vessels, of the great importance and absolute necessity of keeping a long distance to leeward of the yachts competing in the Cup races. A steamer passing close to a yacht will often give a back draught of wind, together with a wash of sea, both interfering with her speed. The cutting in close ahead or astern should likewise be avoided.

This appeal would hardly seem necessary if the experience of former Cup races did not warrant it.

The fairest kind of fair play should be given to both challenger and challenged, and we feel it is but necessary to call the attention of the public to this matter in order to insure that fair play which we so much desire.

Yours, respectfully,

THE AMERICA CUP COMMITTEE.

AMERICA AND GITANA MATCH.

A MATCH was lately made by Com. W. F. Weld, E. Y. C., and Gen. B. F. Butler between their schooners, Gitana, 97ft. 4in. l.w.l., and America, 96ft., to be sailed off Marblehead for $1,000 a side, on Sept. 17. Both yachts were ready in the morning, but there was little wind. A course was laid out from Halfway Rock to Harding's Ledge buoy, thence 17 miles northeast to a markboat off Eastern Point, and home, 36 miles. The steam yacht Ocean Gem, with the judges and Gen. Butler on board did duty as juages' boat. The wind was light northeast at 11:42, when the start was given, and both carried balloon canvas. America went over promptly but Gitana lost over 7m. in working to the line in a very light wind. The start was timed:

America.....11 44 49 Gitana.....11 51 56

Shortly after the start the wind shifted to south and balloonjibtopsails came in as the two beat in toward Nahant, then made a short leg off shore and a long one for Harding's, turning the latter:

America.....2 43 13 Gitana.....2 46 15

There was trouble on each boat with balloonsails before they were set and trimmed, but at last both were away for the second mark, with wind well aft. The times were:

America.....5 32 00 Gitana.....5 38 00

The finish was in a light wind, America winning. The times were:

	Start.	Finish.	Elapsed.
America	11 44 49	6 31 49	6 47 00
Gitana	11 51 56	6 39 01	6 47 05

There was no time allowance between the boats.

JERSEY CITY Y. C.—The fall regatta on Sept. 14 failed for lack of wind. The larger yachts failed to finish, but Annie Forsythe and Emma made the course in their class, the former winning.

THISTLE'S MIDSHIP SECTION.

Editor Forest and Stream:

The New York *Herald* shows a great deal of enterprise in publishing the true midship section of the cutter Thistle last Tuesday. The identical section was published in your "Supplement" six weeks ago, and has since been seen and studied by pretty much every living being under the sun. The section has been republished in many foreign papers, with this little difference, that they give credit to the source of their information, while the *Herald* has "just received it from a skilled draftsman." Likely enough the *Herald's* copy of your "Supplement" has been delayed in the mails, as the clerks in the postoffice know a good thing when they see it. Having just come to hand in the *Herald* office, that esteemed journal was on the alert, and at once produced the section and drew upon your "Supplement" for an excellent description, which is naturally enough the best of the kind which has yet appeared in the daily press and much more creditable to the *Herald* than the crazy fake foisted upon a disgusted public by one of its contemporaries. Since it has become the fashion to appropriate all the features of the cutter and pass them off as American innovations in our big "sloops," it is in perfect keeping that the daily press should borrow its plumes from headquarters and dish them up second-hand to a confiding public. The public will in that way get sound information in place of the frightful rubbish which has hitherto been manufactured in the newspaper offices by landsmen who have never been off soundings.

A SPECTATOR.

THE INTERNATIONAL RACES.

THE contests for the America's Cup in preceding years have awakened a wide interest throughout the country at large, and among all classes, but this season the excitement far exceeds that attending any previous event; and the movements of Volunteer and Thistle will be anxiously watched wherever newspapers and telegraphs penetrate.

In 1885 the interest was confined very largely to those closely connected with yachting, and comparatively little was known by the general public about the sport; but the continual successes of the Boston boats, and the renewed attempts to capture the Cup, have made the names of Volunteer and Thistle familiar even in inland places where yachts are unknown. Certainly the coming races will be the most important that have ever been sailed; the continual competitions between the two great yachting nations have led to improvements in models and methods which make the present matches the most equal that have ever taken place, the unequalled records of each boat thus far gives the unchallenged position of champion, while the known skill of the principals on each side makes it certain that the fight will be a close one.

The rest of this week will be devoted to the final preparations, and by Monday both yachts will be afloat in perfect fighting trim. On Monday last Volunteer shipped her new boom, a stick 85ft. 9in. long, and with the new mainsail bent on the previous Saturday she was out for a sail down the Bay. Thistle lay at her moorings on Sunday and Monday, but was under sail on Tuesday, going into the dry dock on Wednesday. On Saturday the Messrs. Clark and Mr. Watson started for a cruise down the Sound in the Mohican, but the yacht, with a pilot on board, grounded in the East River below Blackwell's Island, breaking a blade in her propeller. She at once returned and went into dock to ship a spare blade, going off on Tuesday. She will of course act as consort for Thistle, while Mr. E. C. Benedict has offered his steam yacht Oneida to Gen. Paine, to do similar duty for Volunteer. The sails of both yachts have been thoroughly overhauled, Volunteer's by Mr. John M. Wilson and Thistle's by Mr. Ratsey, who sails with her. The reports of Thistle's sailing on Friday have naturally tended to increase the confidence in Volunteer, and there is considerable betting, but the stories of immense sums sent from Scotland to back Thistle are without substantial foundation. A number of Scotch yachtsmen have lately arrived in New York for the races, among them Mr. Wm. Fife, Jr., designer of Clara, Alida, Erycina and many other racers; Messrs. Grant, of the Lenore, 20 tons, and Mr. George Clark.

The conditions for the races are officially announced as follows:

NEW YORK, Sept. 17, 1887.

The Regatta Committee have this day been notified by the America's Cup Committee that the yacht Volunteer has been selected by them to defend the America's Cup, and that they have also agreed with Vice-Com. Bell that the races with the Thistle shall take place, barring unavoidable accidents to either yacht, as follows:

Sept. 27—At 10 A. M., over the New York Y. C. course.

Sept. 29—At 10:30 A. M., twenty miles to windward or to leeward and back from Scotland Lightship or from Sandy Hook Lightship, as will be determined on the morning of the race, and if necessary.

Oct. 1—At 10:30 A. M., triangular course of forty miles outside, starting from the Scotland Lightship.

In compliance with this arrangement the Regatta Committee give notice that the races will be sailed as above.

The rules of the New York Yacht Club, except as otherwise hereinafter provided, will govern the sailing of the races.

Yachts while sailing the race must carry their private signals at the main peak.

The signals for starting will be given from the flagship Electra, as follows, viz.:

Preparatory Signal.—One gun will be fired, and at the same time the United States Ensign will be lowered from the foremast, and a blue peter set in its place.

The Start.—Ten minutes later there will be a second gun fired, the blue peter will be lowered and the yacht club signal set in its place, when the time of each yacht will be taken as it crosses the line. Five minutes later there will be a third gun fired, and this time will be recorded as the time of either yacht starting in the race thereafter.

Note.—That before any signal is given the United States Ensign will be flying at the foremast; during the preparatory period a blue peter, and after the starting gun the yacht club signal.

If practicable, a short blast of the steamer's whistle will be given when each yacht crosses the starting line.

In the race over the club course, the yachts in starting will cross an imaginary line drawn from the flagship Electra to Buoy No. 18, opposite Owl's Head, Long Island, thence (keeping outside of Fort Lafayette) to and around Buoy No. 10, passing to the west and south of it, thence to Buoy No. 8½, passing west and south of it, and north of Buoy No. 5, off the point of Sandy Hook, to and around Sandy Hook Lightship, turning it from north and east, and then returning over the same course to the westward of the home stakeboat, which will be anchored abreast of and to the eastward of Buoy No. 15. The yachts must pass to the eastward of West Bank Buoys Nos. 9, 11, 13 and 15, and to the westward of red buoys Nos. 10½, 12, 14 and 16, both going and returning, and must keep to the southward of an imaginary line drawn between buoys 8 and 8½, on Flynn's Knoll, and to the eastward of buoys 1 and 3, on the False Hook outside, going and returning.

In the outside races, at the start and finish, the yachts will pass between the flagship Electra and the Lightship, and in the triangular race, in rounding, will keep on the outside of the tugs used to mark the course.

In the windward or leeward race the yachts round the tug, leaving it on the starboard hand. The tug running off a course will display no signals until she has anchored, when she will hoist a large red ball at the masthead and keep it hoisted as long as she remains anchored.

Further necessary instructions will be given on the morning of each race.

Each race must be made in seven hours.

GOUVERNEUR KORTRIGHT,
STEPHEN PEABODY,
ALEX. TAYLOR, JR.,
Regatta Committee.

A large number of steamers will accompany the races, notices of which will be found in the daily papers. Persons coming from out of town can reach Pier 1, North River, by means of the elevated railways, and steamers for the races will be found there.

LARCHMONT Y. C.

THE postponed race for second class was sailed on Sept. 20 in a moderate N.E. wind, the course being from off Larchmont, around a markboat off Matinnicock Point, thence around markboat off Sheffield Island and home over same course, 33 miles. Only Shamrock, Titania and Gracie entered. Galatea was at anchor in the harbor and Lieut. Henn, sailed on Titania. The start was made at 11 A. M., but the long interval of ten minutes had nearly expired before Shamrock crossed, while both the others were handicapped, the times being: Shamrock, 11:09:58; Gracie, 11:10:14; Titania, 11:10:37. Over the four miles to first mark Shamrock and Gracie carried balloon jibtopsails, while Titania, starting with baby jibtopsail, shifted to a larger one. Shamrock sailed ahead, while Titania and Gracie kept company, the former having the best of it and leaving Gracie to leeward. The times at Matinnicock were: Shamrock, 11:42:49; Titania, 11:47:29; Gracie, 11:48:58.

The next leg of 12½ miles was laid out to windward, but a shift of wind made it so that only one leg was necessary. The wind was stronger, too, but all hung on to clubtopsails. Titania did the best sailing on this leg, overtaking Shamrock. The times were: Shamrock, 1:28:37; Titania, 1:28:51; Gracie, 1:39:14.

Titania was now pushing hard for first place, both she and Shamrock carrying balloon jibtopsails, with a brisk wind on the starboard beam. The steel boat worked out to windward of Shamrock, and at 2 P. M. blanketed and passed her.

Gracie was now far astern, with clubtopsail and large jibtopsail set, when a puff struck her and in a moment she was on her beam ends. The water was up to the cabin house, and the cockpit flooded, but her owner managed to close the doors in time. The jib sheets were to leeward under water and could not be reached, and though the main sheet was eased off, the boom dragged in the water and the sail would not spill. As she went down the new balloon jibtopsail and a spinaker, which were made up in in stops and lying on the cabintop, slid into the water, and one of the crew was also thrown overboard. He clung to the jibtopsail until it sank, when he disappeared, being unable to swim. For over a minute Gracie laid down so far that those on board had given up all hopes of her righting and were preparing to swim, but she finally came up. As soon as the man was missed a life buoy was thrown, while the yacht was put about and cruised for half an hour in search of him, but no trace was found.

The other yachts were too far ahead to render assistance, and continued the race, being timed at Matinnicock: Titania, 2:56:14, Shamrock, 2:57:51. Over the short leg home Shamrock gained a little, the full times being:

	Start.	Finish.	Elapsed.	Corrected.
Titania	11 10 00	3 26 13	4 16 13	4 16 13
Shamrock	11 09 58	3 27 14	4 17 16	4 16 22
Gracie	11 10 00	Withdrew.		

Titania wins by 9 seconds.

The tug ran back after the race to learn what had happened to Gracie. The lost sailor was Charles Wirgen, 26 years of age, a Swede. At the start another of Gracie's crew met with a painful accident, his fingers being crushed by the anchor.

NEWARK Y. C. FALL REGATTA, SEPT. 13.—The Newark Y. C. has long since outgrown the narrow limits of the Passaic River, the only water near at hand, but it is only within a few weeks that it has made a decided move for larger quarters by the rental of a piece of ground at Bayonne, on Newark Bay, and the erection of a small club house, in addition to the large home house. This gives the club a station on fairly good water, the depth being the only serious drawback, but as all the yachts are centerboarders it does not so much matter. The yachts can be left at the new station, thus avoiding a tedious sail of six to eight miles up a narrow, winding river. The opening of the new station was celebrated on Sept. 12 by the fall regatta, which was sailed for the first time over the new course, from off the club house up to the head of Newark Bay, down to the Long Bridge, and back to club house. The wind blew strong N. E., or directly down the Bay, raising a good sea and bringing grief to many a swift sandbagger, a class of yacht which this club still encourages. Owing to the many capsizes and mishaps, the race was not a success.

MONTGOMERY SAILING CLUB.—Seventeenth weekly cruise. Course, Norristown to Indian Creek and return; distance, 5 miles. Wind, light easterly. The start was made at 9 A. M.:

	Length.	Finish.	Corrected.
Josephine, E. Sowers	15.00	11 59 56	2 59 21
Priscilla, E. Stanley	15.00	11 59 55	3 00 32

Elsie, E. MacAllister	15.00	Withdrawn.	
Iola, George Walker	15.00	Withdrawn.	
Princess, C. Wainwright	15.00	Withdrawn.	

Josephine wins champion pennant. Judge, Thomas Rochell.

ACCIDENT TO A YACHT.—On Sept. 16 the yacht Carrie E., of Salem, was in collision with the schooner B. F. Somes in Gloucester harbor, sinking near Ten Pound Island.

SINGLE-HANDED SAILING.—Solitary traveling appears to secure independence more completely than any other, and it has its earnest advocates in these times. The utmost thought and skill have been expended upon schemes for rendering the solitary traveler more and more completely independent of his fellow men both on land and water. Mr. John Macgregor used to be the strongest advocate for the solitary principle. His argument was that the lonely traveler could generally find some one to talk to when he wanted society, and also that conversation with any companion is speedily exhausted when two people are thrown together constantly. These ideas have been apparently accepted to some extent in America, where the type of small yacht known as the single-hand cruiser—the vessel whose owner navigates her entirely by himself—has been very carefully studied and brought to a curious perfection. In the FOREST AND STREAM, published at New York, an intelligent and humorous contributor has well described the repugnance felt by the accomplished yachtsman toward awkward people who come on board his little craft and vex her by their untidiness, leaving the marks of their boat nails for a permanent memorial. He suffers too, morally, from their discontented ways, from their impatience with those delays and small disappointments that the yachtsman takes as part of the ordinary course of things, and from their frequently evident desire to be put ashore. The taste for solitary cruising would, indeed, almost seem to be the result of unfortunate experiences in uncongenial companionship. The same unfortunate experiences may be met with in land traveling also, but they are especially likely to happen to the amateur sailor, because sailing is a peculiar passion requiring the love of water and wind and a natural affinity for sailing boats and their complicated tackle. If the chosen companion has not these instincts by nature, he has been selected without due discrimination, and is the only consequence of his presence will be to beget a desire for solitude. But I cannot think that solitude is anything better than a negative solution of the difficulty, and I can even prove that the lonely man is not always the most truly independent. When in a boat by yourself you are so completely the slave of your vessel that so long as it is in motion you have hardly leisure to eat a crust of bread. Even the American advocate of solitary sailing admits that the lonely yachtsman may sometimes have ten or twelve hours of fatigue and fasting at a stretch. Two companions relieve each other, and so give each other independence. I remember sailing in a boat with a rather stiff old gentleman who was good at the helm but not sharp enough for anything else, so he took that as his specialty, and I attended to the sails and fed the steersman and made his coffee for him. Surely he must have felt more independent than if he had been in a state of constant anxiety about sailing gear and suffering from the pangs of hunger! It is almost impossible to state fairly and truly the degree in which two men are superior to one. It is not simply the multiplication table "twice one are two," for the two can do a hundred things that are infinitely more than twice what the isolated man could accomplish, and, what is most to our present purpose, they can relieve each other, which is all-important to creatures so easily fatigued as we are. The reader may, perhaps, remember one of Mr. Macgregor's books—"The Voyage Alone in the Yawl Rob Roy"—in which he told us how he crossed the Channel from Havre to Littlehampton. Overcome with fatigue, he fell asleep in the middle of the Channel, and lay thus for six hours under the folds of the mainsail while the boat drifted. I need not expatiate on the very considerable dangers of such a situation. Two men in the same boat might have escaped the risk by watching alternately.—*P. G. Hamerton in Longman's Magazine.*

CORINTHIAN Y. C., MARBLEHEAD.—The final race of the season was sailed on Sept. 17, over the following courses: First and second classes, from judges' line, leaving Buoys 5 and 3 on starboard, Half-Way Rock on starboard, Can Buoy on outer breaker off Pig Rocks on starboard, buoy off Tom Moore's Rocks on port, Buoys 3 and 5 on port, to finish; 10 miles. Third class, from judges' line to buoy off Chappel's Ledge on starboard, buoy on Gooseberry Ledge on starboard, stakeboat one-half mile south of Marblehead Rock on starboard, Buoys 3 and 5 on starboard, to finish; 6 miles. The wind was fresh S.W. at the start, but fell to a calm when the race was half over. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS CENTERBOARDS.

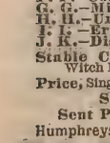
THIRD CLASS KEELS.			
Nixie, A. L. Cochrane	20.09	1 43 52	1 21 28

The judges were Messrs. Chas. E. Andrews, Wm. Eddy and Geo. W. Jackson.

EM ELL EYE AND COYOTE.—A match was sailed on Sept. 17 between these two boats, the course being from judges' boat, anchored off South Boston pier, to Sculpin Ledge buoy, leaving it on port to buoy 6 on lower middle, leaving on port to line, leaving flagboat on port, thence to buoy 6 on lower middle, leaving it on starboard, thence to Sculpin Ledge buoy, leaving it on starboard, thence to starting line, 14 miles. Coyote allowed 1m. 39s. In the light S.W. wind Coyote took the lead, but Em Ell Eye soon passed her, and gained steadily, passing the judges' boat at 4.17.22, with Coyote 4.17 52. On the next round there was more wind, but Em Ell Eye continued to gain, the finish being timed:



Em Ell Eye ..... 5 29 08 Coyote 5 38 40

Em Ell Eye wins by 11m. 5s. corrected time. S. A. Freeman acted as judge.

YACHT FURNITURE.—FOLD-UP LAVATORIES.—One of the most convenient pieces of yacht furniture yet devised is the folding lavatory seen in some of the imported cutters now in this country. The outfit includes a tank for water, a washbasin and a second tank below for waste water, all in one frame, the dimensions of the largest size being 3ft. 8in. high, 1ft. 6in. wide and 8in. extreme depth. The basin folds up when not in use, emptying the water as it does so. When open the water faucet and dishes for soap and brushes are seen inside. The entire arrangement is compact and convenient. The cost in England ranges from $56 for the largest size in teak or mahogany, including mirror, down to $13 for the small size in varnished pine. They are furnished by George Wilson, 20 Glasshouse street, London.

LLOYD'S REGISTER.—We have received Supplement No. 1, containing alterations up to Aug. 13, 1887.

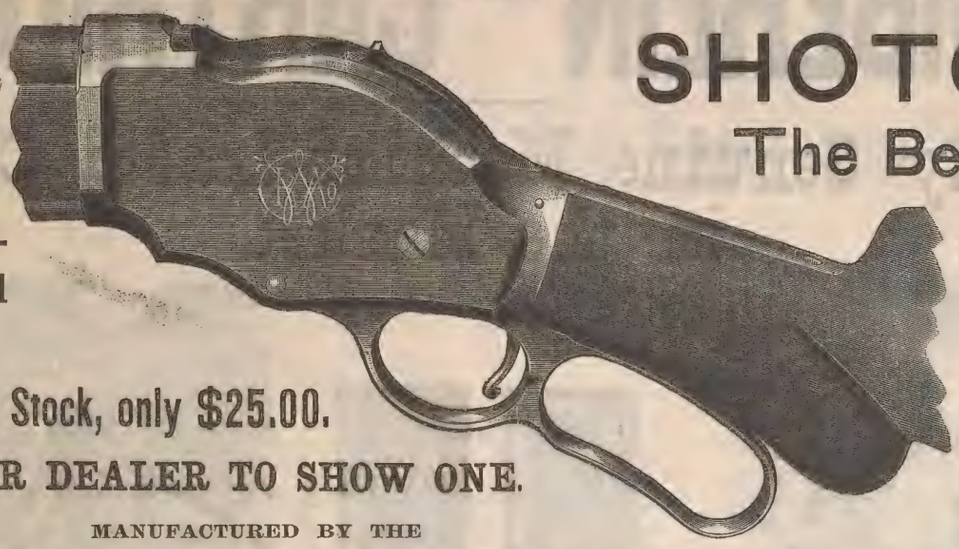
The "Mayer" Minnow Casting and Trolling Rod.

This rod is made from specifications furnished by Professor Alfred M. Mayer, who with this rod and an Imbrie Black Bass Reel won first prize for black bass casting at the tournament of the National Rod and Reel Association, Oct. 28, 1884.

Its proportions were reached after a long series of experiments, the object of which was to obtain a round section bamboo rod of about 9 ounces that would feel light in the hand, be well balanced, not throw off a delicately mouthed minnow in making long casts, and finally, after striking the bass, would have enough spring and flexibility to afford the angler the same pleasure as that given him when playing a bass on a fly rod.

The rod has two tips, one 6 inches shorter than the other; the shorter tip is used for trolling and in casting when wading.



This rod has been thoroughly tested in both lakes and quick water, and anglers who have used it are unqualified in praises of its staunchness and the delicacy of its action.

Our rods have taken the highest prize at every tournament in which they have been used.

A NOTABLE ART ENTERPRISE!

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson's poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actual canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature, fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. The upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene. In the foreground a buck, just shot, is falling on the edge of a lake. Tearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channel outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scene is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17½in. The pictures have the tint and tint border, and the artist's remarque and signature, and form artist's proofs, an édition de luxe.

PRICE, $30 FOR THE SET; SINGLE PICIURES, $3.

THE CREEDMOOR MEETING.

THE full report made in our last issue of the recent fall meeting at Creedmoor left little to add in the way of explanation. The entry list and the score list showed that the meeting was not up to anything like a decent standard in the way of attendance, and showed that, taking the luck of weather, there are marksmen in the militia as well as in the civil matches who can get out about all that a rifle is capable of.

When we hear complaints that the directors of the National Rifle Association do not put forward sufficient inducement to bring marksmen to the meetings, we can point to the disproportion in prizes and entries. Why is it that the Wimbledon cup has only three entries? Is it no honor to take and hold such a trophy for a year? Is all the sport, and pleasure, and bodily profit of long range shooting gone because there is no international match on the tapis with its newspaper notoriety and general parade in public view? If the long-range men, who are supposed to belong to what our English cousins so clumsily and vulgarly style "gentlemen sportsmen," do not care enough for the sport of rifle shooting to keep up a lively rivalry for such a piece of honor plate as the Wimbledon cup, then it must be confessed that rifle shooting is on a decline, and that the pot-hunting, lucre-loving shots are in the ascendant.

Again, if any one shall say that the Creedmoor range has not accomplished anything in the way of making good marksmen, the recent fall meeting will go on record as a contradiction. The range has a proud and a growing record. The scores of to-day beat the scores of yesterday, and each annual gathering find better weapons on hand and more intelligent, more skillful men to shoot them. This is progress, and the National Rifle Association is to be credited with all this advance, and not only on its own range, but on a hundred ranges which have been called into being because a decade and a half ago the Long Island shooting ground was established.

It is to be regretted perhaps that the range has not a capable statistician; by this we mean one who would and could collect all the data which might be of value in the future to those who see the science of fine marksmanship lying behind the art as it is practiced on the range. Each ndividual who shoots profits by his own experience. Each man who would become a shot must travel this path of personal training, but the experience of every one who goes to the range and strives carefully and honestly to reach perfection is worth more to those who make rifles and ammunition, or who study as inventors to improve the present weapons. Creedmoor should furnish an immense amount of data of this sort. It does not, and to that extent is not following its entire mission.

There is nothing to be discouraged at in the past meeting. There are bigger gatherings abroad, beside which the Creedmoor assembly would figure as a corporal's guard against an army corps. Yet the average shooting is far better at Creedmoor than at Geneva or at Brussels or even at Wimbledon. There are many causes which go together to explain why we do not see crowds at Creedmoor; yet, for all that, the range is exciting a wide-spread influence for good, and it would be a national loss of no small moment if the butts there should be abandoned and a real and universal apathy fall upon the sport in the metropolis.

THEY JIGGED THEM.

IN a letter from a Boston correspondent, "Special," in the FOREST AND STREAM of Sept. 15, it was reported that two Maine trout exhibited in a Boston show window were attracting much attention because of their size and beauty. One measured 23in. in length and weighed 8½lbs.; the other was 22in. and weighed 6½lbs. These were two of a total catch of twenty-one, said to have been caught Aug. 31 at the Upper Dam of Richardson Lake, near the Union Waterpower Co.'s works. Mr. T. B. Stewart, of New York, had the credit of their capture, and the letter said; "Mr. T. B. Stewart, of New York city, is just out with a better record than ever, though previously he has made some good scores in taking the Androscoggin trout with the fly. Mr. Stewart has visited the Upper Dam, Richardson Lake, nearly every season for a number of years, and almost always in the fly-fishing season. * * * These are not the largest trout that have ever been taken at that point, but they are very large to be caught with the fly. * * * The many sportsmen who have met Mr. Stewart at the Upper Dam on former seasons, will feel like congratulating him on his good success."

It now appears that there was an error in our correspondent's account of this affair. The weights and lengths of the fish were probably as given and they were caught in the locality and by the person named, but there is no reason to suppose that they were taken with the fly. They were jigged, or doctored with "the silent doctor."

The method is one of which most anglers have heard, but it is to be hoped that not many of those who make pretension to being fly-fishermen or legitimate bait-fishermen, are practically familiar with it. The jig is a very simple implement. It consists of a hook or a number of hooks attached to a pole or to a line with or without a rod. That is all there is to it; no bait, no fly, nothing but just bare hook. This is let down into the water underneath the fish or by the side of it, and jerked upward or sidewise. The hook is driven into the fish's belly or side or head or tail, and there you have him! The jig is sometimes called "the silent doctor." Under either name, as a device for taking trout on their spawning beds, it is just about as infernal an engine of destruction as any abhorred by right-minded anglers and resorted to by poachers, fish-hogs and big-fish-in-the-show-window big-name-in-the-newspaper notoriety hunters.

Jigging has been one of the curses of Maine trout waters. In the fall of the year the big fish gather on the spawning beds, and there, ranged in rows, they lie motionless, utterly disdainful of the most tempting wiles and lures. They are not in striking mood. They can be jigged; "the silent doctor" will take them; and "the silent doctor" it is. Men come from distant cities, appareled in the guise of anglers, equipped with expensive tackle, inscribing on the hotel register names well known in fishing clubs, hire boats and guides, paying those men well to serve as accomplices, and then sneak down to the spawning beds and jig trout, keeping an eye out the while to see that no one detects them. When they succeed in jabbing their jig into a fish, if no one be near to see, they yank it in without any nonsense; or if there be a spectator they "play" the impaled trout, and make a great ado, even to giving the butt, until the victim can be taken in and unjigged without detection. The feat is bragged about as a fly-fishing performance, and if the marks of the jig are not too plain the fish is dispatched to some city show window to be exhibited, after the manner of those jigged by Mr. Stewart, as trophies of their captor's fly-fishing skill.

The jigging abuse is of long standing, and the time has come when an end should be put to it once and for all. At the particular point in question, the scene of Mr. Stewart's jigging exploit, there should be stationed a fish warden to watch this one spot through September and October, or if Maine's parsimonious appropriation for protection will not cover the expense of providing such an officer, an amendment might be added to the law to close this death trap by forbidding any fishing whatever between the Upper Dam and the lake below. This would be a deprivation to those who fish legitimately, but it is an instance where the innocent must suffer with the guilty.

As it is now, the wardens appear to find difficulty in bringing offenders to book. Game and fish warden Geo. D. Huntoon, of Rangely, did succeed last week in capturing two jiggers, Messrs. T. B. Stewart, of this city, and Mark Hollingsworth, of Boston, but tardily and not until most of their jigged trout had been distributed around or shipped out of the State. They went before an Andover justice and each put in a plea of guilty, Stewart being docked $25 and Hollingsworth $28.

The psychologic aspect of this case we are quite free to confess we do not understand; the peculiar condition of mind that prompts a professed fly-fisherman to jig trout for brag has never been discussed in the text-books. Here is a man who is presumably a devotee of fly-fishing, for the name of T. B. Stewart appears in the list of vice-presidents of the National Rod and Reel Association. Of that organization the "aims and objects" are stated to be: "The preservation of game fish by every possible means, the cultivation of that fraternal feeling which always exists among the lovers of our gentle sport, and the holding of an annual tournament to compare excellence in the use of rod and reel." At the last tournament Mr. Stewart gave a prize for excellence in the "expert light rod contest" in "single-handed fly-casting." It would be presumed that a public patron of the fine art of angling, associating with fly-fishermen and being numbered among them, would have the utmost contempt for such clumsy fish murdering devices as a jig. Yet Mr. Stewart goes to Maine and jigs trout. He yanks in the big ones in a style emulating the veriest spawning bed poacher that ever skulked out of the way of a warden. How is the personality of the Harlem Mere fly-caster to be reconciled with that of the Upper Dam jig dabber? Have we here perhaps a dopplegänger?

THE YACHT RACE.

ON Tuesday morning the general opinion of all interested in the great yacht race was that Thistle was a sure winner over the inside course, but with no chance in a breeze. By Tuesday night the wind was in another quarter, and Thistle was generally regarded as unable to sail with any of the American boats. To-day another race is to be sailed, and there is no telling what the next move of the popular Volunteer may be.

The wildest fluctuations of the stock market do not equal the quick changes of the public favor. It is not yet clear on what grounds an easy victory for Thistle was expected; all the real evidence pointed toward a very close race, with chances about even. Now that Thistle has been beaten, there is as little reason for pronouncing her to be a slow boat as there was before for extravagant estimates of her speed. Worse luck never met a yacht than she had on Tuesday, and while she lost a place she should have held at the start, in what little show at fair sailing she finally had she did very well, fully holding Volunteer over half the course. As to the race to-day, there is every probability that it will be very close, and reverse the poor opinion now generally held of the boat. Should she win, her stock will rise as quickly as it has fallen, and possibly with no more reason.

Apart from the sport and pleasure of such races, there is a great benefit to be derived from an intelligent study of the results and attendant circumstances; but the present tendency is to exalt or condemn a boat upon the most superficial grounds. Even if she loses, there is ample material for study in the Thistle, but with the present hasty and erroneous conclusions pro and con, the chances for a fair and thorough comparison of the strong and weak points of each boat are very small, and a larger part of the lessons that every prominent boat can teach will be lost to all but a few.

The Sportsman Tourist.

Address all communications to the Forest and Stream Pub. Co

IN THE SAWTOOTH RANGE.—I.

AS a preface to this short account of my last year's hunt in Idaho, I think it my duty to thank the FOREST AND STREAM as having been the medium to introduce me to the many pleasures which I have enjoyed in that far-off territory. I happened one day to read a very interesting article in the columns of this journal on "Large Game in Idaho:" this aroused my hunting passions to such an extent that I mustered courage to inquire for details and particulars, which were readily given, and this also introduced me to the writer of the account, with whom I enjoyed, three years ago, the wonders of the National Park and afterward my first hunt in Idaho. But now for my last hunt.

I shipped by freight to Mountain Home part of my camping outfit. This included an umbrella tent, which is my own invention; it is handy to pack on a horse when moving camp, having only one pole in the center, which, being made out of bamboo, telescopes like a fishing rod. There were also my fur-lined sleeping bag, horsehide suit, pack and riding saddles, bridles, ropes, etc., ample ammunition for my rifle and shotgun, and also coffee, tea, condensed milk, baking powder, cigars and tobacco. I started on the 15th at 7 P. M. by the Erie Railroad and got to Detroit next day. Here resides the writer of the article on large game in Idaho, who is known to the readers of your paper as "Prairie Dog." He met me on my arrival, and I spent a happy day with him and his good wife. The next day I took the 1:55 P. M. for Chicago. My "old pard" felt pretty blue when we parted. He knew what sport was in store for me, while he had to return to the dull monotonous office work of his vocation. I reached Chicago one hour too late to make connection, and had to lie over. Next day—Sunday, 18th—left on the Northwestern; made Council Bluffs the 19th, 9 A. M. Had to wait here or at Omaha till 7:50 that night; rechecked my baggage at the last place, and started again, one hour behind the specified time. Had breakfast at North Platte in the morning, dined at Fort Sidney, and supped at Cheyenne. Wednesday, the 21st, reached Green River, where I left the Union Pacific for the Oregon Short Line, and next evening at 11:45 arrived at Shoshone.

Intending to see the falls, I stopped at the Dewey House. Next morning took conveyance to the falls, they are about 26 miles through a monotonous sage prairie. As one nears the falls, a ragged, zigzag line of black marks the edge of the walls of the Snake Cañon, and a dull throbbing sound reaches the ear. Stepping near the cañon wall, I looked down into a broad circular excavation, over 700ft. deep; the river flowing quietly until plunging into a labyrinth of rocks, and tumbling then over a precipice more than 200ft. in depth. Among the islands above the brink are several beautiful cascades: most prominent in view is a colossal upright boulder; a pair of eagles have selected this lofty and secure resort, and have made it their undisputed home for a number of years; and it is accordingly named Eagle Rock. Walking down the steep, dangerous descent, rather than trusting to the wagon, I soon got to the river side; a chain ferry will take one to the other side, and to the hotel. Enjoying a fair dinner, and looking the falls over from below and this side of the river, we left them about 6 o'clock, got back to Shoshone at 11. One hour later I was seated in the west-bound train, arriving next morning 3 A. M., at Mountain Home, the terminus of my long railroad journey. This is a small but lively station, being the nearest railroad point to the Rocky Bar Mining Camp, to which there is a good deal freighting, and a stage runs from here to Rocky Bar, a distance of 72 miles. The next morning after a good night's rest and breakfast, I looked the town over. Two years ago I had been here, but the place looked about the same. I found my freight, which was shipped to this point, in perfect shape, thanks to the kindness of Mr. Scranton, the station agent. Friend Bill McK., of the Bonaparte Mines, was to meet me here with his team, and later in the afternoon he came rattling along accompanied by his young wife. To say that I was only too glad to see his good honest face, would hardly express my feeling.

In the morning we all went to the supply store to purchase the rest of the provision, cooking utensils and other necessaries which I would need on my trip, and the storekeeper, who knew what was wanted, soon had my outfit complete.

Sunday, the 25th, we started to the mountains. One large box and trunk we took along with us in the wagon, the other box, a barrel with No. 3 and 4 beaver traps and a large bear trap, I had arranged to have freighted with the first team coming to Rocky Bar. We were soon spinning along the dusty stage route, glad to leave the station and hot, desolate plains behind us. We drove thirty-five miles to Fred Cooper's ranch on Little Camas prairie; he was an old friend and hunting companion. While Fred was getting supper and Bill was tending to horses, Mrs. McK. and I caught a nice mess of trout in the creek near by in less than one hour. On leaving Detroit my "old pard," who is an ardent disciple of Izaak Walton, had given me a book of assorted flies; these now came in very handy; Mrs. McK. especially enjoyed this sport, much preferring them to the commonly used grasshopper. Bright and early next morning we were off again, and after a delightful drive along the South Boise River amid beautiful mountain scenery on both sides we reached Rocky Bar Junction. Here we left the stage road, climbing up through a dismal cañon and several times fording the Feather River. Cayuse and Bonaparte creeks, we came at last to the mines, which we made before sundown. Two years ago my Detroit friend and I drove from the Yellowstone Park by way of Beaver Cañon and Wood River to these mines. He had known Mr. McK. for years, but I was a perfect stranger. Our host had treated me so kindly and had made me feel so much at home that now, when I beheld the buildings, outhouses, stamp mills, stables, etc., all seemed to welcome me back. While Mrs. McK. prepared supper, Bill and I unloaded the wagon, placing my goods and chattels in a cosy room assigned to me as my headquarters until going on my long hunting trip. Refreshed after a solid night's rest and nice breakfast I went to look for my horses, which McK. had previously purchased for me. Told where I most likely would find them, I soon came across them grazing with his own band a mile or so above the mine. I was well pleased with the appearance of my ponies and had also been assured of their gentleness and that they were used to riding and pack saddles.

Getting back to the mine for dinner I found Billy Howard and Charles Hopkins waiting for me, both old friends and hunting companions, the first one a relative to McK. and working in his mine, the other working a placer mine claim with his brother Billy Hopkins, five miles below, near Junction Bar. We were soon engaged raking over the good old times and discussing prospective plans for my present hunting campaign.

Charles's, as well as McK.'s camp, being out of fresh meat, proposed a little hunt, to which I gladly assented, and the next morning early found me riding one of McK.'s horses, leading another packed with grub, cooking utensils and camp outfit, bound for Charles's cabin, found him waiting on his handsome chestnut sorrel horse, and with two more pack horses. Billy, his brother, was glad to see me, and wished us good luck. We were soon on our way, following along the picturesque South Boise River to our hunting grounds of two years ago.

On our way we overtook a team, driven by friend Jem Nicholson, bound for Bascomb's Ranch. As we intended to hunt in that vicinity, he insisted that we should put up there, telling us of a lick close by, which was used a good deal by deer. Promising to meet at the old ranch, we parted, as he with his wagon had to go a different route from ours. I had my Parker along, and we killed a number of grouse, fat and plump, and delicious morsels. Out in these wild and sparsely populated regions the butcher markets are far and few between; the people are obliged to depend on game; but in my experience I have never seen any wanton slaughter; on the contrary I have found them extremely considerate in killing only bucks in the close season, and not more than will answer for their necessary wants.

We reached Bascomb Ranch before sundown, and found Nicholson waiting supper for us, after which Charles and I took our rifles to watch at the deer lick, not very far off. We lay in the roughly built blind constructed out of logs placed crosswise, through which we could see all over, until it was too dark to shoot, when we left, hoping to meet with better luck in the morning, as deer never or very seldom use licks in the daytime. But we were doomed to the same bad luck, for no deer made its appearance. Getting back in time for a fine grouse breakfast, we decided to shift quarters, and try further up, on the other side of the river, near an old cabin, where two years before we had killed so many goats.

Intending to be back next day we left most of our truck, only taking some grub and blankets, strapped on the pack horses. As Jem N. was to leave in the morning, to winter in Rocky Bar, we promised to be back before his start. Just before fording Charles saw some ducks in the river, and as shooting a shotgun was something new to him, I left him enjoy it. He crawled behind the bushes until in gunshot, when he fired both barrels into the flock. The report made my horses wild, especially the one I was riding; he began to rear and buck, trying to run away. Unfortunately the pack horses, which I led by their halters, were bound to go in the opposite direction. Having my rifle and bridle in the other hand, I felt that I must let go of something, so I let go the halter ropes of the pack horses. My frisky pony feeling the sudden relief, gave one extra jump for joy, so sudden and high as to send my rifle flying out of my hand, besides testing to the utmost my cowboy equestrianship. Hanging on to the horse like an Indian I conquered at last. Charles apparently had enjoyed the circus, and had just captured the contrary-minded pack horses. I was afraid to look at my rifle, fearing especially for the Lyman sight, but my old reliable Sharps was all right and the sights unharmed.

After this little incident we safely reached our old hunting camp, where we found the old hut, just as we left it two years ago. The horses, after being hobbled, were soon enjoying the rich and plentiful pasture; and after a cold lunch we stretched ourselves in the shade of giant pines and hemlocks, smoking our pipes in *dolce far niente*. When the sun began to sink we thought it time to go to our stations, I to watch a warm spring close by, while Charles went down into a willow meadow to another dry lick, promising to call for me at his return. Taking along my shotgun, besides the rifle, I soon took position in the blind, making myself as comfortable as possible. I watched and waited carefully, but no signs of game appeared. The majestic high pines began to throw long and fanciful shadows, and old Sol after giving one more parting look disappeared behind some mountain peaks. Twilight was setting rapidly, with all its silent mysteries. Nothing disturbed the tranquillity of this primeval forest, excepting the hooting of the owl above my blind. Arousing myself out of my lethargy, thinking Charles had forgotten to call or I had not heard him, as it was now quite dark, I gave one more searching look over the lick before taking up my traps; and I thought I distinguished a whitish shadow moving at the spring. It would watch and stop, and then dip down to take a few licks at the warm spring; now it was right opposite from the blind, not 35yds. from me. Oh! how I wished for a little more light. Having my shotgun loaded with a dozen buckshot, I concluded to chance it with that. At the next dip it made I rose silently, and aiming where I guessed to be the deer's shoulder, banged away. I listened intently, as the powder smoke made it still darker to see the result of my shot; but hearing nothing whatever, no swiftly departing feet, nor eagerly hoped-for death struggle, I stepped out of the blind to go nearer for inspection.

Noticing something suspicious lying in the lick, and going closer, I saw that I killed my deer dead in its track; and as it proved later, I had driven the whole twelve buckshot through its shoulder, killing it stone dead, and without a struggle. It was a large 2-year-old buck, with a handsome pair of horns in velvet. Charles came up after a little while, hearing me shoot, but never dreaming that I had shot at a deer, and it was almost pitch dark. We started a fire, carried the deer out to the blind, and soon had it dressed and hung up. Getting back to the cabin we had fried deer's heart, freshly baked bread, with a fine cup of coffee, after which we crept into our blankets.

The next morning, after packing our deer and camp duffle on the pack horse, we started back for the ranch, which we made by noon. We found that Mr. Nicholson had just gone, and on the hot fire-place were awaiting us a fine pot of stewed grouse, hot bread and coffee, which were most grateful, for our appetite was well seasoned by the long morning ride. The weather being warm we jerked our venison so that it would not spoil. The best process of doing this is to cut the deer into medium sized pieces, except the hams, which should have deep incisions. Then make a strong brine of water and salt, in which you leave your meat from two to three hours, then hang it over a smudging smoke (but see that no flies blow the meat), and it will keep for any length of time.

Having finished this task, we concluded to try our luck on Willow Creek that evening. After a rough ride of four miles on a dim, overgrown trail, we came to a little opening and good feeding ground for our horses. Leaving them picketed here we carried rifles and blankets to the blinds not very far off. Installing ourselves within, we were soon watching the lick alternately, but strangely no deer showed itself. Charles especially felt disappointed, as he was sure of getting a deer or two, but trusting to better luck in the morning, we made ourselves as snug as possible in the blind for the night. At the dawn of day we were again at our post, but nothing stirred. Charles assured me that he had never watched this place without seeing from a pair to as many as six deer come in at once, and as the day had advanced too far, we left the blind to see if any deer had been there during the night. We soon found the cause of our disappointment. In one corner of the lick there lay the carcass of a large antlered buck, which somebody had killed and left to rot—a most foul and willful murder. This explained all. Deer will never visit licks where they scent or see the carcass of a victim. Utterly disgusted, we removed the cause of disappointment, went back to our horses and returned to the ranch, where we prepared a good dinner from our jerked venison.

After dinner, taking my shotgun, we had some sport with the numerous grouse, Charles trying to shoot them on the wing. After securing all we needed, we decided to try again on the other side, where I killed my buck. I watched at the same place. No deer came in sight, though I had a glimpse of one and heard the running of two; these must have scented me, as they made off in a great hurry. Charles, who called me on his way back, was more successful, having killed one in the willow meadow.

The next morning we started before day, noiselessly approaching my stand; but seeing no deer here, we proceeded down the meadow, where Charles had killed his the previous night. Sneaking softly through the willows, I saw him motion me to stop, and a deer emerging from behind a willow brush, he took careful aim and made a fine shot, the deer only making three jumps when it fell, never to rise. While he was going to his deer I saw another stepping from behind some brush to look for his companion and to discover the cause of alarm. Before I could get sight on it I heard Charles's rifle crack; he hit it, but unfortunately too far back; it bled freely and we trailed it for some time. Seeing that it had crossed a fork of the river, we had to get our horses to ford. After following it for some distance again to the main river, we there had to leave it to its pitiful fate, not being able to get our horses down the rocky and dangerous incline.

Packing our two deer on one horse, having left the pack animals at the ranch, we took turns riding the other. As we had all the meat needed, we started for home. It was pretty late when we reached Charles's cabin, as he kept up grouse shooting until the ammunition gave out. Here we divided the spoils of our hunt, three deer, thirty-five grouse and three mallards, he keeping the smaller share. My part, with camp outfit, made a heavy load for my pack horse, and it was quite dark before I arrived at the mines. The folks had all retired except friend Bill, glad to see me back, and delighted with our success. Relieving my horses of their saddles and packs, then hanging our game in the cool cellar, I had to relate the particulars of the hunt.

F. B.

ADIRONDACK EXTORTION.

Editor Forest and Stream:

Let me give a little note of warning to future travelers over the Northern Adirondack Railway. On going into the North Woods this year I contracted with Paul Smith's agent at the last station on the road to carry our party, camping equipage and canoe to Paul Smith's hotel, a distance of some nine miles, for a fixed sum. On arrival at the hotel, the pert clerk who rules behind the desk, discovering that we intended to camp out instead of spending our time and money loafing at the big hotel, tacked an extra charge of $3 on my canoe above the agreed price. Although the contract was clearly proven by bystanders, and although the contract price was an over-liberal remuneration for the service performed, yet the hotel managers refused to surrender the canoe until the extra amount was paid, coolly remarking that Paul Smith was not bound by any contract made with his agents. This was such a novel proposition in business morals that it quite took my breath, and realizing that, as Paul Smith controlled everything in the surrounding country, I was in a helpless condition so far as righting a wrong was concerned, I paid the $3 bonus under protest and gracefully yielded to the swindle. This was but one of a series of incidents that proved, to my mind at least, that Paul Smith's $4 per day hotel system is now run by his hired men on the "gouging" principle, and that independent camping in that region is to be discouraged to as great a degree as possible by overcharge and all the petty indignities which a monopoly can invent.

A large portion of the provisions purchased at this hotel by our party while in camp near by was thrown away, either on account of being spoiled by staleness or for the reason of its original inferiority. A camper's stomach is not generally qualmish; but odorous beefsteak at 35 cents per pound, mouldy ribs of bacon at 18 cents per pound, and wormy oatmeal, were a little too Paul Smithish for our table; so we fed them to the poor dogs and helpless fish, and eventually subsisted, in so far as was practicable, upon supplies procured from a neighboring farmhouse.

I would strongly advise those who intend to camp in that vicinity to take with them a store of provisions and thereby avoid annoying impositions.

ORANGE FRAZER.

WILMINGTON, O., Sept. 12.

Natural History.

BLACK AND SILVER FOXES.

Editor Forest and Stream:

I have just returned from an extended tour through the Northwest, and on looking over the back numbers of the FOREST AND STREAM I notice that two of your correspondents take exceptions to my theory regarding black or silver gray foxes. I wrote the article they refer to for the purpose of obtaining "more light" on that subject, and the opinions of Mr. McD., of McDames Creek (not McDavies), Cassiar, B. C., are gratefully received.

As I have before stated in your columns, I once owned a tame black fox, that was taken when quite young out of a litter of young red foxes; and having heard of other similar instances, and having also seen their skins, one in a place, scattered through the country from Nova Scotia to the Northwest, I became convinced that they belonged to the red fox family, and began to collect facts to substantiate my convictions.

Francois Mercier, Esq., of the Alaska Commercial Company, is a cultured gentleman and interested in natural history subjects. The Mercier collection, now in the Dominion Museum, Ottawa, Can., is a valuable and interesting one. Some years ago Mr. Mercier attempted to procure a female black fox for breeding purposes, but was informed by his trappers that there were no females; that all black foxes were males. This excited his interest, and to learn if this was a fact he offered a reward for a female black or silver gray fox; but everywhere throughout Alaska was met with the reply: No such animal ever seen. During the present season I have visited several Hudson Bay Company's posts and other large fur-buying firms, and have conversed on this subject with men from the extreme northern posts, and they have all expressed to me their belief in the truthfulness of Mr. Mercier's statement. I have during the present season had the pleasure of inspecting several lots of these fox skins—prime ones—caught last winter, and there were among those lots all shades, from perfectly black to almost a pure silver gray. Above and over the mere value of the pelt, I will give a liberal reward for the body, dead or alive, of a female black or silver gray fox sent to my address, Montreal, Can., or Highgate, Vt., or care of John Fannin, Esq., Government Museum, Victoria, B. C. I offer this reward for the "cause of science." If the black and red fox are of distinct families there must be female blacks taken. Has any one ever seen a female cross or bastard fox? (A bastard is a low-grade cross fox; that is, I understand them to be such.)

Regarding the black fox being finer furred than the red, such is the case; and I have also noticed that the occasional black or dark martin found East is much finer in fur than his foxy red brother. The dark martin is quite as rare in the East as the red martin is in the Northwest. Do they belong to the same family?

In northern Vermont the black squirrel is but rarely seen, but as we go west he becomes more plentiful, and in western Ontario the gray is but rarely found.

Will Mr. McD. give us his opinion regarding the black wolf? Is it not heavier furred than the large gray wolf, and do they belong to the same family? Will other of your Northwestern correspondents aid us in getting more light on this subject, for it is an interesting one?

N. PARKER LEACH.

MONTREAL, Canada.

SNAKES AND STINGS.

Editor Forest and Stream:

Talking about snakes, I believe I have a well authenticated case of the killing of a singing snake.

Some ten years ago a young farmer in western Louisiana, the region of centipedes, scorpions, and tarantulas, a young man of apparent veracity, related to me that he had killed a stinging snake, and gave a minute description of it. Still I had lingering doubts in my mind, thinking that perhaps his imagination was inflamed by his very inflammatory surroundings, and associating the stinging snake theory with the mythical hoop snake, the phantom of negro folk lore. Apropos, I have heard many circumstantial recitals of the hoop snake story, from old negroes in different localities, and the circumstances and surroundings were indentical in all of them. In all of these vivacious histories there figures a negro girl at a spring getting a pail of water, when a hoop shake comes rolling down the hill and plumps his horn into her side, from the effects of which she straightway gives up the ghost, and the snake, intent upon fulfilling his destiny, rolls on down the hill until he encounters an oak tree, which in his precipitancy he whacks his horn, or sting, into, and the oak tree incontinently withers and dies in the space of a few minutes.

But recurring to the stinging snake: Mr. William Robinson, a reputable citizen of Coahoma county, a man not likely to provoke the antics of phantom snakes by over-indulgence in the seductive juice of the corn, in other words, a sober-minded man of reputable character among his neighbors, related to me, under strict injunction of veracity, that a month ago or such matter, while engaged with some negro hands in clearing certain woods, they discovered a snake which the negroes immediately pronounced to be a stinging snake. The reptile was killed under his supervision, and he described it as being about 5ft. long, of very slim proportions, jet black on top—a brilliant shiny black—and pink underneath. He said the snake showed a great inclination to hide its head, but kept the tail flourishing around at a lively rate, and upon applying a stick a bristle-like sting was quickly thrust out from the extremity of the tail and as quickly withdrawn. This agrees substantially with the description of the Louisiana farmer. Has Miss Catherine C. Hopley ever encountered such a snake? I have been in the woods and fields the better part of thirty years, and have made the acquaintance of many varieties of snakes, but never had the pleasure of meeting a stinging snake.

A few days ago, while riding through a Mississippi swamp, I fell in with a very interesting specimen of the genus moccasin, I suppose, though unlike any other I had ever seen. He (or she) was three and a half feet long and very nearly six inches in circumference. The skin was composed of scale-like divisions, very similar to that of the rattlesnake, each having a slight protuberance at the lower point, inclined toward the tail, so that a string in the form of a noose around his body would slip readily toward the tail, but not at all toward the head. The general color was dark brown with diagonal marking of a slightly lighter shade. He was a very gentlemanly snake and endeavored to avoid a difficulty with me without exhibiting undignified haste in getting awaw. I pursued him with a stick having a twine string on the end arranged into a noose, which I several times succeeded in getting over his head, but which he succeeded in crawling through.

I secured him at last by tightening the noose just below his neck, and held him up for inspection, and to the great horror of an old negro who was with me, I cut off his head with a pen-knife. This snake showed no disposition to bite at all during the whole quarter of an hour I was "fooling" with him. On dissecting the head I found the fangs only a quarter inch long, or about one-third the length of the fangs of a rattlesnake of the same size. I found the usual contingent of immature fangs, either for periodical shedding or to provide for accidental breaking, I have not learned which. Upon this point I should feel much obliged to Miss Hopley for information.

MEMPHIS, Tenn. COAHOMA.

Through some misunderstanding, or inefficient instructions on my part, the illustrations to my paper on the rattle (FOREST AND STREAM, July 7) are somewhat confusing, and for those of my readers who are interested in the subject the editor kindly spares space for the explanations given below. But while writing I may report on the progress of the new rattle, which only yesterday was inspected for this express purpose. As was surmised, a new link appeared after the casting of the cuticle, about to occur when last writing, May 12, and there is now another link partially developed, and which will be perfect after the next desquamation, should the snake retain its present excellent health. There is therefore quite a respectable rattle again of 5in. and the "button," and it is quite possible that some believer in links may declare this remarkable *Crotalus* to be "seven years old" by the end of the season.

EXPLANATION OF ILLUSTRATIONS GIVEN JULY 7.

Fig. 1. The deformed rattle (enlarged).
Fig. 2. The very long rattle (reduced in size) terminal links worn.
Fig. 3. A perfect and not very old rattle (natural size).
Fig. 4. What remains of the rattle from which the long portion was broken off. (Somewhat enlarged in size).
Fig. 5. The form of one single link detached from the rest.
Fig. 6. Section of rattle, showing how the links run up, each into the preceding one. (Somewhat enlarged, and imperfect at the base).
Fig. 7. An average-sized rattle, the earlier links gone (natural size).

CATHERINE C. HOPLEY.

LONDON, Eng., July 27.

While clearing out a ditch in an orange grove here, a man named Bryens was up to his waist in water pulling up the "bonnets" and weeds. He forked up a moccasin five feet long from the bottom of the ditch, which exploit made him shiver, but he had grit enough to stick to his work. Only four snakes were killed in the afternoon. This is a good region for the pursuit of ophiology. B.

ORANGE BEND, Fla., Sept. 16.

THE NAMES OF BIRDS.

FORT SIMPSON, British Columbia, Sept. 5.—*Editor Forest and Stream:* Regarding Mr. McManus's calling the cheewink "catbird," in his little poem, which appears in July 14 number, and the correspondence relating thereto, may I be allowed to suggest that it is through a local name that the apparent mistake has arisen.

Our cheewink (*Pipilo oregonus*), is known altogether in this country by the local name of "catbird," for the reason that it utters the peculiar cat-like cry. The catbird proper (*Mimus carolinensis*), is not, to my knowledge, found in this province, not at least near the coast. Might it not be, therefore, that Mr. McManus's cheewink calls the cat call and thereby earns the cat name as his own?

It is certainly very confusing to thus have different birds called by the same name, and to have different names given to the same bird. Still, one may argue that as your *Corvus* in Canada is called "Jingo" because he says jingo, why should I not call my *Cygnus* in Patagonia, by the same name, when he plainly rouses me every morning with his jingo! jingo! ? The question of arranging and classifying the various local names in use for identical birds in different parts of the country should, I think, receive more attention than it hitherto has.

Geese are beginning to congregate on our flats. A few marbled godwits, ring plover and redback sandpipers are about. Northern swifts have been darting around for the last week preparatory to taking flight. A few Carolina doves have been seen. Their second summer here. I got a kingbird this summer, the first I have ever seen on this coast; also the first horned lark. W. B. A.

HABITS OF THE BADGER.

Editor Forest and Stream:

I have read with great interest Dr. Shufeldt's contribution to your columns touching this curious animal, and beg leave to add a word on some of its habits which seem noteworthy.

The badger is very courageous and is always ready to fight if the avenues of its escape are shut off. I have frequently surprised it at a distance from its hole, overtaken it on foot and had it turn on me in the fiercest manner. It can give a most severe bite and should not be handled without the gloves which Dr. Shufeldt recommends.

It may not be generally known that a blow on the end of the nose will render a badger *hors du combat* for a while. I first learned this many years ago when traveling with the Pawnee Indians. An old chief told me that this animal was easily killed by a blow on the nose, and not long afterward coming upon a badger as I was riding over the prairie I experimented to see for myself if this were true. The badger lumbered along toward home and I galloped up alongside him, and holding my rifle by the muzzle, swung it from before backward and after two or three attempts hit the animal fair on the end of the nose. The blow was not a severe one, no force being exerted, more than the momentum of the weight of the gun swinging like a pendulum. On receiving the stroke the badger turned over, kicked a few times convulsively and then lay quiet, to all appearances dead.

We were in a buffalo country where badgers were abundant, and I several times knocked them over in this way. One day, after having done this, however, it occurred to me that possibly the animal was not really dead and I waited near it for five or ten minutes. At length I saw it get up again and crawl away, apparently not much the worse for the blow it had received. On another occasion, one which had received a much more severe blow on the end of the nose did not recover. G. B. G.

[In this connection comes the following note from the Billings, Mont., *Gazette*: "O. F. Goddard and B. W. Toole, who have been out to Mr. Olden's ranch on Rock Creek on a hunting trip, returned last night. They had quite an exciting time with a badger. Mr. Goddard attacked him and but for the timely appearance on the scene of Mr. Toole, the badger would have got away."]

A NEW SUBSPECIES OF PETREL FROM GUADALUPE ISLAND.—In a paper recently read before the California Academy of Science, Mr. Walter E. Bryant described a new petrel from his collections made at Guadalupe Island, an account of which was published some months ago in FOREST AND STREAM. He says: "A series of fourteen specimens of *Oceanodroma*, collected by myself on Guadalupe Island off Lower California in March, 1886, were assigned to the species *leucorhoa* (Leach's petre'), in my paper on the ornithology of that island. In a footnote, reference was made to the considerable excess in size of the Guadalupe Island specimens over Leach's petrel of the Atlantic coast, but from lack of sufficient material for comparison I was unable to satisfactorily determine their differences, although strongly inclined to consider it a distinct race. My supposition has since been confirmed by several prominent ornithologists, and by comparison with typical specimens of Leach's petrel from Alaska and coast of Massachusetts, which were kindly loaned from the Smithsonian Institution. The Alaskan birds seem to be the same size as those from the Atlantic coast, and of about the same color. A single female from Alaska (No. 102,281 Smithsonian Coll.), is nearly as dark as the Guadalupe birds, but the upper tail coverts are much whiter and the measurements less. For this well marked local variety, I propose the name *Oceanodroma leucorhoa macrodactyla*, subsq. nov., Guadalupe Petrel. Subsq. Char., similar to *O. leucorhoa*, but larger and darker. White of upper tail coverts more restricted, and the ends of coverts broadly tipped with black. Pileum darker than back, lighter anteriorly. Bill broader and deeper at base than that of *leucorhoa*. Wing, 155—171 mm.; tail feathers, 85—99 mm.; depth of fork, 23—35 mm.; exposed culmen, 15.5—17 mm.; tarsus, 22—26 mm.; middle toe and claw, 28—30 mm. Habitat.—Guadalupe Island, Lower California. Types.—Nos. 2567, ♂ ad.; 2565, ♀ ad. Both in collection of Walter E. Bryant.

A COOT STRIKES A HOUSE.—New Castle, N. H., Sept. 24.—My brother, while walking to-day, observed the following curious and fatal freak of a butterbill coot. The coot was flying almost head to wind, which was blowing fresh, and was rapidly approaching a clump of buildings. He came nearer and nearer, and finally, without swerving a foot from his course, struck the side of a house, and broke his beak, and fell down stunned, whereupon my brother despatched him. I have often heard of sea fowl killing themselves by flying against a lighthouse in the night, but I never heard of a duck that in broad daylight flew against the broad side of a dwelling house, with sufficient force to stun him. Perhaps some of your readers can account for this curious performance.—J. WENDELL, JR.

Game Bag and Gun.

HUNTING IN THE SHOSHONE.

Editor Forest and Stream:

Mr. Rainsford inquires, in his reply to my criticism of the article he wrote in *Scribner's*, why I rushed into print to accuse him of violating necessary laws, etc. Possibly it may be fairer to give my reasons for so doing. I object to his method of trapping bears and then killing them; Mr. R. acknowledges having secured two in that manner. When I called attention to the dinner of elk steak at Heart Lake where Mr. R. was camped, I said the inference was that the elk from which the steak was cut was killed in the vicinity. Mr. Rainsford says that Heart Lake lies eight miles north of the southern boundary, therefore it is entirely in the Park. The laws of the Park very properly forbid having in possession any game (save fish) dead or alive. Hence it is a legal assumption that this elk was killed in the Park.

Mr. R. does not deny that it was killed in the Park but leads one to infer that it was killed outside and packed in as meat. In either case the law was violated.

I have been informed that Mr. Rainsford, or one of his party, did kill an elk in the Park, and that a fine was voluntarily paid for so doing. I have also been told that Mr. R. and his outfit were seen in the Park with a number of bear traps.

Mr. Rainsford objects to criticism, but calls for facts and a courteous spirit. I have given the facts as I know them, and endeavored to be as courteous in spirit as possible. I may be wrong as to facts and courtesy; if I am it will give me pleasure to say so, but the very defenseless position of the Park, and the prominence of the author whom I have ventured to criticise, have led me much against my inclination to thus "rush into print." If Mr. R. and his party did not hunt and kill bear or elk in the National Park it's the simplest thing in the world for him to say so by a manly, straightforward denial, and not split hairs about the exact geographical location of Heart Lake or lecture us on dried elk meat. If, on the other hand, Mr. R. or his party did while camping within the boundaries of the Park, trap bear or kill elk, as may be inferred by his article, it is eminently right and proper for any one to try and deter others from doing likewise by a criticism of author and article.

Mr. Rainsford pleads that because a bounty is offered for bear, and because other animals are trapped in a similar manner, it is too late to cry out about the cruelty. This, if he will pardon my saying so, is a very weak defense of the practice so many sportsmen abhor. As it may be taken for granted, Mr. R. hunts as a sportsman, for recreation and pleasant excitement, and not on the dead level of a professional skin hunter, who cares not a brass farthing about the cruelty, so long as he gets the skins and the money. ARCHIBALD ROGERS.

MOOSE IN MAINE.

BOSTON, Mass., Sept. 17. There is some moose hunting to be done in Maine as soon as the season opens, on Oct. 1. It is also to be done by about the only two successful moose hunters who go into Maine from outside of that State. Mr. A. P. Kitching has killed several moose there, and he has started on his annual excursion into the Moosehead region and down the Penobscot. He will devote his time to trout fishing in the Moosehead waters, till time to betake himself to the grounds for moose calling. He is in the acquaintance of one or two of the most successful moose callers to be found among the Indian guides. Mr. Kitching is a respected member of the wool trade of Boston. Mr. W. S. Hills, a well-known merchant of Boston, in the flour trade, has also slain his moose in Maine. He will take his departure in a few days for the wilds of the upper Moosehead. He says that he does not expect to see a moose this season on account of the slaughter last winter, but that he shall go prepared. Mr. Hills is a dead shot with a rifle, and has been very successful with the larger game. Mr. Kitching takes no shotgun at all into the woods with him this fall. He is sufficiently keen with the rifle to shoot off the heads of all the partridges he desires to kill, or rather, he says that the partridge that can get away from his rifle he does not want. His shotgun lost him a caribou last fall; for he got within gunshot of the animal, and the charge of buckshot failed to kill. With his rifle Mr. Kitching feels sure that he should have been successful.

Talking with these two moose hunters about the difficulties they have to encounter, the patience required, the amount of experience requisite in the guide, the difficulties of wind and weather, one cannot but believe that the moose hunter who tries to kill the game with the jack-light and the birch horn is by no means the worst enemy of that noble game in Maine. All the moose killed in that State last year by legitimate hunting, or even including all killed before the law was off, could be counted on the fingers of both hands. But about those killed by the lumbermen the story is different. I am much afraid, good FOREST AND STREAM, that the story you had in your issue of Sept. 15, about the large number of moose killed in Maine last winter is too true. I have been in possession of rumors of even worse purport for some time. I have refrained from publishing them in the FOREST AND STREAM earlier, for the reason that I have hoped to be able to confirm them and also to come into possession of the names of the lumber contractors who are guilty of allowing, or worse, of encouraging such slaughter of an almost extinct game animl. Indeed, even worse stories have reached me concerning the slaughter of moose in New Brunswick, and that, too, by the lumbermen last winter, after the close time had begun. I have it from one of the most extensive lumber dealers in St. John that there were over sixty moose killed by the lumbermen in the Tobique region last winter. This gentleman gets his information from the men with whom he deals. He gives it honestly, and like a man who believes exactly what he says. Still, he is not willing to give the names of the lumber contractors who have encouraged such slaughter. Again it comes from sportsmen who have been up the Tobique River this summer, that the Indian guides inform them that moose, deer and caribou are killed, regardless of the law, at these lumber camps every winter. Indeed, some of these Indians are regularly employed to hunt and supply fresh meat for the camps, regardless of the game laws. It begins to be pretty certain that it is just here that the worst enemy of the conservation of the larger game in Maine and New Brunswick exists. It is certain that it was the lumber interest that killed the bill before the Maine Legislature last winter to make September an open month for the killing of moose, deer and caribou, also to make it a penal offense to kill a cow moose at any time. The lumber interest came in and killed the bill at the very last moment of the session, almost, and at a time when it was thought that there was no opposition to its passage. What reason could the lumbermen have had? None in the world, except that they desire the meat of this large game to feed their men on. A few years ago they paid no attention whatever to game legislation in that State. They even laughed at the notion, said in open Legislature that "there was not a dozen moose in the whole State," and as for deer, "why, they are about all gone." That was true at the beginning of protective game legislation in that State, but to-day the case is different. There is now game enough on which to at least partly feed a crew of men. Protection has wrought a wonderful increase in the numbers of deer especially, and these lumbermen want them. They did not desire an extension of the open season for hunting, for it would take away the venison that they might get for feeding their men. It certainly looks that way, and here is a bad enemy to encounter. The lumber interest is one of the most powerful in the State of Maine and the same is true of New Brunswick. What is to be done? Shall the game be sacrificed to the cupidity of these lumbermen? No! There are game laws in both Maine and New Brunswick. These must be enforced. The FOREST AND STREAM and the rest of the newspaper press must be informed against this miserable destruction of the noble moose by these lumbermen. They must be made to see their meanness and cupidity; they must be made to pay for the moose and deer they kill—pay the penalties the law places upon such crimes! I shall try myself that every name of a lumber dealer who permits of or allows of such poaching at his camps shall be made public through the FOREST AND STREAM and other papers. I shall lay every possible plan to become possessed of such information the coming winter. And if A, B, C, or D and down to Y or Z allows his men, or hunters who make his lumber camps their headquarters, to hunt deer or moose in the close season, the public shall know of it.

There is one powerful ally to be looked to for aid in this attempt to stop the poaching of the lumbermen, that is, the railroads. Through sensible men as presidents and superintendents these corporations have come to take a strong stand in favor of the strict enforcement of the game laws, both in Maine and in the Provinces. These men have sense enough to understand the value of this large game alive in the forests. It is one of the most powerful attractions to draw travel. If the lumbermen desire the moose and deer to feed their men on, then the railroad and summer travel interest desires it alive in the woods, as an attraction to draw the stranger in open season. It is possible that the railroad and the summer travel and hotel interest may be stronger than the lumber interest after all. But this is not all. I have it from the best of authority that one of the largest land owners in the State of Maine—timber lands—a man who sells more stumpage than any other man or concern in that State, is a warm friend of game protection. He has rendered the Maine Game Commissioners all the aid in his power, at various times, toward bringing winter poachers to justice. He can be relied upon to help to restrain the lumbermen with whom he deals, to whom he sells the right to cut lumber, or whom he hires to cut and haul lumber. I have not the slightest doubt but what he is a strong friend of game preservation. But at the best there is a work to be done in the direction of trying to stop this winter slaughter of moose, deer and caribou. Will the readers of the FOREST AND STREAM collect all the information bearing upon this subject in their power, and above all get hold of the names of the lumbermen who allow of or encourage the killing of this noble game in close time? As for myself, I have no positive information that such slaughter has been allowed to the extent that was mentioned in the FOREST AND STREAM of Sept. 15, but I fear that it may be true. SPECIAL.

GAME ON VANCOUVER ISLAND.

VICTORIA, B. C., Sept. 3.—The open season for shooting all kinds of game, excepting hen pheasants, began here Sept. 1.

The various kinds of game here on the Island are black-tailed deer, bear, panther, lynx, blue and ruffed grouse, California and mountain quail, ducks, wild geese and English pheasants. The pheasants were imported from England and turned out in the forests near this city several years ago and were protected until the present season. The climate and country have proved suitable for them; they have increased in numbers very rapidly and have often made their appearance in the main thoroughfares of the city. The fact that cocks were to be lawful game to shoot after Sept. 1 set every man and boy here who owned a gun or could borrow a gun, on the *qui vive* to get the first shot at them; and long before early dawn the gunners were away to get some selected stand which the male pheasant was known to haunt. Accidents were numerous. Before daylight one poor gunner got peppered with No. 6 shot. But the bird hunters did not make all the mistakes, for during the day several cows were shot by deer hunters, and one unfortunate knight, who rode into the woods and left his horse tied to a bush, some hours afterward shot it for a deer.

The writer, with Mr. John Fannin, a gentleman who is the champion big-game hunter of this coast, together with two other good shots, Messers. Maynard and Knight, of Victoria, drove out to the Gold Stream Hotel, where, without any extra hard labor, we shot three deer and a quantity of smaller game; and to-day my son and I have, over the same ground, made a fair bag of deer, blue grouse and California quail. Bear and panther signs are not uncommon. The bears found here are the black, and though numerous, they keep well under cover. During the past month three panthers have been shot within a short distance of the city. One was killed with No. 6 shot.

A strong and active game protection society should be formed for Vancouver Island, with headquarters at Victoria. There is no question that hundreds of hen pheasants have already been killed, and unless the game laws are rigorously enforced, this splendid game bird will soon become exterminated. Deer and grouse are shot during all seasons of the year. Hundreds of deer are shot for their skins alone. Every British Columbia reader of the FOREST AND STREAM should assist Mr. Fannin in forming at once such a society. Once formed it would become a good working association, and much good would result from it. Now is the time to form it. Don't wait until the horse is stolen before you lock the door. STANSTEAD.

"Four o'clock, boys," sung out a voice, and I awoke with a start. The voice was that of our genial host of the Gold Stream House, and the morning was that of the 1st of September, the opening of the game season in British Columbia. Springing out of bed I quickly dressed, and having been joined by my brother Sam and an old veteran hunter, by name Jack Knight, we proceeded to dispatch a hasty breakfast before setting out in quest of the wary deer.

By the time the meal was finished the east had put on that grayish hue which heralds the approach of day, and, having filled the chambers of our Winchesters and called to our dog Sport (a cross between a water spaniel and a retriever, but nevertheless one of the best animals to start deer from the timber bottoms I ever saw), we proceeded down the wagon road which runs past the Gold Stream House for about three-quarters of a mile, and, having crossed the Esquimalt & Nanaimo Railway, struck into the foothills just as old King Sol was warming the top of Branden's Mountain, which loomed up dark and majestic about a mile away.

Rain had not fallen for over four weeks, and the timber under our feet cracked at every step, rendering traveling necessarily slow, as the greatest care had to be exercised where we placed our feet in order to make as little noise as possible. Directly below was a large wooded bottom, on the other side an immense moss-covered rock was visible through the trees. "Wait a minute, boys, till I fill my pipe," says Jack, so we seated ourselves on a fallen tree and proceeded to discuss the prospect of a very hot day, which was already beginning to make itself felt. While we were speaking a low whine drew our attention to the dog, who was looking accross the ravine; following the direction of his gaze, we saw a doe slowly ascending the rock on the other side. Jack quickly raised the sights on his rifle to 300yds. and whistled. The doe stopped right on the top of the rock and looked around; now the golden opportunity presented itself, and raising his rifle, he took a steady aim and fired. The doe gave two or three jumps and then rolled over and over down the rock. Hastily crossing the ravine, we let the dog go, and in a few minutes a sharp yelp told us that he had found the deer. The bullet had passed clear through the neck, a dead shot; and having cut her throat and taken out the entrails, we hung the carcass up in a tree and proceeded to climb the mountain, by no means an easy task, especially with a hot sun pouring down upon us.

About half way up the dog flushed a covey of blue grouse, and one of them perched in a tree, about 15yds. from where I was standing; he offered such a pretty shot that I could not resist the temptation, but let drive and had the satisfaction of taking the head off (by the way the only game your humble servant managed to kill on that day).

After about an hour's hard climbing we reached the summit, and were well rewarded for our trouble by the lovely panorama that stretched before us. Twelve miles away the beautiful city of Victoria was plainly seen, and by the aid of a pair of field glasses we could distinguish several of the principal buildings; beyond, the waters of the Straits shone and glistened like burnished metal, and stretched away for thirty miles to the foot of the Coast Range of Washington Territory, which reared their eternal snow-capped summits far above the clouds. After having gazed on this really beautiful scene to our heart's content, we started down the mountain side, for the purpose of allowing the dog to run the ravine, through which the west branch of the Gold Stream flows. About half way down Sport commenced to show signs, so we let him go, and very soon two sharp yelps informed us that he had started a deer, and we stood still in breathless expectation of obtaining a shot; but the deer was too smart for us. Instead of coming up the hill as they usually do when started by the dog, he ran along the ravine for about 200yds. before showing himself, and then only for a second. I think it was a spike buck.

Continuing down we reached the stream, and refreshed ourselves with a draught from its ice-cold waters. Here we saw several bear tracks, some of them measuring 5 and 6in. in diameter. After leaving the stream we separated, Jack taking one side of the hill, while Sam followed the ravine with the dog, and I ranged along the other side. We had not proceeded more than a quarter of a mile before the dog started off and made a detour round a clump of trees which grew in the center of a natural clearing. Sam gave a low whistle to attract our attention, and standing still we prepared ourselves for a flying shot. Presently two sharp yelps from Sport informed us that he had started the deer, and amid a crashing of underbrush he leaped into view, about 100yds. away, and came along a runway across the clearing and almost in a direct line toward where Sam was standing. What a glorious creature he looked, coming along that runway 20ft. at a jump, his head surmounted with a magnificent pair of antlers, laid well back on his shoulders. But his rapid flight was soon to end. Sam brought his rifle to his shoulder and pulled the trigger, and the noble animal dropped on to his fore knees with a crash that might have been heard a half a mile away. The bullet had penetrated his backbone, thus rendering him helpless. After cutting his throat and taking out the entrails we started back with the buck, and when we reached the hotel were pretty much fagged out; but with something solid for the inner man "Richard was himself again."

About 4 o'clock in the afternoon we brought in the deer that Jack had killed in the morning. The buck when dressed weighed 184lbs. and the doe 65lbs.

After having partaken of an excellent dinner which awaited us at the hotel, we started for Victoria, and arrived in town about 10 o'clock that night, a little tired, but well satisfied with our day's sport. W. H. W.

VICTORIA, B. C., Sept. 3.

CHAT OF GUN AND GAME.

MANCHESTER, N. H.—My first acquaintance with the FOREST AND STREAM was long ago. It began with the *Rod and Gun*. I have always had it every week since, and it has seemed to me to grow brighter and more interesting every year. Where everything is so good, it is hard to discriminate. There was "Uncle Lisha's Shop." I read and re-read that so much I just about had it by heart. I am pleased to know it is soon to be issued in book form. One of my most valued books is Nessmuk's Poems. As I read the hunting stories in this paper from various sections of the country, my mind reverts to days I myself have passed with dog and gun, and to friends, many of whom have now joined the great majority, but are none the less remembered.

Big game I know nothing about. I have never desired to face the grizzly on his native heath. I have stood at a respectful distance and gazed upon him as he walked to the right and left in the narrow quarters allotted to him by the proprietor of the side show. It struck me if I should meet him in the woods I would not stand upon the order of "getting," but would get at once.

There is no greater enjoyment to me than to pass a few days away from the cares and anxieties of a busy life, away from the smoke and dust of the city. The cosy little camp, the fragrant bed of hemlock boughs, the pure air, the fish and game dinners, the whirr of the ruffed grouse as he sometimes jumps into the air almost from beneath your feet, the whistle of the woodcock as he takes his spiral flight over the tops of the alders, the jump and spring of the gray squirrel as he puts the largest amount of distance between you and himself in the shortest possible time, the big strings of fish and bags of game, the lucky shots and unaccountable misses—all make up the sum total of time well and wisely passed; and the good result manifests itself in the hardened muscles, elastic step and bronzed cheek of one who has thus passed a few leisure days. It has been my good fortune to get a few days for several years, generally in the months of September or October, to enjoy this kind of life. I have had days with the plover and other shore birds on old Long Island's sea-girt shore, and also with the quail in Virginia. I have lain in a dory off the coast shooting coots and other seafowl. In some sections of this State there is generally some fine partridge and squirrel shooting in the fall and some good bags are made. At one time I thought it fine sport to shoot gray squirrels, but since I have kept some for pets it seems to me a little too much like murder.

Most of my friends had bought breechloaders long before I had one. I clung to the old muzzleloader. No argument could convince me that a gun that broke open at the breech to load was any good. About that time a friend of mine showed me the shooting qualities of a 12-gauge Parker gun he had bought. As the result I sold my muzzleloader that cost me over $100 for $30, and bought a breechloader, and I have never been sorry. I remember well the first time I used it on game. A friend of mine living near Alton wrote me: "If you want to have some fun with the gray squirrels, come right along; the woods are full of them." I got there as soon as possible. The woods were not full of them, but there were enough to insure fair sport. The first morning I was there I started at daylight and visited a piece of woods about a quarter of a mile from the house; got back at 9

A. M. with seven large grays and seven empty shells. The trees were high, but 4drs. of powder and 1¼oz. No. 5 shot in the 12-gauge gun seldom fails to kill.

The next morning something happened that brought to my mind my own former prejudice against the breech-loader. I had bagged four or five squirrels in a small piece of woods, and thinking I might see another soon, I sat down on a log to have a quiet smoke, at the same time keeping a pretty good watch on the tops of the trees. I heard the report of a gun a short way off, and then heard some of the shot as they came rattling down through the leaves. I thought I would let the party know there was some one in there, so I whistled, and soon I heard some one coming toward me, tramping heavily enough to scare all game within fifty rods. As he approached I saw, as he appeared to me, the duplicate of "Pelatiah" of the "Uncle Lisha's Shop" stories. His clothes seemed to be mostly tied on with strings, his feet were incased in a big pair of cowhide boots, No. 12s or 14s; into the legs of these were tucked part of the brown overalls he wore. One suspender, carried over one shoulder and tied into a button hole with a string, held them up. An old cardigan jacket, quite ragged and fearfully dirty, did duty as a hunting coat. His headgear was once a straw hat, but badly used up now. He looked as if he might be anywhere from eighteen to twenty-five years old. As green-looking, loose-jointed a specimen as one generally sees. His gun was quite a curiosity, a long singlebarrel, 40in. in length, about 14 gauge, stock homemade, of some light-colored hard wood, and running nearly the whole length of the barrel. The arm might some day have been a flintlock, as there was a plug screwed in on the side. As he fetched up in front of me I said, "Good morning. What luck?"

"Did ye hear me shute jes now?"

"Yes, and some of your shot came over here."

With a pleased look, "Want tu know. Must be nigh on to 40 rods where I shot from here."

"Did you get the squirrel?"

"'Twan't no squirrel, 'twas an ole crow." In a confidential tone, "She was nigh on to 20 rods off, an' I histed her mor'n four feet right off err the limb. She's around dead somewhere, 'cause I know I hit her. You got one of them are breechloaders, ain't ye?" he asked, as his gaze fell on my gun, with a half pitying and half contemptuous expression of countenance. "I wouldn't give ten cents for as many on 'em as you could pile into a hay rack. There ain't no shute in 'em, and you're liable to get your gosh darn head blowed clean off on ye any minute."

I mildly suggested that there were some kinds better and safer than others, and some cheap kinds might be dangerous. Bristling up he settled the question right there. "Don't make any difference 'bout the price. Jonathan Willey's son Bill went to Farmington and paid $18 for one on 'em, and I seen him stan' right in our pastur' and snap twelve times at a bluejay, and the cussed thing wouldn't go. I wouldn't swap this gun I've got here for forty on 'em. How fur do you s'pose she'll carry? Now guess." I gave it up. "Wall, I can kill a fox with her twenty-four rods. Las' winter I done it right on the ice; yes, mor'n twenty-four rods, nearer twenty-five, 'cause I walked it over twice so to be sure. I'd like to see a gray now," he added, as he pointed the arm at an imaginary squirrel, and I instinctively stepped one side to give him room, as I had noticed the hammer was at half-cock, and I did not know but it might accidentally go off. "I think I know where's a gray," said he. "Right down below that fence there's some pastur' oaks. I'm going down there."

"All right," said I, "If you find more than you can kill I'll come down and help you."

He went away, and I resumed my log and pipe. Ten minutes later bang went the old gun. A short time, and bang again. Five minutes more, with a roar like blasting rocks, the old gun belched forth again. Then a yell, "Come down here quick as ye can." I soon joined him, and asked him what he was shooting at. "I reckon the cuss is up that hemlock; he's chock full of shot any way." I said, "You had better load; he won't try to come down right away." He proceeded to load by putting in a good charge of powder out of a glass bottle he carried in his overall's pocket; on that a piece of hornet's nest well rammed down, then a big charge of BB shot, more hornet's nest rammed hard; next a GD cap on the tube. He was now ready for business. We soon located the squirrel about 6ft. from the top of the tree, hugging the limb.

My friend got ready for another salute, and with a roar like thunder the old gun spoke again. The only effect it had on the squirrel was that he moved a little further up.

"Les see you try him," said he, I've had about all I want of him; he ain't a very big one any way." "I think you will get him next time." "No, I wont waste any more powder on him, 'cause I want to go down to Davis's to-morrow, and there's plenty of 'em down there." With a spiteful look up the tree, "If you can't kill him I'll git him some other time." "Well," said I, "get ready to pick him up."

Cocking the right barrel which is choked I covered his head and a part of his shoulder, which I could plainly see. At the report he bounded into the air and struck the ground, dead as a stone. Three No. 5 shot in the head were enough. My friend with the long range fox gun stood for a moment with almost a sad countenance looking first at the muzzleloader, then at the breechloader. Biting off a large piece of tobacco he chewed a moment rapidly, then said, "Kin the other barrel do that?" "Easy." "Does she go every time?" "Never misses." "Probably cost over twenty-five dollars." "Yes, considerable." In a very confidential tone, "That's a better gun than Bill Willey's." Picking up the squirrel and putting him carefully in his pocket, he said, "Wal, I must be going. We live in that red house over on the road by the corner; we've got some good cider; stop some time." And he was gone.

My bag for three days was 29 very large squirrels, 4 partridges, 2 woodcock—quite a fine looking string. This year they say birds are very scarce, so much rain and cold weather here, it has been very bad for the young broods. None comparatively have been brought in to the city as yet. N. H.

PENNSYLVANIA RUFFED GROUSE SEASON.—*Editor Forest and Stream:* No change in the ruffed grouse season was made by our last Legislature; it will open October 1. —SPICEWOOD.

WHEN THE FROST IS ON THE MEADOWS.

WHEN the golden summer's over
And a chill is in the air,
And the fields of wheat and clover
Are brown and bleak and bare.
Then the hunter seeks his pointer
Who comes bounding to his call,
For the frost is on the meadows
And the leaves begin to fall.

The air is fresh and bracing
And we rise before the lark,
And the trusty pointer, racing,
Shows his joy with cheery bark,
And the dear old gun is taken
From its place upon the wall,
For the frost is on the meadows
And the leaves begin to fall.

Through the meadows and the tangle
And the woods along their sides,
Where the wild grapevines do dangle,
We walk with sturdy strides,
And we listen almost breathless
To the scattered covey's call,
For the frost is on the meadows
And the leaves begin to fall.

"What do you scent, old fellow?
Ah! steady now; take care."
A twittering so mellow,
Then a quail whirls through the air.
A shot, "Go fetch him. Steady!
Or you will flush them all,"
For the frost is on the meadows
And the leaves begin to fall.

Don't talk of city pleasures,
The joy that money yields.
Keep all your vaunted treasures
Give me the broad brown fields.
The pleasures one can gather
Can't be had at rout or ball,
When the frost is on the meadows
And the leaves begin to fall. F. M. GILBERT.

GAME NOTES.

EVANSVILLE, Ind., Sept. 17.—More quail here this season than were ever known. We have protected well for five years, and are now seeing the good results. —F. M. GILBERT, Game Warden 1st Dist.

BILLINGS, Mont.—It is thought that the cold last winter must have killed off the prairie chickens, for very few are found by gunners.—SPOT.

TUXEDO PARK is in Orange county, N. Y., near the border of Rockland county, and only a few miles from the New Jersey line. The park has been stocked with English pheasants, quail and other game, which have spread over the country. Quail from Tuxedo are reported in Passaic county, N. J.

RICHMOND, Ind., Sept. 22.—This is a red-letter year for sportsmen in this part of the State, as quail, rabbits and woodcock are plentiful. More woodcock have been killed in this county this year than any one year for a good while. Quail are unusually plentiful as the dry season has helped them finely, and the coveys are large both in size and birds. Rabbits—well, all I can say is what an old farmer said, "Come out and I'll guarantee you 15 rabbits per day for a week on my farm." The teal are coming south, having seen more than usual this year.—PLOVER.

HOPE, Idaho, Sept. 15.—Dr. Howard, Mr. Mount and Mr. Crone returned to-day from a hunt in the Caribou country, but though game was plenty their records of misses was greater, hence no game. Messrs. J. W. Astley, H. A. Piper and The. Allen of Marysville, Mont., guided by the efficient Idaho Lew, returned from a trip up the lake yesterday. They made some fine catches of fish and shot a deer. Bear are not very plentiful this season, and but few have been killed. A large black bear swam from the mountains and landed on a large island about a mile from here, and five of us hunted all day for him, but bruin was too sharp for us. Tex claims he saw him, but as he describes the animal as having long ears and of gray color, I'm inclined to think it was a jack rabbit. Fishing in the lake has just begun, and some fine catches are being made. The hotel will not close this year until December, as several hunting parties are expected here to take advantage of the best hunting.—F. T. A.

HALLOCK, Minn., Sept. 20.—There is a remarkable absence of ducks in localities along the Dakota and Manitoba boundary line, but there is no end to ducks and geese in select parts of the Roseau region known to resident sportsmen. Elk and moose are abundant. One man on the Roseau River has four domesticated and quite tame, also two black foxes. The blacktail deer are quite as abundant as when I first declared their presence in spite of the declarations of unbelief by all the scientists. Mr. L. E. Booker, president of the National Bank of Pembina, has mounted specimens of bucks of this animal, which is thought to be a different variety from *C. columbianus* of the Pacific coast. Last week I sent full measurements and descriptions to Otis T. Mason, curator of the National Museum at Washington. Prof. Warren Upham, of the U. S. Geological Survey under Major Powell, were here last week, being now engaged in locating Lake Agassiz. He thinks there is good coal in places on the branch of Two Rivers, not thirty miles from Hallock. Two lieutenants and a military outfit are at present in the Roseau country on a sort of military survey and pleasure excursion. The departure of hunting parties from Hallock for this remarkable tract has been quite frequent since Aug. 15. The Rainy River and Southwestern Railroad is already surveyed and staked through this country to a point near Argyle, thirty miles south of Hallock, on the Manitoba R. R. Sportsmen will have easy access thereto in the course of a couple of years, but game will be scarce then. There has been a fair showing of chickens in the vicinity of Hallock this fall, and several parties of visitors have enjoyed shooting them.—CHARLES HALLOCK.

SACRAMENTO, Sept. 18.—The first wild geese of the season to fly over the city, so far as we are aware, were en route southward last Thursday morning. It is said, however, that geese appeared two or three weeks ago near Fisherman's Lake, six miles from here, and a number were killed. Last year the first flock flew over the city about 5:30 A. M. of the 12th of September. Following are the dates of their arrival in this city for twelve years: 1876, Aug. 14; 1877, Aug. 31; 1878, Sept. 6; 1879, Aug. 30; 1880, Sept. 17; 1881, Sept. 3; 1882, Sept. 7; 1883, Sept. 12; 1884, Sept. 2; 1885, Sept. 13; 1886, Sept. 12; 1887, Sept. 14. A few days ago some hunters, while quail shooting in Sonoma county, killed two deer. One was killed with quail shot, but the other got a dose of buckshot, the shooter having one barrel of his gun loaded for an emergency of that kind. It is a pity that men will shoot quail while the weather is too hot for the game to keep. Last week thousands of spoiled birds were dumped into the bay by San Francisco dealers. The weather is now cooling, however, and from this on the sport will improve.—W.

NEW BRUNSWICK GAME LAW.

THE following summary is that prepared by the Chief Game Commissioner:

MOOSE, CARIBOU AND DEER.—To hunt, take, kill, wound or destroy moose, caribou or deer between Feb. 1 and Aug. 1 in any year, the penalty is not less than $10 nor to exceed $60. (41 Vic., Cap. 45; 43 Vic., Cap. 21.) To hunt, chase or pursue with intent to kill with dogs, $20 for each and every act; and it shall be lawful to destroy or kill any dog so found hunting, pursuing or chasing, or proved to have pursued, chased, wounded, torn or killed any moose, caribou or deer. (41 Vic., Cap. 45.) No person or number of persons forming a hunting party shall kill or take in any one year or one season more than three moose, five caribou or five deer. (41 Vic., Cap. 45.) All such game must be removed from the woods within ten days after killing the animal. (41 Vic., Cap. 45.)

The fact of any person having in his possession the carcass of a moose, caribou or deer, or any part thereof, or the hide thereof, within the time specified (viz., Feb. 1 and Aug. 1), shall be *prima facie* evidence of his having hunted or killed the same contrary to law, and such person shall be liable to a penalty of not over sixty nor less than ten dollars. (41 Vic., Cap. 45, Sec. 5.)

MINK, OTTER, FISHER, SABLE AND BEAVER.—To hunt, take, kill, wound, trap or otherwise destroy, between the first day of May and the first day of September in any year, a person will be liable to a penalty not exceeding $20 nor less than $5 for each such act. (41 Vic., Cap. 45.)

The fact of any person having in his possession the carcass of any animal mentioned in the preceding section, or the green or fresh pelt or hide thereof, within the time specified (viz., May 1 to Sept. 1), shall be *prima facie* evidence of his having hunted, killed, taken or trapped the same contrary to law; and the fact of any person having been found hunting within the time specified, having in his possession any trap or traps, shall be *prima facie* evidence of his hunting contrary to law, and in either case such person shall be liable to the penalties mentioned in the preceding section. (41 Vic., Cap. 45, Sec. 6.)

PARTRIDGE.—To take or kill between the first day of December in any year and the twentieth day of September in the year following, a person will be liable to a penalty of $4 for each such act, and the fact of having the same in one's possession between the above mentioned dates shall be *prima facie* evidence of the taking or killing contrary to law. (41 Vic., Cap. 45; 43 Vic., Cap. 21; 48 Vic., Cap. 61.)

SNIPE OR WOODCOCK.—To take or kill between the first day of December in any year and the first day of September in the year following, a person will be liable to a penalty of $4 for each such act, and the fact of having the same in one's possession between the above mentioned dates shall be *prima facie* evidence of the taking or killing contrary to law. (41 Vic., Cap. 45; 42 Vic., Cap. 20; 48 Vic., Cap. 61.) The exportation of partridge and woodcock is prohibited by act of Dominion Parliament, 1885.

BLACK DUCK, WOOD DUCK OR TEAL.—To take or kill, or have in possession any wild black duck, wood duck or teal between the fifteenth day of May and the fourth day of September, or to destroy or remove their nests or eggs, a person will be liable to a penalty of not less than $20 nor more than $40. (41 Vic., Cap. 25.)

DUCKS, BRANT, GEESE OR OTHER WILDFOWL OF THE GAME KIND.—To take or catch with a net or nets, or kill with a swivel or punt gun, a person will be liable to a penalty of not less than $20 nor more than $40 for each and every such act. For the setting of any net for the purpose of catching any wild duck or any game bird, the offender shall be liable to a penalty of not less than $10 nor more than $20. For the catching of any wildfowl by artificial light the offender shall be liable to a penalty of not less than $10 nor more than $20. (42 Vic., Cap. 20.) To shoot, kill or otherwise destroy any sea gull at any time within the parish of Grand Manan a person will be liable to a penalty of $4. (48 Vic., Cap. 61.)

THE KILLING OF ROBINS, SPARROWS, SWALLOWS, and other small birds and birds of song which frequent the fields and gardens, and the selling and offering for sale and having in possession such birds when killed, shall hereafter be unlawful, penalty $1. The trapping, snaring, or otherwise taking alive or selling or offering or exposing for sale alive of any of the said birds, and the destroying of the nest or eggs of such birds, shall be unlawful, and any such traps or snares may be destroyed and a penalty be exacted of $1 in addition to 10 cents for each bird. (41 Vic., Cap. 45.)

HOW FINES AND PENALTIES SHALL BE ENFORCED.

Fines and penalties shall be paid as follows: One half to the informer and the other half to the Commissioner or Warden or Deputy Warden prosecuting; but if the prosecutor be any person other than a Commissioner, Warden or Deputy Warden, then such other or second half shall be paid to the Chief Game Commissioner.

The Warden or his deputy, or either of them, are authorized to seize all carcasses, or any part thereof, all hides, pelts or traps found in the possession of any person contrary to law, and shall forthwith proceed before a Justice of the Peace, who will deal with the case as prescribed in Section 12, Act 41 Vic., Chap. 45.

If the owner of the property seized be not known, the Warden or his deputy shall proceed as directed in Section 13 of the same act before a Justice of the Peace.

A search warrant can be obtained on application, under oath, of any stipendary magistrate, police magistrate, justice or justices, whenever any person has reason to suspect and does suspect that moose, caribou or deer hides, or any portion of the carcass of a moose, caribou or deer during the close season, are concealed on the premises of any person, and if found, the same may be seized and dealt with as directed in Section 12.

Any nets set or placed for the purpose of taking or catching any wild duck or other game bird may be seized by any person and the same shall be destroyed under the conditions of Section 18

GAME LICENSES.

No person not having his domicile in the Province of New Brunswick shall be entitled to hunt, take, kill, wound or destroy any moose, caribou, deer, mink, otter, fisher, sable, beaver or other animal referred to herein, or to hunt, take, kill, wound or destroy any bird referred to herein without first having obtained a license, and shall be subject to the enactments of the game laws. The fee to be paid therefor will be $20, and the license shall be in force for one year from the first day of September in each year.

Every such person shall, on request of any person whomsoever within the Province, at all times and as often as requested, produce and show to the person making the request, such license; and if he fail or refuse to do so, he shall forfeit any such license as he may possess, and shall, upon proof of such request and failure, be deemed to have violated the provisions of the preceding section.

The penalty for a non-resident hunting without a license will not be less than $20 nor more than $50 in addition to license fee and cost of prosecution.

Officers in Her Majesty's service, officers in the army and navy, shall be entitled to the privileges of the game laws of the Province on the payment of an annual fee of $5, but shall be liable to last-mentioned penalty for hunting without a license.

Licenses may be obtained at the office of the Chief Game Commissioner, No. 31 Pugsley's Building, corner Prince William and Princess streets, St. John, N. B. Office hours, 10 A. M. to 1 P. M., daily.

J. DEWOLFE SPURR,
Chief Game Commissioner.

KEOKUK, Ia., Aug. 31, 1887.

J. F. Breitenstein, President of Keokuk Gun Club:

DEAR SIR—The two boxes of paper shells, "Climax," U. S. Cartridge Co., which you so kindly handed me, have been thoroughly tested, and I, after my long experience as an expert amateur, without hesitation pronounce them the best shells made, being perfection for wet and dry shooting. They cannot be excelled. Knowing perfectly well what I am writing about, I subscribe myself, yours truly, (Signed) H. A. KINNAMAN. *Adv.*

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

MIRAMICHI SALMON.

THE Miramichi has lately been made much more accessible for sportsmen owing to the construction of a railway from Fredericton to Chatham Junction on the Intercolonial, and cars now run daily from Fredericton, passing Boiestown at a distance of about 48 miles from the former place. Salmon have been more plentiful on the Miramichi and its branches above Boiestown this year than for many previous ones; as the water was high nearly all the season, the fish were enabled to reach their spawning grounds with great ease.

There has been less spearing done this season than commonly; this was no doubt partly owing to the dark color of the water, due to its height, but a good deal of this freedom from trespassers is due to better protection as well on the part of the Canadian Government as on that of individual lessees, who are now becoming numerous. Indeed all of the best trout streams as well as salmon rivers in New Brunswick, are being held under lease by individual owners or by companies. Public opinion is compelling both Dominion and local government to pay much more attention to the subject of fish protection than was formerly the case. In this matter there was much need of reform, and much remains to be done before the fishing interests of the country will have received that attention to which they are entitled.

The first run of salmon above Boiestown took place from the first to the middle of June, the fish were of good size. Owing to high water they were always on the move, and have been found further up stream than ever known before. Some were taken nine miles above the Forks up the North Branch.

There have been about twenty parties of fishermen above Boiestown during the summer. One of these parties secured sixty fish, another caught thirty-seven, while one person caught in one day at the mouth of Burnt Hill nine salmon. Most of the fishermen who have been on this part of the southwest Miramichi returned well pleased with their success, and few complaints have been heard of ill-luck.

The formation of a new sporting club at Fredericton during the past season has given an unwonted impulse to all that is connected with salmon and salmon fishing there. Until within a short period the waters of the lower southwest Miramichi were to be reached only by a long and tedious drive over rough roads; now the sportsman is taken by rail from Fredericton in the fraction of a day to within a few miles of the clear cold pools of the Renous and its branches, which abound in salmon. The territory leased by the club for ten years covers about eighty miles of these streams, all navigable for canoes at the ordinary height of water. With the exception of about twelve miles their territory is bounded by a forest in which there is not a solitary settler.

The protection afforded by the Canadian Government to the numerous salmon which ascend these streams to their sources has been of a very inefficient character, owing to the fact that political partisans were the persons selected to fill the office of guardian. Messrs. M. Tenant and T. G. Loggie, who were appointed a committee of inspection to visit the property of the Renous and Dungarvon Club, report under date of Sept. 1: "Our guardians informed us that some days prior to our inspection they cut away nets placed across the river from bank to bank, and since returning to Fredericton we have been informed of one party below Colepaugh's having nets set in the above manner. At the mouth of the north branch of Renous (a rapid, rough, cold water stream) there is a large pool in which we caught three grilse and lost one salmon. This in our estimation is a fine stream for fish; the banks are high and bold, cold springs rush frequently from the banks, and the descending rapid water, falling over great boulders, form many fine pools in which salmon delight to lie."

Under the new regime inaugurated by the club there are now five competent guardians, the whole of whose time is occupied in patrolling the streams in canoes and seeing that all the laws enacted for the protection of fish are duly carried out; some are occupied at this work during the daytime, others at night.

The attention of Messrs. Tenant and Loggie during their recent visit of inspection, was directed chiefly, however, to the Dungarvon, which they ascended to its head, finding it a first-class salmon stream, their catch being twenty-seven fine fish, two other parties who went up after their return secured twenty-nine more salmon.

The Dungarvon, as well as the other branches of Renous, abound with trout, many of which are of large size.

EDWARD JACK.

FREDERICTON, Canada.

VERMONT TROUT AND PIKE.—John Averill, the veteran baggage master on the Central Vermont Railroad, went fishing for trout the last day of August, and says his experience that day convinced him that the close season for trout should begin the 1st of August instead of the 1st of September. In his catch were several from 8in. to a foot long, and he says many of them were full of well developed sp wn. Some years ago C. F. Orvis, of Manchester, and others interested in trout fishing in the western part of the State, took ground before the legislative committee in favor of closing the open season for trout the 1st of August, and the logic of events has convinced us that they were right. W. E. Green and T. P. Fuller recently caught twenty-four wall-eyed pike at Thompson's Point, on Lake Champlain. The largest weighed 4½lbs. For some years there was a marked and growing scarcity of wall-eyed pike in the lake, but the enforcement of the laws making from the 1st of February until June a close season for these and for b'ack bass, with a prohibition of all net fishing, except seines for about six weeks, has caused these fish to increase again. This increase began to be noticed last year, and was still more evident this year. This is the proof of the wisdom of the legislation protecting fish in Lake Champlain, and there should be no step backward in the matter. In fact, the close season for black bass should be extended until the first of July, as they are not through spawning and protecting their young as early as the first of June.—*Montpelier Argus and Patriot.*

MAINE TROUT JIGGING.—A Camp Bemis correspondent of the Boston *Herald* says: "The first prosecution of the season on the Rangeley lakes for illegal fishing was instituted to-day by George D. Huntoon, game and fish warden of Rangeley. The defendants were A. S. Stewart of New York and Mark Hollingsworth of Boston. Each agreed to plead guilty before a trial justice at Andover, and they paid $25 and $28 respectively. Another man, named Hoyt, who hails from Lynn, will probably settle in a few days rather than stand a prosecution, as the warden has evidence enough to convict him. These cases are of great interest to the hundreds of sportsmen who find keen pleasure in taking, by legitimate means, the peerless fish of these famous lakes. An item in the *Herald*, 10 days or a fortnight ago, told of two handsome trout on exhibition in Appleton & Litchfield's on Washington street. It interested many, but it amused the fishermen here and their guides, for they know that Mr. Stewart, although he is the vice-president of the New York Rod and Reel Club, and professedly foremost among the protectors of fish here and in his own State, was one of a party at the Upper Dam who were knowingly breaking the law every day by taking the biggest trout from a pool below the apron of the dam by means of a "silent doctor." They have taken at least 300 pounds. Their apparatus was not exactly a grapple; it was a line equipped with several large hooks, unbaited, and by "jigging" with this in the pool, they hooked the trout in great numbers. The warden to-day could find but three fish in their possession, but all were hooked in the side or under the mouth. The guides and the real sportsmen have instituted these proceedings for the protection of the fish and the sport. The Oquossuc Angling Association was especially interested.

CAMP FLOTSAM.—Toronto, Sept. 8.—The pegs of the seventeeth annual camp have been pulled—or broken off, the canvas packed and stored at Gravenhurst for another summer's outing; and yet I am not happy. The Muskoka District has enthralled me, I have pursued the bass and maskinonge for eight weeks, and not in vain; have watched the nightly flight of black ducks, and allowed my eyes to follow the deer crossing the lake within gun shot with never an impulse to pull the trigger. In those eight weeks no rain fell; the vast forests were in a sheet of flame, which on Aug. 14 gave us a night fight to save the camp. We succeeded in doing this, but with the loss of one tent, a pair of blankets and a rubber coat. But the bass and *E. nobilior* escaped the blaze, and we were content.—WAWAYANDA.

KEY EAST BEACH, N. J., Sept. 19.—An article on bass fishing at Ocean Beach, in the *Beach Patrol* of Saturday last, calls attention to the increasing interest in fishing for bass in the surf. At Key East, fishermen of note from New York city, Asbury Park and other places line our beach in front of Avon Inn. Superintendent Murray, of the New York police force, and four friends of his, caught twenty-two fine large bass opposite Avon Inn today. Mr. Hertiz at the same time caught six, Mr. Ferry, of Orange, N. J., three, and Mr. Napier, two. Our neighbors across the river are catching some fish, but the palm must be awarded to Key East, as the famous fishermen are found regularly on our beach. Shark River inlet was alive with fish to-day.

CAN FISH SEE IN THE DARK?—I keep a small silver fish in my bedroom. He is a little glutton for flies. Just before retiring the other evening I caught and dropped one into his water, but as he would only make feints at it, I extinguished my light and retired. Shortly after, in perfect darkness, I heard him "strike," and getting a light I found the fly had been taken. Can any of your readers throw any further light on the question?—W. F.

MENHADEN.—Greenport, Long Island.—The Menhaden fishery has been unsuccessful this season, but the fish taken have been of very fat and productive quality, and so make amends by their superior quality for their lesser numbers.—ISAAC MCLELLAN.

AN UNTOWARD EXPERIENCE.

AFTER spending several annual vacations in the same region, however enjoyable they may have been, however good the fishing and shooting, and the natural beauties of the country may be unsurpassed, the sportsman naturally rejoices at seeing a notice of some new section of country which promises all that he has already enjoyed and more besides. So after five excursions into the Maine woods, I read the advertisement of the Northern and Northwestern Railroad in FOREST AND STREAM with delight.

They furnish a guide book upon application, which I promptly obtained. It is a charming little work of fiction containing about 200 pages and nicely illustrated. The same book bound in cloth could be bought in Toronto for 75 cents. I read it with great care and as I had no objection to roughing it a little and wanted the best fishing and shooting the region afforded, I finally settled upon the "far famed Maganetawan River" as the objective point for this year's vacation.

As the trip was not entirely devoid of incidents, and as one sportsman's experience is sometimes of value to others, I offer mine for what it is worth. I first wrote to one of the guides, whose name I found in the guide book, to see whether it would be possible to hire a log cabin in that section to camp in a few days; and received no answer. I then wrote to Croswell's Hotel, Ah-Mic Harbor, and though the proprietor informed me afterward that he answered my letter, I never received his communication. I started, however, with a friend from Brookline, Mass., Saturday, Sept. 3, via Niagara Falls and Toronto.

Our first experience worthy of mention we enjoyed at Niagara Falls. As I have never had any opportunity for gunning more than once or twice a year, I had not bought a gun for previous trips, but used one belonging to a friend. As he had sold his, I hired one of a local dealer. As he called my attention to the fact that the firing pins needed attention, one being broken, I sent the gun to one of the most reliable houses in Boston for repairs, and called for it on my way through the city. They said it was all right, and I had just time to catch my train, so I did not examine it until my arrival at Niagara Falls. It struck me there that it would be well to examine it before going into the wilderness, and I found to my disgust that one of the pins, been before, had not been touched, and was practically useless. To see that the other was all right I slipped a cartridge in, and as I snapped the barrels down into place blew a hole in the side of the room about the size of a man's fist. I told the hotel clerk to bring in his bill for a new house, and bought a gun at Toronto; not a fancy gun, but a good plain English gun for $35.

Here we bought a ticket to Ah-Mic Harbor and return, on the Northern and Northwestern through the "Garden of Canada," so-called. If this region is the garden, may heaven help the man who lives in the wilderness. The road is a new one and runs for miles through a forest of scrubby spruce with once in a while a new settlement of small houses. It may be more attractive, seen under different circumstances, but I could not sleep well, and raising the window curtains, braced myself up in my berth with pillows and inspected the country. It was not a dark night, and as I arose very early in the morning I saw considerable of the scenery before we stopped at Burk's Falls, the head of steamboat navigation on the Maganetawan.

Here our troubles commenced. "Music," whoever he may be, wrote some time ago to FOREST AND STREAM that "the trout have an unlimited range and are seldom disturbed, so that they have a chance to grow." The guide book and Hallock's "Sportsman's Gazetteer" both say, "Speckled trout are caught 3 to 5lbs.; bass, 5 to 8lbs.; pickerel, 8 to 14lbs." I will confess that I was at first a little skeptical about finding trout in such company as black bass and pickerel, but in the face of so many authorities, it was decidedly aggravating to find that there were absolutely no trout in the river. They say there, "Of course it is possible that once in a great while a trout may be caught that gets in from some brook, but no trout live in the river."

We were told that we would find good bass and pickerel fishing at Ah-Mic Harbor, but would probably need bait. As we had come equipped thoroughly for fly-fishing this was a damper. They also doubted whether we would like Ah-Mic Harbor, where the accommodations, we were told, were poor. I asked which place there was the best at which to put up, and they smiled at my ignorance and said there was only one, Croswell's. I mildly quoted the guide book, which enumerated three, besides some farmhouses where boarders could be accommodated. These were evidently myths, fancies of the active brain of the compiler of the above mentioned book of fables.

We were advised to stop at Maganetowan, which the guide book says is a "thriving town," and also "the Great Northern Colonization road crosses the river and a center for surrounding discricts has been formed." It is twenty-five miles down the river, which is really a beautiful stream, winding as it does through the woods for eighty or a hundred miles, I am told; we followed it for forty. We went ashore at Maganetowan and went to one of the two hotels to look for a guide. The hotel and village seemed to us both the most dirty, as well as uninteresting and God-forsaken spots man ever visited. The principal street is made up largely of a villainous light yellow clay which, softened by the light rain which was falling, stuck to our shoes like paint. The pigs seem to be about as numerous as the inhabitants and travel the thoroughfares with the same freedom and I should judge in fully as great a state of average cleanliness.

In due time, near the foot of Ah-Mic Lake, which is an enlargement of the Maganetawan River, we found "Croswell's hotel." To quote our invaluable guide, "Good accommodation for travelers or tourists; the best hunting and fishing in the district, boats and livery on hand; goat's milk for sickly children," etc. We found a small farmhouse, the proprietor of which runs a sawmill. The "livery" mentioned consists of one or two horses which are used for work in connection with the mill. He owns two or three rather poor boats. Both Mr. and Mrs. Croswell seemed glad to see us, and I have no doubt they were, as we were the first guests from the United States they had entertained this year. They both did the best that lay in their power to make our stay enjoyable during our limited stop. The beds were clean and the house generally in the same condition. A few million less flies at the dinner table might have made our meals there more enjoyable, and I have occasionally in traveling struck a rather more appetizing bill of fare; still, in that out of the way place their opportunities are limited, and had the fishing been good we should have stayed a week or ten days.

After dinner we started with Mr. Croswell as guide to some particularly choice spots for black bass fishing, Mr. Croswell taking some minnows for bait, as he had no faith in fly-fishing; he said he had never seen any before, a statement that impressed us with the number of sportsmen we must have been. We fished all the afternoon with the result of getting all told three bass and one small pickerel. One of the bass weighed 2lbs. and the smallest one was certainly less than 3in. long.

The next morning we tried partridge shooting; they told us that ducks were scarce, and I have no doubt they spoke the truth. They might have included partridges without fear of contradiction. Mr. Croswell's nephew, Bill Stanyard, acted as our guide, assisted by a mongrel cur called Snap. The partridges there are accommodating in the extreme; when scared up by a dog they take to a tree and wait for the dog's yelps to attract their murderers. This obviates any necessity for the most indifferent shots missing one. They will allow one to approach so near that care is essential to prevent blowing them to pieces. Before we had been in the woods ten minutes the dog Snap's alarm and we bagged two birds. We may in doing so have killed all the birds of that breed in Canada for all I know to the contrary, for we found no more although we tramped through the woods all the forenoon. After the first half hour Snap evidently thought he had worked enough, and sauntered along before us as though he cared nothing for the fact that we had come 700 miles for this exciting sport. That afternoon we went back to Burk's Falls. Mr. Burk, the gentleman for whom the village was name, keeps a hotel which is at least ten years ahead of the town. The table is fair and the house well furnished throughout. The parlor is quite luxurious, being quite elegantly fitted and boasting a fine piano. The hotel is supplied with electric bells and has a telephone attached. I have no idea what te telephone can be attached to at the other end, but there it is. There are two other hotels in the village, and how they keep alive is a mystery.

Mr. Burk felt really bad that we had found no better luck; he said he never knew but one other party to go away dissatisfied, and he wanted us to take a trip with a guide of his selection. This was the proposition: We should hire a wagon of him and go to a brook some distance away, and he would guarantee that we (guide included) should catch 150 brook trout in a day or he would make no charge. He held out no alluring promises as to the size of the trout—"a great many would weigh a pound." We must have angle worms, which must be imported, as they do not live in their sandy soil, and if successful the charge for team and man would be seven or eight dollars. As we were not fishing for a record we declined.

He then said: "See here, I don't want you to go away feeling that we have no fishing up here; we think that we have got as good fishing and shooting as can be found in the world, and if you will stay one more day I will drive you to Horn Lake, where both brook and salmon trout are caught, and will not charge a cent."

We agreed, and the next morning Mr. Burk took a good pair of horses and drove us I don't know how many miles to a beautiful sheet of water. We were everywhere told that we were too early for anything but bait fishing, and the lake is very deep, 150ft. they say. We fished around the shore with flies, spoons and phantom minnows, and caught nothing. He then drove us to Stirling Falls, a fine looking trout stream, where I am told they catch some fine strings of fish. Armed now with bait and with a resident, who got a chub for bait, to act as a guide, we began our last afternoon's fishing. It resulted in my getting a 6in. trout almost ashore. I am rather glad I did not secure him, and so break the record. Neither of the others got any. Mr. Burk is a thorough gentleman and I wish him heartily the success that his pluck in trying to run such a hotel in such a place deserves.

Almost everybody we met informed us that we had come too early and that October was the great month for lake fishing. As the law goes into effect there on trout Sept. 15, this was confusing to law-abiding fishermen. Everywhere, too, we met people who could tell us just where we should have gone; and yet we selected what we judged beforehand was the best stream in the whole Muskoka district.

I am told that many sportsmen go there year after year and have great luck; but Maine is good enough for me. I have caught many hundred trout and black bass, and I know it was not altogether inexperience that caused our hard luck. I am convinced that the guide book is unreliable, and that the particular region we visited is greatly overestimated.

The urbane and gentlemanly Custom House officer at Lewiston on the Niagara River, charged me $12.95 duty on my gun upon my return. I explained that it was bought to take the place of a broken gun I brought from the States; that it had been used and was purchased for my own use. He was inflexible, and I am just now a violent free trader. O. E. BORDEN.

FALL RIVER, Mass.

The angling season on Lochleven which has just closed has been the most successful for many years past. The total capture of trout has been 17,892, and their total weight 17,24 pounds. Last year 11,938 trout were taken, and 16,558 in 1885. The most productive month was August, with 6,688 trout, and next came June, with 3,285. The heaviest trout of the season weighed 4 pounds, and the best basket was taken by a Yorkshire angler on July 23. It contained 59 trout, which weighed 58 pounds. Lochleven, which belongs to Sir Graham Montgomery, is open to the public on very reasonable terms, and since netting was abolished it has become one of the best angling lochs in Scotland, and the trout not only afford good sport but they are of excellent flavor.—*London World.*

VIC SMITH'S LIONS.—Last Sunday night one of the two mountain lions recently purchased by Vic Smith in the west part of the Territory, became tangled in some manner with the chain to which it was tied and choked to death. The loss is quite a serious one to Vic as he intended to take the animals East with him shortly as a part of a Wild West show he is accumulating. To add further to Vic's troubles he had the misfortune, while reloading shells a few days ago, to have a pound or more loose powder explode so near him that it severely burned one side of his face.—*Livingston (Mont.) Enterprise, Sept. 3.*

Fisculture.

FISHCULTURE IN SCOTLAND.

SOME fourteen years ago Sir James Ramsey Gibson Maitland, Bart., began the culture of several species of Salmonidæ, near Stirling, at a place called Howietown, and, like all those who began at an early day, when but little was known of the process of fishculture as now practiced, he met with many difficulties. He was, however, so systematic that he kept a correct and accurate account of all his experiments, whether they resulted in success or failure, that this report, now published,* makes a valuable addition to the literature of fisculture.

Part I. of this history contains 278 pages, on heavy paper, and is illustrated by 196 cuts. Mr. Maitland has persevered in the face of many difficulties, and has spent a great deal of money in bringing his establishment to its present state of perfection. From the plates on page 33, showing an interior staircase of stone, with ornamental iron railing, we should judge that there was no hatchery in America that approached it in cost of construction and elaborateness of detail.

The table of stock at the Howietown trout farm on Sept. 1, 1886, shows that in thirty-two ponds there are 228,902 fish of different species, varying from six months to five years and a half old. The species are salmon, brown trout, Loch Leven trout, American landlocked salmon, rainbow trout, American brook trout, and hybrids, between several of these species. The oldest salmon were five and a half years, and much dwarfed, the largest being probably not over 3lbs.; but the young salmon fry reared from eggs obtained from these fish the previous winter have thriven better and are much larger than some of the same age hatched from eggs from the river Tay, and from this it seems probable that a second generation of landlocked salmon will thrive better and attain a larger size than the direct produce of wild fish.

Mr. Maitland has been very successful, not only in rearing fish but also in sending eggs to many parts of the world. Eggs which have come to this country from him have been packed in boxes elaborately made, with dovetailed corners and handsomely painted, forming quite a contrast to the rude boxes in use in America, which, however, are as effective; this being cited merely to show the care and system with which everything is done in Howietown. No person could read the history of this place without being impressed by the systematic manner in which everything is done, from the taking of the eggs to the planting of the fish, even though he may think some of the minute directions unnecessary.

It is estimated that 20,000,000 trout eggs can be produced annually at this establishment at a cost of a little over $5,000 a year, and that when the demand has risen sufficiently to absorb this large quantity, eggs could be incubated, packed and delivered in any part of the United Kingdom for about $60 per 100,000 and yet leave a fair margin of profit.

Charred wooden troughs and glass grilles are in use at Howietown, two things that never were popular with American fishculturists, although they have had fair trial. The daily care of the eggs in all the hatcheries at Howietown occupies the time of two girls, but as they also assist in packing, and the annual number of eggs sold is a little under 2,000,000, Mr. Maitland thinks the great economy in the use of grilles is evident. The objections to these in America has been the breaking of the glass rods and the great care required in handling, and they were long ago replaced by wire cloth, which is kept well tarred with coal tar and made with a peculiar long mesh which will hold the eggs, but allow the young fish to drop through as well as on the glass.

The ponds are compactly and conveniently arranged on one side of a stream which is left as a waste and flood-way course, although rather solidly and substantially built. One of these ponds is made very deep in the center, so that saline water of a high density can be maintained at a small expenditure of bay salt, and this is used to correct any epidemic of fungus which sometimes appears in the spring or early summer in a pond of fish in high condition, and these fish are placed in this pond.

Mr. Maitland finds earthenware more suitable than any other material for taking of trout eggs in, because it is a very bad conductor, and the temperature of the water placed in it is very slightly affected by that of the atmosphere. Howietown experiments show that the vitality of the milt is much impaired by exposure to low temperatures, or even to air or light; therefore, the custom prevalent among some fishculturists of mixing ova and milt together, and leaving them together for considerable time, and then washing off the milt and pouring out the eggs into the collecting pail is contrary to common sense, and produces a large percentage of insufficiently vitalized embryos. With earthen plates ten thousand eggs can be perfectly impregnated by the milt of a single fish; and although Mr. Maitland has no substantial reason for it, he has a strong prejudice against stripping several males over one dish of eggs.

*"The History of Howietown," containing full descriptions of the various hatching houses and ponds, and of experiments which have been undertaken there from 1873 to the present time; also of the fishcultural work and the magnificent results already obtained. By Sir J. R. Gibson Maitland, Bart. Published by J. R. Gray, Sec'y Howietown Fishery, Stirling, Scotland, 1887.

FIXTURES.

DOG SHOWS.

Sept. 27 to 30.—Annual Show of the Southern Ohio Fair Association, at Dayton, O. M. A. Nipgen, Secretary.

Oct. 4 to 7.—Fifth Annual Dog Show of the Danbury Agricultural Society, Danbury, Conn. B. C. Lynes, Secretary.

Oct. 12 and 13.—Th rd Annual Show of the Stafford Kennel Club, Stafford Springs, Conn. R. S. Hicks, Secretary.

Feb. 21 to 24.—Twelfth Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Oct. 17 to 22.—Second Annual Meeting of the American Coursing Club, at Great Bend, Kan. G. I. Royce, Secretary, Topeka, Kan.

Oct. 31.—First Annual Field Trials of the Indiana Kennel Club at Bicknel, Ind. Open to dogs owned in Indiana. P. T. Madison, Secretary, Lock Box 4, Indianapolis, Ind.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

Jan. 10, 1888.—Second Annual Field Trials of the Texas Field Trials Club, at Marshall, Tex. W. L. Thomas, Secretary, Marshall, Tex.

Jan. 16.—Fifth Annual Field Trials of the Pacific Coast Field Trial Club, near Kingsburgh, Cal. N. P. Shelden, Secretary, 320 Sansome street, San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5400.**

THE WAVERLY DOG SHOW.

THE fourth dog show of the New Jersey Kennel Club was held at Waverly, N. J., last week, in conjunction with the fair of the New Jersey State Agricultural Society. No money prizes were offered, and in consequence entries were not as numerous as usual at shows of the club. The quality in many of the classes was much below the average, although quite a number of good dogs were present. The show was held in the building erected by the society for the purpose, the club having contracted to give a show for a series of years. Last year the club lost money and they decided upon a cheap show this year. Some of our prominent exhibitors sent their best animals, mainly, we presume, in compliment to the club, which is certainly deserving of its support for its straightforward course and efforts to please in the past. Let us hope that the average Jerseyman will awake to the importance of the dog question and that future shows of the club will be more liberally patronized. The building is well adapted for benching 500 dogs, the stalls being already arranged, and as the animals were scattered over the space, the many empty stalls did not impress one favorably, and the display did not make nearly so good an appearance as it would had the animals been closely grouped. John Reed was superintendent, and it goes without saying that the management was first-class.

The judges announced were: Mastiffs, C. C. Marshall; collies, J. D. Shotwell; St. Bernards, K. E. Hopf; English setters, black and tan setters, Great Danes, Newfoundlands, foxhounds, basset hounds, dachshunde and miscellaneous, Percy C. Ohl; Irish setters, Max Wenzel; pointers, Geo. L. Wilms; all sporting spaniels, A. C. Wilmerding; Dandie Dinmont, Skye, Bedlington, rough-haired and fox-terriers, King Charles spaniels, poodles and pugs, T. F. Rackham; beagles, A. H. Wakefield; all other classes, James Mortimer. All were present except Mr. Wenzel, and Mr. H. C. Glover acted in his place. Judging began shortly before 12 o'clock on Tuesday and was finished before night. The attendance was a little better than that of last year, but was not nearly so large as it should have been.

There were 237 entries, with 37 absentees; 33 of the remainder were not for competition, leaving 167 in the 149 classes, many of which were not represented. There were 160 awards, leaving but 7 unnoticed; only 2 commended cards were bestowed, 3 highly commendeds and 8 very highly commendeds, with 87 firsts, 39 seconds and 21 thirds. This we believe is unprecedented in the history of dog shows, with the exception perhaps of the Centennial show at Philadelphia in 1876. The minor awards must not be taken in all cases as indicative of the actual worth of the recipients, as in many instances prizes were awarded to specimens that would hardly get them even in moderate company. The first prize winners, however, with few exceptions, were well-known winners.

There were twelve entries in the open mastiff classes, with four absentees. No champions were entered. First went to the well known Pharaoh, looking well. Moses, a seven months old son of Ilford Caution, made a good second. He is one of the most promising youngsters we have seen and if he goes all right he will make some of the good ones take a back seat. He appears to have been properly reared and stands straight on capital legs and moves very nicely. He is of good size for his age, lacking at present in skull, but he will undoubtedly improve in this respect as he gets older. He also won first in dog puppy class. Third went to Danger, not a good specimen, with a sour look. Hildebert, shown very thin, was vhc. In the bitch class first went to Mayflower, a nice bitch of good size and a fair amount of bone. Her head is not massive enough and she lacks depth of chest. Regina, not at her best, came second. Third was withheld and vhc. given to Juno B., a very moderate specimen with a wild eye.

The St. Bernards were a capital lot, all the winners are well known with the exception of Lady Alice, winner of second in the open class for rough-coated bitches. She is a nice big roomy bitch with plenty of bone and stands nicely on good legs and feet. She is off in head and muzzle and has a ring tail. She was in good condition, except that she has just shed her coat. It was thought by some that she should have beaten St. Bride. The latter is the best in head and expression and was in much better coat and is the best mover. In the smooth-coated bitch class Crevasse was the only one shown. The prizes were withheld, but the exceedingly good-natured judge shut his eyes and faintly whispered he.

Only two Newfoundlands were shown, one dog and a bitch. First was withheld in the latter class and the judge, even better-natured than the genial Mr. Hopf, electrified the onlookers by bestowing second prize on a small weedy animal with not character enough to do honor to a commended card.

But two Great Danes faced the judge, the better one taking second honors, probably on account of his bad disposition.

Mother Demdike was alone in the greyhound champion classes, as was Stormy Day in the open dog class. In the bitch class the only entry, Flora, is off in head and ears, light in bone and lacks substance all through, she is also too flat-ribbed. Two of her puppies were first and second in their class, both have the faults of their dam, although the winner is better in bone.

Mr. Thayer carried off all the honors in the deerhound classes with his well known string.

There were twenty-five entries in the two pointer classes, two of them not for competition and one absentee. In the champion class for large dogs Beaufort was absent, and the contest was between Robert le Diable and Nick of Naso. Both were in capital condition, the former winning. He also won the special over Naso of Kippen, who was in good form. We cannot agree with this decision, as Naso is as good at all points as Robert, and decidedly beats him in loin. Naso is not so catchy to the eye as his competitor, but a close examination shows him to be a rare good one at nearly every point that is required for work. In the open dog class the well-known Jimmie had no trouble in disposing of the others. Second went to Nip, a large, strongly-made dog, with plenty of bone and substance and good legs; he is fairly good in head and looks a worker; he is a trifle out at elbow and his feet are not of the best. In the bitch class Kate VIII. was an easy winner. Second went to Daisy Ranger, vhc. at Boston last spring. Polly Varden, omitted from our prize list last week, was third. In the lightweight champion class Naso of Kippen was alone. There were no entries in the bitch class. In the open dog class first went to Bang Bang, looking his best. Nick o' Time, winner of second, is a handsome dog with a fair head and body, good quarters and fair tail, which is a trifle coarse. He is a bit light in bone and somewhat too straight behind. Bangso, winner of third, was shown too thin and soft. Banjo II., vhc., has a nice head except that his ears are set on too high. He has good shoulders, legs and feet, and promises to turn out something good. He was shown much too thin which made more prominent his worst fault, a long loin. In the bitch class first went to Queen Fan, a good bitch off in head, muzzle, eye and ear. Modesty, placed second, was not in first-class show form. Third went to Flirt, quite a fair bitch, not good in head and muzzle. Wanda, vhc., won second at New York last spring in the puppy class. She has improved somewhat but is still far from first-class. The two dog puppies were nothing extra. The only bitch puppy is rather pretty with a fair head, good legs and feet and tail, her ears are a trifle high and she is not deep enough in chest.

Of the twenty-six English setters entered thirteen were not for competition, and five of the remainder were absent, leaving only eight in the six classes to face the judge. Both entries in the champion dog class were absent. In the open dog class first went to Prince Jester, looking well. Buck II., winner of second, has a fair head and good legs and feet; he is too shallow and was shown soft. Rex Gladstone, placed third, is a very nice moving dog, with good loin, legs and feet; he is off in head with heavy ears set on too high, and is too wide in front. In the bitch class first went to Mavis, off in coat and a bit tucked up. It was a question whether Forest Dora, looking well, or Passion, shown too fat, was the better bitch, but there could be no doubt that either was better than Mavis. There were no puppies shown for competition.

Two dogs in the open class and two bitch puppies comprised the black and tan setters. The dogs are well known. The winning puppy we did not find. Lady Dora, winner of second, is pretty but off in head and too light in tan.

In Irish setters Gerald was alone in the champion dog class. In the open dog class Chip had an easy win. Jake Malone, placed second, has improved since we saw him last spring. Lancewood, winner of third, is not a show dog. He is off in ears, round in barrel, and his coat is not straight. In the bitch class Wanda was alone; she has rather a nice head, but as she was nursing a litter, no opinion could be formed of her. Two fairish puppies completed the list. They were awarded first in their respective classes.

In champion field spaniels, Compton Bandit had a walk-over. The only entry in the bitch class was not for competition. The open dog class brought out three new ones, all noted English winners. After a careful examination the flag went up for Newton Abbot Beau, a capital all round black and tan with very few faults. He shows lots of character and will undoubtedly prove a great acquisition to the breeders of this country. He has a profuse coat and splendid feather although these were not in first-class condition. He is not clean cut enough under the eye, which is about his only fault. Second went to Newton Abbot Laddie, also a very good dog with a nice head of the cocker type. He is very good in body and has a nice flat coat. He might be improved in hocks and forelegs and does not move quite free. Newton Abbot Lord, winner of third, is also a very good specimen with a good head except that he is overshot, which gives a bad appearance to his muzzle; he is a trifle up on his legs, and might stand better in front; he appears to be able to show a good coat when in condition. In the open dog class for black or liver cockers, first went to Baby Obo, one of the most typical dogs we have ever seen; with the exception of being a trifle straight behind but little fault can be found with him; but he is much too small, not scaling much above 18lbs., and we doubt the wisdom of giving first prize to a toy in what should be most decidedly a working class. In the champion class for other than black or liver, C. V. V. Sewell's Marion was awarded the prize. She arrived too late for the regular order of judging, and did not appear in the list of awards published last week. The puppies were not a remarkably good lot.

Two foxhounds were shown, a dog and bitch; both were of the same type and a racing-looking pair. They look like workers, but would hardly pass muster as typical representatives of the breed.

Eleven collies were entered and there was but one absentee, nearly all of them were out of coat. Nullamore, not in good condition, had a walkover in the champion dog class, as did Lady of the Lake in the bitch class. In the open dog class first went to Lockgarry, a nice-headed dog, well made and with a coat of good texture; he is a bit high on his legs, and a trifle too straight behind. Lochinvar, winner of second, has a fair head, with ears a trifle heavy. He moves badly behind, and for this reason should have given way to Gilford, placed third, a well put together dog with capital shoulders, legs and feet; he is a trifle small, a bit cheeky, and rather soft in coat. Only one bitch was shown, Bonnie Brae, a nicely shaped one with good head and ears; her coat was scant, but of good texture; she moves very well indeed; she is a trifle straight behind, and carries her tail too much like a setter. Alloway, the winning dog puppy, has a beautiful head, is well-formed, of good size, has plenty of bone and a good coat; but alas! his left foreleg is decidedly crooked; were it not for this he would be a very hard one to beat in any company.

Mr. Wakefield made his debut as a beagle judge in public, and handled his dogs very nicely. Bounce, winner in the open dog class, is a very good specimen; he is a trifle short in muzzle and ears, and would do with a little more bone. The only puppy is a very moderate specimen with a suspicion of the basset hound in ears.

Three pugs only were shown. Midget, winner in the bitch class, is too young for the place, to say nothing of the white on her breast and toes. Lillie, winner of second in the same class, should have been placed over her, although neither are good enough for a first prize. The latter is of fair size with no mask or trace to speak of, and she has white toe nails.

The bulldogs are well-known, as are the bull-terriers, except a very moderate lot of puppies in the latter class. The fox-terriers are also well-known. In the open dog puppy class the judge reversed his decision at Newport and placed Suffolk Trap over Sly Mixture. We cannot agree with this, although Trap has taken on a pound or more of flesh which partly covers his faulty loin, and he also showed up better; he is not good enough to beat Sly Mixture, even in the poor condition in which he was shown.

The prize was withheld in the black and tan terrier class from the only entry, a little black bitch minus tan. Bounce, a very moderate specimen, was the only Irish terrier shown. He did well to get a second. There were two Dandie Dinmonts shown. Border Wang, winner in the dog class, shows considerable character, he is off in ears and texture of coat on head. There was nothing in the remaining classes that calls for especial comment.

PUPPIES AND SAWDUST.

Editor Forest and Stream:

I would like through the columns of your valuable paper to place before the public my two years' experience in breeding dogs. I have lost some puppies of every litter bred and nearly all died in their second or third week. As soon as dead I put them under the sod and nothing more was thought of it. Six and a half weeks ago, I had a grand litter of German mastiffs out of my imported Flora by P. Merker's Nero. These puppies when whelped were the largest and finest lot I ever saw, but as usual, at the age of one week they began to droop and lose their appetite; three of them died, one after another, without my knowing what the trouble was. When the last one died I made a post-mortem examination and found that the intestines were full of long sawdust such as is made in a shingle and heading mill, which I generally use for bedding. It was twisted together like a rope, making it impossible for such young puppies to pass it off without assistance. Watching them I found that the sawdust stuck to the wet teats and that they got it in their mouths while nursing and swallowed it with the milk. I at once changed their bed by tacking an old carpet over the sawdust and gave a dose of castor oil to the remaining four. All of them passed more or less of the sawdust and soon began to improve. Since the change I can just see them grow and they are now at 6½ weeks old the largest pups of their age I ever saw. Since my experience as above I have had a litter of mastiffs, now three weeks old. They are a very fine lot with not a sick one among them. Heretofore at this age, when they lay on the sawdust, I lost some from every litter, and am satisfied that the sawdust caused their death. I trust that this will be of service to breeders and I would like to hear if any one has had a similar experience.

R. R. OESTERREICH.

DETROIT, Mich.

IRISH RED SETTER TRIALS.

THURSDAY, Sept. 1, and following day, on Viscount Powerscourt's Moors, county Wicklow.

First Day.

PUPPY STAKE.—First prize a silver cup, value £5, presented by the club; second prize a silver cup, value three guineas, presented by Spratts Patent (Limited).

Mr. R. J. Lloyd Price's Ginger (Rufus—Mirth), breeder, Rev. P. J. Keene; 18mos.,

beat

Mr. J. J. Giltrap's Kathleen Aroon (Mangerton—Iveragh), breeder, Mr. John McGoff; 18mos.

Mr. D.G. Fitzgerald's Wairoa (Mangerton—Quail), breeder, owner; 17mos.,

beat

Mr, C. C. Ellis's Drogheda (Frisco—Grouse II.), breeder, Rev. R. O. Callaghan; 7mos.

ALL-AGED STAKE.—First prize a silver cup, value £5, presented by Lord Ardilaun, and a cup, value £5, presented by the club; second prize a silver cup, value £5; third prize a silver cup, value three guineas.

Dr. Gogarty's Belle, pedigree and breeder unknown, 2½yrs.,

beat

Mr L. F. Perrin's Hector (Attie—champion Kate), breeder, owner; 5½yrs.

Dr. Gogarty's Sandy Kelly (Major General—Lillie III.), breeder, Mr. J. Harris, 3yrs. 7mos.,

beat

Mr. R. J. Lloyd Price's (pointer) Bellona (Ben—Belle Faust), breeder, owner; 6yrs. 7mos.

Mr. C. C. Ellis's Moonlighter (20,439), Cocksure—Quail), breeder, Mr. L. King; 2yrs. 2mos.,

beat

Dr. Gogarty's Rusif (Frisco—Zeta), breeder, Ivatts; 2yrs. 2mos.

The third annual field trials of the Irish Red Setter Club began on 1st inst. under favorable circumstances. Shortly after the appointed time the judges, owners, dogs, keepers, etc., proceeded to Viscount Powerscourt's moors, kindly lent to the club for the occasion. After a march to the top of the hill, the first brace were laid down, with the wind in their teeth. Ginger, the property of Mr. Lloyd Price, worked in first-class style, quartering her ground well. Mr. Giltrap's Kathleen Aroon was slow, and did not cover so much ground, but she worked well under thorough control. Ginger found first, and was well backed. Ginger then roaded out, the bird having gone; then Kathleen flushed, and dropped to wing. Ginger then set, birds having just left. Kathleen made two sets, Ginger backing well, a hare stealing away behind Ginger. Ginger then dropped to wing as a wild bird rose, Ginger dropping to hand, Kathleen backing. Kathleen then found, but flushed, and dropped to wing, while Ginger dropped well to hand. Ginger then ranged in brilliant style, Kathleen going too slow. Kathleen then made a false set to "gone away" birds, Ginger dropping. Ginger then came to call, and ranged away, working very merrily. Both bitches then dropped to hand, birds having risen wild. Ginger then found, and before Kathleen got the chance of backing, the bird rose and was knocked over. Both bitches dropped to shot, the judges giving the heat in favor of Ginger. Kathleen found, while Ginger stood to dead bird, remaining very steady. Both bitches behaved well on this bird, and were capitally handled, Merritt working Kathleen and Michie handling Ginger.

Wairoa and Drogheda were then put down, handled by Merritt and Turner respectively. This was a very short trial. Drogheda made a good set and was well backed by Wairoa. Drogheda ranged the best, and the flag went up in his favor. Belle and Hector, for the All-Aged Stakes, had very little sport, Hector doing what little was to be done, won easily, worked by Mr. Perrin, his owner, Merritt handling Belle. Hector made a set where birds had been and was backed by Belle. Belle then sprung a woodcock, but dropped to wing. Both then made a "blind." Sandy Kelly and Bellona were then put down, after considerable delay, the stewards not having the brace ready. Both ranged well, Bellona finding a hare and Sandy chasing it, the flag going up for the pointer, who was worked by Michie, Dr. Goharty handling the Irishman. Moonlighter and Rusif then started. Both dogs worked well, Moonlighter covering most ground. Both dogs set where birds had been, the judges giving the heat to Moonlighter. A halt was then called, and eventually it was decided to postpone the final trials, as it had been raining for some time, and everybody was thoroughly wet.

Second Day.

FINAL HEATS—PUPPY STAKE.

Drogheda beat Ginger.
Kathleen Aroon beat Wairoa.

AGED STAKE.

Dr. Gogarty's pointer Ida (12,232) (Graphic—Nora Creina); breeder, owner; 3yrs. and 5mos.; a bye.

Mr. R. J. Lloyd Price's Irish setter Dixie (Roval—Norah); breeder, Mr. T. Armstrong; 2yrs. and 8mos.; a bye.

Mr. J. J. Giltrap's pointer Lord Graphic (20,183) (Graphic—Daphne); breeder, Mr. J. E. Lloyd; 2½yrs., a bye.

Dixie beat Ida.
Hector beat Lord Graphic.
Moonlighter beat Bellona.
Dixie beat Moonlighter.

BRACES STAKE.

Mr. C. C. Ellis's Irish setters Moonlighter and Drogheda, and Mr. R. J. Lloyd Price's pointers Luck of the Goat and Bellona, divided.

Mr. L. F. Perrin's Irish setters Hector (5yrs. and 6mos.) and Bess (8yrs. and 7mos.), won third.

Owing to the severity of the weather, it was nearly 1 o'clock before a start was made, the undecided Puppy Stake being the first on the card. Ginger and Drogheda were cast off, Michie worked one and Turner the other. Ginger set a hare and dropped well. Drogheda did not, however, drop properly. A large pack of grouse then crossed the dogs, both dropping to wing. Ginger then dropped to a wild bird rising; Drogheda dropped behind, and afterward made a false set. Two birds then rose, both dogs dropping to wing. The dogs were then ordered on, and the keeper fired in the air, both dogs, wheeling, dropped to hand, when the flag went up for Drogheda, who thereby won the stakes, with Ginger second, and Kathleen Aroon reserve. Dixie and Ida, the next brace on the card in the All-Aged Stake from the previous day, then started. Dixie quickly found. Michie just got up to his dogs when the birds rose. Dixie was then ordered on, and drew up steadily. Ida backed, but went on and stole the set, making a point nearer to where the birds had been, the keeper firing. Ida dropped, Dixie remaining steady to down charge, while Ida broke away and came to heel. Dixie then made a false set, Ida, backing him, stole the set, when the flag went up for Dixie, Michie having worked him in his usual style, while Dr. Gogarty handled his pointer. Graphic and Hector were the next brace cast off, the former standing to a hare. Hector went on and set in front of him. The pointer, moving on, backed Hector prettily. A rabbit then got up in front of Hector, he dropping to hand. Graphic then made a point and was well backed. Graphic then made another point to game gone away. The dogs were then ordered up, no decision being given. Merritt worked the pointer, while Mr. Perrin worked his own setter. Moonlighter and Bellona were the next brace ordered down. Bellona made the first point. Then Moonlighter made a set, and was well backed, which proved a blank. Bellona then made a false point, and was backed by Moonlighter. Moonlighter and Dixie where then put down, Dixie making first set. Pussey being killed, both dogs dropped to shot, when the flag went up for Dixie. Moonlighter and Bellona were then put down, the former making a nice set, and was properly backed, when the flag went up for Moonlighter, first prize going to Dixie, second to Moonlighter, third to Bellona.

BRACE STAKES.—First prize, a silver cup, value £5. Presented by the Marquis of Conyngham; and a silver cup, value £5, presented by the club. Second prize, a silver cup, value £5. Third prize, a silver cup, value 3 guineas.

Lord Graphic and Avondale were the first brace let go, the former taking first point to a hare, Avondale running foot scent a few yards. Another hare then went off, and was chased by Lord Graphic, but he dropped to command; he then went on and flushed a bird. Bess and Hector were then ordered down, Bess making a nice set, and being well backed, birds rising, they both dropped to wing. Lord Graphic and Kathleen Aroon were then put down, Lord Graphic making a point, Kathleen Aroon backing him well. Luck of the Goat and Bellona were then sent on, both making a beautiful point. Luck of the Goat then made a couple of points further on, being backed in fine style. Two birds then rose to right, both dogs dropping to wing. Luck of the Goat then made a point on a single bird, Bellona backing him, a hare going away at the same time. Both dogs then dropped to shot. Moonlighter and Drogheda were the next brace. Drogheda made a nice set, and was well backed by the dog, both dropping nicely to shot.

The judges awarded equal first to Mr. Ellis's Moonlighter and Bellona, with Mr. Lloyd Price's Luck of the Goat and Bellona second, while Mr. Perrin was awarded third for his Hector and Bess. After thanks had been returned to Viscount Powerscourt for his kindness in lending his moors for the trials, a vote of thanks was passed to the judges, and the assembly broke up thoroughly satisfied with everything but the inclemency of the weather. Though the first day was one of the worst ever witnessed on a mountain, the latter part of the concluding day was not disagreable. The judges were Fletcher Moore, Esq., J. P., and Hubert M. Wilson, Esq., the Hon. Henry P. C. S. Monk and W. H. Lipscomb, Esq., acting as field stewards. James J. Giltrap, Esq., is hon. sec. to the club, and is ably supported by an efficient committee.—*Stock Keeper, Sept. 9.*

A. K. C. METHODS.

Editor Forest and Stream:

This time it is not to find fault (although it used to be the rule that the faults found us), but to suggest a difficulty that needs remedy. The revised constitution of the A. K. C. abolished the use of proxies, yet made no substitute for them. Undoubtedly proxies in the past have been sources of great mischief, many of the greatest blunders of the A. K. C. have been enacted by the force of proxies. Still something should be done to allow clubs representation, when it is impossible for their delegate to attend in person. It would be preposterous to expect the St. Paul Club, for instance, to send a delegate to New York three or four times a year, and it will be ruin to allow the careless slinging round of proxies that has characterized the past. What we need is a clear indication of exactly what clubs must do to secure their representation when their regular delegate cannot attend in person. Take the late Broadway meeting as a sample case. I appeared as a representative of the Hartford Club; I do not recall the exact words of my letter of authority, but as nearly as I can recall it, it read that I was duly authorized to act for that club, at the meeting of Sept. 22. The delegation of authority by the Cleveland Club was almost the same, except that it said the delegated party was to act as their "representative and proxy." The St. Paul letter directly said that —— was appointed their "proxy." All the letters were the official acts of the clubs, signed by the secretaries, and not by the delegates. Now I think the letter of the Hartford club clearly entitled me to a seat; it said nothing as to my being a proxy, but specifically authorized me to act for the club. The same was true of the letter of the Cleveland Club, if the word "proxy" was treated as simply a superfluity, one that could be stricken out without affecting the sense or force of the letter. The St. Paul one was fatally defective in that it appointed their representative only their "proxy." Mr. Child ruled that the Hartford letter was valid, and that the others were void. On appeal from his ruling all were declared defective and thrown out. The ground taken by Messrs. Peshall and Donner in support of this petition was that as all the secretaries meant the same thing, all must be treated alike, a most singular mistake for a lawyer like Mr. Peshall to make, and one that I warrant he does not go into court on. The only way of knowing what a writer's intent is, is by what he writes. Mr. Collins, of Hartford, made the intent of his club unmistakable by the words he used. So did Mr. Munhall, if the word "proxy" was eliminated as superfluous, while Mr. Drake left us all at sea as to any intent, except that of appointing a proxy, a thing not known to the A. K. C. Constitution. I think that I might have worried my way into a seat, but I thought it of more importance to establish a rule on this subject.

There will be another meeting of the A. K. C. some of these days, and before the regular annual meeting, and it seems to me that the best way out of the difficulty will be for the president to prepare a form, which secretaries shall use, specifying just what they shall do to secure representation if the regular delegate cannot attend in person. Such a proceeding, coming from Mr. Child, would hardly be voted down at any meeting of the A. K. C.

There was a very serious objection to the letters of the Cleveland and St. Paul clubs, that in principle should have vitiated both; that was, that they did not specifically appoint anybody. One was sent in blank, with a request or direction to the secretary to fill in whoever he chose, and the other appointed one of two parties. Either mode is too loose not to be capable of mischief. W. WADE.

HULTON, Pa., Sept. 26.

A. K. C. MEETING.

THERE was a meeting of the Executive Committee of the American Kennel Club, Sept. 22, at 44 Broadway, New York. The resignation of President Elliot Smith was accepted, and Mr. W. H. Child, of Philadelphia, was elected in his stead. Secretary Vredenburgh also tendered his resignation, which was accepted. He was then, upon motion of Mr. Peshall, unanimously re-elected. Upon reading the minutes of the last meeting the statement that it was voted that A. E. Rendle was entitled to the prize withheld from his spaniel at Providence was declared erroneous, and upon motion of Mr. Grosvenor it was expunged. Mr. Watson raised the point that the initial motion for a reconsideration of the Beaufort-Patti M. case was illegal, and was sustained with but one dissenting vote. The application of the Buffalo Kennel Club for membership was refused. That of the Stafford Kennel Club and the Masliff Club were laid over until the next meeting. The erroneous notice of the disqualification of the greyhound Pembroke was referred back to the New England Kennel Club. The secretary was instructed to send notice of the reinstatement of Messrs. L. & J. Backer and their Irish setter Irish Laddie. The standing committees were discharged and new ones will be appointed by the president.

MILWAUKEE DOG SHOW.

FOLLOWING is a list of the awards at the second annual dog show of the Wisconsin Kennel Club, held at Milwaukee, Wis., Sept. 20 to 23:

AWARDS.

MASTIFFS.—CHAMPION—*Dog:* Wacouta Kennels' Wacouta Nap. *Bitch:* No entry.—OPEN—*Dogs:* 1st, O. Kitzinger's Reno; 2d, J. Wacouta Kennels' Corsair. Very high com. and high com., Dr. A. Richter's Skobeleff and Storm. Com., F. Schroeder's Jack. *Bitches:* 1st, 2d and very high com., Wacouta Kennels' Wacouta Rose, Phœdra and Tamara. High com., Dr. A. J. Richter's Renee. Com., O. Kitzinger's Flora. *Puppies:* 1st, Dr. A. J. Richter's Don.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—*Dog:* R. J. Sawyer's Sir Charles. *Bitch:* R. J. Sawyer's Swiss Beda.—OPEN—*Dogs:* 1st, Name not given; 2d, F. J. Mann's Barry. Very high com., Miss H. M. Kilbourn's Jarl. High com., R. J. Sawyer's Tillox Mona. *Bitches:* 1st, Mohawk Kennels' Noma; 2d and very high com., R. J. Sawyer's Floss and Priscilla. *Puppies:* 1st, F. J. Mann's Barry; 2d and high com., Acme Kennels' Lion and Belle.—SMOOTH-COATED—CHAMPION—*Dog:* Absent. *Bitch:* No entry.—OPEN—*Dogs:* 1st, C. K. G. Billing's Rector II.; 2d, R. J. Sawyer's unnamed. *Bitches:* 1st, R. J. Sawyer's unnamed. *Puppies:* 1st, R. J. Sawyer's unnamed.

NEWFOUNDLANDS.—1st, D. O'Shea's Leo; 2d and very high com., H. Niemann's Flora and Peggy.

GREYHOUNDS.—*Dogs:* 1st, withheld; 2d, Abbott Greyhound Kennels' Druid; 3d, O. Kuestermann's Yank. *Bitches:* 1st and 3d, Abbott Greyhound Kennels' Sister in Black and Hawthorne Belle; 2d and very high com., E. Marshall's Purity and Josephine. High com., F. Leich's Bessie.

DEERHOUNDS.—No entries.

GREAT DANES.—*Dogs:* No entries. *Bitches:* No entries. *Puppies:* 1st, Dr. E. R. Kuemmel's Catch.

ENGLISH SETTERS.—CHAMPION—*Dog:* No entries. *Bitch:* Absent.—OPEN—*Dogs:* 1st, J. S. Hudson's Dad Wilson; 2d, K. T. Kennedy's Prince Royal H.; 3d, T. G. Davey's Knight of Snowden. Very high com. and high com., T. Donoghue's Duke Gladstone and Druid's Spot. High com., D. O'Shea's Sport. Com., name not given. *Bitches:* 1st and 3d, T. Donoghue's Blue Spark and Blue Cubas; 2d, D. O'Shea's Belle. Very high com., W. A. Collin's Pickles. High com., A. Bermann's Toby's Choice and C. Hendee's Lady Pearl.—PUPPIES—*Dogs:* 1st and 2d, T. Donoghue's Noble Boy and Duke Gladstone's Boy. *Bitches:* 1st and 2d, T. Donoghue's Noble Girl and Blue Hornet.

BLACK AND TAN SETTERS.—CHAMPION—W. S. Hammett's Royal Duke.—OPEN—*Dogs:* 1st, A. H. Christ's Alp; 2d, E. G. Asmus's Bang. *Bitches:* 1st, W. S. Hammett's Rose. *Puppies:* 1st, E. G. Asmus's Bang.

IRISH SETTERS.—CHAMPION—*Dog:* I. H. Roberts's Bruce. *Bitch:* No entry.—OPEN—*Dogs:* 1st, D. L. Carmichael's Mac; 2d, E. Maher's Larry S.; 3d, J. H. Naylor's Frank. Very high com., J. Welsch's Buncher II. High com., P. Hochstein's Willow. *Bitches:* 1st, H. Schubert's Nellie H.; 2d, I. H. Roberts's Jessie; 3d, T. Donoghue's Irish Maud. Very high com., W. L. Carpenter's Gypsy. High com., E. P. Thomas's Gypsy. *Puppies:* 1st, T. Donoghue's Irish Lass; 2d and 3d, H. Schubert's Gypsy and Feltman.

POINTERS.—CHAMPION—*Dog:* Detroit Kennel Club's King Bow. *Bitch:* No entry.—OPEN—LARGE—*Dogs:* 1st, R. Schmidt's Bow Faust; 2d, Detroit Kennel Club's Fleet; 3d, Mrs. C. J. Engel's Young Meteor. Very high com., F. Esser's Hector. *Bitches:* 1st and very high com., T. Donoghue's Queen and Rose Croxteth; 2d, Mrs. C. J. Engel's Lady Trinket; 3d, A. M. Grau's Birdie.—SMALL—*Dogs:* 1st, name not given; 2d, T. Donoghue's Vanguard. *Bitches:* 1st, T. Donoghue's Juno S.—PUPPIES—*Dogs:* 1st, R. Duttke's Faust; 2d, F. Esser's Hector. *Bitches:* 1st, Mrs. C. J. Engle's Lady Trinket.

IRISH WATER SPANIELS.—CHAMPION—T. Donoghue's Count Bendigo; 2d, Excelsior I. W. S. Kennels' The O'Donoghue.—OPEN—*Dogs:* 1st, Excelsior I. W. S. Kennels' Patsy. *Bitches:* 1st, 2d, 3d, very high com. and high com., Excelsior I. W. S. Kennels' Chippewa Belle, Gipsie, Juda, Mildred O'Donoghue and Hilda O'Donoghue.

CHESAPEAKE BAY DOGS.—No entries.

FIELD SPANIELS.—1st, J. N. Nocho's Fan II.

COCKER SPANIELS.—CHAMPION—Absent.—OPEN—*Dogs:* 1st and 2d, C. M. Nelles's Rufus and Mike; high com., F. W. Chapman's Keno. *Bitches:* 1st, C. M. Nelles's Juno W.

CLUMBER SPANIELS.—No entries.

FOXHOUNDS.—*Dogs:* 1st, 2d, very high com., high com. and com., H. E. Cook's Brave, Whoopey, Dan Fraud, Roderick and Druid. *Bitches:* 1st, 2d, 3d, very high com., high com. and com., H. E. Cook's Spotty, Rose, Pearl, Fly, Cloud II. and Jet.

BEAGLES.—CHAMPION—D. O'Shea's Rattler.—OPEN—1st, 3d, very high com. and high com., J. Bross's Dexter, Reta, Flora II. and Bell; 2d and com., D. O'Shea's Music and Tomboy. UNDER 12IN.—1st, J. Bross's Roxy; 2d, D. O'Shea's Fairmaid. *Puppies:* 1st, J. Welsch's Waldman.

DACHSHUNDE.—*Dogs:* 1st, 3d and very high com., W. Loeffler's Romeo, Kaiser and Wilhelm; 2d, name not given. High com., L. Seng and's Hirschmann. *Bitches:* 1st, W. Loeffler's Thusnelda; 2d, G. Poppert's Juliette.

FOX-TERRIERS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, E. Lever's Little Swell; 2d, W. A. Lacy's Rattler. Com., Mrs. A. Gregory's Faxi. *Bitches:* 1st, J. H. Shepard's Lady Winnie; 2d, E. B. Boxwell's Lotta. Very high com., E. Lever's Varsity. *Puppies:* Absent.—WIRE-HAIRED.—No entries.

COLLIES.—CHAMPION—Chestnut Hill Kennels' Dublin Scot.—OPEN—*Dogs:* 1st, Chestnut Hill Kennels' Bonnie Duntroon; 2d, J. Watson's Clipper. *Bitches:* 1st and 2d, Chestnut Hill Kennels' Spoiled Miss and Luella. *Puppies:* No entries.

BULLDOGS.—CHAMPION—T. Patten's Romulus.—OPEN—1st, J. Teague's Toro; 2d, W. W. Silvey's Duchess of Kent.

BULL-TERRIERS.—CHAMPION—F. F. Dole's Count.—OPEN—LARGE—*Dogs:* 1st, W. Marriner's Nimble. *Bitches:* 1st, reserve and high com., F. F. Dole's Miss Norah, Countess and Young Venom; 2d and high com., W. Marriner's Lady in White and Kit. Very high com., D. O'Shea's Lillie. SMALL—*Dogs:* 1st, F. F. Dole's Barton; 2d, W. Marriner's Cribb. *Bitches:* 1st, W. Marriner's Nectar II. *Puppies:* 1st, W. Marriner's Cribb.

BLACK AND TAN TERRIERS.—1st and 2d, E. Lever's Safety and Royal Agnes. Very high com. and high com., Campbell & Blake's Nunon and Turk. Com., W. Meyer's Lady B.

BEDLINGTON TERRIERS.—1st and 2d, D. O'Shea's Judy and Sting II.

SCOTCH TERRIERS.—1st, 2d, reserve, very high com. and high com., J. H. Naylor's Rosie, Glenlyon, Fannie Fern, Lourie Dunbar and Glen Gow.

DANDIE DINMONT TERRIERS.—1st, 2d and very high com., J. H. Naylor's Pansy, Cromwell and Bonnie Briton.

IRISH TERRIERS.—1st, very high com. and high com., C. T. Thompson's Geesela, Mollie and Bedad; 2d and com., D. O'Shea's Garrie Owen and Fly.

YORKSHIRE TERRIERS.—No entry.

KING CHARLES SPANIELS.—*Dogs:* Prizes withheld. *Bitches:* 1st, O. Kitzinger's Molly; 2d, F. Collinge's Mollie. Com., H. Jansson's Lisla.

SKYE TERRIERS.—1st and 2d, J. H. Naylor's Drollie and Harrie. Very high com., J. Lawrie's Guess.

PUGS.—CHAMPION—*Dog:* No entry. *Bitch:* Mohawk Kennels' Bo-Peep.—OPEN—*Dogs:* 1st, J. Trondle's Kolpie; 2d, Mohawk Kennels' Bijou. *Bitches:* 1st, Mohawk Kennels' Tody; 2d, Campbell & Blake's Rubie F.

TOY TERRIERS.—1st, Campbell & Blake's Tony; 2d, J. E. Friend's Tiny.

POODLES.—1st, Mrs. G. W. Strohmeyer's Fido.

DALMATIANS.—1st, Withheld; 2d, F. Kulling's Sport.

MISCELLANEOUS.—Equal 1st, D. O'Shea's Ranger and Roxy

SPECIAL PRIZES.

Kennel of mastiffs, Wacouta Kennels; St. Bernards, W. J. Sawyer; English setters, T. Donoghue; pointers the same; Irish water spaniels, Excelsior Irish Water Spaniel Kennels; foxhounds, H. E. Cook; beagles (2) J. Bross; dachshunde, W. Loeffler; collies, Chestnut Hill Kennels; bull-terriers, F. F. Dole; pugs, Mohawk Kennels. Best mastiff (2), Wacouta Kennels' Wacouta Rose; St. Bernard, R. J. Sawyer's Sir Charles; in open class, C. R. G. Billing's Rector II.; Great Dane, Dr. E. R. Kuemmel's Catch; Newfoundland, D. O'Shea's Leo; greyhound, Abbott Greyhound Kennels' Sister in Black; English setter, J. S. Hudson's Dad Wilson; in open class, the same; black and tan setter, W. S. Hammett's Royal Duke; in open class, A. H. Christ's Alp; Irish setter, I. H. Roberts's Bruce; in open class, D. L. Carmichael's Mac; pointer, T. Donoghue's Juno S.; in open class, the same; Irish water spaniel, T. Donoghue's Count Bendigo; in open class, Excelsior I. W. S.

Kennels' Chippewa Belle; cocker spaniel (2) C. M. Nelles's Rufus; foxhound (2) H. E. Cook's Spotty; beagle, D. O'Shea's Rattler; dachshund (2) W. Loeffler's Romeo; fox-terrier (2), E. O'Shea's Judy; Dandie Dinmont, J. H. Naylor's Pansy; Irish terrier, C. T. Thompson's Geesela; Skye (2), J. H. Naylor's Drollie; King Charles spaniel, O. Kitzinger's Molly; pug (2) J. Trondle's Kelpie; sporting dog owned by club member, J. W. Olcott's Chippewa Belle; non-sporting, W. Marriner's Lady in White.

NEWBURGH DOG SHOW.

Editor Forest and Stream:

A dog show was held at Newburgh, N. Y., Sept. 20 to 24, in connection with the fair of the Orange County Agricultural Society. There were about 150 entries, 118 of which were present. The quality was quite moderate, nearly all the dogs being from the immediate vicinity. They were benched under a temporary shed. The management of the show was not first-class, although it proved to be the leading attraction of the fair, the building being constantly packed with visitors. The dogs were fed on Challenge food. Mr. H. Clay Glover judged all classes. Following is a list of the

AWARDS.

MASTIFFS.—*Dogs:* 1st, W. Ranson's Leo; 2d, I. Legar's Grover.

ST. BERNARDS.—Prizes withheld.

NEWFOUNDLANDS.—*Dogs:* 1st, C. G. Martin's Rover.

GREYHOUNDS.—*Dogs:* 1st, withheld; 2d, H. Duffy's Racer. *Bitches:* 1st, Miss Mamie McLellan's June; 2d, H. A. Duffy's unnamed.

FOXHOUNDS.—*Dogs:* 1st, Donahue & Kissam's Sport; 2d, G. A. Lamoreaux's Ned. *Bitches:* 1st, Donahue & Kissam's Fly; 2d, G. A. Lamoreaux's Daisy Dean. *Puppies:* 1st, G. A. Lamoreaux's Fly; 2d, M. C. Nichols' Belle.

BEAGLES.—*Dogs:* 1st, J. M. Carpenter's Trip. *Bitches:* 1st, J. M. Carpenter's Gyp.

POINTERS.—*Dogs:* 1st, R. Whitehill's Jim; 2d, E. Wilkinson's Dash. *Bitches:* 1st, J. H. Brook's Frank. *Puppies:* 1st and 2d, E. Wilkinson's Nell and Dell.

ENGLISH SETTERS.—*Dogs:* 1st, R. Johnston's Dan; 2d, L. W. Y. McCrosky's Don. *Bitches:* 1st, W. F. Milford's Glenora; 2d, L. W. Y. McCrosky's Daisy. *Puppies:* 1st, T. Stapleton's Ovid.

IRISH SETTERS.—*Dogs:* 1st, R. Hawes's Sachem; equal 2d, I. E. Dawson's Kit Carson and W. Doderer's Rover. *Bitches:* 1st, L. A. Van Zandt's Ruby Glencho; 2d, I. E. Dawson's Flora.

BLACK AND TAN SETTERS.—*Dogs:* 1st, C. Kemp's Eley. *Bitches:* 1st and 2d, C. Kemp's Faun and Bessie.

FIELD SPANIELS.—1st, W. Gomley's Fly; 2d, Houghton Farm's Max.

COCKER SPANIELS.—1st, E. W. Deyo's Daisy. *Puppies:* 1st and 2d, F. F. Ferguson's unnamed.

IRISH WATER SPANIELS.—Prizes withheld.

COLLIES.—*Dogs:* 1st, Houghton Farm's Davy Lindsay; 2d, J. E. Denniston's Shep. *Bitches:* 1st, J. McDowell's Daisy; 2d, W. C. Brewster's unnamed. *Puppies:* 1st, W. T. F. Balfe's Gaffer; 2d, W. F. Thomson's unnamed.

FOX-TERRIERS.—*Dogs:* 1st, C. F. Kew's Novice. *Bitches:* 1st, C. F. Kew's Nellie; 2d, L. A. Van Zant's Gypsie. *Puppies:* 1st and 2d, C. F. Kew's unnamed.

YORKSHIRE TERRIERS.—*Dogs:* 1st, withheld; 2d, T. Stapleton's Spark. *Bitches:* 1st, withheld; 2d, T. Stapleton's Flirt. *Puppies:* 1st, withheld; 2d, T. Stapleton's Tiny.

BLACK AND TAN TERRIERS.—*Dogs:* Absent. *Bitches:* 1st, W. Wilson's Nellie; 2d, A. J. Ulley's Jess. *Puppies:* 1st, J. Orr's Fannie.

PUGS.—*Dogs:* 1st, Miss Minnie Goetchius's Smart; 2d, T. Stapleton's Pocheaux. *Bitches:* 1st, E. K. Shaw's Nixie; 2d, T. L. Nullsfough's Gyp. *Puppies:* 1st and 2d, E. K. Shaw's Punch and Judy.

DALMATIANS.—*Bitches:* 1st, W. H. Hallock's Nell.

MEXICAN HAIRLESS.—1st and 2d, J. Hyde's Beauty and Grover.

MISCELLANEOUS.—Equal 1st, T. M. Davis's Scotch terrier Rose and A. J. Ulley's wire-haired fox-terrier Clip. C.

A DOG'S GOOD DEED.—A gentleman who lives among the Catskills owns a bright and powerful Newfoundland dog called Rover, of large and commanding stature. Rover has a kindly eye and is one of the most intelligent beasts in the country. One Sunday last winter, when the family returned from Dextertown, where they had been attending church, Rover did not greet them as was his invariable custom. The members of the family were quick to notice his absence. After they had been but a short time in the house they were startled by the low baying of Rover, and on opening the door the dog rushed in on them, and going over to where Mr. Titsworth stood, he looked up appealingly in his face, gave utterance to low sounds of distress and tugged at his master's coat. At Mrs. Titworth's suggestion, a lantern was procured and Rover was followed to the stables, where five cows had been yoked in their stalls. A heavy beam had fallen out of its socket, and the cows were all prostrated with this beam over their necks. A few hours more and the whole number would have perished. They were speedily liberated from thier perilous condition.—*Judge and Jury.*

THE POISON FIEND.—Utica, N. Y.—*Editor Forest and Stream:* The writer owned a pair of dogs, a spaniel and a setter, both fairly broken, and quite submissive, both thoroughbred. We have lived where we now reside for 14 years, and never until a new neighbor moved next door was there any trouble about our dogs. The gentleman in question kindly prepared for the grave our spaniel and setter, and our neighbors who owned valuable hounds and terriers were kindly relieved from the responsibility of supplying the animals with shelter and food. Some 3 years ago on Sunday afternoon on leaving the house, the spaniel following, I found on the grass between the fence and stone sidewalk four pieces of bread and butter. I kicked the dog away and picked up the pieces, carried them to the laboratory, and on examination found strychnine in quantities sufficient to kill a dozen people. The same friendly gentleman placed that where it was picked up. Is there no redress? Cannot dog murderers be made to suffer?—T. B.

THE SPANIEL CLUB.—A meeting of the American Spaniel Club was held at Waverly, N. J., on Sept 20. The meeting was well attended, twenty-four members being present and represented by proxy. The finances of the club were shown to be in very fair condition, a good balance being in the treasury. The standards for field, Clumber, Irish water and Sussex, as presented by the Standard Committee, having been voted upon favorably by the members of the club, they were duly accepted. Mr. Richardson here on behalf of the Clumber men entered a protest against the Clumber standard as not being full enough, and suited to the modern Clumber. On motion it was voted to appoint a committee on its revision, which was done. Officers for the ensuing year were duly elected as follows: President, S. R. Hemingway, New Haven, Conn.; Secretary-Treasurer, A. C. Wilmerding, New York city; Executive Committee: S. R. Hemingway, A. C. Wilmerding, James Watson, Marmaduke Richardson, Edw. M. Oldham.

FRENCH DOGS.—The *American Register*, Paris, France, Sept. 3, says that the number of shooting licenses has been largely in excess of that of last year. The authorities are said to have received upward of 12 million francs from 428,569 Nimrods, accompanied by no less than 852,000 dogs.

DAN O'SHEA DISQUALIFIED.—St. Paul and Minnesota Kennel Club, St. Paul, Minn., Sept. 22.—*Editor Forest and Stream:* While our show was a grand success, yet several things occurred which marred the pleasure of the occasion. Three of the visiting exhibitors were guilty of ungentlemanly conduct. The misbehavior of one of these, viz., Dan O'Shea of Loudon, Ontario, was so unbearable that we felt obliged to disqualify him. He is very quarrelsome and was ready to fight at a moment's notice, without sufficient provocation, with visitor, exhibitor or attendant. He appropriated to himself all sorts of articles, dog chains, slips, collars, brushes and pans, crackers, hammers, etc., in fact any article of the smallest value. He has been accused of thieving at bench shows before this; and I believe that Mr. Fellows tried to disqualify him for such actions at the Buffalo show last spring. I trust that by making an example of him we may be able to stop this business.—H. T. DRAKE.

THE STAFFORD DOG SHOW.—The fourth annual dog show of the Stafford Kennel Club will be held at Stafford Springs, Conn., Oct. 12 and 13. Although the club is not yet a member of the A. K. C., we see no reason why their application should not be favorably received at the next meeting of the association. The amount of prize money depends upon the number of entries in each class, as fifty per cent. of entrance money goes to first, thirty per cent. to second and twenty per cent. to third. The club also offer $250 in cash as special prizes in champion classes and for kennels. The show will be held in connection with the fair of the Stafford Agricultural Society, and is sure to be well attended. Entries close Oct. 6. The secretary's address is R. S. Hicks, Stafford Springs, Conn.

QUAIL—PATTI B. WHELPS.—Baltimore, Sept. 20.—*Editor Forest and Stream:* Please state in your next issue that one James Bardwell, of Everett, Mass., is advertising in the Boston *Globe*, seven Gordon setter pups out of his Patti B. by my Quail. I hold his letter dated June 26, 1887, where he states to me he has three bitches and one dog pup only living. He states that Patti B. is imported, when the truth is she was bred by Capt. J. P. Fitzgerald, of Chicago, Ill. and is registered in the *American Kennel Register* as No. 2577. I wish to keep the public clear of fraud, and save my stock from imposition by his selling other pups as bred from mine. Those wishing for any further information can write me.—H. MALCOLM.

GREENSBURG DOG SHOW.—There will be a dog show held at Greensburg, Pa., Oct. 11 to 14, in conjunction with the third annual fair of the Westmoreland County Agricultural Society. The premiums in the more important classes are $5 and $3, with $3 and $2 for puppies. A number of classes have $4 and $2, and a few minor classes $3 and $2. Entries close Oct. 8. The Secretary's address is James B. Laux, Greensburg, Pa.

EASTERN FIELD TRIALS.—Entries for the All-Aged Stakes and Champion Sweepstakes of the Eastern Field Trials Club close next Saturday, Oct. 1.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Merry. By Miss M. W. Tyler, West Newton, Mass., for black cocker spaniel bitch, whelped April 3, 1887, by Rex (Obo II.—Gem) out of Irving's Nell (Ebony— ——);

Huntress and Highland Lassie. By H. W. Huntington, Brooklyn, N. Y., for black, white points, greyhound bitches, whelped Aug. 7, 1887, by Balkis (Clyto—Primrose) out of Cassandra (Debut—Dead Secret).

Haidee. By H. W. Huntington, Brooklyn, N. Y., for white, with black head, greyhound bitch, whelped Aug. 7, 1887, by Balkis (Clyto—Primrose) out of Cassandra (Debut—Dead Secret).

Hazelhurst. By H. W. Huntington, Brooklyn, N. Y., for black, with white markings, greyhound dog, whelped Aug. 7, 1887, by Balkis (Clyto—Primrose) out of Cassandra (Debut—Dead Secret).

Highland Laddie. By H. W. Huntington, Brooklyn, N. Y., for fawn greyhound dog, whelped Aug. 7, 1887, by Balkis (Clyto—Primrose) out of Cassandra (Debut—Dead Secret).

Grace Gladstone and Gay Nell Gladstone. By A. S. Hoffman, Morrisville, Pa., for black and white English setter bitches, whelped July 13, 1887, by Rex Gladstone (Royal Gladstone—Mollie Druid) out of Little Bess (Antic—Dream).

Budd Gladstone and A. H. S. By A. S. Hoffman, Morrisville, Pa., for black and white and blue belton English setter dogs, whelped July 13, 1887, by Rex Gladstone (Royal Gladstone—Mollie Druid) out of Little Bess (Antic—Dream).

Frank Mohawk. By Edwin Still, Philadelphia, Pa., for roan, black and tan beagle dog, whelped May 3, 1887, by Tripe II. (Tripe I.—Rose) out of Nellie (Gunner—Diana).

Viscount. By W. F. Barnard, Philadelphia, Pa., for white bull-terrier dog, whelped June 7, 1887, by Count (A.K.R. 3173) out of White Violet (A.K.R. 3799).

Gypsy Queen.—Editor Forest and Stream: I observe in the last issue of the FOREST AND STREAM that F. C. Evans has registered a collie bitch (No. 5301 in the A.K.R.) under the name of Gypsy Queen. I wish to protest against his use of said name, as I have already claimed it, viz.: My Gypsy Queen (A.K.R. 3708), by imported Strephon (A.K.R. 2760) out of imported Nancy Lee (E. 14,125). Respectfully, C. VAN W. FISH (Cleveland, O., Sept. 23).

Naso of Bergen.—Editor Forest and Stream: I see that Geo. W. McNeil claims the name of Naso of Bergen in a recent issue of your paper. As I claimed that name in the FOREST AND STREAM of Aug. 6, I would ask him to select another for his dog.—FLOYD VAIL.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Lilly II.—Vortigern. A. W. Smith's (Buffalo, N. Y.) black and tan bitch (Lilly II. (Cupid—Lilly) to E. Lever's Vortigern (Viper—Gipsey), Sept. 23.

Jeannie Nettles—David. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Jeannie Nettles (A.K.R. 1224) to their David (Strephon or Rex—Mavis), Sept. 4.

Juniata—Robinson Crusoe. Grasmore Kennels' (Manchester, N. H.) bulldog bitch Juniata (Tippoo—Josephine) to John E. Thayer's Robinson Crusoe (Monarch—Penzie), Aug. 12.

Mary Dell—Zanzibar. A. S. Hoffman's (Morrisville, Pa.) English setter bitch Mary Dell (Dash III.—Dashing Jessie) to G. F. Clark's Zanzibar (Gladstone—Mercy), Sept. 14.

Nellie Pride—Dundee. L. E. Haag's (Indianapolis, Ind.) collie bitch Nellie Pride (A.K.R. 2319) to R. J. Curry's Dundee, Aug. 1.

Ashmont Bertha—Leo. East Lake Kennels' (West Jefferson, O.) mastiff bitch Ashmont Bertha (Hero II.—Empress) to W. K. Warwick's Leo (imported Lord Nelson—Lioness, formerly Nana), Sept. 16.

Friza—Otho. Wm. Montgomery's (Waverly, Md.) St. Bernard bitch Friza (Duke of Leeds—Dido II.) to The Hospice Kennels' Otho (A.K.R. 483), July 6.

Lakme—Otho. F. Kimball's (Worcester, Mass.) St. Bernard bitch Lakme (Merchant Prince—Bernie V.) to the Hospice Kennels' Otho (A.K.R. 483), July 8.

Bellne II.—Alvier. The Hospice Kennels' (Arlington, N. J.) St. Bernard bitch Bellne II. (A.K.R. 3033) to their Alvier (A.K.R. 5166), July 22.

Abbess—Wotan. O. W. Folger's (Buffalo, N.Y.) St. Bernard bitch Abbess (A.K.R. 783) to The Hospice Kennels' Wotan (A.K.R. 5180), Aug. 31.

Flora—Eiger. P. Kraemer's (Newark, N. J.) St. Bernard bitch Flora to The Hospice Kennels' Eiger (A.K.R. 5168), Aug. 11.

Duchess of Montrose—Eiger. Geo. T. Schenck's (Burlington, Ia.) St. Bernard bitch Duchess of Montrose (Duty—Apajune) to The Hospice Kennels' Eiger (A.K.R. 5168), July 31.

Speranza—Hector. T. Burke's (Bridgeport, Conn.) St. Bernard bitch Speranza (A.K.R. 5004) to The Hospice Kennels' Hector (A.K.R. 4425), Sept. 4.

Judith—Otho. J. R. McAlpin's (Morristown, N. J.) St. Bernard bitch Judith (Blucher—Madeline) to The Hospice Kennels' Otho (A.K.R. 483), Sept. 15.

Sweetheart—Black Prince. C. V. V. Sewell's (Tarrytown, N. Y.) spaniel bitch Sweetheart (Obo, Jr.—Woodstock Flirt) to A. C. Wilmerding's Black Prince (Benedict—Madcap), Aug. 19.

Chip—Don Quixote. A. T. Currier's (Whitinsville, Mass.) pointer bitch Chip (Prince—Belle II.) to Don Quixote Kennels' Don Quixote (A.K.R. 5066), Sept. 5.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Lakme. F. Kimball's (Worcester, Mass.) St. Bernard bitch Lakme (Merchant Prince—Bernice V.), Sept. 6, thirteen (seven dogs), by The Hospice Kennels' Otho.

Heather Lass. A. H. Aldrich's (Melrose, Mass.) Gordon setter bitch Heather Lass (Jock—Gypsy), Sept. 6, nine (seven dogs), by G. E. Browne's Argus II. (Argus—Beauty).

East Lake Flora. Geo. Gillivan's (West Jefferson, O.) pug bitch East Lake Flora (Bradford Ruby—Flossy), Sept. 6, four (two dogs), by Geo. H. Hill's Joe.

Ferry. T. F. Rivers's (Williamsport, Pa.) pointer bitch Ferry (Tammany—Erie), Sept. 12, nine (six dogs), by J. T. Perkins's Mainspring (Mike—Romp).

Dido K. Don Quixote Kennels' (Worcester, Mass.) pointer bitch Dido K. (Bob—Daphne K.), July 14, four (three dogs), by their Don Quixote (A.K.R. 5066).

Bessie C. P. Cullen's (Salmon Falls, N. H.) cocker spaniel bitch Bessie C. (A.K.R. 5445), Sept. 12, eight (five dogs), by Black Pete (A.K.R. 3071).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Juniata. White and tan bulldog bitch, whelped August, 1884, by Tippoo out of Josephine, by J. E. Thayer, Lancaster, Mass., to Grasmere Kennels, Manchester, N. H.

Little Bess. Black and white English setter bitch, whelped Sept. 5, 1884, by Antic out of Bartlett's Dream, by A. S. Hoffman, Morrisville, Pa., to Wm. S. Rogers, May's Lauding, N. J.

Grace Gladstone. Black and white English setter bitch, whelped July 13, 1887, by A. S. Hoffman, Morrisville, Pa., to Wm. S. Rogers, May's Landing, N. J.

Hazel Obo. Black cocker spaniel bitch, whelped March 24, 1886 (A.K.R. 4097), by Dr. J. Wheelock, Waterbury, Vt., to Wm. Barnes, Philadelphia, Pa.

Prince Roy. Red Irish setter dog, whelped April 13, 1887, by Jim out of Nell II., by Onota Kennels, Pittsfield, Mass., to N. McIntosh, Providence, R. I.

Phœbe. Black and tan collie bitch, whelped August, 1886, by Calhoun Kennels, Springfield, Mass., to W. S. Chambers, Victoria, B. C.

Douglas II. Apricot fawn pug dog, whelped June 1, 1886, by Douglas out of June, by E. A. Pitts, Columbus, O., to Geo. Gillivan, West Jefferson, O., and resold by him to A. G. Eberhart, Cincinnati, O.

Lady Isabella. Lemon and white pointer bitch (A.K.R. 465), by Floyd Vail, Jersey City, N. J., to H. S. Kearney, New York.

Royal Naso. Liver and white pointer dog, whelped July 25, 1887, by Naso of Devonshire out of Lady Isabella, by Floyd Vail, Jersey City, N. J., to Dr. S. W. Clark, same place.

Premier Naso. Liver and white pointer dog, whelped July 25, 1887, by Naso of Devonshire out of Lady Isabella (A.K.R. 465), by Floyd Vail, Jersey City, N. J., to H. S. Kearney, New York.

Lilly II. Black and tan terrier bitch, whelped August, 1880, by Cupid out of Lilly, by E. Lever, Philadelphia, Pa., to A. W. Smith, Buffalo, N. Y.

Budd Gladstone. Black and white English setter dog, whelped July 13, 1887, by Rex Gladstone out of Little Bess, by A. S. Hoffman, Morrisville, Pa., to W. A. Poland, Trenton, N. J.

Gay Nell Gladstone. Black and white English setter bitch, whelped July 13, 1887, by Rex Gladstone out of Little Bess, by A. S. Hoffman, Morrisville, Pa., to John Dick, Pullman, Ill.

Glenmar II.—Nell I. whelp. Red Irish setter dog, whelped March 12, 1887, by Onota Kennels, Pittsfield, Mass., to H. F. Smith, Benson, Vt.

Vortigern—Fortune whelps. Black and tan terriers, whelped May 14, 1887, by E. Lever, Philadelphia, Pa., to Mr. Grendall, Baltimore, Md.

Jim—Nell II. whelps. Red Irish setters, whelped April 13, 1887, by Onota Kennels, Pittsfield, Mass., a dog to W. K. Patch, Danbury, Conn., two dogs to S. Dru, Lanesboro, Mass., and a bitch to J. D. Gale, Providence, R. I.

Ramona. Blue belton Laverack setter dog, 2½yrs. old, by Tempest out of Lilly, by J. E. Eveleth, Brookline, Mass., to Geo. L. V. Tyler, West Newton, Mass.

Dido K. Black and white pointer bitch, whelped June 30, 1886, by Bob out of Daphne K., by Don Quixote Kennels, Worcester, Mass., to C. A. Parker, same place.

Nellie. Liver and white cocker spaniel bitch, whelped Nov. 24, 1884, by Bang out of Gypsie, by Fleetfoot Kennels, Delhi, N. Y., to Monadnock Kennels, Peterboro, N. H.

Bang—Flirt whelp. Liver and white pointer dog, whelped April 1, 1887, by Geo. L. V. Tyler, West Newton, Mass., to L. H. Bosworth, Florence, Mass.

Don Quixote (A.K.R. 5066)—Nell (A.K.R. 1354) whelp. Lemon and white pointer dog, whelped June 28, 1887, by Don Quixote Kennels, Worcester, Mass., to C. A. Parker, same place.

PRESENTATIONS.

Kate Gladstone. Black and white English setter bitch, whelped Jun 14, 1883 (A.K.R. 5379), by G. DeHaven, Philadelphia, Pa., to A. S. Hoffman, Morrisville, Pa.

Countess Naso. Orange and white pointer bitch, whelped Aug. 4, 1887, by Mort of Naso out of Devonshire Queen (A.K.R. 3127), by Floyd Vail, Jersey City, N. J., to F. F. Benson, New York.

Lord Naso and Fairy Naso. White pointer dog and lemon and white bitch, whelped Aug. 4, 1887, by Mort of Naso out of Devonshire Queen (A.K.R. 3127), by Floyd Vail, Jersey City, N. J., to Wm. Welsh, same place.

Naso of Bergen. Liver and white pointer dog, whelped July 25, 1887, by Naso of Devonshire out of Lady Isabella (A.K.R. 465), by Floyd Vail, Jersey City, N. J , to Wm. Welch, same place.

DEATHS.

Prince. Liver and white pointer dog, whelped May, 1884, owned by Calhoun Kennels, Springfield, Mass.

Daisy. Fawn, black points, pug bitch, whelped April, 1885 (Doc—imported Judy), owned by Calhoun Kennels, Springfield, Mass.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

C. W. G., Hinsdale, Mass.—I have a mastiff pup now eight weeks old, perfectly deaf. Don't know but he always was. Can I do anything for his deafness? Ans. If the deafness is congenital, it is doubtful whether anything can be done. You had better consult an aurist or veterinary and have an examination made.

An exciting incident occurred in one of the deer pens at the Philadelphia Zoological Gardens Sept. 10. The hog deer, which came from India, has lately become very savage, and he vents his rage upon his faithful wife and infant offspring. He amused himself all day long running at his family with his antlers lowered, and scaring Mrs. Deer out of her wits. At last the buck inflicted two severe cuts on the fore and hind flanks of the doe, causing her great pain and rendering her lame. Head Keeper Byrne then decided to take the ferocious buck's antlers off in order to prevent further injury. Four of the keepers entered the inclosure and succeeded after much difficulty in catching the deer, and his horns were speedily sawed off at the base. After the operation the deer lay down in the corner of the inclosure, as if ashamed of his degradation. Keeper McCadden, who is a famous deer hunter, took up the horns, and, approaching the miserable buck, shook them in his face, saying: "You beggar, this is the result of abusing your wife." The deer, as if understanding the reproof, rushed at the surprised keeper, and with the stumps gashed him on each leg, throwing him down and attacking him furiously. Mr. McCadden climbed a tree and his three companions ran to his rescue. Harrison, the Hercules of the garden, succeeded in holding the infuriated animal until the other animals were safely out of the inclosure. Then he threw the beast down and ran out himself. McCadden now limps about the gardens with his legs in bandages, and the deer, as if feeling the disgrace of the loss of his antlers, is humble and affectionate to his wife and family.

RANGE AND GALLERY.

THE IDEAL PISTOL TOOL.

THE present interest in pistol practice and the demand for a convenient bullet maker and cartridge loader has led the Ideal Manufacturing Co., of New Haven, to send out a special device for the use of revolver shooters. It is well shown in the accompanying cut. The model shown is intended for the .32-40 Smith & Wesson or Colt revolver. There is a bullet mould, whence if lead and mould are both properly hot, good missiles should be turned out. The old primer is removed by a single pressure of the handles, and then, with shells properly cleaned, the seating of the new primer is the task of a moment. The instructions which the tool makers send out with the neat little invention are models of conciseness and are worth reprinting:

In Casting Bullets.—Be sure the mould is hot, also the lead, or you cannot get good results. Care should always be taken, after

A—Bullet Mould. B—Loading Chamber.
C—Re-capper. D—Adjustable Plunger.

firing, to clean the shells in strong, boiling soapsuds or soda water. See that all the burned powder is removed, or the shells will soon be destroyed by corrosion.

To Remove the old Primer.—Place the extracting plug in the loading chamber *B*, with the pin up; put the shell over it, bring the handles together, press the shell gently on the pin until the primer is expelled.

To Seat the Primer.—Be sure the shell is empty. Never attempt to seat the primer after you have the powder in. Enter the primers well in the pocket of the shell by placing them on the loading table wrong side up, and forcing the pocket of the shell down upon the primer, then place the shell in the hole *C*, bring the levers together, and the punch will force the primer home. Be sure it is below the surface of the head, or it may interfere with the action of the arm, and cause premature explosion.

To Load.—Put in the required charge of powder, enter the bullet in the shell by hand, place the cartridge in the chamber *B*, adjust the screw plunger *D*, so that it will press the bullet hard on the powder. The charge for the conical or target bullet is 11grs. of fine powder; for the round or gallery bullet, 6grs. fine powder. Shells not crimped.

WORCESTER, Mass., Sept. 22.—The Worcester City Guards, Co. A, 2d Regiment, M. V. M., went to Gardner yesterday, where they were the guests of the Heywood Guards, Co. F, 2d Regiment, M. V. M. In the afternoon there was a visit to the Hackmatack Range of the Gardner Rifle Club, where there was a number of contests. In the individual score the result was as follows:

Co. A.		Co. F.

Gardner Rifle Club: Fred Parker 22, F. E. Nichols 21, C. J. Crabtree 21, Charles Leland 20, H. C. Knowlton 20, L. L. Walker 19, I. N. Dodge 19, W. C. Loveland 17, E. B. Taylor 17, Wm. Austin 9, D. E. Warfield 0.

SAN FRANCISCO, Sept. 18.—The annual target practice of the Third Cal. Infantry Regiment took place to-day at Shell Mound Park. Of the eight companies in the regiment Companies B and G did not shoot, the average for the others being uniformly good. The following was the score at 200yds., 50 being the highest possible, all above 40 securing a silver and all above 25 a bronze medal.

Co. A—P. Gallagher 25, C. H. Becker 31, W. P. Dilney 25.

Co. C—Corp. Maginnis 41, Sergt. Dolan 41, T. Fell 38, Sergt. McBryen 38, A. E. Fake 35, Cor. Vogt 33, Lieut. Ryan 33, Sergt. Yager 32, D. O. Herrick 31, L. E. Braguire 32, Lieut. Crowley 27, Sergt. Jordan 27, J. Cammozzi 26, T. Orlup 26, P. Foley 25, James Crossan 25, T. F. Murray 25.

Co. D—Capt. J. C. O'Conner 23, T. J. Sullivan 29, M. T. Murray 29, J. Garrity 25, J. Cardiff 23.

Co. E—Lieut. H. Kennedy 34, W. J. Burke 31, Sergt. T. Waters 34, D. Hudson 27, G. Hunt 25, E. Lawler 25, M. W. Molloy 25, M. Philips 25, A. Stokes 25.

Co. F—Sergt. Keefe 26, Sergt. Lyman 34, T. McCabe 29, Sergt. Leary 32, L. Barry 32, W. Kearney 29, M. J. Sullivan 30.

Co. H (cadets)—Capt. O'Dell 33, Sergt. Mahone 27, A. Murphy 30, D. O'Leary 25.

Commissioned and non-commissioned staff vs. enlisted rank and file, out of possible 25 (five shots)—Lieut. McAlpine 20, Col. Bendell 19, Sergt. Geary 16, Capt. Smith 18, Sergt. Middleton 19, Sergt. O'Brien 19, Lieut. Lawton 14, Capt. O'Conner 16; total 141. Corp. Maginnis 20, T. Foley 18, Sergt. Dolan 14, Sergt. Waters 13, Sergt. Stewart 13, Sergt. Murphy 18, W. Fell 7, Sergt. McBryan 20; total 133, thus giving the staff winners by 8.

Field staff vs. non-commissioned officers—Major J. F. Barry 21, Major and Surgeon F. B. Kane 33, Lieut. W. D. Lawton 41, Lieut. T. J. Dillon 11, Lieut. A. C. McAlpine 35. Non-commissioned—Quartermaster-Sergeant H. B. Gleeson 7, Orderly Sergeant S. A. Donahue 12, Hospital Steward J. Sheehy 25, Color Sergeant D. Geary 43, J. J. O'Brien, R. G. G., 32, Signal Corps Sergeant Middleton 39.

In the officers' match for the Savage medal, out of a possible 25 (five shots)—Capt. Smith and Lieut. Lawton tied at 20, Lieut. Lawton's shoot, by the Creedmoor rules, being decided the best.

BOSTON, Sept. 24.—A large party of riflemen visited Walnut Hill to-day to shoot in the several matches now in progress. J.R. Munroe and Salem Wilder each made a fine score, which on the old count would have been a "clean" one. Matches F and C will close Oct. 1, and on Oct. 6 the three-day shoot of the fall meeting will commence. The record of shooting is as follows at 200yds:

Decimal Off-Hand Match.

G G Franklin	10	8	8	10	6	7	6	10	10	10—85
O M Jewell	9	9	5	10	9	9	9	6	5	10—81

J W Frye	113 112 112 112 111—560		

*Handicap of five points for telescopic sights.

THE CHICAGO MILITARY TOURNAMENT.—The following is the programme of the rifle competitions to take place during the international military encampment, at Chicago, Ill., commencing Oct. 12. The officer in charge of the competitions will be Col. J. A. Shaeffer, inspector general rifle practice, I. N. G. The shooting will commence at 8:30 A. M., Oct. 12.

National Guard Team Competition.—Open to regimental teams of 10 men from the national guard of any State or Territory. Military rifle within the rules. Buffington sights and shades for front sights allowed. Ten shots each man at 200yds., 10 at 500yds., and 10 at 600yds. No sighting shots. Position, standing at 200yds.; any within the rules at 500 and 600yds. Any ammunition. The team making the greatest number of points out of the possible 1,500 will take first prize, $200 cash; team ranking second, $100 cash; third, $75; fourth, $50; fifth, $25. Entrance fee, $10 per team.

All-Comers' Individual Competition.—Open to the world. Any rifle within the National Rifle Association rules. Distance, 200yds. Position, off-hand. Number of scoring shots, 15. Sighting shots, not any. Target, American field. Ammunition, any. Military rifles allowed 5 points. First prize, $150; second, $100; third, $75; fourth, $50; fifth, $25. Entrance fee, $1.

All-Comers' Team Competition.—Open to teams of ten men from the United States or any foreign country, including members of the regular army, militia companies and rifle clubs. Any military rifle within the rules of Blunt and the National Rifle Association of America. Buffington sights and shades for front sights allowed; otherwise the same as Blunt (see paragraphs 630-634). All rifles, other than military, handicapped three points at each range. Ten shots allowed each man at 200yds., ten at 300yds., ten at 500yds. and ten at 600yds. No sighting shots. Target A will be used at 200 and 300yds., and target B at 500 and 600yds. Position, standing at 200yds., kneeling or sitting 300yds., and any within the rules at 500 and 600yds. Ammunition, any. First prize $1,000 cash and $500 in badges; second prize, $500 cash; third prize, $250 cash; fourth, $125 cash; fifth, $100 cash. Entrance fee, $10 per team.

Individual Short and Mid-Range Competition.—Open to the world. Any rifle within the rules of Blunt and the National Rifle Association of America. Other than military rifles, handicapped six points. Competitors will start near the 600yds. firing points and advance until near the 300yds. firing points, when they will retreat to the 600yds. In advancing, five halts will be made and two shots fired at each halt; time allowed, two minutes at each halt. The same rule will be observed during the retreat. Position, any within the rules. Target B will be used. First prize, $100; second prize, $75; third prize, $50; fourth prize, $40; fifth prize, $30. Entrance fee, $1 per man.

THE NEW BRITISH ARM.—The special committee on the new army rifle have been conducting a long series of experiments with a view to fixing a standard bore as well as settling the form of magazine to be adopted in the service small arm. It has been decided to fix the diameter of the bore of the new rifle at a point near .3. The exact gauge is to be .31, which means a bullet about the diameter of an ordinary pencil or penholder. This is a considerable lessening of size from the .450 of the present Martini-Henry, and much below the .400 of the rifle of the future that was to be—the Enfield-Martini. Over 100,000 stand of these Enfield-Martinis have been completed, with sword bayonets to fit. The number is actually in the armories, and the re-arming of the forces with these rifles was to have been undertaken at an early date. The adoption of the still newer and smaller bore of .31 renders the unissued Enfield-Martinis obsolete, so that the government will be forced to sell them as useless or unnecessary stores. In the experiments with the new chosen rifle of the British soldier, the .31 bore, it was found, that although the bullet is not much bigger than that of a saloon pistol, it was remarkably efficient in range and destructiveness. At 2,030yds. range the shooting was exceedingly close. Compared with its diameter the bullet is very long. As it is fired with a large charge of compressed gunpowder, it has a high velocity and consequently very flat trajectory. Up to 500yds. range the soldier need not raise the back sight, but firing low, can easily hit his enemy. In order to test the destructiveness of bullets of so small a caliber, shots were fired into the carcasses of dead horses and other animals. It was found that bullets that had a small alloy of copper in them gave most successful results. So satisfactory were these repeated experiments with the .31 rifle that it left the committee in no doubt, and its adoption was recommended. Having settled on the bore of the rifle of the future the committee found less difficulty with the other portion of their labors, namely, selecting the type of magazine. With the use of a small bullet, and as has also been decided, the adoption of the new compressed gunpowder in solid drawn cases, not only is the weight of the ammunition reduced, but a greater number of cartridges can be placed in the magazine of the rifle. For some time the committee have apparently been disposed to take up the improved Lee rifle. The chief objection to this rifle by military men was that the magazine, when of a convenient practical size, could only hold five cartridges. That number, it was argued, was too few, and unless they could be made to carry eight or ten cases, it was not worth while having the magazine, as a soldier could fire five shots almost as quickly by single loading, picking the cartridges from his bandoleer. The new bullet and case will permit of an increase in the number of charges that can be placed in the Lee magazine. The committee are, however, still conducting their inquiry into the question of the best form of magazine for military purposes, and have by no means finally settled to adopt the Lee. It is tolerably certain that the future rifle of our troops will now be a magazine gun, containing not less than eight reserve shots, which, in the supreme moment in assault or repulse, can be almost instantly delivered in a death-dealing shower.—*United Service Gazette.*

THE GENEVA TOURNAMENT.—Many accounts have been published of the big July gathering of riflemen at Geneva. There was no end of outside festivity and a tremendous lot of rifle practice after an antiquated fashion. J. A. Huggins, who was one of the small American contingent there, in talking with a reporter of the Pittsburgh *Post* upon his return, said of the gathering: "I never in my life saw or ever dreamt of seeing such a remarkable affair. When I tell you that there were 22,000 competitors you will have an idea of what the tournament was like. There were 253 targets in operation daily for two weeks, and each target was crowded from morning till evening. Of course there was some remarkable shooting. Every civilized nation was represented. After a careful observation, however, I am of the opinion that the United States is equal to, and probably better than that of any other country. In scoring, however, and also in some minor details, I think we are behind other countries. We are also behind in national enthusiasm in rifle contests. I couldn't begin to describe to you the extraordinary interest that I saw displayed in the tournament. In Geneva all places of business were closed and the city was decorated in a way that eclipsed all previous efforts of decoration in any country. I met an American preacher, who had traveled extensively throughout the world. He told me that he had seen Rome on its most festive day, and also Chicago, and that the decorations of these cities could in no way compare with those of Geneva. Another thing I noticed was that though about 30,000 people were daily on the grounds, I never met a teetotaler nor saw a drunken man. There was plenty of wine and beer, but every one seemed to know when to draw the line. The Swiss competitors as a class seemed to be the best shooters. There was a very large number of them, however. The French showed up well, but displayed their national characteristics of excitability. For instance when any one of them would make four good shots he was sure to become excited at the fifth and make a glaring mistake." Mr. Huggins was among the best prize winners. He made some remarkable records. At a distance of 330yds. he hit a 2-in. bullseye 317 times, winning a handsome gold medal. He also won a gold watch, several money prizes and others that have not yet been determined. It will be a few weeks before all the prizes are awarded, because of the large number of competitors. He shot during eight days and fired 125 shots per day.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

CHAMBERLIN COMPANY TOURNAMENT.

THERE was a large attendance at the third annual tournament of the Chamberlin Cartridge Co., at Cleveland, O., Sept. 13 and 14, when the ties in the several classes were shot off. Everything went smoothly, and the meeting was in all respects well managed, and proved a bigger success than either of its predecessors. The blue rock targets and traps worked well; of the 35,000 birds thrown, those broken by the trap were so few as to amount practically to none whatever. Below are the scores:

The 90 Class.

C. W. Budd 95, W. R. Huntington 95, H. McMurchy 89, J. R. Stice 88, D. C. Powers 88, Ben Teipel 86, R. E. Sheldon 86, J. C. Hendershot 86, J. E. Miller 85, Ed. Taylor 84, C. E. Verges 83, C. M. Roof 82, J. D. Early 82, H. H. Fleisher 79, Andy Meaders 76, F. L. Chamberlin 72. Ties for first: Budd 95, Huntington 91; second divided; third: Sheldon 49, Teipel 48, Hendershot 43.

The 80 Class.

H. W. Eager 95. Al. Bandle 93, L. S. Carter 92, R. Valentine 91, R. B. Organ 91, Dr. J. G. Parsons 89, H. Phare 88, R. O. Heikes 86, C. A. Calhoun 86, H. B. Hill 85, E. H. Smith 84, D. Auld, Jr. 81, C. C. Hebbard 80, E. W. Tinker 80, M. Loew 78, Geo. C. Luther 75, C. E. Willard 69, W. L. Davis 67, A. L. Smithmight 56, W. J. Kelley 55, L. Stevens 46.

The 70 Class.

J. L. Winston 96, J. Sayle 87, W. Watts 87, T. M. Games 86, I. W. Budd 86, T. A. Peacock 86, S. A. Tucker 85, A. W. Ball 84, A. Hoffman Jr. 84, G. H. Spross 84, O. F. Britton 83, M. C. Funk 82, W. Ackerman 82, Schott 81, A. G. Courtney 81, P. North 79, A. M. Cloak 79, F. B. Brockway 79, T. F. Quayle 78, H. A. Comstock 78, J. J. Wightman 78, Chas. Wagener 78, Q. A. McClure 76, J. M. George 74, W. H. Becher 72, G. W. Given 71, L. O. Jones 69, Frank Wilcox 67, Chas. Richards 66, S. P. Heartt 60, F. J. Snyder 55, A. L. Traeger 52, H. W. Nemoyer 42, A. W. West 41, W. H. Osmun 40, E. B. Cahoon 29, J. M. Taylor 29, P. Bacon 23.

The 60 Class.

F. D. Kelsey 94, E. E. Sample 93, C. W. Hart 91, C. D. Keeney 90, G. Schachtele 89, S. Gay, Jr. 88, A. W. Fehrman 87, A. C. Dick 86, A. Burnison 86, Wm. Gottfried 85, J. N. Whiteside 85, E. Hinds 85, L. A. Croy 85, D. A. Upson 84, Campbell 84, A. A. Walker 84, J. W. Gay 84, C. K. Sober 84, M. G. O'Neil 83, E. Tully 83, G. H. Bodette 83, W. R. Durfee 83, C. Wendt 82, T. W. Hall 82, W. C. Williams 82, T. F. Spencer 81, E. E. France 81, J. Gray 81, W. H. Brumith 80, A. G. North 80, A. J. Brown 79, A. P. Pope 79, L. B. Arkwright 78, T. Goldrich 78, J. P. Hickey 78, W. A. Parmalee 78, F. C. Percival 77, J. G. Messner 77, J. R. Bruner 77, J. McCarty 77, H. Klee 76, E. T. Brown 76, H. T. Smith 76, C. A. Funk 75, J. H. Baumgartner 75, E. R. Page 75, H. J. Martin 75, S. G. Miller 72, T. F. Cummings 72, J. R. Lea 72, W. H. Chader 71, M. Bedell 71, W. S. Stoughton 70, J. H. Ashley 70, D. M. Lefever 70, H. G. Wheeler 69, W. H. Brown 69, F. H. Oakleaf 69, C. H. Kelso 69, W. H. Burl 69, C. N. Brown 68, W. A. Smith 67, Waldon 66, M. F. Silsby 66, J. S. Barnes 64, W. J. McCrickart 63, T. T. Hollinger 63, T. Haycox 62, C. A. Hardway 58, N. D. Hemmenway 58, J. P. Hill 57, F. C. Damm 51, D. J. Deyo 50, W. F. Crosier 50, C. L. West 49, C. W. Kiefer 49, C. K. Patterson 48, H. H. Luck w., James Finnie w.

TAUNTON, Mass., Sept. 24.—Taunton F. and G. P. A.; there were 13 members to shoot for the club prizes: strong northeast wind; 10 L. G. C. P., 3 L. G. C. P. traps, 16yds. rise, 3 angles, N. G. A. rules:

G L Smith	1011001011—6	J Davis	0 0 1 0 1 1 1 1 0—6
J T Hall	0000010100—2	F S Keith	0101101111—7

Hardy	1100110111— 7		

Sweepstakes; first match at 7 clay-pigeons, 3 clay-pigeon traps, 16yds. rise, 3 angles, N. G. A. rules, 3 prizes: J. T. Hall 4, G. L. Smith 5, E. Bowers 4, J. Davis 4, Keith 4, Walker 3, Scudder 2, E. Leonard 4, Borston 3, Hardy 2.

Second match at 7 blue rocks, blue rock trap, 16yds. rise, 3 angles, N. G. A. rules, 3 prizes: J. T. Hall 3, Smith 6, Bowers 3, J. Davis 7, Keith 5, Leonard 7, Borston 6, Hardy 5, Hill 2, G. H. Davis 6, Snow 5.

Third match at 5 blue rocks, 3 traps, 16yds. rise, 3 angles, N. G. A. rules, 3 prizes: Hall 4, Smith 5, Bowers 2, J. Davis 4, Keith 3, Leonard 3, Borston 4, Hardy 3, Hill 3, G. H. Davis 2, Snow 4.

COL. J. E. BLOOM.—There are few names better known to our readers than that of the principal promoter of the National Gun Association, whose rules are now in universal use in this country. It may not be generally known that Mr. Bloom is a graduate of West Point; that he served honorably as an officer of the Fourth U. S. Artillery for six years; he participated in the Sioux campaign of 1876, and the Nez Percé campaign of 1877; and while acting as commander of cadets at the East Tennessee University, Governor J. D. Porter conferred upon him the commission of Colonel. We are pleased to learn that Col. Bloom has removed to New York city for the practice of law, having formed a connection with the law firm of Nichols & Bacon, 71 Broadway. No one has done more than he to elevate and popularize outdoor sport with the shotgun; and we trust our resident sportsmen will give him a cordial welcome.

SAN FRANCISCO, Sept. 18.—The final medal shoot of the Lincoln Gun Club at Alameda Point to-day attracted not only a full attendance of the members but many visitors who were anxious no doubt to witness the last struggle for the club trophies. The shooting, to say the least, was poor, many of the club's hitherto invincible shots presenting a score replete with zeros. The marksmen composing the first class were especially "off," the second class discounting them by a total of eleven birds. The medal in the first-named division was carried off by Dunshee, he having obtained the highest average throughout the season. Incidentally the best shooting of the day was accomplished by R. Wenzel, the winner of the second class medal. He scored twelve kills out of a possible fifteen and displyed remarkable judgment in many instances. His advancement to the first class will undoubtedly make matters lively in that division during next season's shoots. At the conclusion of the medal shoot the members agreed to form themselves into two teams, irrespective of class, the members of the losing team to defray the expenses of a dinner to be served to the club and its guests. The teams were composed of ten men each, with Messrs. Parks and Potter as captains. Following are the complete scores:

First Class, 21yds. rise; Bruns, Parks and Campbell, 18yds.:

Cate, C.	0001001101100111—7	Parks	1011011100100—7
Dunshee	0110001011010110—7	Potter	0010001111100—7
Bruns	1000110100001010—6	Campbell	0001011000101—6
Schendel	0100100001011000—5	Scovern	1001101111101101—10
Ford	0001001001101000—5	Richter	1110000000111001—6

Second Class, 18yds. rise:

Boyce	1001001011010001—6	Cate, F	1000101001000010—5
Holmes	1001001001110011—7	Crandall	0111001110000010—7
Quinton	1101011010001111—9	Brown	1110111001101101—10
Wenzel	1111101111011110—12	Venker	00000w.
Horber	1100000011010000—5	Doane	0100000101011110—6
Karney	1100110101111110—10		

Following is the result of the match between the rival teams of Captains Parks and Potter:

Parks's Team.		Potter's Team.	
Parks	1001111010011111—10	Potter	0100010001001101—5
Bruns	0101101111010111—10	Scovern	0101001110000000—5
Wenzel	0111011101101111—10	Quinten	0010011010000010—5
Brown	0100101000111110—6	Karney	1011001101101100—8
Crandall	1101000101010000—5	Holmes	0000001110011111—7
Cate, F	1100000010010010—5	Horber	0011001011100011—8
Ford	0100000000111000—3	Richter	0100111010100001—6
Campbell	0110011000010010—6	Bovee	1001000100000001—5
Venker	0101011001110000—6	Doane	0000000101000001—3
Cate, C	0000010100101111—6—68	Dunshee	0010111000111000—7—59

SAN FRANCISCO, Sept. 17.—The Gun Club held its final shoot of the season to-day at Adams Point, Alameda. The birds provided were not a very good lot, and in many instances they could not be made to fly from the traps. Altogether the shooting was very good. Butler made the highest score. Five other members came next, with 10 birds each to their credit. The following is the score of the club's last shoot.

Jellett (30)	1110121101111—10	G Leviston (28)	1011201111120—10
Laing (30)	0111221101111—10	Havens (28)	2102011211100—8
Swett (28)	0221112011110—9	Riordan (26)	2101201020000—6
Golcher (30)	1210211101111—10	Butler (31)	1121111211110—11
Wattles (28)	1100221221211—10	Gillette (31)	0211011212101—9
W Leviston (26)	1200111220200—7	Hamilton (28)	1011011011001—8

Following the club shoot a freeze-out was contested. Wattles, a new man, made some very clever snap shooting. The birds proved to be better flyers than the ones used in the club's shoot, and some difficult shots were registered. Freeze-out, $2.50 entrance, seven men contesting, was won by Wattles with 4 birds. The gentlemen of the Gun Club who made the best average scores during the season's shooting will be awarded four prizes, as follows: Butler, first prize, club's gold medal; Laing, second prize, split bamboo trout rod; Jellett, third prize, a silver pocket flask, and Sweet, fourth and last prize, a Winchester rifle.

WELLINGTON, Sept. 24.—There was a fair attendance at the grounds of the Wellington Club to-day to participate in the regular weekly shoot. Following are the first prize winners in the several events: 1. Six blackbirds—Gerry. 2. Six clay-pigeons—Sanborn. 3. Six blackbirds—Gerry. 4. Six clay-pigeons—Sanborn. 5. Six clay-pigeons—Gerry. 6. Six blackbirds—Gerry. 7. Six clay-pigeons—Sanborn. 8. Six clay-pigeons—Snow, Adams and Gerry. 9. Six blackbirds—Sanborn and Gerry. 10. Six blackbirds—Gerry. 11. Six clay-pigeons—Gerry. 12. Six blackbirds—Adams, Snow and Swift. 13. Six clay-pigeons—Twift. 14. Six blackbirds—Gerry and Perry. 15. Six blackbirds—Snow and Melcher. 16. Six clay-pigeons—Swift. 17. Six clay-pigeons—Perry and Melcher. 18. Six blackbirds—Sanborn and Snow. 19. Six clay-pigeons—Melcher.

DUNELLEN TOURNAMENT.—The second tournament of the Middlesex Gun Club will be held Oct. 3 to 8. The prizes are $1,000 in purses and a number of merchandize prizes, ranging in value from a $100 gun to ammunition worth $10.35. The club grounds are located at Dunellen, N. J., on the line of the Central Railroad of New Jersey, and are five minutes' walk from the depot, one hour's ride from New York city, forty-five minutes' ride from Newark, N. J., and one hour and a half from Philadelphia, Pa. The shooting will be at live birds and artificial targets. Full programmes may be had of the following: W. Fred Quinby, 501 Broadway, New York; Charles Richards, 201 Broadway, New York; T. H. Keller, Plainfield, N. J.

MONTGOMERY, Ala.—A grand shooting tournament, under the auspices and management of the Montgomery Shooting Club, will be held on the fair grounds, Montgomery, Ala., during the Alabama State Fair, commencing Monday, Oct. 17. Live birds and clay pigeons.—S. T. WESTCOTT, Sec'y.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

OCTOBER.

8. New York, Sailing and Paddling.
9. Oakland, Edwards Cup, Mayrich Badge.

NOVEMBER.

6. Oakland, Edwards Cup.

DECEMBER.

4. Oakland, Edwards Cup.

AMERICAN CANOE ASSOCIATION.

Commodore: R. W. GIBSON.....} Albany, N. Y.
Secretary-Treasurer: F. L. MIX.}

	Vice-Com.	*Rear-Com.*	*Purser.*
Central Div.	Henry Stanton	R. W. Bailey	E.W. Brown, 146 P'way, N.Y.
Eastern Div.	L. O. Jones	Geo. M. Barney	W. B. Davidson, Hartford.
N'thern Div.	A.D.T. McGachen	W. G. McKendrick	S. L. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Central Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

A. C. A. REGATTA COMMITTEE.—New York, Sept. 26, 1887. To the members of the Central Division of the A. C. A.: Gentlemen: Please take notice that the following gentlemen have been appointed the Regatta Committee of the Central Division of the A. C. A., viz., C. B. Vaux, of New York City, Chairman; P. M. Wackerhagen, of Albany, and C. J. Bousfield, of Bay City, Mich. Very respectfully yours, Henry Stanton, Vice-Commodore Central Division A. C. A.

A. C. A. MEMBERSHIP—Eastern Division.—Applications to date: J. H. Fitch, Lawrence, Mass; W. B. Emery, Newton, Mass.

A. C. A. MEMBERS, CHANGES OF ADDRESS.

TRENTON, N. J., Sept. 3, 1887.—*Editor Forest and Stream:* At a meeting of the Executive Committee, Aug. 22, 1887, at Bow-Arrow Point, it was

"*Resolved*, That the secretary be instructed to publish in the FOREST AND STREAM the names of those members to whom statements have been sent and no reply received, and whose correct addresses are not in possession of the secretary."

Below will be found the members (with the exception of Northern Division members) referred to in the resolution. It is believed that a majority of these statements never reached their destination, owing to insufficient addresses.

CANOE RACING AND CLASSIFICATION.

Editor Forest and Stream:

Will you allow me to explain a few points in my letter of Aug. 21, in reply to your comments on it?

First, I ought perhaps to have stated, with respect to starting canoes in sailing races, that the boats I alluded to were always held to the line, head to wind, whether the wind was blowing up or down the course, and even with all sail set, there was no trouble in holding some fifteen boats, each one of which would equal in weight and displacement at least four canoes, so that I think the objection on this score is quite imaginary. In your report of the regatta of the W. C. A., one gentleman at least seems to have made elaborate preparations to secure a good start, and as I have seen some very irregular and delayed starts in the sailing races, I inferred the management was not quite satisfactory to all concerned. Certainly no time would be lost, if the plan I suggested was adopted, the canoes could be paddled at once to their stations on the starting line, hoist sail, and hold on either by their painters, or by a light line until the starting signal was given, when they would all cast off together. The entries for Class I. this year, as far as I am aware, were of canoes that belonged to other classes and were not purely paddling canoes. The object of the association being rather to promote cruising canoes than racing ones and the fact of no purely paddling canoes having been built for members (with one or two exceptions) since the formation of the A. C. A., would seem to show that this class is quite superfluous.

It is certainly right to recognize the existence of a light decked cruising canoe; it is a better craft for the purposes for which it is used, viz., general cruising, than its heavier sister, being easier to portage and lighter to paddle, the difficulties of classification for paddling purposes would be easily got over by fixing a minimum as in Class II. at present. Minimum beam for paddling 26in., minimum depth 7in.; it would be almost impossible to have a narrower range than this, and a canoe 15ft.×28in.×10in. would be very nearly equal in paddling powers to one of 15ft.×26in.×7in. if the latter had the sheer necessary to make it a cruising canoe, it is hardly to be expected that one would be built for paddling alone in this class. I agree with you that handicapping by carrying weight is somewhat unsatisfactory, but there would be very little trouble attending it and unless a multiplication of classes was substituted, I do not see how some way of handicapping is to be avoided. In conclusion, I judged, from the correspondence which went on about paddling races in open canoes against decked ones, from the way in which the classification of the A. C. A. was ignored at some of the meets this season and the few entries there are for the paddling races as compared with sailing ones, that the present arrangement is not as satisfactory as it might be. C. M. D.

[In still water, or with a leg-going tide, the proposed plan would be quite practicable; but this season no trouble was experienced in starting from thirty to forty canoes at one time by a one-gun start, and the reason for any change is hardly apparent. The evasion of the rules mentioned would not be permitted by the A. C. A., as every canoe must be well clear of boats, wharves and buoys, and under sail only at the start. The Class I. race this year brought out but one special paddling canoe; nevertheless it makes an interesting race, and is apparently a desirable feature, as it promotes paddling contests. The present classification works too well to warrant any serious change at present, as it is highly undesirable that alterations in the rules should be made every year. The evidence of the last two years to the effect that within A. C. A. limits beam is of little consequence, has made a change necessary, but it need not be in the rules. It has lately been suggested that, without any change of rules, the sailing programme can be improved by making a class for all canoes under 15ft. length and one for all over 15ft., and as length is a much more valuable factor than beam, the change would probably be found beneficial. At any rate, it would not necessitate nor encourage an immediate change of dimensions, such as would probably follow an alteration in the rules; but would only class evenly the entries at the next meet. There seems no difficulty in the case of the Canadian canoes if they are only raced apart from the decked boats, as originally proposed. Any attempt to force the two classes together would result in the exclusion of one class or the fusion of the two by the incorporation of undesirable features, such as the cutting down of the deck of the one to a degree of lightness that would destroy her for practical use, or the addition of a light deck to the Canadian canoe, thus destroying her best feature. Paddling races never secure the entries that are made for the sailing events, and every inducement should be offered in making up the programme to secure entries in paddling events, but this can be done as well under the present rules as under new ones.]

A MOVABLE CANOE KEEL.

Editor Forest and Stream:

It is very evident that no entirely satisfactory canoe centerboard has yet been devised, nor is likely to be. The plan here given has served my own purpose for several years and may be useful to others.

At each end of the well, fore and aft, a piece of brass tube, say ⅜ or ½in. internal diameter, extends from the top of the deck down through the keel, a lock nut at either end holding it in place.

The keel is a wrought iron plate of such length, width and weight as desired, shaped, on the edge touching the bottom of the boat, to conform to its lines. (My own sailing keel is 8ft. long, 6in. wide, and weighs 65lbs.) Two steel rods, ¼ or ⅜in. in diameter, are fastened to this keel, as shown in sketch, by bolts which can be readily removed, the rods being flattened where joined to keel to receive these bolts.

Each rod is of such length as to pass through the pipes inserted in the boat and project sufficiently to receive a nut, which holds them in place.

In use, the canoe, while on shore, is turned on its side or bottom upward, the keel placed in position and held by the nuts on the ends of the rods, which, when in place, of course rest on the tops of the brass pipes.

This plan has the advantages of making no interference whatever with a free well; of permitting the use of as much weight as may be desired and placing it where it best serves the end of ballast; and of offering a hitherto unapproached extent of surface for lateral resistance. It is, therefore, particularly adapted to racing purposes, enabling the user to carry a large spread of canvas with safety.

For general cruising it is a little inconvenient, though to my mind less so than the presence of a centerboard box in the well. For such use, a much thinner and shorter plate of metal should be employed. Heavy sheet brass is most suitable in this case, or even wood. I have found satisfaction in such a keel made of oak, barely larger than would reach from one pipe to the other, and about 4½in. wide. The rods being fastened to the keel by two bolts, the upper one is made easily removable, when the rods fall down and lay alongside the keel, which is stowed in the well. It is, therefore, important that the brass pipes, through which the keel rods pass, should be placed close to the end of the well, that the keel for cruising may be short as possible. This does not prevent having a purely sailing keel considerably longer, as the thickness of an iron keel makes it so rigid that it may extend 18in. or more beyond the rods attached to it. Or the desired weight and surface may be obtained by using a width of 8 or 10in. An advantage of the wooden keel in long cruises is that it can be unshipped while afloat. Simply push the rods downward through the brass pipes with a ramrod or small stick, and the keel will rise to the surface alongside.

Still, with all these advantages, which are self-evident, I should hesitate to advise the owner of a "symphony in cedar" to experiment on his latest and highest priced acquisition. But if he has an old-time and now discarded craft, by all means make the venture. Then, if not wholly satisfied, the pipes may remain with little or no detriment, or be removed and the small holes so left easily plugged. A. T. L.

CHICAGO, Sept. 20.

TORONTO C. C. SAILING RACE.—The fourth sailing race of the T. C. C. took place Sept. 16, over the 3½-mile club course, twice round, the following contestants crossed the line at 3:05:

	Sail area. sq. ft.		Sail area. sq. ft.
Mac, W. G. McKendrick	85	Acis, A. H. Mason	103
Dottrel, D. B. Jacques	110	Una, Colin Fraser	95
Dawn, W. A. Leys	100	Werra, H. McLean	50
Ripple, W. A. Cooke	98	Clytie, I. W. Kelly	45

The last three, as well as having a chance for the regular sailing trophy, have the open canoe medal to sail for. The wind, a wholesail breeze, was from the east, veering a little to the south during the race. The canoes got a good start, the light board, unballasted craft all getting under way faster than the heavier craft. The Mac took the lead with Dawn, Dottrel and Una in the order named, and to the finish of the first round this order was maintained, with about a minute between the canoes. On the first leg of the second round Jacques caught up to Leys and a pretty huffing scrap was then engaged in, in which Jacques came out on top. Mac in the meantime was shoving on the lines and increasing his lead while these two were monkeying with each other. The finish was as follows:

	Start.	Finish.
Mac	3 08	4 29 04
Dottrel	3 08	4 30 25
Dawn	3 08	4 32 07
Una	3 08	4 32 29
Ripple	3 08	4 42 59
Acis	3 08	4 42 50
Clytie	3 08	. . .
Werra	3 08	. . .

Fraser now has scored two wins for the open canoe medal. One of the most pleasing portions of the race was the contest between Acis and Ripple, who had passed and repassed each other during the entire race, and rounded the third buoy for the home stretch together, with the wind square astern. Mason could outfoot Cooke, who always blanketed him and caught up again. About 20yds. from the line there appeared to be not 2in. between them, and they finished a tie, and immediately afterward fouled each other and the Ripple rolled over, while her skipper jumped into Mason's craft, they being side by side. As the regular club events only bring out the same racers every time, a regatta is to be held on the 24th inst. in which cruising canoes will have a better chance, as the regatta committee have made the sailing race "each canoe to carry a passenger."—MAC.

ARLINGTON C. C. REGATTA.—Sept. 10 was the day selected by above club for their first annual regatta, held on the Passaic River, near their club house. Very light wind, and wind and tide same way made the first event. Class B sailing, rather uninteresting, but the paddling races were hotly contested from start to finish and were won by small distances. Time was not taken. The river was in good condition for paddling and the afternoon passed very pleasantly both for the club and its friends who were present. Shortly after 3 P. M., Event 1, Sailing, Class B: Old Ironsides, Geo. Douglass, first; Ignace, I. V. Dorland, second; Union, S. Rogers, Jr., third; Petrel, R. E. Molloy, fourth. Event 2, Tandem Paddling, 1 mile with turn: Regina, C. V. Schuyler and I. V. Dorland, first; Partner, A. C. Molloy and R. E. Molloy, second; Union, S. Roger, Jr., and Richard Molloy, third; Vera, David Miller and F. Place, Jr., fourth. Event 3, Hand Paddling, 300yds.: Redante, I. V. Dorland, first; Partner, A. C. Molloy, second. Event 4, Class B, Paddling, 1 mile with turn: Old Ironsides, Geo. Douglass, first; Redante, R. E. Molloy, second; Regina, C. V. Schuyler, third. Event 5, Class 4, Paddling, 1 mile with turn: Regina, C. V. Schuyler, first; Close, Jno. L. Douglass, Jr., second; Vera, David Miller, third. Event 6, Upset, 300yds: Redante, I. V. Dorland, first; Regina, C. V. Schuyler, second.

STEEL SLOOP "VOLUNTEER."—General C. J. Paine, E. Y. C.—Designed by Edward Burgess and built by Pusey & Jones, Wilmington, Del.

IANTHE CANOE CLUB REGATTA.—On Saturday, Sept. 24, the Ianthe C. C. held a most successful regatta, on the Passaic, fully 300 of their friends were present. Dr. Wm. B. Graves, New York C. C., acted as judge, and Dr. O. F. Coe, of the Hudson C. C., was time keeper. Members of the Brooklyn, Paterson, Rutherford, Musceta of Bergen Point, and Arlington Canoe Clubs were present and participated in the races. Class B, sailing, was called at 2:15, with the following starters: M. V. Brokaw (Brooklyn), canoe Minx; L. B. Palmer (Ianthe), Atlantic; J. L. Douglass, Jr. (Ianthe), Idlemere; G. P. Douglass (Ianthe), Old Ironsides; W. R. Burling (Ianthe), Nilo; W. Smilie; I. V. Dorland (Arlington), Ignace; C. V. Schuyler (Arlington), Regina. This race was twice over a triangular course, the strong northwest wind made much excitement. M. V. Brokaw finally won by 2ft., the others finishing in order named, Regina capsizing. Class I., paddling, was easily won by W. R. Burling, canoe Mabel, I. V. Dorland second, C. V. Schuyler, J. V. L. Pierson. "Man overboard," G. P. Douglass first, J. L. Douglass, Jr., second, W. Smilie third. Paddling, Class IV., C. V. Schuyler, L. B. Palmer, W. R. Burling, M. V. Brokaw and G. P. Douglass entered. C. V. Schuyler won by half a length, Burling a close third. Standing Paddling.—G. P. Douglass first, beating W. R. Burling, C. V. Schuyler and J. L. Douglass, Jr. Tandem Paddling.—There were four crews in this race: Palmer and Burling (Ianthe), Brokaw and Blake (Brooklyn), Magie and R. McLees (Rutherford), Schuyler and Rowland (Arlington). The Brooklyn crew led until close to the finish, when they were passed by the Ianthes, who won by less than one foot; the Rutherfords and Arlingtons, just behind, fought hard for third place. The Hurry-Scurry Race was won by H. S. Farmer, with L. B. Palmer and Wm. P. Dodge second and third. After the races suitable prizes were presented to the winners, after which refreshments were furnished to the visiting canoeists and the evening pleasantly passed with dancing and music. The visiting canoeists from a distance remained in the club house over night, cruising home the next day. On Thursday evening the 29th the Ianthe C. C. will have a parade, the canoes will be dressed with Chinese lanterns, and several of the canoe clubs will participate. Friends of the club are invited to view the parade from the club house.

FIXTURES.

SEPTEMBER.

29. America's Cup Match, N. Y.

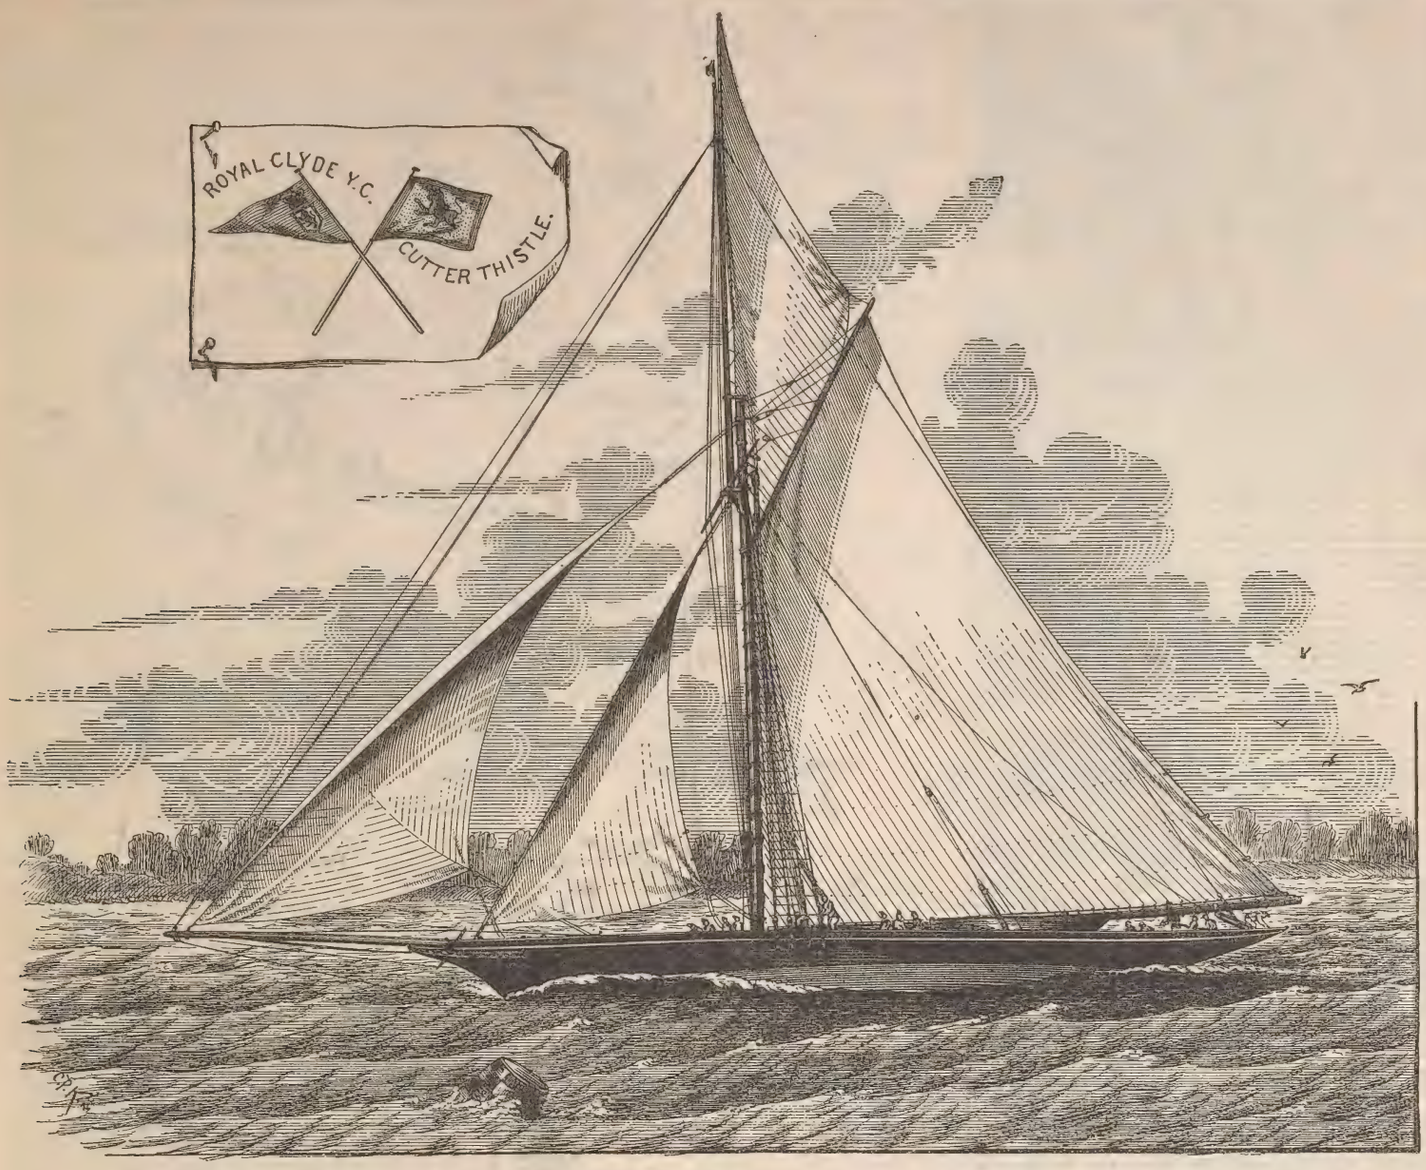
OCTOBER.

1. America's Cup Match, N. Y.

NEW CUTTERS.—Mr. C. P. Kunhardt has finished some handsome plans of a cutter of the beamy type for gentlemen in Kingston, Ont. She is 30ft. loadline, 42ft. over all, including a 7ft. fantail and a fashionable clipper stem, with billet head of 6ft. Beam at waterline is 10ft.; draft, 5ft. 4in. Displacement, 11½ tons, with 5¾ tons ballast, a large portion of which will be on the keel. Least freeboard to plank sheer is 2ft. Mast, deck to hounds, 27ft. 6in.; boom, 32ft.; gaff, 22ft.; topmast, cap to shoulder, 10ft.; bowsprit beyond forward perpendicular, 16ft.; lower sail area, 1,000sq. ft. Mr. K. has also in hand another cutter for the lakes of about the same size, but somewhat narrower and deeper. She will also have a clipper stem.

THE INTERNATIONAL RACES.

NEVER since the days of Father Æsop has the fable of the mountain and the mouse been better exemplified than it has in the great mystery that has vexed the yachting world for the past six months and that was only solved last week. The mountain of doubt, conjecture and anticipation that has grown since the keel of the Thistle was first laid reached its culmination on Wednesday last as the water slowly subsided in the great dry dock of the Erie Basin, and disclosed to the gaze of the hundreds of eager watchers—a mouse. Only a plain gray mouse, handsomer and decidedly plumper than its fellows that the same spectators had seen in previous years, but none the less a mouse on that account, and by no means a rat, a cat or a tortoise. As foot by foot Thistle rose from the water, there was seen nothing but the plain ordinary surface of a steel cutter's bottom, until at last she stood revealed, without fins, screw, centerboard or abnormal and unusual proportions, a beautiful and shapely cutter, differing in detail from the cutters that have of late preceded her, but not a whit less entitled to the name than they.

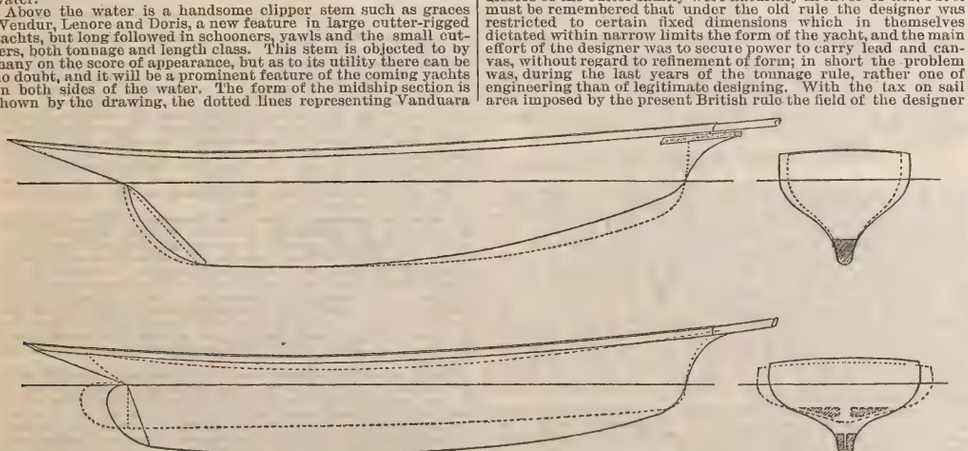


Early on Wednesday morning she towed to the Basin with Mr. and Mrs. Bell and Mr. Watson on board. The keel blocks had been very carefully prepared under Mr. Watson's special supervision, and they alone gave a very good idea of her sheer plan below. For nearly two hours the crowd increased in volume as the dock filled from the waters outside, until at 11 A. M. when the huge caisson was floated out, leaving a clear entrance for the yacht, there was gathered a very large number of yachtsmen, with an addition of a good many idle spectators who took no special interest in the form of the yacht. A watchman was on duty at the yard gate as usual, but visitors generally were admitted freely, though in a number of cases without apparent reason admittance was refused without a pass from the New York office of the dock owner or the Anchor Line. This was effectual in sending some back at once to New York for a pass, but those who waited near the gate were admitted after a few minutes, unless in the meanwhile they had gone through the adjoining property and found a way in through a rear gate. The exact object of this maneuver or who was responsible for it was not apparent, as every one who desired to saw the Thistle out of water, though some were put to much unnecessary trouble.

After the yacht was warped into the dock tackles were made fast to bows and quarters by which she was very carefully adjusted over the blocks. Meanwhile Mr. John Hyslop, measurer of the New York Y. C., was at work in the dinghy, in company with Mr. Watson, who accompanied him at his request, taking the measurement of the yacht by the New York Y. C. rule, under which she must race. Some adverse comment has been made on the fact that the jib was removed from the bowsprit before the yacht was measured, but in any case this would make little difference; in the present instance the two anchors were on the bows, where they would not be in racing, and the capstan in place, and so far as any impropriety or attempted evasion, the jib is seldom on the bowsprit when a yacht is measured, unless it is permanently hanked to the stay. As soon as the waterline was measured the pumps were started, and slowly at first, then faster, the water fell, disclosing the fair and pleasing proportions of the yacht for the first time in public. From 23ft. on the caisson the water fell to about 15ft. before the yacht took the blocks, and as the latter were about 2ft. high her draft was seen to be very near to the figures already given or 13ft., probably 3 or 4in. more. As she ceased to be waterborne, long shores were adjusted from the steps of the dock to her sides, so as to hold her upright, the pumps were stopped for a short time until the adjustment directly over the blocks was made perfect by a final pull on the tackles and then the pumps started up again, never stopping until 2:15 P. M., when the dock was dry. The condition of the bottom was a matter of considerable importance to those who sought some guide for placing money on the boats, but contrary to expectation it was very good, there being no barnacles and only a little scum of soft dirt, quickly washed off with a powerful stream of water from a hose. The dark red paint that covered the bottom up to the "copper line" was hard, smooth and comparatively clean, the only really bad places being near or above the waterline, where the cement was knocked off in spots.

A single look at the yacht as she lay fully exposed to view was enough to settle at once the charge of copying that has been made at random here since it was known that Thistle was wider than her immediate predecessors, and to show at once the wide gulf between her and the sloop family. Differing from Irex, Genesta and Galatea on the one hand, she is totally unlike the Burgess boats on the other, while in all her features she shows a close relationship to the older Watson boats from Wendur, Vanduara and Marjorie, down to Shona and Doris. Naturally the designers of both Thistle and Volunteer have declined to furnish the lines or anything more than the most scanty details for publication, but the accompanying sketches will serve to illustrate the leading points of difference and resemblance with a sufficient degree of accuracy for all practical purposes. The upper outline represents Thistle in sheer plan and section, the dotted line showing the general proportions of Vanduara enlarged to the length of Thistle. The lower drawing shows Volunteer, the dotted outline representing the general proportions of the old centerboard sloop.

Looking at Thistle the first idea that strikes one is that she is in every sense a cutter, then the beam shows out in contrast to the Cup racers of previous years, the reduction of the forefoot is apt to create some astonishment from the degree to which it is carried, but above all one is struck with the harmony of proportions and extreme beauty of form everywhere visible. It is on the question of beam that the claims of relationship to the sloop have been chiefly based, and this demands the first attention. Undoubtedly Thistle is wider than any cutter built for a long time for solely racing purposes, but the reasoning which compares her beam of 20ft. with Galatea's 15ft. on the same length, and hurriedly proclaims Thistle a sloop is entirely false. To compare her fairly one must take the other efforts of her designer, who in yachts above 20 tons has never gone to the extreme limit of narrow beam. The previous Watson boats run as follows in proportion of length to beam: Vanduara, 5 beams; Lenore, Marjorie, Wendur, 5¼; May, 5⅓. Of course this is widely different from Thistle's proportion of nearly 4½ beams, but the only deduction that can be drawn from the latter's increased breadth is, not that the cutter is a failure, but that under a waterline length rule, with practically unlimited sail area, the extreme narrow boats in the larger sizes cannot race with the new compromise type. The recent change of the rule in England, the international races of 1885 and 1886, and the readiness with which every English designer now expresses himself in favor of more beam if he can have it untaxed, all stand in evidence of the fact that the old rule has gone too far in narrowing the yachts; but the mere fact that a wider boat than usual has been built for a special purpose counts for very little. Suppose for a moment that depth was so heavily taxed by the New York Y. C. that no cutter could compete for the Cup; the fact that British yachtsmen were obliged to build a shoal boat in order to compete for it would in no way prove that the national type of deep boat was to be abandoned for a skimming dish. So with beam. Thistle was built for a specific purpose, her dimensions were chosen to meet certain conditions and rules, but this of itself proves little as to the proportions of the coming generation of British yachts. Beyond doubt the extreme narrow boats have had their day, the value of more beam is now generally admitted, but where the limit will be for the next few years no one now can say. Next season will see several new racers afloat on the other side, with probably about 4½ beams to length; but it is very certain that nothing will ever induce the British yachtsmen to adopt the proportions of beam and depth, as well as the other distinguishing features, which have always been associated with the term sloop.



In sheer plan Thistle is much the same as her older sisters, with the exception of the cutting away of the forefoot and keel forward, which is carried to a greater length than usual. The out-

THE SCOTCH CUTTER "THISTLE."——Designed by G. L. Watson and built by D. & W. Henderson, Glasgow, Scotland.

line is shown with sufficient accuracy in the sketch above, the rake of sternpost is a little greater than 45 degrees, to judge by the eye, the overhang and sheer are like all the Watson boats, but the line of keel differs, as shown by the full in contrast with the dotted line. The keel from the heel of sternpost forward some 20ft. is nearly straight and parallel with the waterline; from this point it curves upward for another 20ft., and then runs quite straight to the forefoot, where there is a sharp turn just below the water.

Above the water is a handsome clipper stem such as graces Wendur, Lenore and Doris, a new feature in large cutter-rigged yachts, but long followed in schooners, yawls and the small cutters, both tonnage and length class. This stem is objected to by many on the score of appearance, but as to its utility there can be no doubt, and it will be a prominent feature of the coming yachts on both sides of the water. The form of the midship section is shown by the drawing, the dotted lines representing Vanduara

enlarged to the same waterline as Thistle. The waterline forward shows a barely perceptible hollow, perhaps an inch, while aft it is moderately full. The section lines of the bow for some distance abaft the stem are of a V-shape, the bow being fined away, but by no means hollow. Looking at the yacht from the top of the dock the bow seems unduly small and the part below water overbalanced by the projecting stem and flaring topsides, but this view is very deceptive. From the level of the waterline the yacht looks very small in the whole underwater body, and many who saw her only from this point of view went away with the idea that she was deficient in power, but a look up at the hull from below gives a very different impression. Like all well-proportioned vessels, Thistle does not look her size, and most of those who saw her underestimated her power. This was especially so with those who had just come from a visit to Volunteer, docked but a short distance away. The latter lay low down in a box dock, the ends overhanging, and consequently looked very large, while Thistle, alone in the graving dock nearly 500ft. long, was proportionately dwarfed.

The keel of Thistle is a beautiful piece of flanging, a semi-circular trough about 2ft. in diameter at the largest part and some 50ft. long, diminishing in size from the lowest point to its junction with the stem forging. It is bent from ¾in. plate iron. The garboard is about 3ft. wide, the keel overlapping on the lower edge. The next strake, about 30in. wide, overlaps the upper edge of garboard and lower edge of the third strake, the fourth overlaps the third, while above the latter joint the hull is entirely flush. Every part of the plating is perfect in shape and finish, the only projections being the edges of keel and plating, four on each side, and the chainplates. Thistle's designer has done his work well, in every part the form is beautifully moulded, every line is fair and true for its entire length, and the model is one that an artist or sculptor, though wholly unfamiliar with yachts, might look at with appreciation and enjoyment as a work of art.

The many comparisons made between Thistle and her predecessors of the cutter family were naturally in favor of her, but it must be remembered that under the old rule the designer was restricted to certain fixed dimensions which in themselves dictated within narrow limits the form of the yacht, and the main effort of the designer was to secure power to carry lead and canvas, without regard to refinement of form; in short the problem was, during the last years of the tonnage rule, rather one of engineering than of legitimate designing. With the tax on sail area imposed by the present British rule the field of the designer is expanded and the importance of form as well as power is recognized, but curiously enough, the present tendency in this country, under the New York rule, seems to be in the same direction as of old abroad, to hang on the lead and pile on canvas, the only limit being the strength of spars; rigging and equipment. It looks as though, if a given boat is to be beaten, it must be done by more power, through lead and beam, or depth, and an increased sail area; and this certainly is not yacht designing, but savors strongly of the old sandbag days, when the best boat was the one which carried the most bags to windward, the longest boom—and did not upset until she had crossed the finish line. Under the present Y. R. A. rule the designer certainly has such opportunities as were never offered him before since lead keels came in, and a comparison of his efforts under the altered condition with the older boats is by no means a fair one to the latter.

During Thursday and Friday Thistle was visited by hundreds of people, among them Gen. Paine and Mr. Burgess. The bottom was thoroughly cleaned and sandpapered, the defects in the cement were made good by repeated coats until all was dry, hard and smooth as the old cement, the topsides exchanged their dead black for a glossy coat, and the bottom was painted. Mr. Watson was everywhere about the boat, watching and superintending everything and even laying on the cement himself, while Captain Barr and his crew were busy with the gear and rigging. On Friday she was floated and towed to her old anchorage off Tompkinsville.

At the same time that Thistle was docked at the Erie Basin, her rival was towed to Tebo's dry dock, a small floating dock at the foot of Tebo's pier, Twenty-third street, South Brooklyn, and by noon she too was high and dry. The two docks are a couple of miles apart by land, but only a short distance by water, and soon all the idle rowboats in the vicinity of South Brooklyn were busy ferrying passengers from one to the other. The new Boston boat is a large and powerful craft and shows it in every line, but when it comes to a comparison with Puritan in point of model the older boat can well hold her own. Two years of trial and thought have shown some minor improvements over the older boats, but the chief superiority over both Puritan and Mayflower is size and especially depth. The new boat is deeper in actual draft than both, the draft probably being as much as 10ft. 6in. compared with Mayflower's 10ft.; but beyond this the greatest draft is well amidships, the keel having a decided rocker, while Mayflower drew most at the sternpost. Thus the ballast is considerably lower than in last year's boat, while the steel trough keel and the absence of an inside keel of wood, makes all the weight practically in the keel, with no "inside ballast" in the common acceptance of the term. In general features Volunteer resembles her two sisters, the chief points of difference being the clipper stem, the cutting away of the forefoot, the greater depth amidships and the shape of the stern. The stem is different from Thistle's, shorter and not so handsome, the forefoot is cut away considerably more than in Mayflower, but much less than Thistle, while the additional depth increases the apparent reduction. The midship section, besides the extra depth, has a harder bilge than Mayflower, a medium, it is stated, between her and Puritan. The sheer is not as perfect as in the others, but this is probably due to the builders. The responsibility for the stern rests clearly with the latter; seen from below the iron work is in proper shape to make such a stern as Mr. Burgess obviously intended, a counterpart of Puritan and Mayflower as well as the rest of his boats, large and small. The fault is in the wooden superstructure of the stern, which is very clumsily worked, the rail and bulwark turning sharply in, giving a peculiar and most awkward shape to the sternboard and by no means improving the sheer. The bottom of the boat is a poor piece of work, but as far as speed goes it looks much worse than it really is. The seams and rivets show and the plating is unfair locally, but seams and projections have all been smoothed down, the surface has been well painted and then potleaded and polished. The result is a hard smooth surface for a time, at least during the races, and the vessel should suffer little in speed. While on the dock the board was overhauled and strengthened, about 8in. depth being cut from the top side. The withe on the end of the bowsprit was replaced with a new one, and every part of hull and gear thoroughly overhauled. The new boom and mainsail have been sent ashore, the old ones being used for the races. On Monday Volunteer came off the dock and went back to Bay Ridge.

But little authentic information concerning the dimensions and elements of either boat has been made known by the designers, but the following details will serve to give a fair idea of the two. Only the dimensions marked * are official, but the others are approximately correct:

	Volunteer.	Thistle.
*Length over all	106.23ft.	108.05ft.
*Length on l.w.l.	85.88	86.46
*Beam, extreme	23.16	20.03
*Hold	10.90	14.10
Draft	10.50	13.0
*Sailing length, N. Y. Y. C. rule	80.35	8[illegible]
Sail area, sq. ft	9,271.00	8,9[illegible]
Sail area, sq. root	96.30	about
Perpendicular	108.00	
Base of sail plan	171.50	

The displacement of neither boat is known, but Volunteer is probably between 130 and 135 tons, while Thistle is 140 or a little more.

In comparing the two it becomes necessary to include to the old subject, so often discussed in our co[illegible] ship and nomenclature of each, but we shall touch briefly and in only a general way, as it is of relation-question importance

as the reforms so long advocated by the FOREST AND STREAM are being accomplished. The pictures of the two yachts under sail show that both are essentially the same in rig, and consequently are cutters in the original sense of the word. In saying that Volunteer is a cutter in rig we do not mean that she is rigged precisely as the old revenue cutters or even the yachts of half a century since, but simply that she has in all the leading features the rig of the modern cutter yacht; differing in some details, but still the cutter rig and in no way allied to the national rig of America, the sloop. Thistle too is cutter rigged, though the fact that her mainsail is partly fast on the foot has been used to establish her relationship to the sloop. Laced vs. loose-footed mainsail has long been one of the many points of difference between the two rigs, but of itself it cannot make the difference, otherwise the mere cutting of the boom lacing on an old sloop would convert her into the cutter. The results of several seasons of close competition are seen in the minor changes and improvements in the rigs of both boats, but still the distinguishing features of the cutter prevail and even the most enthusiastic friends of Volunteer would not care to claim for her any relationship to the true sloop rig that failed so signally at Larchmont lately on the Anaconda.

While strictly applicable only to the rig, the terms cutter and sloop have by common usage of late years been associated also with certain features of design, ballast and build, and in this connection the hulls as well as the rigs above them demand consideration. It has been claimed that Thistle is a sloop because she is wider than some cutters, and also that Volunteer is a sloop because in addition to beam she has a centerboard. The difference between Thistle and Galatea is certainly very great, a proportion of beam of 4½ in the one compared to 6¾ in the other. The working of the old Y. R. A. rule has been such that for some years the beamy boat has been prohibited from racing under it, and the extreme narrow cutter has taken such a prominent part in all racing that the existence of a wider class of cutter has been entirely ignored by Americans. There are to-day, however, hundreds of yachts of as much or more beam than Thistle that are in every respect cutters, as much so as the narrow racing class. These boats include a number of modern yachts built solely for cruisers, a very large number of yachts once the pick of the racing fleet, and many small cutters that race under other rules than the Y. R. A. Independent of beam all these yachts possess other features thoroughly identified with the cutter; the depth of hull is great compared with the beam, each has a clearly defined keel in which is all or a large portion of the ballast, each above water shows a long overhang and an amount of freeboard far in excess of any American yachts until a recent date. The question of the relative excellence of narrow and moderate beam is one thing; that of the existence of many wide as well as narrow cutters is another. We do not propose to dodge the old issue of wide or narrow beam by any claim that the narrow boats, Galatea, Miranda, and the rest, down to Shona, do not fully represent the modern British racing fleet, for they have done so since sloops and cutters first came together; but we claim that Thistle is in every way a cutter and in no respect a sloop, in spite of beam. The outlines show the difference between her and the older boats to be only in degree and not in kind.

So with Volunteer. Beam and centerboard, the attributes of the sloop, she has; but the great difference between her and the sloop is shown in the drawing. The largest sloops built for many years have been in second class, so there is no individual boat with which to compare Volunteer of 86ft. l.w.l. direct. The dotted lines show, however, the general proportions of the leading second class sloops before the day of the cutter, enlarged to the scale of Volunteer. The sloop on Volunteer's length would have had about 28ft. beam, or 5ft. more than Volunteer; the draft would have been about 6ft. 6in. or 7ft., against 10ft. 6in.; the ballast would have been stowed as shown, high up inside the planking and on each side of the trunk, instead of being entirely of one piece at the lowest point of the hull. The presence of a clearly defined keel, forming a substantial addition to the lateral plane, the features of long overhang, raking post, greater freeboard and less sheer, all go to make up the sum of cutter as distinguished from sloop details, and to throw the boat into the category of cutters in spite of her centerboard.

However, all this is of secondary importance. The question is, Will Thistle win? If not, what will be the form of the challenger which is sure to come next year? If so, what boat will Boston build to retake the Cup next year? Should Volunteer prove victorious, it will be consoling to national pride to dub her an American sloop; but those who do so must at the same time stand father to the escapade of the other American sloop, Gracie, at Larchmont last week. There is no holding to the one and disowning the other.

The fact that Thistle has proved to be considerably over 85ft. has been used by a daily paper to work up a sensational report that she would not be permitted to race, but the matter has been amicably disposed of. A meeting was held on Friday to determine the final arrangements, at which Messrs. Paine, Bell and Watson were present, with the Commodore and America Cup Committee. After the meeting Com. Gerry made the following statement for publication:

"The Cup Committee had its attention drawn to the fact of a reported discrepancy between the waterline of the Thistle as stated by the challenger in his original communication to the club, and the actual measurement reported by the club measurer on the 22d inst. It was contended by the challenger that in his view of the construction of the deed of gift, the waterline was not a necessary dimension that he was compelled to furnish with accuracy.

"The committee is of the opinion that it is a dimension under the deed of gift, and in view of the precedent that would be established by accepting either view of the case at this time, both parties desired to submit the question to the umpire, which was done this evening in writing. At the same time the Cup Committee stated that in the event of the decision of the umpire being that there was an irregularity in the entry of the Thistle which might preclude her from competing under her challenge, a new challenge could be immediately presented based on her present measurement, which would be accepted by them with like effect as if the accurate waterline had been stated in the original communication from the challenger. The umpire now has the matter under advisement, and will render a decision some time to-morrow. In either event it will not affect the present race."

Ex-Com. Smith, of the Cup committee, who was also present, spoke of the matter as follows:

"There never has been any question about the race between the Volunteer and Thistle coming off at the time appointed. The only question that has been raised which has been most pleasantly discussed on both sides is whether the dimensions named in the deed of gift included length on the waterline.

"The reason why it was discussed was that it was the intention of this committee to settle the question that the waterline length was important, and that the precedent should not be established that it was not necessary.

"At the meeting of the committee to-night a letter was submitted from Mr. Bell to the chairman of the committee, and the chairman of the committee, on behalf of the Cup committee, made a presentation of the case in writing at the request of George L. Schuyler, umpire of the facts in the case.

"Mr. Bell also, by the request of the umpire, presented the case from his standpoint, and all the papers were taken by the umpire, who will make his decision to-morrow noon, when it will be delivered to the chairman of the committee, who will authorize full publication of it in the daily press. The whole subject has been discussed in the spirit of the utmost fairness and courtesy, and it is believed that the decision which will be rendered by the umpire will be satisfactory to all parties."

The following letter was sent to Mr. Geo. L. Schuyler, the sole survivor of the donors of the cup, and the umpire in the present races:

NEW YORK, Sept. 24, 1887.

Mr. George L. Schuyler, Umpire:

The following questions and facts are submitted to you by the America's Cup Committee and Mr. James Bell for your decision:

Does the Thistle, as now measured and offered to sail, correspond with the particulars of dimensions furnished by the challenger within the requirements of the deed of gift?

The deed of gift requires, "Accompanying the six months' notice there must be a Custom House certificate of the measurement and the statement of the dimensions, rig, and name of the vessel."

A letter from the challenger, dated March 16, 1887, inclosed a Custom House certificate of the measurement and the certificate of Mr. G. L. Watson, dated March 14, 1887, as follows: "Length of load waterline, 85ft.; breadth, extreme, 20 3-10ft.; depth of hold, 14 1-10ft. The two last measurements are from actual measurements, but as the vessel is not yet afloat it is impossible to give exactly the waterline length. This, however, is the designed length, and when she is afloat and in racing trim I have no reason to expect it will be more than an inch or two out either way." Signed George L. Watson.

A letter from William York, Secretary of the Royal Clyde Yacht Club, dated March 16, 1887, states: "Length per register, 98ft.; breadth, 20 3-10ft.; depth, 14 1-10ft. I send also a statement of the dimensions by Mr. G. L. Watson, her designer, giving, although not required by the formalities of the deed of gift, the length of the load waterline, which is as before stated in Mr. G. L. Watson's certificate."

NEW YORK Y. C. COURSE.

Actual measurement of the Thistle by the club measurer, Mr. Hyslop, on Sept. 22, 1887, shows the actual waterline to be 86 46-100ft. instead of 85ft., as stated in the letter of March 16, 1887, from Mr. William York, Secretary.

Question—Is the variation sufficient to prevent the challenger being entitled to a race for the Cup with the boat named?

Is there a remedy?

By order of the America's Cup Committee,
JAMES D. SMITH, Chairman.

Mr. Bell also submitted the following statement: In the letter of challenge, dated March 16, 1887, it was stated that the Thistle was in course of construction on the Clyde. She was sufficiently advanced to be measured by the Custom House authorities, and an official certified transcript from the Custom House register was sent with a letter of challenge. This certificate gives the length, breadth and depth of the vessel, and includes, as a matter of course, the name and rig. Conditions of the deed of gift require the Custom House certificate of the measurement and a statement of the dimensions, rig and name of the vessel. Challenger considered the statement of dimensions given in his letter of challenge and the production of the Custom House certificate was full compliance with the terms of the deed of gift; but the challenger supplemented this statement by one from the designers, Messrs. G. L. Watson & Co., giving, to quote from the letter, "although not required by the formalities of the deed of gift, length on the load waterline."

The designer's statement of dimensions is qualified by the observation "as the vessel is not yet afloat, it is impossible to give exactly the waterline length. This, however, is the designed length and when she is afloat and in racing trim I have no reason to expect that it will be more than an inch or two out either way." When launched, however, and with her equipment on board, her waterline length was found to be 86.40ft. As the challenger accepted the measurment and time allowance of the New York Y. C., which adjusts all differences of tonnage, and as the vessel had to be measured in New York, exact waterline length did not seem of any importance.

Under the New York Yacht Club rules, which were mutually accepted, competitors are at liberty to shift ballast up to 9 P. M. of the day prior to the race, subject of course to after measurement, which precludes the idea that in giving an approximate waterline measurement the Thistle was tied down to a fixed load-line length. Were the Thistle claiming to race at a waterline length of 85ft., having 86 46-100ft., there would be grave reason for complaint, but the Thistle is tendered for measurement of length and sail area as per New York Yacht Club rules, under challenger's arrangement with your America's Cup Committee to adjust the time allowance she was to receive or give.

SEPT. 24, 1887.

Mr. Schuyler's reply reads as follows:

NEW YORK, Sept. 24, 1887.

James D. Smith, Chairman America Cup Committee:

My reply to the questions submitted to me by your committee and Mr. Bell is as follows:

The clause in the deed of gift, which requires besides Custom House measurement, a statement of the dimensions of the vessel, is intended to convey a just idea of the capacity of the same, without reference to any rule for racing tonnage which may be in force at the time that the challenge was given. The length of load waterline is an essential element. It was furnished by both the Genesta and the Galatea, and, had it not been given by the Thistle, the committee should have demanded it before closing the terms of the match. Mr. Bell did, however, furnish the load-waterline of the Thistle, notwithstanding his misapprehension of the necessity of doing so, for the reason, as stated by himself, that if the information was withheld it would be impossible to determine with any approach to accuracy the power of the boat, the reason which proves the necessity of load waterline being a factor in giving the dimension of the vessel as well as the desire of Mr. Bell to do everything in his power to make a fair trial between the contestants for the cup.

Your second question refers to the discrepancy between the load waterline of the Thistle, as furnished by letter, March 16, 1887—about 85ft.—and the actual measurement made in New York, 86.46ft. The length of load waterline of a vessel in commission is accurately obtained, but before launching, as the case with the Thistle, there was no course left to the owner but to apply to his designer for the necessary information. This was done, and a certificate of the designer was forwarded, stating that "it was impossible to give exactly the waterline length. This is, however, her designed length, and when she is afloat and in racing trim I have no reason to expect that it will be more than an inch or two out either way."

The importance of accuracy in giving the dimensions of a yacht challenging for the Cup is so great that any decision reached in any one case cannot be used as a precedent in any other which may arise. A great error in any of the dimensions, whether through mistake or design, would vitiate the agreement. A small one should be governed by circumstances attending it and always on the liberal side. Although the variation between the stated and actual load waterline is so large as to be of great disadvantage to the defender of the Cup, still, as Mr. Bell could only rely upon the statement of his designer, he cannot in this particular case be held accountable for the remarkably inaccurate information received from him, and I therefore decide that the variation is not sufficient to disqualify him from starting the Thistle in the race agreed upon. Respectfully yours, GEORGE L. SCHUYLER.

On reading the above Mr. Watson wrote the following for publication:

Editor Forest and Stream:

As Mr. Schuyler's reply to the Chairman of the America's Cup Committee has been made public, and as that reply will doubtless be printed by you, I would venture in my own defense to say a word or two regarding the final paragraph, which reflects, in some degree at least, on myself.

Mr. Schuyler very properly exonerates Mr. Bell from all blame in the matter, placing it, with perfect justice, on "his designer," but as he previously implies that an error has been made, "through mistake or design," it becomes necessary for me to protest against at least half of this insinuation.

While, then, the Thistle has been sailed in Britain, as she will be here, at a line lower than her designed draft, and is consequently, from her great overhang forward and aft, 1ft. 5½in. longer than I intended or supposed she would be, I most emphatically deny that I had any intention that she should be longer or shorter than the 85ft. she was designed for. She is a new type of boat,

built under a (to me) new tonnage law, and after getting her into sailing trim, the Yacht Racing Association's official measurer found her to be 86.40ft. long, or three-quarters of an inch shorter than the New York Y. C. measurer found her to be. The New York Y. C. scale of time allowance is supposed to adjust all differences of length and sail area. It was devised for that purpose. If, under this rule, extra length be an advantage, it would be as unfair to accuse Mr. Burgess of unchivalrous conduct in designing a boat 10½in. longer than the vessel he expected to meet as to blame me for meeting the Volunteer with a boat which inadvertently is 7in. longer than the Volunteer.

While throughout this contest I have maintained such secrecy as seemed to be advisable (as a whist player has every right to conceal his own hand), I would rather lose all chance of the Cup than that one of the many millions of that people which Charles Reade calls "the most generous nation under the sun" should suppose we tried for it except in a strictly honorable way. In their hands I confidently leave the matter. I am, sir, faithfully yours,

G. L. WATSON.

While we agree with Mr. Schuyler that the waterline length is what is really necessary, and in accordance with the spirit of the deed of gift, we cannot see that it is directly or indirectly specified in either the old or new document, in fact, it seems tolerably certain that the waterline should not be included in the term dimensions. The passage reads: "Accompanying the six months notice there must be a Custom House certificate of the measurement, and a statement of the dimensions, rig and name of the vessel. The original deed of gift reads: "This notice to embrace the length, Custom House measurement, rig and name of the vessel." It is not too much to say that waterline length is a modern institution, and entirely unknown to yachtsmen of thirty years back. Then all measurements were governed by tonnage, the size or class of a yacht was approximately indicated by her Custom House measurement in tons, her "length" was either "length on keel" or "length over all," "for tonnage," and the length on waterline was of little importance. Then, and for many years after, yachts were built of so many tons, or so many feet on keel, from a block model made to the inside of planking, the length perhaps governed by the length of keel stick available. The lateral plane was not taken seriously into account, the stem outside rabbet was often governed entirely by the size of the knee at hand, the length on waterline being left to shift for itself. In short the modern method of designing on paper a yacht of a fixed length and breadth was unknown in the ordinary practice of our yacht builders until a comparatively recent day, and even now there are many of the old time yachtsmen who, if told that a yacht is of a certain waterline, will ask at once her length on keel or her tonnage, referring instinctively to the old standards. Looked at in this light the "length" in the first deed of gift is certainly not waterline length and the "dimensions" referred to in the deeds of gift are the "tonnage dimensions," carrying out the idea of the original deed, framed at a time when waterline length was disregarded. Even so late as 1881, the date of the new deed, waterline length was not the general standard with American yachtsmen. The "mean length" then in general use as a basis for time allowance, being much more commonly used. The old standard of tonnage was retained in the new deed without an intimation that waterline length or any other data than the official dimensions, from which the tonnage was computed, was desired. If it be decided that the "tonnage dimensions" only were not referred to, but that waterline length is also included, the door is at once opened to endless conjecture and possible quibbling in the future, the beam and draft may very properly be asked for, and perhaps other details.

It will be remembered that the first intimation of Thistle's dimensions came by cable through a leak in the Custom House at Glasgow, only the tonnage and "tonnage dimensions" being given, and during the short time that elapsed before the arrival of the formal challenge every one was on the alert to decipher the length of the yacht on waterline from the meagre and indefinite dimensions furnished by the Custom House register. Gen. Paine and Mr. Burgess own, we believe, to have spent over a day in the calculation, finally making the length 90ft.

Whether the waterline length is demanded or not by the present deed of gift, it is certain that it should be. The days of tonnage of all kinds for yachts, and of lengths on keel and lengths over all, have passed away, and now yachtsmen recognize but one governing dimension, length on load waterline. Given this, a fair idea of size is had by a comparison with known boats of similar length, and if the unknown boat be the bearer of a challenge, any man who is familiar with the racing fleet will instinctively pick out the vessels she will be expected to meet. Of course it is impossible to say in advance exactly what a yacht will measure in racing trim, especially if she has a long overhang at each end, but the dimensions may be determined within reasonable limits, and it is only in accordance with modern practice that the waterline should be the chief detail of a challenge.

Fortunately the pleasant relations between challenged and challengers in the present races that have existed thus far are not threatened, and it is as well that the question should have arisen now, to be set at rest permanently. Changes and alterations in any such document as the deed of gift are highly undesirable, but considering the great changes in methods of measurement since the first deed was framed and the fact that the original idea has been preserved in the wording of the second deed, it would certainly be well before another challenge is received to clear up any ambiguity, and to interpret the evident intention in accordance with modern yachting usage.

FIRST RACE, SEPT. 27—INSIDE COURSE.

Early on Tuesday the weather was anything but pleasant and promising, a thin dry haze, no wind, and no prospect of any. The flagship, with the America's Cup committee and the regatta committee on board, besides a large number of guests of the Commodore, anchored off Buoy 18 at 10 A. M. Volunteer had come off the dock on Monday, afterward taking a sail in the afternoon to make sure that all was right. She was at her anchorage during the morning, with clubtopsail set and jib in stops. Captain Haff was in command, sailing the yacht all day, while with him were Captains Terry, of the Grayling, Berry, of the Mischief, and Jeffrey, of the Mystery. Besides General Paine and Mr. Burgess, there were on Volunteer Messrs. Richards, Bryant, Fay, Forbes, Willard, Busk and Wylie, the latter representing Thistle. The latter yacht was under way long before Volunteer, sailing about in the neighborhood of Robbins Reef. On board were Messrs. Bell, Watson, Fife and a number of the Scotch visitors, while Mohican carried a large party, including Mrs. Bell. Com. Latham A. Fish, of the Grayling, was on Thistle as Volunteer's representative. At the hour for the start there was a good ebb tide, but barely a breath of wind from the north. Both yachts were at the line with kedges down; Tristle nearly on the line and Volunteer just ahead of Electra to the north of the line. After a tedious wait of nearly two hours a little wind was seen below the Narrows, coming up with the young flood. While the tide was on the last of the slack the yachts began to swing to the wind, and at noon a start was decided on. The steamers by this time were in a solid mas across the line, and it was with great difficulty that a way was finally cleared by the Patrol and the Electra's new naphtha lauch, and even then it seemed as though the line could not be kept clear long enough to start the race. The large steamer Frances lay directly along the line, and was only persuaded to move after much trouble. Finally space enough was made to allow a little maneuvering, and at 12:20 the first gun was fired.

The interval was 10 minutes, but some trouble was threatened by the accidental firing of a second gun but 3 minutes after the first, through some one touching the wrong electric button on the bridge, but the racers saw the blue peter flying and were not misled. Thistle, with small jibtopsail set, reached back and forth along the line, Volunteer following with second jibtopsail. As the time shortened, Thistle wore round, Volunteer still following her, and came for the line on port tack, with the other on her weather quarter. Both were at the east end of the line, Thistle going over very near Buoy 18. The gun fired at 12:30, and the two were timed:

Thistle.....12 33 06 Volunteer.....12 34 58¼

The wind was very light from S. E., the tide just running flood and as the two breasted it they gathered way slowly, Thistle seeming to move the faster at first. Soon, however, Volunteer picked up, being sailed a little freer when well over the line. The fleet at once closed in and left little room for the work that was necessary to get out of the Narrows, with little wind and a foul tide. Standing on for about six minutes, Thistle then made a tack toward the Long Island shore, but instead of tacking with her, Volunteer held on, going under her stern and over toward Staten Island. Thistle held the starboard tack for only a couple of minutes, but she had managed to run out of the wind, while Volunteer had a little breeze and less of the flood tide. When Thistle came on port tack she had lost considerably, and when Volunteer, after tacking at 12:44, approached her with the right of way, Thistle tacked under the other's lee.

Here she was becalmed, while Volunteer had a little wind and made the most of it to carry her out of the trap and into the better breeze of the Lower Bay. Working in toward Clifton she took a good puff over the hills and walked off finely, while Thistle was becalmed in the tide and now well surrounded by steamers. One huge clumsy scow with a wrecking derrick ran directly in her way. Thus far she had been badly outlucked, but the first tack had also proved a mistake, while she frequently had all her headsails shaking in a way that must have hindered her seriously, and which looked as though she were trying the experiment of pointing with the other boat rather than sailing her own course with a good full, which has brought disaster to the cutters in the same place in previous years.

Volunteer outside, with her rival becalmed above the Narrows, it was the old story, the race was finished as far as any sport was concerned. Volunteer, with a clear course before her, and running into a constantly increasing wind, was soon the better part of a mile ahead, while Thistle was working out as she caught the varying puffs, hindered more each minute by the fleet.

At 1:32 the Volunteer went on port tack by Buoy 14, tacking again at 1:39 and standing for Buoy 10, with the wind now freeing and helping her. The wind was shifting continually from the Narrows to the Spit, at one time shortly before 2 P. M. Volunteer and Thistle, now a couple of miles apart, sailing the same course, but with wind on opposite sides.

Thistle tacked as Volunteer had done at buoy 14, and followed her rival for the Spit, shifting to No. 2 jib about 1:55. The times at Buoy 10 were:

Volunteer.....2 21 03 Thistle.....2 36 45

Adding the difference at the start Volunteer had beaten Thistle 17m. 34⅓s.

The great fleet now surrounded the leader, so that a piece of canvas with the words "Keep Astern" was hung over the quarter with a temporary benefit. The buoys were entirely hidden from Thistle by the steamers, while here too her way was impeded. Out went Volunteer, finding smooth water and a better breeze, and after her, pell mell, went the hundreds of steamers, leaving Thistle to do as best she could in the wash of this mighty fleet, with only the faithful Mohican to keep her company.

When Volunteer reached the Lightship there was an immense gathering to greet her, and she luffed around and was soon bound for home. Thistle's troubles from the fleet were now over, and she had the first fair chance of the day from the Hook to the Lightship. The times at the mark were:

Volunteer.....3 42 12 Thistle.....4 01 18

The difference here is 19:06, which added to Volunteer's time at the start, makes her gain 20:58¼. Of this 3:24 was made from Buoy 10 to the Lightship, but even here the odds were all in favor of the leading boat until Thistle had made within 6 or 7 miles of the mark, as she was just in the tail of the fleet from Buoy 10 to Buoy 5.

Of course Volunteer had the race beyond fail now, and she went home easily, carrying only a large jibtopsail, the same as she started with. Now she began to get the washing as she came inside the Hook, and at the Spit she was badly worried by the tugs and steamers, but with a good breeze and a strong flood tide the effect was comparatively trifling. At Buoy 10 she set her spinaker to starboard, carrying it to the finish. Thistle came up with spinaker set long after Volunteer had finished, the times being:

	Start.	Finish.	Elapsed.	Corrected.
Volunteer	12 34 58¼	5 28 16¼	4 53 18	4 53 18
Thistle	12 33 06	5 45 52¾	5 12 46¾	5 12 41¼

The times of the runs out and in were:

	To Lightship.	To Finish.
Volunteer	3 07 13¾	1 46 04¼
Thistle	3 28 12	1 44 34¾
	20 58¼	1 29½
	1 29½	
Volunteer's gain	19 28¾	actual time.

Thistle's run in was made in 1.29½ less than Volunteer's, but then the latter was not pushed at all, while she was hiudered by the fleet at the Southwest Spit, Thistle having a clear course on the way home.

Of course no one supposes that Volunteer can outsail Thistle by 20m. in 20 miles, the difference between none of the large class is as great as this; and as far as mere figures go if Volunteer's gain of 21m. over one-half the course was all fairly earned it should have been doubled on the other half, while it is a fact Thistle at the very least held her on the latter run. How much of the race is due to flukes of wind and the interference of the fleet it is not possible to estimate, but a very large per cent. of Volunteer's gain must be laid to chance, and among her adherents the legitimate gain is placed at from 5 to 10 minutes, the former being the more nearly correct. Even this is a very bad beat between such boats, far more than we expected to see on either side. The sailing and handling of Volunteer certainly was such as to merit a win, and she certainly did her work throughout in a creditable manner. To-day a second race will be sailed over a fairer course, and probably under more equal conditions, we hope with the result of a close race, whoever may be the winner.

The force of the wind, as registered at the Signal Service station in New York, was as follows:

7 to 10 A. M.....1 mile an hour.
10 A. M. to 12 M.....Increase to 4 miles.
12 M. to 3 P. M.....4 miles.
3 P. M. to 4 P. M.....Increase to 8 miles.
4 to 4:45 P. M.....Increase to 9 miles.
4:45 to 5:30 P. M.....Decrease to 6 miles.
6 P. M.....6 miles.

While the fact that Volunteer has proved the winner in the first of the great races was a cause of the wildest rejoicing throughout the immense fleet of attending vessels, there was a general feeling of disappointment among yachtsmen that a race from which so much was expected, between two such yachts, with picked crews, should be entirely devoid of incident and excitement, being after the first two miles a mere procession. That Volunteer won by a handsome margin, that she sailed faster than Thistle all day, is beyond denial, but like scores of other races over the same course, the result of this one was practically decided by the flukes of the first half hour in the Upper Bay. As in the races this spring, to quote no others, the yacht first outside the Narrows had the race beyond a doubt, barring serious flukes, though she had then sailed less than three out of the thirty-eight miles. Volunteer would have won on her sailing by a safe margin, but beyond that she was enabled to roll up a tremendous total by the luck which has stood by all the Burgess boats, and by the actions of the crowd of vessels that accompanied the racers over the entire course.

The faults of the old New York course have been so well recognized by every one for years that another instance like the present will have no influence in inducing the club to change it, but it is evident to all yachtsmen that a more unequal course could not well exist. The only apparent reason for declining to improve it to a great extent by making the start outside the Narrows is that it is the old course sailed for many years by the club and associated with many famous races; but if this consideration is to prevail, why not go the whole length and restore the first course of the club, from up the river, opposite Wehawken, around the Southwest Spit. New York yachting has outgrown both of these courses, but many fail to recognize the fact, and race after race is spoiled, as far as sport goes, by the miserable trap between Buoy 18 and the forts. The next of several very necessary reforms in yachting is to settle on a common course for the New York, Seawanhaka, Atlantic and Corinthian clubs, outside the Narrows; a course over which all the races of the club will be sailed and over which the records will have some value. At best this course will be uneven and far from perfect, for the Bay from the Narrows to the Hook is a nest of flukes and foul winds in most weathers, with currents and tides to complicate matters, but such a course will be far more just to every boat than the present and far more in accordance with the increased importance of yachting.

In the present race every precaution was taken by the club to prevent the crowding that on all such occasions adds so much to the natural disadvantages of the course, but the effort was a failure. The appeal of the Cup Committee to steamboat men, published in all the papers, was disregarded by many steamers and tugs. The police Patrol, under command of Inspector Byrnes, was of great service, but she could not be in half a dozen places at once, and even when near an offender, when moral suasion proved useless, there was no possibility of "taking in" the recalcitrant tug or steamship. The Patrol was manned by a special crew, with boats in readiness for instant use in case of an accident and none but the police on board, and through the day she was well managed, doing much good, but in spite of all her efforts as well as the signals and requests from the bridge of the Electra, both the competing yachts were seriously hampered, in many cases the act being deliberate, as in the case of the steamer Sam Sloan, which with charming impartiality first ran close aboard Thistle for some time, washing her badly, later on serving Volunteer in the same way. At the very start the fleet closed in on the yachts, leaving no room for maneuvers, either about the line or later when near the Narrows.

After Volunteer passed the forts she was clear of the crowd, but Thistle was getting the full effect of the wash and interference with her wind. All the way out to Sandy Hook, Volunteer was undisturbed, while Tristle was for a long time surrounded, and finally had to sail in the rear and to leeward of the enormous fleet. From the Lightship in Thistle was undisturbed, while about buoys 8½ and 10 it was Volunteer's turn, and she was washed and blanketed freely. It mattered comparatively little here, as she had a free wind of moderate strength, and a fair tide flowing swiftly, but Thistle was worse hindered at the start, when, working to windward in almost a calm, with a strong head tide, the least wash or back draft was a serious hindrance. There seems to be no remedy for this trouble; boats will push close without regard to the rights of the racers. The matter would of course be much improved if the start were at a distance, as at the Lightship, and in entirely open water. Two other remedies have been suggested, both fatal to the pockets of the offending captains; to go to a distance, say Newport, where the tugs and steamers will not follow, or to keep the dates of the races secret, and go out and sail quietly, without notice being given to the public. The care and trouble which has been taken this year to prevent interference has perhaps prevented a serious collision or the stoppage of the race, but beyond that it was unavailing, and proves more fully than ever the helplessness of any club or even the authorities to control such a fleet.

JUST THE SIZE OF IT.

Editor Forest and Stream:

I quote the following from a well written and fair minded editorial in the Boston *Post*, Sept. 20:

"Should the Cup be borne across the water by the Thistle, we shall have left the consolation that from the international contests has arisen the best type of all-round boat yet built; powerful, non-capsizable and fast. It has been a patriotic thing to cling to the centerboard, and wise, so long as it gave the greatest speed to windward; but that it is an element of weakness, and that, other things being equal, no centerboard yacht can equal a keel in seagoing qualities, must be admitted by every yachtsman. And when to the centerboard boat is left the sole advantage of ability to cruise in shallow waters, she will speedily vanish, and our yachtsmen become a hardier set of deep-sea, rough-water sailors."

A few years ago such an expression would have been deemed rank heresy. It would have been impossible from an American source.

Now see how popular sentiment has shifted! The truths and sound views so long preached in your columns are bearing good and plentiful fruit. How graciously we now take to the keel. We dote upon a loaded keel. We love the cutter rig and style all through, and we just revel in the hardy life of the deep, unruly sea!

The Boston *Post* is right. But the *Post* might go further. It makes no difference whether Thistle win or lose. We are learning the lesson in our own waters, with our own boats.

We have the bold, smart little 36ft. cutter Pappoose, fit to knock round the world in and fit to lift a win from any centerboard in existence. We also have the 50ft. Anaconda, sample light displacement sloop, with inside ballast and single jib, unfit to face a reefing breeze and little lop in landlocked waters not five miles wide, unfit to race anything at all, and saved from being sent to the bottom only by turning tail and running for shelter, before the band had settled down to play.

Let Thistle lose if she cannot win. It makes no difference. The cutter is now the standard to which we are all conforming as fast as the old craft drop out and the light of experience filters into dark corners.

C. P. K.

CEDAR POINT Y. C., FALL OPEN REGATTA, SEPT. 21.—The triangular course of the Cedar Point Y. C., 15 miles. Weather slightly foggy; wind, strong S. W.; tide, flood and ebb. Summary:

	Length.	Start.	Finish.	Elapsed.
CLASS B.				
Inez, J. H. Cole	38.02	12 26 37	did not finish.	
Nellie, H. C. Eno	33.00	12 26 45	4 18 25	3 51 40
Genevieve, D. S. Warner	34.05	12 30 15	4 22 50	3 52 35
CLASS C.

The Alice, holder of the cup from last season, did not enter. Winners—Class 1, 24ft., Red House Belle first, Hornet second, Grace L. third. Class 2, 20ft., Leo first, Tripoli second, Ida May third. Class 3, 18ft., Boneville first, Brunette second. Class 4, 18ft., Wave first. Class 5, cabin sloops, Gracie first, Dawn second. The Leo wins the cup, which is quite an elegant affair, given by the citizens as a perpetual challenge cup. Regatta Committee, Com. A. C. Hobbs, Messrs. A. H. Davis and Wm. F. Brooks, Judges, Capt. I. P. Davis, Messrs. C. M. Foster and F. T. Staples.

MONATIQUOT Y. C. TENTH CLUB REGATTA, Sept. 17.—Course, Fort Point (shortened), first and second classes, 8 miles, third class, 6 miles. Weather fair, light N.E. wind, tide 11 A. M., start 2 P. M.

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Posy, R. G. Hunt	22.03	2 47 21	2 22 37
Folly, J. F. Sheppard	26.08	Withdrawn.	
SECOND CLASS.			
Diadem, Hayward	18.02	2 48 07	2 19 12
Spray, White	19.02	2 53 32	2 26 41
THIRD CLASS			
Helen Snow, Lane	16.06	2 31 20	2 14 38
Nitti, Lenton	17.01	2 34 43	2 17 27
Snarleyow, Maybury	17.10	2 35 59	2 19 19
Flora Lee, Glover	17.05	2 41 23	2 24 21
Dot, W. F. Maybury	15.00	Withdrawn.	

Winners: Class 1, first, Posy, second, Tony; Class 11., Diadem; Class III., first, Helen Snow, second, Nitti, third, Snarleyow. Wind over first half of course very light, boats finished in a good wind. Judges, E. P. Worster, Henry Gardner, T. D. Bagley.

CLEVELAND YACHTING ASSOCIATION.—Fall regatta Sept. 12. Courses, N. E. around stakeboat four miles and return, S. W. around home stakeboat, sailed twice around for all boats, 16 miles. Weather cloudy, wind N. E. steady. Summary:

	Start.	Finish.	Elapsed.	Corrected.
SECOND CLASS.				
Ida, C. W. Kelly	10 58 48	3 15 53	4 17 05	4 11 27
Alert, Herman Kelly	11 00 23	3 17 47	4 17 24	4 16 17
Emma G., J. N. Wagner	10 55 07	3 11 37	4 16 30	4 16 30
Iolanthe, W. P. Francis	10 53 54	3 21 50	4 27 56	4 22
Bessie, W. C. Sly	10 56 58	Did not finish.		
THIRD CLASS.				
Petrel, F. G. Overbecke	10 57 38	3 27 21	4 29 43	4 16 29
Unique, E. Radder	10 58 32	3 38 27	4 39 55	4 22 05

Growler, H. D. Moran	10 55 00	Did not finish.		

Winners: Second class, Ida first, Alert second. Third class, Petrel first, Unique second, Eole third. The divisions of classes for this race was: Class 2, under 35ft. and over 25ft. l. w. l. Class 3, under 25ft. l. w. l. Regatta committee, P. A. Mettling, H. D. Moran, S. Law, C. Krause, H. Richter. Judges, Com. Geo. W. Gardner, Vice-Com. Percy W. Rice, Dr. C. C. Arms.

MONTGOMERY SAILING CLUB, Norristown, Pa., Sept. 26.—Eighteenth cruise. Course, Norristown to Indian Creek and return, distance five miles. Wind fresh to brisk northly. The start was made at 9 A. M.:

	Finish.	Corrected.
Josephine, tuckup, E. Powers	10 20 25	1 20 20
Igidious, tuckup, Wm. Rochell	10 21 31	1 23 21
Gracie, skiff, E. A. Leopold	10 33 29	1 24 26
Priscilla, tuckup, E. Stanley	10 26 09	1 26 46
Bowers, tuckup, C. DeHaven	10 30 30	1 30 30
H. C. Scott, tuckup, W. Carnathan	10 31 31	1 30 31
Playford, tuckup, Grisdale Bros.	10 30 42	1 30 42
E. C. Potts, tuckup, Parker Bros.	10 32 30	1 30 50
Ino, ducker, W. Sullivan	10 50 08	1 47 16
Lulu, tuckup, Jas. Frith	Withdrew.	
Pennsylvania, hiker, J. Adams	Withdrew.	
Princess, canoe, C. Wainwright	Withdrew.	

Josephine wins champion pennant. Judge, Thomas Rochell. After the race the Bowers, with her crew of four men, attempted to jibe around the point of Barbadoes Island and capsized. The Princess is a decked canoe 15 x 36, and carries 85ft. of sail in main and mizen. She was overpowered by the heavy puffs, and ran for home before reaching the outer mark. The open boat Gracie 12 x 34, carried the same amount of sail over the entire course and shipped less than a gallon of water. She has a 3in. rockered lead keel weighing 25lbs, and carried 15lbs. of lead and 15lbs. of paper packages inside ballast. Her skipper weighs 121lbs.

NEW ROCHELLE Y. C.—On Sept. 24 the New Rochelle Y. C. sailed a race for catboats only, the course being twice around Execution Light, 12 miles, making two legs to windward and two free, the wind being strong N.W. The times were:

	Start.	Finish.	Elapsed.	Corrected.
CLASS VI., 23FT. AND OVER.				
Stream	1 02 20	3 00 14	1 57 54	1 57 54
Adele	1 01 50	2 58 10	1 56 20	1 55 49
La Perichole	12 57 25	Did not finish.		
CLASS VII., 19FT. AND UNDER 23FT.				
Olive N	1 00 30	3 18 20	2 17 50	2 17 50
Marion	12 56 10	Did not finish.		
CLASS VIII., UNDER 19FT.				
Terrapin	12 59 00	3 19 00	2 22 25	2 22 12
Nettie	12 55 55	3 32 02	2 37 07	2 36 17
Gracie L	12 56 35	3 42 00	2 45 25	2 44 52

After the race Perichole challenged Adele to sail at once, one round of the same course, for $100 a side. The offer was accepted, Perichole finally winning by 5m. 23s.

MIRAMICHI Y. C.—An open race for prizes presented by the club, sweepstakes and silver cups, was sailed on Sept. 18 in a stiff nor'wester, with frequent squalls. Only plain sails were carried on the first half of the course, from Chatham to Newcastle, which was a dead heat, but spinakers were set on the return. The schooner Fedora sent up a staysail after rounding the mark and almost instantly had her maintopmast carried away and was unable to get the wreck down. The distance was 12 miles:

	Elapsed.	Corrected.
FIRST CLASS.		
Kilbride, J. C. Miller	1 59 00	1 43 31
Kittoch, Jas. Miller	2 04 05	1 48 16
Fisherman, D. McLean	2 04 50	1 52 56
Fedora, J. L. Stewart	2 19 40	2 05 45
Arrow, Geo. Watt	2 30 20	2 11 20
SECOND CLASS.		
Pooh-bah, H. A. Muirhead	2 41 55	2 14 13
Bear, M. Hayes	2 49 45	2 22 03
Annie, W. R. Gould	Lost rudder.	
Terror, D. McEachran	Swamped.	
Daisy, Chas. Wilson	Did not finish.	

SHAMROCK AND TITANIA.—A remeasurement of these yachts was made after the race of last Tuesday, making the official figures as follows:

	Start.	Finish.	Elapsed.	Corrected.
Shamrock	11 09 58	3 27 14	4 17 16	4 15 57¾
Titania	11 15 00	3 26 13	4 16 13	4 16 13

By these figures Shamrock wins, instead of Titania, as at first reported.

WITCH AND BETH.—On Sept. 23 a match was sailed off Marblehead between Witch, B. B. Crowninshield, and Beth. Witch led until her topmast went, when she lost some time clearing the wreck, but finally passed Beth again, finally winning by 7m. 33s.

ROYAL CANADIAN Y. C.—A race was sailed on Sept. 17 between Cyprus, Verve, Yolande and Molly, the former winning by 1m. 51s.

QUINCY Y. C.—The sail off of the third class in the Quincy Y. C. resulted in a victory for Wildfire, and she takes the championship.

ORIOLE AND ATALANTA.—Mr. George Gooderham, of Toronto, has written the following letter to Mr. W. J. Eyre, owner of the Atalanta, accepting the challenge of the latter: TORONTO, Sept. 17, 1887.—MY DEAR SIR: I am in receipt of yours of 10th inst., which reads as follows: "I am informed you have made the assertion that your boat can outsail the Atalanta. I hereby challenge you to sail a match race for a thousand dollars a side, twenty miles to windward and back, the race to be sailed one month from date. Yours truly, W. J. EYRE, Brighton, Sept. 10. If challenge is accepted half will be posted with the editor of the *Sporting Times*." In reply to the above I accept your challenge subject to the following conditions: 1. The race to be sailed under the Lake Yacht Racing Association rules, and under the auspices of either the Royal Canadian or Toronto yacht clubs. 2. The race to be an open lake race, and to be sailed off the port of Toronto. 3. The distance to be twenty miles to windward and return, or *vice versa*. 4. The race to be sailed in seven hours, or no race. 5. The Oriole to allow the Atalanta $50 for expenses coming to Toronto. Yours very truly, GEORGE GOODERHAM. In order the more thoroughly to test the sailing qualities of the boats and to guard against defeat through accident, I would suggest that the race be made the best out of three, and if you desire it that the purse be increased.—G. G.

OUTBUILDING IN THE CUP RACES.—*Editor Forest and Stream:* When Genesta challenged for the Cup, representatives of the N. Y. Y. C. built the Priscilla to meet her, and they deliberately and intentionally made their boat fully 3ft. longer than the challenger, but there was no spasm of virtuous justice developed then. What causes this sudden clamor for "fair play" now that the Thistle has inadvertently taken only half the advantage that we attempted so recently? Is it the trembling of our pocketbooks that has so awakened our sense of justice? Whatever the cause, would it not be well to settle the whole question, and not rest satisfied with deciding what are the obligations of the challenger? It may not be necessary to put it in the form of an agreement, but it certainly would be eminently satisfactory and reassuring to future challengers if the N. Y. Y. C. put on record that it is the sense of the club that a challenging yacht should not be outbuilt by the holder of the Cup.—W. F. H.

FORTUNA.—Ex-Com. Hovey and Mr. C. A. Longfellow have returned from England, having laid Fortuna up at Southampton, where Day & Summers have hauled her up and removed her masts. Capt. Newcomb and the crew are on the way home by steamer.

☞ **No Notice Taken of Anonymous Correspondents.**

C. B.—We do not recommend its use.

C. D., Freeland.—Milford, Pike county, Pa.

W. W. R., Ohio.—The .45-70-500, with Lyman sights.

J. M.—Write to the Springfield Armory, Springfield, Mass.

J. W. R., City.—Robin season on Staten Island will open Nov. 1.

B. L. C., Catasauqua.—We hope to have the full text of the law by next week.

C. D., Pennsylvania.—Go to Tom Chester's, Second Connecticut Lake, New Hampshire.

W. A. S., New Haven, O.—The White River region of Arkansas will probably be better for your purpose than the other.

H. E. A.—We understand that experience with it has shown very satisfactory results. It is claimed to be perfectly safe.

J. J. S.—Send for the special daily Wimbledon edition of the *Volunteer Service Gazette*, No. 121 Fleet street, London, Eng.

F. P., Newark, N. J.—Is it lawful to shoot game in Connecticut in season and take it out of the State with you for your own use or to sell? Ans. No.

F. A. C., Newfield, Me.—You may find a market for the live animals with Chas. Reiche & Bro., Chatham street, New York. The dobson is the helgramite. The gun is a good one.

G. R. S.—We should not give very much consideration to the mere trajectory in the cases mentioned. Either arm will do capital work and you would do well to select the larger caliber. The single shooter is the one to choose.

H. F. M.—It may be had of the tackle manufacturers, or of the Shipmans, Philadelphia. We cannot say just when you could strike the ducks in New York markets. Write to Drohan & Powell, Washington street, New York.

L. W. H.—1. We do not recommend its use. 2. Ball may be used, if it is small enough, but there is always liability of accident with it. If you use buckshot see that they will chamber in the choke so as to pass through without difficulty.

WARDEN JACK, Toronto.—1. Would you kindly inform me if meadow larks are game birds or not? What is the value of a good golden eagle, well mounted, also bald-headed eagle? Ans. 1. The meadow lark is not a game bird. 2. In the vicinity of $15.

N. E. J.—In issue of 15th inst. H. Holgate asks about wild rice planting among the northern lakes. Has it been attempted successfully in Chesapeake Bay, and under what conditions? Ans. We do not recall wild rice planting in the locality mentioned.

H. K., Madison, Wis.—While shooting Wilson (or jack snipe as they are called here) I saw a snipe spring up before the dog, and, without making any sound, fly slowly away with something that looked like a bunch of feathers between his feet. Do snipe carry their young like the woodcock? Ans. Woodcock do this, but snipe are not known to have the habit.

DORY.—Will you kindly inform me where I can obtain black bass for stocking purposes? They are not bred at the State fish hatchery. The fishing in this immediate vicinity is discouraging. There is a pond here in which I think bass would breed. I should like to put them in without mentioning the fact and let them take their chances of living and breeding. I feel sure that they would survive, and the fact of their being there would become known soon enough. Ans. We know of no one who keeps black bass for this purpose. There are repeated calls for the fish.

J. C.—My shot measure, at the 1¼oz. notch, flush measure, holds just 1oz. 385grs. by careful weight, and the pellets count, No. 7 size, just 363. As 600grs. would be 1½oz., I find the measure 385grs. short, equal to 57 pellets. I find allowed by manufacturer 364 pellets for 1¼oz. Will you please state if I should load 57 more pellets to a charge, giving actual weight 1½oz. Would I be permitted by the National Gun Club rules to shoot them at the trap in a match, or must I be governed by the count instead of weight? Ans. The Dixon powder measure is the standard adopted by the N. G. A. Use that, struck measure, without regard to the weight.

The Passaic County Fish and Game Protective Association, of Paterson, N. J., has entered on a novel field. It has engaged counsel to certiorari to the Supreme Court the ordinance of that city requiring a registry fee of $2 for every dog owned by a resident. It is claimed that the city's charter contains no authority for the imposition of a tax on dogs; when a tax of $2 was levied this point was raised, and the city then resorted to the subterfuge of requiring each dog to be licensed, the fee being $2. Admitting the right to demand registry, it is nevertheless clear that the charge of $2 is excessive. The Association is sanguine of success in its endeavor to abolish the ordinance.

The penal code of New York porhibits hunting and fishing on Sunday, but the statute is very generally disregarded, alike in town and in the woods. Sunday is the great salt-water fishing day of the week in the vicinity of New York city, and in the Adirondacks a deer is not shielded by the State law if he ventures within shot. A Clinton exchange, of Sept. 7, records: "A party consisting of Dr. Peck, H. B. Vann, Ellery Stebbins and Frank Elliott returned this morning from Jock's Lake with a fine deer which Mr. Elliott shot just before church time on Sunday night."

More coon guns are coming. The change in the caliber of the British service arm leaves a lot of 100,000 Enfield-Martini rifles in the racks of the English government armories. These arms will come in for reboring into cheap shotguns just as the old army Springfield was treated. If the caliber reduction keeps up, a stop will be put to the industry of buying up government rifles at old iron figures and reissuing them after boring as safe shotguns at dirt cheap prices.

A NOTABLE ART ENTERPRISE!

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson's poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actual canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature, fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a dull, Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. The upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene. In the foreground a buck, just shot, is falling on the edge of a lake, bearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channel outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scene is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and, at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb plate paper; size of paper 24×30in.; size of print 14¼×17¾in. The pictures have the tint and tint border, and the artist's remarque and signature, and form artist's proofs, an édition de luxe.

PRICE $30 FOR THE SET; SINGLE PICTURES, $3.

---

BEN,

The famous and only champion Yorkshire terrier in America (A.K.R. 5206). Puppies have been sold as Ben's get by people that never had the use of Ben. A pedigree of Ben will be furnished with every puppy got by Ben, and can only be obtained from Mr. Peter Cassidy, his owner, or J. R. Gildersleeve, agent. Ben weighs 7lbs., and is perfect in color and very long in coat, and a sure getter. Stud fee, $10.

We have the best toy dogs on hand all the year round.

PETER CASSIDY, 135 Varick st., N. Y.
J. R. GILDERSLEEVE, Agent. 1t

WM. GRAHAM, NEWTOWNBREDA, BELfast, Ireland, is prepared to purchase and ship dogs for importers. Dogs purchased from him had the following prizes awarded to them: At New York and Chicago, 1883, sixteen 1sts, nine specials, three 2ds and one 3d. At New York, 1884 seven 1sts, six specials and one 3d.

FOREST AND STREAM

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, OCTOBER 6, 1887.

VOL. XXIX.—No. 11. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

VOLUNTEER'S VICTORY.

THE excitement which has prevailed throughout the length and breadth of the nation for over a month has at last given place to a wave of enthusiasm which has carried the names of Paine, Burgess and Volunteer to all parts of the globe, in connection with the great international races, which have resulted in such a triumph for America. Only a few years since, these races were sailed quietly in the presence of a few yachtsmen, while the world went about its business without a thought of yachts or yacht racing. Now, for a week at least each year, the races engross the attention of all, land-lubbers and yachtsmen; on salt water and the great lakes, or far inland on the western prairies, the prospects of Volunteer and Thistle form almost the sole topic of discussion and conjecture. In London, in Glasgow, in Boston, in New York, in San Francisco the streets are thronged with thousands watching for the latest yacht race news on the bulletin boards. About the race course, on Sandy Hook, on the Highlands, at Long Branch and along the Long Island shore, were stationed watchers armed with powerful glasses, while from the following tugs swift carrier pigeons bore the news at intervals of a few minutes, to be flashed by wire and cable across the continent, beneath the ocean, and to the eager watchers far and near. In front of one newspaper office a man stood on a platform high above the multitude, a telegraph instrument suspended about his neck and a huge blackboard behind him, on which the latest of news of the race was written so plainly that it could be read on the outskirts of the crowd. After following the race with breathless interest for hours, at last the news came, "Volunteer wins," the suspense was over, and from the throats of the nation went up one great cheer for the boat and men who had again won the day and saved the old trophy. If Volunteer's victory meant only that American yachts were the fastest it would still be an occasion for a national rejoicing, but it means far more now. It is an evidence of improvement, of progress, which is truly characteristic of all Americans. That the Cup has been held in the past is comparatively little, the contests for it then involved few important issues, but that it has been defended so well for three years against worthy antagonists is a far different matter. There was a time when the national fleet was generally open to criticism, when in design, in construction, in sail and in rigging American yachts were behind those of other nations. Now that it is otherwise, the credit is far greater to those who have been chiefly instrumental in this change, to the men whose skill, labor and liberality has placed the national pleasure fleet on an equality with any. The leaders in this great work, Gen. Paine and Mr. Burgess, are reaping now a fitting reward in the praise and honors so freely bestowed, but further than this, their names, with those of Puritan, Mayflower and Volunteer, will find a place in yachting history as exalted and lasting as those of Steers, Stevens and the America.

SNAP SHOTS.

BRIG.-GEN. GEORGE CROOK is an officer whose testimony with respect to any Indian trouble investigated by him will have unchallenged acceptance. In the report he has just sent to the Secretary of the Interior in relation to the Ute "war" in Colorado he fully bears out the FOREST AND STREAM'S characterization of the manner in which those people were treated as unwarrantable aggression, treachery and murderous brutality. A summary of the report is printed on page 208. It makes one blush for the actors in that disgraceful affair, chief of scouts and all.

Last week we took occasion to comment upon the capture of trout at the Upper Dam Camp, Maine, by Messrs. T. B. Stewart, of New York, and Mark Hollingsworth, of Boston. Our angling columns to-day contain a communication from Mr. Stewart, advising us that the information upon which our unfavorable comments were based was incorrect. Mr. Stewart states that the trout alluded to were taken in a perfectly legitimate manner, and that he has never jigged any fish. If we have made a mistake in accepting the reports which have come to us in relation to this matter, Mr. Stewart has manifestly been placed in a false position by our criticisms, and his disclaimer of the conduct imputed to him will be received with satisfaction by all friends of legitimate angling methods.

The Maharajah Dhuleep Singh is not a Yankee, but he is thrifty, and a Yankee with a white elephant on his hands could hardly do better with it. Elveden Hall is an English estate converted into a vast game preserve, which could be neither sold nor leased. The happy plan has been hit on of letting out the shooting week by week to parties of four or more guns, each gun being charged $30 per day, the game to go to the owner, and keepers' fees to be extra. As the first party in four days killed 500 brace of partridges for the proprietor to sell, he evidently has a profitable thing of it.

They are handy with their guns in New Jersey when private fishing interests are at stake. Coast fishermen have a way of training cannon on menhaden steamers; and last week when the State fish commissioners attempted to destroy a weir in the Delaware River they were routed by the owner, one Brink, a Dutch farmer, who fired on them without any ceremony. They barely saved themselves from the brink of destruction by abandoning their designs on the weir.

Boston takes pride in the increasing hosts of her dogs. The total number licensed this year was 9,463, a total increase over last year of more than 1,400. The city drew into the treasury the snug sum of $23,501 in the way of license fees. The New England Kennel Club ought to be a prosperous institution if this thing keeps up. It certainly deserves credit for improving the quality of Boston's dogs.

The President has appointed William L. Putnam, of Maine, and President Angell to act with Secretary Bayard in the pending negotiation with the British Commissioners in relation to the fisheries. The appointments have been received with much satisfaction, and with confidence that the interests of the country will be ably represented by these gentlemen.

"Uncle Lisha's Shop," in dollar book form, will be ready at once, and orders are now received for it by the publishers, the Forest and Stream Publishing Co.

A DERELICT PARK SYNDICATE.

THE act of 1883 provides that the Secretary of the Interior may lease small portions of ground in the Yellowstone National Park, on which to erect hotels. The grounds so leased cannot exceed in extent more than ten acres to any one lessee. The Secretary is also prohibited from granting any exclusive privileges in the Park.

The franchises are very valuable, for the travel in the Park is large enough to pay a good rate of interest on the money invested, and is each year increasing. These privileges are to be had for a merely nominal rental, and having been secured on such terms, the parties obtaining them are bound to render to the visitors to the Park—the public, for whom the Government holds the reservation in trust—a service which shall be satisfactory. As this business of accommodating the public is one which requires considerable capital, it has naturally fallen for the most part into the hands of corporations, and these corporations in the past have been very slack in performing their duty toward the public. During the last season matters have been better managed than heretofore, but there are still many points to which attention must be called.

The National Park is under the exclusive control of the Secretary of the Interior. Mr. Lamar, as is well known, is deeply interested in the reservation and has been watchful of its best interests. He has been fortunate in having the advice of men most intimately acquainted with its needs.

The history of the now defunct Yellowstone Park Improvement Company needs no more than a passing reference. This corporation endeavored to secure exclusive privileges in the Park, and having—as they supposed—obtained these rights they entered into possession as if they owned the Park. They cut with reckless hand for their own use the timber owned by the Government, and slaughtered its game to feed their laborers. They "wanted the earth," and imagined that they had succeeded in obtaining it, but they had made one miscalculation. They assumed that the Yellowstone National Park was so far away from civilization that no one would know or care anything about it, but they were wrong. The FOREST AND STREAM learned of the project to wrest from the people the rights which belonged to them, and it protested vigorously against this high-handed outrage. After it had shown up the matter in its true colors, other papers took up the cry, and the result was that the Improvement Company, after a brief struggle, perished. A part of its property passed into the hands of the Northern Pacific Railroad, and then into those of the Yellowstone Park Association, of which mention has recently been made in these columns. We learned during the past summer that this association has in very many respects failed to carry out the terms of its lease, and it is time now to draw attention publicly to this matter, and to call upon the Yellowstone Park Association at once to comply with the conditions. If it shall fail to heed this warning it will be the duty of the Interior Department formally to revoke their leases and to offer the valuable privileges which this Association now enjoys to other persons, who will comply with the terms on which they are granted.

It might be supposed that the Association would have taken every pains to fulfill its contract with the Government. Setting aside any question of justice and right, it would seem that merely as a matter of business policy this would have been the true course to pursue. As we shall show, however, this has not been done. The managers of this syndicate cannot plead ignorance as an excuse for their failure to carry out the terms of their bargain. An extended and laborious search which we have made through the papers of the Interior Department shows that the Secretary of the Interior has more than once called attention to their failure to fulfill the terms of their lease. This, however, does not seem to have influenced them to do their duty. They need some stronger spur.

In his report on the condition of the Yellowstone National Park, made to the Secretary of the Interior in September, 1885, Mr. W. Hallett Phillips calls the attention of the Department to the well-founded dissatisfaction expressed by travelers at the poor accommodations furnished them at hotels of the Yellowstone Park Improvement Company. He stated that while the unfortunate financial reverses of the company had much to do with

the state of things then existing there, yet the interests of the public were to be considered before anything else; that if the travel to the Park was to continue to any large extent, adequate accommodation must be afforded travelers, and that the Department should see that privileges within the Park were accorded to persons of such financial standing that they could carry out at once any agreements that they might make with the Government for the accommodation of the public.

On the third of October, 1885, Frederick Billings, of Vermont; J. D. Perry, of St. Louis; J. C. Bullitt, of Philadelphia; C. Gibson, of St. Louis; T. B. Casey, of Minneapolis; M. D. Carrington, of Toledo; and C. B. Wright, of Philadelphia, applied to the Department for a lease of ten acres of land in the Park. These persons were most, or all, of them men of large wealth and were officers of, or largely interested in, the Northern Pacific Railroad. They asked for two acres of land in the Norris Geyser Basin, two acres in the Upper Geyser Basin, west of Old Faithful, one acre on the shore of the Yellowstone Lake, west of south of the Assistant Superintendents' building, and two acres at the Grand Cañon. The remainder of the land they did not then designate, but proposed to locate it at some time in the near future. Their application was approved by the Superintendent of the Yellowstone National Park.

In a letter dated Jan. 18, 1886, C. Gibson, in whose hands the management of the affairs of the concern seems to have been from the beginning, states that an accurate description of the sites will soon be furnished, and on March 12 of the same year surveys were filed for the sites at Norris Geyser Basin, and at the Grand Cañon and Mammoth Hot Springs, three of the four locations made in the application. On March 20, 1886, a lease was executed by the Secretary of the Interior, granting to Charles Gibson and his associates for a period of ten years, four sites, the descriptions corresponding with the surveys filed for the Mammoth Hot Springs, Norris Geyser Basin, Grand Cañon and Yellowstone Lake, but it was provided that the lease at the Yellowstone Lake was not to take effect until the site had been definitely located and the plans of the building had been approved by the Department, that the plans for buildings at other sites should be approved by the Secretary of the Interior, and that these buildings should be completed by January 1, 1887, except that at the Grand Cañon, which was to be completed by October 1, 1886.

The only building constructed under this lease up to the present time was that at the Norris Geyser Basin, which has since been burned to the ground.

In 1886, the Department learned that the lessees had purchased the hotel erected at the Mammoth Hot Springs by the defunct Yellowstone Park Improvement Company, and that the same interest had also obtained by purchase the hotel at the Lower Geyser Basin, said to have been erected on the Marshall lease by parties claiming under Marshall. They also purchased from Hobart and others the hotel erected by the latter at the Upper Geyser Basin. The lessees had erected at the Grand Cañon a temporary building. Information came to the Department in September, 1886, that the lessees had assigned their interests in the Park to the Yellowstone Park Association, a corporation organized under the laws of Minnesota, with a capital stock of $300,000, the board of directors being C. Gibson, N. C. Thrall and J. C. Bullitt. This assignment the Department has never approved, and it has no official knowledge of the Yellowstone Park Association, to which it has granted no rights of any kind in the Park.

The Department was now requested by Mr. Gibson to ratify the purchase at the Upper and Lower Geyser Basin. Change of location was asked from that granted to the lessees at the Grand Cañon, the new site being nearer to the Cañon than the original one. This request was refused, the lessee being given to understand that he would not be allowed to build nearer the Cañon or Falls than the site granted by the lease.

On the first of January, 1887, the Secretary addressed a letter to Mr. Gibson. He called his attention to the fact that the hotel at the Mammoth Hot Springs, which he desired to have substituted for the one required to be built under his lease, was not on the ground leased to the Yellowstone Park Improvement Co.; that if the new lessee had purchased it, the Department could not ratify this purchase until a correct survey had been made of the site occupied by the buildings, and the formal request made that the new lease be modified to embrace this land, instead of that which had been granted. He also remarked that the new lessee had been operating the hotel at the Upper Geyser Basin, which hotel was not built on leased land, and calls his attention to the fact that his lease did not include any site at the Upper Geyser Basin, but that, appreciating the need of the public for accommodation at that point, the Department would not be unwilling, upon proper application, to grant authority for a building there. In connection with an application to this end, in view of the unlawful location of the building and that it is poorly constructed and inadequate to accommodate the public travel at that point, it would be necessary to consider whether or not it is practicable to remove it beyond the prohibited distance from the Geysers. The letter says, as to the Lower Geyser Basin, that Mr. C. D. Davis had submitted to the Department for approval an assignment to him of the Marshall lease; that the Department had not approved this assignment because it had been represented that the purchase was really in the interest of the lessees (Yellowstone Park Association), and with a view to having all the hotels at the various points under one management. If such were the fact, the approval of the assignment to Mr. Davis would result in an evasion of the spirit of the act of March 3, 1883, which prohibited the leasing of more than ten acres to any one person or corporation, as seven acres had already been leased to them. That in the lease to him and his associates it was agreed that the hotel at the Grand Cañon should be finished by Oct. 1, 1886; that during the season of 1886, at the request of the lessees, the Department had consented to the erection of a temporary building to be built at that point to be removed by Aug. 1, and that the permanent building had not been erected nor the temporary one removed; that the present state of uncertainty cannot be allowed to continue. The Department must be satisfied as to the lessees' right to occupy the buildings erected by the Yellowstone Park Improvement Company, and must also have some assurance as to what they propose to do in regard to other matters wherein the terms of their lease have not been lived up to. The letter concludes by asking that the compliance with the requests of this letter may be prompt and complete, otherwise the Department may feel constrained to give the lessees the formal notice provided for in Article 10 of their lease, in case of default on their part in the observance of the covenants of the lease.

Mr. Gibson replied August 2, 1887, that, as to the Mammoth Hot Springs, the hotel there had been purchased by the Northern Pacific Railroad Company under a foreclosure of mortgage, and that there was an agreement that it should be sold to the Yellowstone Park Association, and that that agreement had been complied with and title papers would be sent on and the approval of the Department asked. That as to the Upper Geyser Basin Mr. Davis had bought the lease for the Yellowstone Park Association for the sum of $6,000; that Hobart claimed some interest in the building, but his claim was unfounded. That as to the Lower Geyser Basin hotel, this had also been bought by Mr. Davis for the Association, for the sum of $6,000, and that a new lease would be submitted to the Department for its approval, embracing the new improvements. About the Grand Cañon he writes: "I have had surveys made of the sites leased to me and Hobart and as to all the proposed sites for the new hotel at this point, they are within quarter of a mile of the Cañon, and are therefore obnoxious to the prohibition contained in the bill passed by the Senate last winter. The parties I sent to survey have selected what they call the compromise site. They affirmed that it is clearly one-quarter of a mile beyond the Falls by any survey that can possibly be made, and that it is as perfectly unobtrusive and harmless as the site leased to me, or any of the sites suggested by any one." "As I understand it the compromise site is only a little way (perhaps two hundred yards down the hill) from the site leased to me." He adds that they must have a place to get water. He further says that the cost of the hotel at Norris which was burned was over fifty thousand dollars, and that the insurance was only eighty-five hundred. That he did not desire to build at the Cañon this season, and proposes to erect a hotel after the season is closed. That the fire at Norris proves that it is undesirable to build large hotels, and that there is great danger to the lives of visitors from such large wooden houses. "I am convinced that it is better for all parties to build a good dining room, kitchen and parlor in one house, with good cottages near by on the old Southern plan. I desire therefore to change the plans at Grand Cañon, and also for a new hotel at Norris, and am having plans prepared, and will submit them for your approval." In a subsequent letter Mr. Gibson excuses his failure to build because the Government had not constructed roads to the localities where the leases were situated. This is of course nonsense, as there was no provision in the lease that such roads should be built.

Such is the history of the Yellowstone Park Association in the National Park from the beginning up to the present time. It appears clear from this, all of which can be established by documentary evidence now on file in the Interior Department, that this Association has not kept faith with the Department, notwithstanding the fact that every allowance has been made for the difficulties which might beset a new lessee. It is clear that if the Association—Mr. Gibson and those whom he represents—wish to retain their rights in the Park they must carry out the contract which they have made.

The first thing to be done by this Association to give themselves a legal standing with the Department is to prove their title to the lands and buildings which they occupy, and to request the approval by the Department of all purchases and leases by which they have acquired rights of any nature from other companies or individuals. Until they have done this the Yellowstone Park Association, as such, has not a vestige of right in the Park and is a mere trespasser. The Government ought not to approve an assignment by a lessee who has not himself complied with the terms of his lease. If this is done it opens the way to speculation in Park privileges, and a lessee may do nothing and sell his right merely to make a profit out of it.

Taking up the different sites mentioned in the letters above quoted, it must be considered that the hotel at Mammoth Hot Springs is large enough to accommodate travel, and there seems no reason why the Yellowstone Park Association should not be allowed to retain it instead of building the one specified in their lease, providing they show their title to the hotel they have purchased. As to the Lower Geyser Basin, there is no reason why the suggestions of the Secretary of the Interior should not be followed. The law provides that but ten acres shall be leased to one individual or company, and if all the Davis purchases are ratified, the Yellowstone Park Association will have more than this. We cordially approve the determination of the Department not to allow any monopoly in the Park. It is true the confirmation of the purchases made by the new lessees would only give them title to the sites and buildings purchased, and would not prevent the Department from granting additional leases in their vicinity to other parties, still it would be a wise policy not to permit any one person or corporation to own hotels at all the points of interest. The Department should encourage competition as much as possible.

If the Yellowstone Park Association can show title to the hotel at the Upper Basin they should be allowed to retain it, but they should certainly make extensive improvements, if they are allowed thus to take advantage of the work already done by others. At the Yellowstone Lake, unless they at once build as required, their lease should be forfeited.

At the Grand Cañon they should not be allowed to come nearer the Falls or the Grand Cañon than the lease granted to them. No buildings must be erected within one-quarter of a mile of any of the objects of interest or the natural curiosities of the Park. Moreover, they must build there at once or else their lease should be forfeited. The hotel at the Norris Geyser Basin recently burned should be rebuilt this winter, so as to be ready for occupancy by the opening of travel next season.

All this may seem hard to the Yellowstone Park Association, but it is just. They have received certain valuable rights from the Government for a merely nominal sum, and must fulfill their part of the contract. No one can expect to go into the Park under a lease from the Government unless prepared to make such expenditures as shall be sufficient for the accommodation of travel, and erect and keep in repair such buildings as the Department can approve. One reason—and the principal one—why the Yellowstone Park Improvement Company came to grief was that it failed to live up to the agreements which it had made with the Government, and the present lessees should take warning by the fate of their predecessors in the Park.

Considering the high position and financial standing of the present lessees, the Government and the public have a right to expect from them better things than they have given us since the Yellowstone Park Association took hold. There has been in many particulars an improvement in the accommodation of travelers in the Park, but much yet remains to be done. We have already waited too long, and the Department should see that a change is made without further delay.

In his report for 1887, noticed elsewhere, Capt. Harris says in relation to these leases: "The rights and privileges conferred by the lease to Mr. Gibson are exercised by a corporation known as the Yellowstone Park Association, and this company is also occupying ground and buildings at the Lower and Upper Geyser Basins. The unsatisfactory condition of matters connected with Mr. Gibson's lease and the operations of the Yellowstone Park Association, as related in my last report and as you have since been fully informed by letter, still continues; but pending the action which has been taken by your Department further comment on this subject is thought to be unnecessary. The other lease-holders in the Park have complied with the requirements of their leases in all essential particulars."

THE meet of the American Coursing Club at Great Bend, Kas., Oct. 17, promises to draw a goodly attendance. It is a great pity that some of the crack bench show winners, owned in the East, should not have an opportunity to pit their skill against the greyhounds of the West. Some of these bench show dogs have made capital records in England, but on this side of the big pond their only exercise has been on the treadmill, and they would doubtless rejoice to catch a glimpse of live game again.

T Adirondack landlord whose treatment of campers has been criticised by correspondents is by no means alone. It is a characteristic trait of North Woods hotel keepers to be disobliging and over-reaching in their dealings with persons who are not guests. They regard the Adirondacks as created expressly for their own individual aggrandizement; and that they do not manifest alacrity to be fairly decent to the independent camper may perhaps be ascribed to the weakness of human nature.

The Sportsman Tourist.

WE MET BY CHANCE.

IF her flour had not become weevily I should never have met her.

A series of accidents had been apparently especially arranged to prevent such meeting, which had it occurred would probably have been a very common-place event; it was the non-occurrence, taken in connection with the subsequent occurrence, which made a rather singular affair of it.

The lady to whom I have referred as "her," is still to me an "unknown quantity," for as though the series of accidents should be completed, I have lost the memorandum book in which, some eighteen years ago, I very carefully noted down either her name, or that of her husband, the name of the vessel he commanded, for he was a whaling captain, and probably their home address; and said names have as completely left my memory as has the memorandum book my possession. Therefore I can in this story refer to the lady only as "her" or "she," unless indeed, excused by the poverty of our own language to meet such an emergency, I borrow a title from another, and call her Madame; this sounds more respectful, and I will.

There is a vague impression upon my mind that the schooner —— hailed from somewhere on Cape Cod, and that between the heel and toe of that boot-shaped peninsula was, and I hope still is, the home of my friend.

In the hope that the far-reaching influence of the FOREST AND STREAM will carry this story to that region, and that it will attract his or her attention, or that of some friend, to whom he or she may have related this story, and that friend, or he or she, will recognize it, and by communicating with the FOREST AND STREAM, supply the missing links, and re-establish the continuity, I will now give my version of it, which will be as true a version as can be expected after so many days.

Early in the morning of the fourth day of July, 1870, the little tug-gunboat Palos, under my command, on the thirteenth day of a voyage from Boston to China, ran into Horta Bay, a harbor of the island of Fayal. As soon after anchoring as possible, I, tired and sleepy from an all night on deck, turned in for a nap, from which, an hour or so after, I was broken out by a messenger, who delivered to me a note, addressed in a lady's handwriting, thus: "The Captain of the American man-of-war, Horta Bay."

As nearly as I can remember, the contents of this note were as follows:

DEAR SIR—I hope you will *pardon* the *liberty* I am about to take in asking of you a *great* favor, in granting which you will render most *valuable* and ever to be *appreciated* aid to a fellow country-woman in *great distress*. *Can* and *will* you lend me a *flour sieve*? The steward has *most carelessly* lost mine *overboard*, and I *cannot obtain* such an article in *Fayal*; and unless you can help me I don't know what I *shall do*, for our flour is so full of *weevils* that I cannot use it. Very respectfully,

MRS. ——, Am. whaling schooner ——.

Fortunately, I was the owner of a very good flour sieve, and, as a matter of course and duty—for in my instructions I was charged to "render all practicable assistance to American vessels in distress"—I sent it. After breakfast I went on deck to take my usual two miles constitutional and my first smoke.

I was never quite sure about having fairly accomplished the two miles of my "stint," for, as my promenade was quite limited, 578 turns were required, and I found considerable difficulty in mechanically counting correctly, at the same time thinking of other matters; but by carrying 578 beans in my outside pocket and dropping one at each terminus, I presume that my reckoning was often tolerably close.

While tramping this morning, my attention was so taken up by the scenery, which included mountains, a pretty white city, fishing and bumboats, that I lost the run of my progress altogether.

Naturally I sought out the schooner from which the note had came; there was no difficulty in identifying her; the four or five whale boats hanging at her davits and astern proclaimed her vocation, and her nationality was so plainly marked by a large and new American ensign, which in honor either of Independence Day or our arrival was floating from her peak.

Another point made identification very easy and sure; excepting ourselves and her the harbor was bare of vessels. Although at times quite a number of the plum-puddingers, as the whaling schooners which go out but for a single season's work are called, make of this harbor a resort for the procurement of water, fruit and provisions, and to enjoy a "gam," as is termed in whaler parlance a chatty ship visit.

As was the case with my friend, these schooners generally anchor well outside, for many of their crew, among whom there is always a large proportion of brand new sailors, never before used, are apt to fancy that they need refreshments other than those which the captain will procure, and they are very likely, if at all handy to the wharves, to give themselves liberty and obtain them. The schooner was a fine-looking craft, and it struck me that it would not be a bad plan for me to go on board of her, call on the Madame, and offer any further assistance in my power. This I proceeded to do, and in a short row my gig brought me and a bundle of latest papers alongside of her. I was received by the captain and ushered into the cabin, where I was presented to his wife, my still unknown correspondent. They were young people, evidently glad to see me as I was to see them, and we passed a very pleasant two hours.

As is the custom when one goes visiting on board some one else's vessel, and too great a strain upon truthfulness is not involved (not so in this case) I complimented the captain on the remarkably clean and tidy appearance of his vessel, and the Madame on the cosy, bright and homelike cabin, in every part of which were evidences of womanly taste.

They were not to be outdone in politeness and assured me that the mate, who had carried the note to me that morning, had returned charmed with my vessel, which he reported to be in most beautiful order, or as he expressed it, "Slick as a parlor." Of this I had some doubts; it was my impression that while that whaleboat was alongside we were very busy hoisting ashes, holystoning decks, scrubbing paint work and in other ways making ready for port. I did not, however, correct him; modest as a man may be, he is not bound to reject compliments, even if not wholly deserved. No doubt the mate enjoyed his visit very much and his views were colored. My mate was a Cape Codder also, and a very hospitable, cheery, nor'wester sort of a man, and they probably had a most delightful "gam," during which exchanges of souvenirs, scrimshawed whale teeth, tooth ivory pie crust crimpers, etc., on the one side, versus navy plug tobacco on the other, added to the enjoyment.

The Madame accepted my compliment as to the cleanliness, but to my surprise did not seem to altogether approve of it. She said that, for her part, much as she loved cleanliness, her happiest times were when the vessel was in a most filthy condition. Seeing that I was puzzled, she explained that she referred to "cutting in" days, which on every occasion mean a goodly sum of money ahead and a shortening of the cruise. At such times the captured whale is secured alongside by slings at each end, so arranged that the body can revolve. The hook of a masthead purchase is inserted near the head, on each side of it a spiral tranverse cut is made, and the strip of blubber, flesh, etc., is hoisted: when high enough, a second tackle hook is inserted, the hoisted strip cut off just above the last hook, and the great slice, perhaps 30ft. or more by 3ft., is lowered to the deck, and there reduced to dimensions suited to the try-pot. During this process the vessel naturally becomes very bloody and greasy, with patches of soot profusely sprinkled.

After explaining to me, the Madame asked: "Did you ever see a whale cut in?"

Fortunately I had. She asked when and where, and this is the story I told her: "It was in March, 1865, that the U. S. S. Connecticut, of which I was executive officer, while making a cruise through the West Indies, went into Bridgetown Harbor, Barbados. We passed, anchored in the outer harbor, an American whaling schooner, alongside of which a dead whale was secured, and the crew were busy 'cutting in.' As soon as we could get a boat a party of us started for the schooner to witness the work. We went on board, and your description of the state of affairs hardly does justice; it was about the hardest-looking place we ever got into. The mate told me that the day before, the captain and nearly all hands being on shore, this whale blew, not more than a mile outside, and that lowering away he, with the cook, cabin boy and a couple of hands, had gone out and captured him."

The Madame listened very attentively, and seemed greatly interested. She asked me, "Were there any ladies on board of that schooner?"

"Not that I know of," was the answer. "I did get a glimpse of a petticoat just vanishing through the cabin door, as I went over the side, but the mate told me that it was a washwoman come for the old man's wash."

This Madame seemed to consider a very good joke, and indulged in a laugh more hearty and merry than I could see that the joke warranted. My surprise can be better imagined than described, when recovering from her laughter she remarked, "That he had no right to say and he never told me that he did; I did tell him not to let you into the cabin, nor to say a word about our being on board."

"Who and what do you mean?" I interrupted, "Who was 'our'?"

Then she told me that she herself and her sister, a young lady, were on board of that schooner, watched our cutter coming toward them, admired our uniforms, but when we rounded to alongside, scud for the cabin, through the window blinds of which they saw us all the time, vexed enough, that arrayed in their "cutting in" clothes, they were not in condition to receive us. And it was the very schooner which I had boarded in Barbados, in which five years after at Fayal, this story, for which I was indebted to weevils, was told me.

The adventure supplied us with quite a stock of conversation. It did seem so strange that we had so nearly met before, prevented only by chance, and that after all this time, a flour sieve, or rather the need of one, had brought us together. Our conversation drifted into other channels and we found ourselves comparing notes as to our nautical experiences. She told me of the hardest time she had ever experienced, a tale of a voyage during which, with almost no luck in catching whales, they did catch fever on the Africa coast, and had dismal times and a gloomy voyage.

I in turn got up as pathetic a story as facts and imagination would furnish, of my dreary life on board of a monitor, dilating on the foul air, darkness, dampness and other discomforts attendant upon being boxed up under water in an iron box.

She was truly and gratifyingly sorry for me; she had "seen one of those horid vessels, and all of the whales in the Atlantic would not tempt her to live on board of one."

I asked her when and where she had seen one, and if she remembered its name.

"Yes, it was the Nantucket. She ran into Provincetown Harbor one day in the winter of 1863, and lay out a gale there. I was visiting friends in Provincetown, and when the blow was over we made up a party and went off to her in a catboat. We meant to have gone on board, but it was too rugged and we had to give it up."

"Do you remember," I asked, "that when your boat first made attempt to go alongside, an officer standing on the turret hailed you and warned you not to attempt it?"

It was her turn now to be surprised. She did "remember very well that a man with a speaking trumpet did warn us off, and seemed quite excited, but he was covered up with oilskins and I don't know whether it was an officer or not."

"What made you think that he was excited?"

"Why, at first he was all right, only when our captain told him that he guessed he knew his own business, and could handle that boat without any of his help, he got very mad and swore at him awfully."

"What did he say?"

"Why, he called our captain a blanked lubber, and"—

"And so I still think he was," I broke in, "the sharp edges of a monitor would be very apt to cut down and sink any boat boarding in a seaway. I was the man who hailed you; I don't remember swearing, but if your captain said what you say, and I heard it, I have no doubt that I did so. I can only say now that I regret very much that I did not then know that you were one of the party, for I would certainly have managed to get you on board, and not have left it for weevils to introduce us."

Two hours after the sieve came back, the schooner sailed, and I have never (that I know of) met them since.

PISCO.

Natural History.

Address all communications to the Forest and Stream Pub. Co

A WORD ABOUT OPOSSUMS.

BY R. W. SHUFELDT, M.D., U. S. ARMY.

Member American Society of Naturalists, Member A. O. U., etc.

IN the Proceedings of the U. S. National Museum, Vol. VII., 1884, there is an exceedingly useful contribution entitled "A Provisional List of the Mammals of North and Central America, and the West Indian Islands," compiled by Mr. F. W. True, the Curator of the Department of Mammals in the U. S. National Museum. This List not only presents us with the common and technical names of all the mammals at present known to inhabit the countries specified, but an approved system of classifying them besides. Now the present writer conceived it would be a good idea to republish such an authoratative List and Classification of our animal in the FOREST AND STREAM, and in doing so, preserve the same order and arrangement adopted by Mr. True in his Provisional List in the "Proceedings." Further, it will be my aim to bring this matter out in a series of chapters, and, as the adopted classification refers to and includes animals that strictly belong to our United States mammalian fauna, to offer figures of such animals, and accompany them by short sketches which will endeavor to present our latest knowledge of their habits and their geographical distribution. This, of course, can only be done as my time will admit, and opportunity offers.

In the present article the leading part of this List will be given, carrying it down to a point that includes an animal or animals which will constitute the subject of our succeeding contribution.

It is hoped that if I am permitted to carry out such a plan it will prove to be of service in more ways than one,—it will, as I say, record an authoritative scheme giving the latest classification of the mammals in our United States fauna; by the figures, in many instances taken from life, and even sometimes taken by photograph from the living animal itself, present correct portraits of the animals in some life-like or characteristic attitude; it will give, so far as our present knowledge extends, the geographical range of the subjects; it will, by giving concise accounts of the habits, distribution, reproduction, and similar matters, incite others to carefully note, and systematically record their observations relating to so important a subject.

The Provisional List and Classification of the National Museum takes on the following arrangement:

CLASS MAMMALIA. MAMMALS.

SUBCLASS DIDELPHIA.

ORDER MARSUPIALIA. MARSUPIALS.

Family DIDELPHIDÆ. *The Opossums.*

Chironectes variegatus, Illiger. Water Opossum.
Guatemala to Brazil.

Didelphys murinus, Linné. Murine Opossum.
Mexico to Brazil.

Didelphys derbianus, Waterhouse. Derby's Opossum.
Nicaragua to Peru.

Didelphys cinerea, Temminck. Ashy Opossum.
Costa Rica to Brazil.

Didelphys quica, Temminck. Quica Opossum.
Mexico to Brazil.

Didelphys aurita, Max. zu Wied. Azara's Opossum.
Costa Rica to Uruguay.

Didelphys virginiana, Kerr. Common Opossum.
United States to Guatemala.

SUBCLASS MONODELPHIA.

ORDER EDENTATA. EDENTATES.

SUBORDER PILOSA.

Family BRADYPODIDÆ. *The Sloths.*

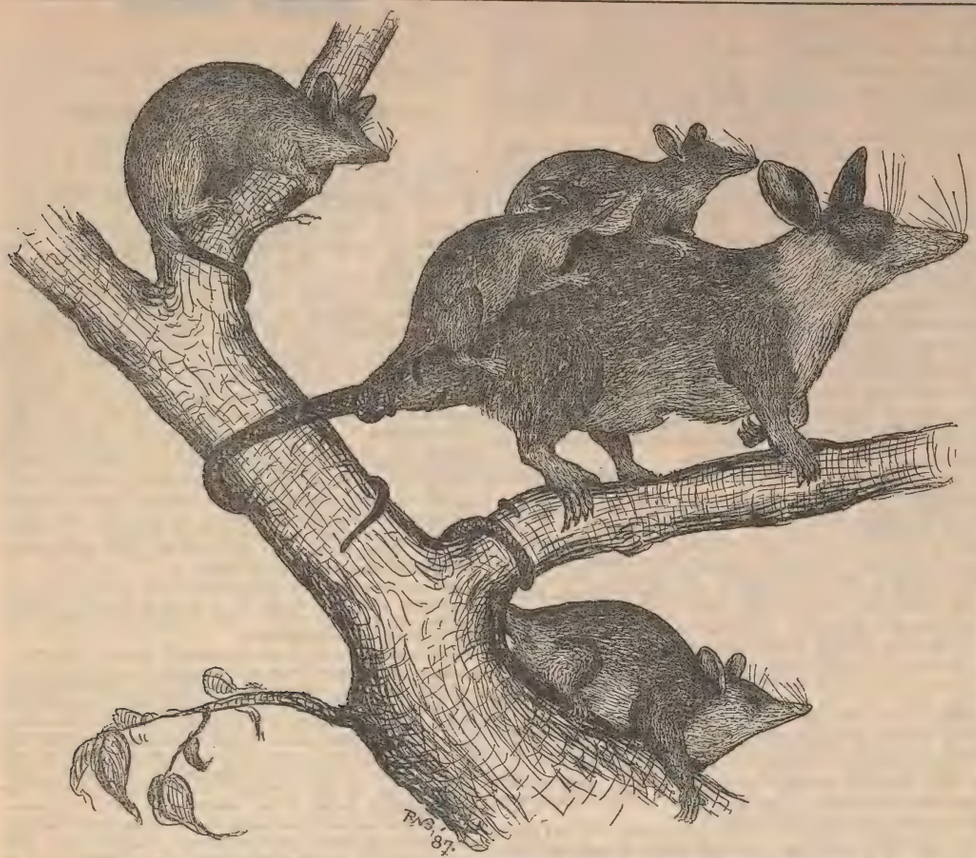
Cycloturas didactylus (Linné), Alston. Unau or Two-toed Sloth.
Guatemala to Northern Brazil and Peru.

Cholopus hoffmani, Peters. Hoffman's Sloth.
Costa Rica to Ecuador.

Bradypus infuscatus, Wagler.
Panama to Peru and Brazil.

Bradypus castaneiceps (Gray), Alston. Chestnut-headed Sloth.
Nicaragua.

Family MYRMECOPHAGIDÆ. *The Anteaters.*



Myrmecophaga quadridactyla, Tamandua-Anteater.
Mexico to Paraguay.

Myrmecophaga jubata, Linné. Ant-bear.
Guatemala to Paraguay.

Then follows the Suborder LORICATA, but as this contains the Armadilloes, and we have an Armadillo in Texas, we will reserve any further publication of the List until we come to discuss those animals in some future contribution.

It will be seen from our classification, as far as now presented, that it contains but one animal found within the faunal limits of the United States, and this is the Common Oppossum, an animal about which much is known, and much has been written, but whose history, find it where we may, is always full of interest, both to the casual observer as well as to the naturalist.

To the Common Opossum then, with a few incidental references to its congeners, the present paper will be devoted; and first it will be observed that our Opossum is a marsupial animal, as is shown in the above classificatory List. Now, although we find a few Opposums in different parts of America, the great stronghold of the MARSUPIALIA is, as we are well aware, in Australia, and outside of these two countries, animals presenting an anatomical structure peculiar to them do not occur. In the earlier history of our earth, however, marsupials enjoyed a very general distribution over its surface. When I say Australia I mean, of course, the Australian region,

FEMALE OPOSSUM WITH FOUR HALF-GROWN YOUNG.—Drawn by the Author.

as some marsupials are found in New Guinea and the adjacent islands, while Opossums as a species do not occur there at all.

The Australian marsupials—and the mammalian fauna of that region is chiefly made up of them—widely vary, both as to their external forms and in many of their anatomical characters, but notwithstanding this fact, zoölogists have, for convenience sake, kept them associated in the same group.

They all more or less agree, however, in the following general structural characteristics: (1), they possess a pair of epipubic bones, peculiar structures surmounting the pelvis in front; ( ), they present a characteristic development of the reproductive organs; (3), their "young are born in an exceedingly rudimentary condition, and are never nourished by means of an allantoic placenta, but are transferred to the nipple of the mother, to which they remain firmly attached for a considerable time, nourished by the milk injected into the mouth by compression of the muscle covering the mammary gland. They are, therefore, as previously remarked, the most typically mammalian of the whole class. The nipples are nearly always concealed in the fold of the abdominal integument or 'pouch' (marsupium) which serves to support and protect the young in their early helpless condition." (Flower).

The several forms of marsupial animals present us with many kinds of variations in their teeth, in our Opossum the canines are very large, while the incisors are small; in all, there are fifty teeth in the two jaws of one of these animals. Their limbs are short, and on each foot there are five complete and distinct toes, armed at their ex remities with sharp and curved claws, except in the case of the first toe of the hind foot, "which is large, widely separable from the others, to which it is opposed in climbing, and terminates in dilated rounded extremity, without a nail."

Those who have had the opportunity of examining these animals will remember the curious tail they possess, which is partially naked, long and tapering, flexible, and prehensile.

Some Opossums, however, have completely naked tails, and as a rule are without pouches for their young to ride about in, and consequently hese latter have to ride on the backs of their mothers, hanging on by their juvenile prehensile tails (*Metachirus*.

Our s ecies has long leafy ears and a pelage of long, coarse hair, of a dull grayish white color, the face and muzzle being pure white, while the ears, on the other hand, are black. Nocturnal and arboreal in its habits, it lives principally upon fruits, insects, eggs, and such small birds as it may be able to capture. Farmers complain that Opossums are no strangers to the hen-roosts, and that they destroy poultry simply for the gratification of sucking the blood from the bodies of their victims; I have never been able to confirm or disprove this trait in their character. Few mammals are more prolific than they, and one of their litters may range all the way from six to sixteen young at a birth, which, when first born, are exceeding small, and still in quite an embryonic state. Their mother places them all in her pouch, and soon succeeds in nosing them into positions where they may at once seize hold of her nipples, where they remain attached until they have attained some considerable size. They develop and grow very rapidly, and at the end of a month's time these engaging and pretty little scamps may be seen peeping out of the maternal pouch, when in a few days more the boldest among them will climb in and out, or even perhaps get around on their mother's back to hang on there by twining their tails about her own. Who among us ever having witnessed the sight can ever forget it—the solicitous dam seems to be absolutely covered all over with her sprawling progeny, and she pulls them along, some dragging behind her, some hanging at her sides, while the remainder are ranged along her back; 'tis thus she leads them along as she endeavors to find sufficient food to feed their hungry mouths—withal a very happy party.

It is said that this prolific marsupial may have a lot of three-quarter grown ones of her own in the tree about her, while a dozen more as large as rats cling to her furry coat, and at the same time attached to her nipples another litter, recently born. Those who have had the opportunity of observing the habits of the Opossum in cold weather state that it is inclined to become torpid, but that it is never known to truly hibernate.

When confronted with any sudden danger, the surprising success with which an Opossum can feign death is generally well known, a trait which has given rise to the common expression of "playing 'possum." In some instances, added to the fact that the animal is wonderfully tenacious of life, this deception may save it from destruction, but to old hunters I fear the trick is too well known.

Many of the readers of Forest and Stream have undoubtedly enjoyed an old-fashioned 'Possum hunt, a treat which the writer thoroughly envies them, for with all my rambles, that have now been made the world over, such an experience yet remains to be mine. Up to the present writing I have participated only in so far as the columns of the back numbers of this journal would permit me—vivid, real pictures oftentimes, but still lacking those bumps and bruises without which no chase can, to me, be a living reality. Yet in many instances they come so near the genuine article, and their reading brings with them such a full measure of pleasure, that I gladly leave this part of my subject to be filled in by others in the coming numbers of Forest and Stream, which we have yet before us to enjoy.

As will be seen by the List at the head of this article, there is one genus of Opossum which has been distinguished by the name *Chironectes;* this curious animal is known as the Yapock, and is characterized by having webbed feet, and a peculiar transverse banded coloration of its fur on the head and scapular region. In many particulars it reminds us of the Otter, as it is almost strictly aquatic in its habits, and subsists on fish, crustaceans, and such similar diet as it chances to find in the marshes where it is to be found. Some Opossums attain a size no greater than that of an ordinary mouse, while the largest of them do not exceed in size a big cat, so that they are to be ranked among the smaller of the mammals of the world's fauna.

Mr. Oldfield Thomas, F. Z. S., of the British Museum, gives us an interesting account of Opossums in the 9th Edition of the British Encyclopedia, and speaking of the extinct types, he says, that "The fossil remains referable to species of the Didelphyidæ are of special interest as showing some of the connecting links in geographical distribution between the Opossums and the Australian Marsupials, now so widely and absolutely separated. They consist of the bones of a considerable number of species from the Eocene and early Miocene deposits of central France, one or two Eocene species having also been found in southern England. The ancient Opossums have been separated generically from *Didelphys* on account of certain differences in the relative sizes of the lower premolars, but as nearly the whole of the species have been formed on lower jaws only, of which some hundreds have been found, it is impossible to judge how far these differences are correllated with other dental or osteological characters. In the opinion of Dr. Filhol, who has devoted considerable attention to the subject, the fossils themselves represented two genera, Peratherium, containing the greater part of the species, about twenty in number, and Amphiperatherium, with three species only. All are comparatively small animals, few of them exceeding the size of a rat.

Besides these interesting European fossils, a certain number of Didelphian bones have been found in the caves of Brazil, but these are either closely allied to or identical with the species now living in the same region. So much for our knowledge of the history of Opossums in time.

Having now given the position of our Opossum in the system; presented a figure of the animal; defined its geographical distribution; given its leading structural characteristics; its habits; its methods of reproduction; its more immediate affinities; and, finally its relation to extinct forms, I will close this account, and on some future occasion present a brief sketch of the Armadillos.

BELATED WRENS.

NORTH NEW YORK, Sept. 25.—*Editor Forest and Stream:* When running a survey line over the Van Courtlandt estate, near the new Yonkers railroad level line at Van Courtlandt Lake, by the side of the old apple orchard on the proposed "Park Parade and Manhattan Race Course" (then staked out by Chas. H. Haswell, C. E., for the Van Courtlandt Club), on Saturday, August 26 last, in cutting through a thicket for sight, near the south side of the ancient garden, we were met by the bold challenge, plaint and quick hammer chatter or warning chirp of the "hallowed house wren." On examination for cause of this alarm, we found, much to our astonishment, in a chink hole of one of the old post supports of the paling fence surrounding this ancient garden, a nest containing two young fledglings, almost ready to enter upon flight life.

Friday last, Sept. 23, near the neglected and sad to say abandoned graveyard of the old DeVoe family, on Sedgewick avenue, near Shaft No. 22 of the new aqueduct line, we discovered in the dense copse there a golden wren.

"The quick note of the russet wren,
Familiar to the haunts of men.
He quits in hollow'd wall his bow'r,
And tho' the winter's gloomy hour
Sings cheerily; nor yet hath lost
His blitheness, chill'd by pinching frost;
Nor yet is forc'd for warmth to clave
To cavern'd nook, or straw-built cave.
Sing, little bird! Sing on, designed
A lesson for our anxious kind;
That we, like thee, with hearts content,
Enjoy the blessings God hath sent;
His bounty trust, perform His will,
Nor antedate uncertain ill!"—*Mant.*

We watched its movements some time, thinking at first we were mistaken, but there before us was that ever upright tail at an angle of 45 degrees, there indeed was to be seen the quick sprightly movement and nervous action that never belies the smart little wren. This is very late in the year for wrens to breed and live in the chill neighborhood of New York. Canonicus.

PHILO.

PHILO; I fancy I hear the reader exclaim, anything to do with patent medicines? None whatever, fair sir. Philo is simply a woodcock that I have succeeded in keeping in captivity for the last five days, or since the 20th, on which date he, poor fellow, had to change his residence from the dark congenial depths of the alder swamp, to the furthest recess of my game bag, and eventually to an old biscuit box half full of damp earth and covered with a wire fly blind and piece of sacking to create an artificial gloom.

On the opening day for "partridge" I was crossing an alder swale, with a companion, when my pointer Beppo (grandson of Sensation) blundered on Philo, and as I was at half cock he was nearly out of range before he felt the shot, and then he fell, only being tipped. As he was so slightly wounded I made up my mind to try and keep him alive if possible and study his habits, but with slight hopes, I confess, of succeeding.

Arrived home, however, I let him loose in my sanctum, and he immediately walked to the darkest corner and turned his back on me in the most unsociable manner. I refrained from offering him any food just then, as I reasoned that when shot he had only shortly finished his nightly orgies and could not be very hungry. After a few minutes quiet he appeared to become drowsy and gradually the lower eyelid closed until it became horizontal, the upper meanwhile remaining open, but I do not believe the bird could see anything as he took no notice of a stick moved rapidly within a few inches of his head. His body gradually subsided until at last the tip of his beak touched the floor. In this most singular attitude he remained until evening, taking no notice of anything. Before sundown I transferred him to the box above mentioned, having previously covered the bottom with four or five inches of garden mould full of appetizing worms. Then covered him up and left him to his fate.

Next morning with fear and trembling I gently removed a corner of the sacking and peeped in, fully expecting to find Master Philo toes up. Not a bit of it, however, he was looking bright as a button, and the muddy state of his bill and the numerous borings in the soft earth plainly showed that he had passed the hours of darkness pleasantly and profitably. I immediately dug a fresh supply of worms and turned them in (probably some fifty worms). On perceiving them he made a most peculiar sound (something like the wheeze of a bad asthmatic), and on my return in about half an hour not a worm was to be seen. Since that time there has been no trouble, he "puts himself outside" six dozen worms at a sitting, or eighteen dozen a day with the greatest ease, and I think would eat as many more if he had the chance.

This bird has, as far as I am concerned, thrown a considerable amount of light on the vexed question of the migration of woodcock during the moult. He was nearly over his. Now I have two well-bred dogs, one a pointer, the other a cocker; both will pass this bird within six feet and not wind him, if the air is still (as it generally is in a swamp), and he takes no notice of them.

My present belief is that the birds do not leave the swamps, but remain so still and hidden all day that, coupled with the fact of their giving out next to no scent, a big bag is almost an impossibility. We got another cock and put up a third on the same morning Philo was captured, but all were almost trodden on before rising. In a few days, however, the birds will become fairly plentiful, though only for a short time, as they leave their northern regions early, usually about the 25th of October, although I shot one last year on the 8th of November; next day it froze very hard, and I do not think a bird was left in the province. Chas. A. Bramble.

Fredericton, N. B., Sept. 26.

A SEPTEMBER BROOD OF QUAIL.

BEING anxious to know how the quail have increased on my preserve this season, I took my old dog Quail, and for the first time since last winter gave him a run over the most likely ground. He came to a point on a field grown up with weeds. I saw that his nose was very close to the game, and I walked up to within six feet of him, where I plainly saw three quail sitting close together, all facing one way, side by side; there were two males and one female. They did not move, and I thought that very strange, as they appeared to be looking right at me with their bright little black eyes. After enjoying seeing the old dog point, and being satisfied with looking at the pretty little fellows, I stepped up to them so close that they flushed, and to my surprise there must have been two bevies of little fellows (underneath these three quail), that were not over twenty-four hours old. They scattered all over the ground as quick as thought, so that I could not tell how many there were, but I should say there must have been at least thirty. I called the old dog in and backed out carefully, so as not to tread on them, while the female flew around me apparently very unhappy. What is singular is that two males and only one female should be covering these birds. This was on the 14th of September.

I heard of two bevies on Mr. W. Bayard Cutting's place at Islip, that were hatched last week.

To those who sow feed for the birds, I would recommend buckwheat. I have sown this year buckwheat, spring wheat, spring rye and millet, side by side, but I find that the quail stick to the buckwheat all the time. Hereafter I shall not plant anything but buckwheat.

ALFRED A. FRASER.

THE CEDARS, Oakdale, Long Island, Sept. 30.

A RATTLESNAKE AT SEA.—Engineer William Dart, of the steam tug U. Dart, reports seeing a rattlesnake yesterday "coming in from sea." The steamer was near the lighthouse when his snakeship was discovered coming in with the tide, head erect, but with rattles trailing in the water. The rattlesnake usually swims with both head and tail erect, the latter waving from side to side like that of a dog. This one must have been swimming a long time, and was no doubt exhausted, hence allowed his rattles to trail in the water. Now, whence came this land monster? Had he come across from England, or had he undertaken to swim across from one island to the other on the ebb tide, been carried to sea, and was returning with the tide?—*Brunswick (Ga.) Advertiser.*

IN THE SAWTOOTH RANGE.—II.

THE second day after this Bill and I went to Rocky Bar, we took a trail across the mountains, partly along the Feather River, known to old prospectors as a very rich placer gold region, now climbing up narrow winding rocks, then along an old deserted water ditch, passing dangerous places, where one misstep of our horses would hurl us down to sure destruction, reaching at last, by walking down a terrible steep decline, the stage road, on which we soon made the town. Here I met all my old friends, who were very glad to see me once more, also some New York and Eastern men all interested in mining schemes. The old camp was all bustle, for several mines were booming, principally the Ellmore, which was just getting a new 50-stamp mill. The next few days I spent idling around, visiting the Hopkins boys and putting in some rifle practice. At this I met with a serious accident, which, however, happened to turn out very fortunately.

Shooting, one morning, near the new mill, until all my ammunition was exhausted, except a few cartridges, which, having been reloaded several times, were a trifle expanded and would not enter freely in the chamber, and thinking to force one with the closing lever, I wedged it only tighter, so tight that I tried in vain to push it back with my cleaning rod. Here was a fix, the shell was almost in, and if I could only close the lever I could shoot it out. I resolved to use a little force with sufficient precaution; so cutting a piece of wood and hollowing it so that the primer might not come in contact with the wood, I gave the obstinate shell several knocks. At the last knock, either from the forced contraction, or more probable, contact with the primer, the shell exploded, tearing out the base, the powder burning my face and thumb considerably. The sudden discharge threw the rifle out of my hands, the hammer cutting my chest and bruising it not a little. Seeing the torn shirt and blood I was terribly frightened, but tearing it off and washing the wound at the near creek, I thanked God it was only an abrasion of the flesh made by the hammer. The bullet entered the log on which I was standing, close to my foot. Billy and his wife were as much frightened as myself when I returned and told them what a close call I had. They cleansed and washed my wounds, applying salt pork to draw the inflammation and the deeply burned powder grains out of my face and thumb; Bill succeeded in picking them out almost entirely.

I staid around the house the next few days, busying myself with my deer's head and antlers, which I preserved, intending to take home with me. Tuesday I was well enough again to pay a visit to Mr. Bailey, who is in charge of the stage station on Wood Creek, remaining with him till Friday, hunting grouse and pheasants, and watching for a thieving bear who had inspected Mr. Bailey's primitive ice box in the creek. The bear had cleaned out the meat, butter, etc., indiscriminately, but he was too sly to be caught napping. We never could see him, except once when Bailey went to get some water he caught a glimpse of him just disappearing in the thick brush.

Friday I went over to Willard's, where I saw Bob Pattison, who proposed a trip up Grouse Creek for a few days' hunt. Promising to be on hand, I started for Bonaparte, to get a few blankets and camp outfit. Taking an early start next morning from the mine, I reached Willard's in good time, found Bob and Willard's oldest boy George waiting, and we were soon climbing up the hills back of their ranch. We pitched camp in a beautiful mountain meadow, near the creek. Unpacking our horses, I missed my hatchet, rubber and woolen blanket, and also a lash rope; the last one must have been loosened by the rapid gait I was going in the morning, allowing the other things to slip out, and in spite of the diamond hitch. Jim Nicholson, who followed me in the morning with his team, found the things, and left them at Willard's. We succeeded in killing two nice deer, only hunting mornings and evenings, the rest of the day we laid off or fished; the creek was full of speckled beauties. Still-hunting successfully this season of the year has many disadvantages, the deer feeding principally in the evening, during the night, or early morning, lying off during the day in some shady nook in the thick brush and heavy timber, through which you cannot go without making some noise, and they are ever on the alert, and will be off before you are aware of them.

Close to our camp was also camped an old trapper and squaw-man, having chosen a full-blooded Sioux belle as companion in his roaming and adventurous pursuits; their union had been blessed by four children, the youngest only a six months old pappoose. The man was intelligent and well informed, telling me his life's eventful history, how, as a child, he would accompany his father from St. Louis on his semi-annual fur trading expeditions until he became enchanted with the free and easy border life, heightened by the excitements and dangers connected with it. An old French voyageur and trapper taking a particular liking to him, filled his young mind with wonderful pictures, and persuaded him to run away from his father and go with the old Frenchman on his first trapping tour. In his life among the noble red men, whose customs he adopted, he became partly one of them. Lying around the bright camp-fire in the evening, I listened with deep interest to the relation of his nomadic wanderings, and heard him revive historical events and incidents, from the sad Custer catastrophe on the Little Big Horn to the rebellion of the half breeds under Louis Riel in the far northwest.

An amusing incident, over which we laughed a good deal, happened in this camp. In our outfit was a jackass, or donkey. The Indian woman and oldest boy, who had never seen one, were looking with wonder and astonishment on this freak of nature. Jack, who was of a rather thieving disposition around camp, was picketed, and being unable to follow the horses straying off, he began to bray. This sudden outburst of jack's unmusical voice, was too much for these children of the forest; frightened almost to death, they ran into their lodge, hiding themselves under the blankets, trembling and imagining no doubt this wonderful ass was nothing less than the angered bad spirit.

Wednesday we left our camp, and got down to Willard's by noon. Leaving one deer with them I started, stopping for supper at the cabin of the Hopkins boys, intending to leave some venison, but Billy who had a day before killed a monstrous buck, had all the meat they wanted. At sundown I got back to the old mine. The next few days nothing happened of any importance, I spent most my time in monkeying around the mine, preparing a handsome pair of deer antlers, and shooting grouse, or in rifle practice.

Sunday Mr. and Mrs. McK. and myself were bright and early on our way to Willard's, bent on an excursion to the Trinity Lakes. We found this gentleman, with his grown daughter, Emma, and three of the smaller Willards, all waiting on their horses. Leaving our wagon here, in which we came from the mine, saddling and packing our horses with camping utensils, everything was set, Joe Willard as captain and scout taking the lead; and looking at the rather mixed crowd, he could not help pronouncing it a rather promiscuous outfit, a word he was very fond of, using it most indiscriminately. The best known trail to the lakes is by way of Rocky Bar, but Willard had cleared some kind of a rough trail through gulches and cañons, right opposite his ranch, by which we reached the lakes after four hours' hard and continuous climbing. They are located in a wild, magnificent mountain basin, 3,000ft. above the river. We pitched camp at the base of a very high peak, where snow on the north side lay still undisturbed, and near a cluster of small lakes abounding with trout, Mrs. McK. and Emma Willard superintending the grouse supper, while we tended to the horses, some cutting fir boughs for our beds, while I set the tent which the ladies and youngsters were to occupy.

Monday morning Willard and McK. went to explore the surrounding regions, and locate the large lake, while I took the rest of the outfit fishing to the lake near. Cutting poles on our way down, and fastening lines and flies I improvised fishing rods which they were as proud of as if owning the finest split bamboo. Soon I was wanted on all sides. Mrs. McK. needed a longer switch to string her fish on, while Emma Willard called for help (venturing out too far on a slippery log, she got stuck in the soft mud), the smaller fry calling to help them unloosen their lines, or applying for new flies. After two hours fishing we counted 108 victims, all good size trout, from 8 to 12in. in length. As this was more than needed we stopped, and cleaning our fish in a cold creek near camp, had them ready for supper. A while after our two scouts came back, loaded with the hides of two mountain goats which they had killed on their exploring tour, bringing also the news that the large lake was about four miles on the other side of the dividing ridge. Then we sat down to a delicious grouse and trout supper which all hands enjoyed.

The next morning we decided to take a trip to the large lake, McK. to take the menagerie, as he called the woman folks and children, while Willard and I would try to get a shot at the goats and meet them later at the large lake. We saw no game of any account. I could have killed a nice buck but we were not after deer and might frighten the wary goats. Climbing as noiselessly as possible the rough, bare and slate-rock proclivities, we came to a mountain basin, where they had killed the two goats the day before. It was a natural yard, the goats must have used this basin for many years, to judge from the deep trodden paths and leavings. Here undisturbed they fed on the rich and juicy moss and lichens, or drank out of the numerous ice-cold springs. We saw no goats in the basin; and after passing the basin we separated, I to follow a small mountain creek, while Willard would make a circuit, promising to meet me above.

Lying down to take a drink out of the creek, I heard above me a noise of falling loose stones, and looking sharp around, noticed, 200ft. above, on a shelf-like protruding rock, a goat motionless, looking down at me. Fearing to alarm the game, I only changed my prone position to reach my rifle, so securing an excellent rest. At the report of the rifle the goat made one leap in the air, and came tumbling down. It was a kid in search of its mother, which Willard had killed the previous day. I soon had it skinned; the hair was short, but white and soft, like fleece. When I got to my partner I found he had not heard my shot, nor seen any game, but had found the trail where they had been down for their morning nip and returned to the lofty mountains. We followed the fresh signs some distance, but seeing them turn in the opposite direction from our way to the lake, we had to give them up.

Having noticed so many mythical accounts of this rare spec men, *Aplocerus montanus*, and the hunting of it, especially that by Mr. Baillie-Grohman, in the December, 1884, number of the *Century* magazine, I advise any ambitious or would-be goat slayer to visit this region, and satisfy his heart's desires.

When we reached the lake we were pretty tired and were glad to get on our horses McK. had taken along for us; and it was near sundown when we all got back to our old camp. Next day Willard and I hunted down Trinity Creek. We saw several deer, also fresh bear sign, but in spite of all efforts we scored a blank. The following day was our last in camp, while Willard and McK. saddled and packed the horses, the rest of the outfit went for the last time to our trout pond to catch a mess of fish to take home. By noon we had all we wanted and bade adieu to our lovely camp. McK., as well as his wife, killed a number of grouse on our way back, and by 5 P. M. we were once more at Willard's ranch.

After supper Mr. and Mrs. McK. started back in their wagon, while I rode ahead to stop at the boys' cabin, leaving my tent and some camping truck with them. I heard the glad news that they had leased their claim on shares and were ready for our great hunting and trapping trip, so we concluded to start Saturday. Completing the necessary preparations for a rather long and extensive trip in the Sawtooth Mountain range, where we expected to find bear, deer, elk and mountain sheep, and along the Salmon River and its tributaries to do a little trapping, we started well equipped with three saddle and three pack horses.

Our first camp was on Willow Creek, which the reader will remember. Here we found an old acquaintance, our squaw-man, trapping for beaver, and intending to strike the same route we had mapped out for ourselves; but we succeeded in talking him into turning back and going to the Trinity Lakes, picturing that locality in glowing colors, the lakes and creek untrapped and full of different fur.

Sunday we kept on climbing our steep and rough trail and made only ten miles, and camped near the summit, remaining here two days, rearranging our packs and hunting a little. Tuesday we started again, went over the divide, descending through a cañon-like gulch, until we got down to the middle Boise, passing the almost deserted placer mining camp Uba, where a few Chinamen washed over the debris of former minings; and by noon reached the old and well-known mining town of Atlanta. The mines being no longer worked the town looked very dead indeed. We traveled seven miles further and camped near the river. In a drizzling rain we pulled out the next day and began to climb the Sawtooth Mountains; the trail is a very hard one for horses and increased as we went higher, but the scenery on a clear day must be grand and imposing. At the summit it was icy cold, and the low-hanging mist and fog clouds enveloped everything in an impenetrable vail.

These mountains are a noted resort of the goats. We noticed lots of fresh signs and well-marked runways, where they had been in the habit of coming down to drink; but we did not pay any attention to them. Our destination was the celebrated Redfish Lakes, and by sundown we camped close to the shore of the largest sheet of water. These lakes were a great resort and pleasure ground during the Sawtooth mining boom, but they are visited now only by the few surrounding mining camps, and being directly on the Rocky Bar and Atlanta trail are used as camping places for freighters and prospectors. They are located picturesquely in an irregular basin, and are surrounded by a range of mountains, whose lofty peaks linked along one after another, appear at a distance like huge colossal sawteeth. In these lakes we find the rare and singular redfish, a large beautiful fish from 2½ to 10lbs. in weight, a bright red in color with handsome greenish head; and flesh which is excellent eating. They will not be lured with any bait whatever, and are generally captured with a grabhook, speared, or shot on the riffles.

F B.

BEAR TRAPPING AGAIN.

SAGAMORE HILL, Sept. 28.—*Editor Forest and Stream:* I think that all men fond of large game shooting are under an obligation to Mr. Rogers for protesting against the unsportsmanlike practice of shooting bears in traps. Of course, where bears or cougars destroy stock it may be necessary to kill them by traps or spring guns as vermin, precisely as I poison wolves on my ranch; but as a form of legitimate hunting to shoot a bear in a trap ranks with the old time Adirondack practice of killing a deer in a lake while the guide held its tail so that it should not sink. It is especially to be regretted that men who are otherwise singularly good and keen sportsmen should indulge in such a proceeding; they probably do not realize that the inevitable effect is to convince all outsiders who do not know them personally that they get all of their bears, instead of some only, by trapping. Of course there are occasions when a trapped bear may be dangerous; exactly as I have known a buck in the water to upset a canoe. But that this is not ordinarily the case may be gathered from the fact that many professional trappers kill the bear with a revolver or axe instead of a rifle. Two of my own men caught a large number of black bears in steel traps, and invariably killed them either with a hatchet or diminutive pocket pistol; and a similar feat was performed with grizzlies in the Cœur d'Alenes, except that in this case the trapper used a heavy revolver.

Two or three of our New York and Brooklyn sportsmen have gained most unenviable reputations in the West by their so-called "bear hunts," on which they carry with them a number of huge, exceedingly heavy steel gins—very proper gear for a professional fur trapper, but entirely out of place as adjuncts to the rifle of a true hunter.

THEODORE ROOSEVELT.

THE NATIONAL PARK.

FROM an advance copy of the annual report of Capt. Moses Harris, acting superintendent of the Yellowstone National Park, to the Secretary of the Interior, we take the following paragraphs:

My last report was dated Oct. 4, 1886. The visiting season for tourists was at that time nearly over, all the hotels of the Park Association having closed for the season of 1886 by Oct. 15. A severe snowstorm, which began on the 10th of the month, lasting several days, served to hasten the departure of the summer visitors, and so seriously interfered with the operations of the parties engaged in road construction that work was suspended for the season and the parties withdrawn about the 20th.

Upon the cessation of tourist travel and the closing of the Park roads by deep snow, the detachments which had been stationed at the different geyser basins for their protection were withdrawn, and the services of the men made available for the important duty of affording protection to the large game which was being driven from the mountains by the early and unusually heavy snowfall. The professional hunters who surround the Park commenced their operations in good season, and great activity and vigilance by scouting parties were requisite to prevent them from operating within the borders of the Park. It is the practice of these hunters to locate camps on the tributaries of the Yellowstone River, just outside the limits of the Park on its northern and eastern borders, and thus to intercept the game when, driven out of the mountains by the deep snow, it seeks the lower valleys and the safety afforded by the Park. The boundary lines of the Park never having been officially surveyed or marked, there is a narrow strip of debatable ground on its border which encourages hunters to encroach upon its limits. All parties found near the borders of the Park were warned off, and were so well watched by scouting parties that it is believed little or no game was killed within the Park. Several arrests were made under circumstances which seemed to require investigation, but in no case was the evidence sufficient to warrant action. In one or two instances where the fact was established that the game had been killed outside of the Park and it was impracticable to get the meat to market without taking it through the Park, permission to do so was granted. This concession, however, gave rise to injurious reports, and the transportation through the Park of any portion of the carcasses of game animals will hereafter be discouraged by every legitimate method.

The open season, during which it is lawful to kill game in the Territories of Wyoming and Montana, terminating on Jan. 1, and the great depth of the snow also interfering with the transportation of meat through the mountains, the active operations of the hunters ceased and a period of comparative quiet and freedom from annoyance was experienced.

After the close of the tourist season the trains of the Northern Pacific Railroad on the branch line from Livingston to Cinnabar were run weekly until about Jan. 20 when, in consequence of severe gales and deep snows, they were discontinued, only resuming their weekly trips in the middle of March. Fortunately the stage line from Livingston to Mammoth Hot Springs was operated with skill and energy, the mail being regularly received every day in the week, except Sunday, the entire winter.

A party of travelers, under the leadership of Mr. Frederick Schwatka, of Arctic fame, arrived in the Park in the latter part of December for the purpose of seeing the Park in its winter aspect; but owing to the illness of Mr. Schwatka and the difficulties developed by the light and soft character of the snow, the expedition was only partially successful. Mr. E. Jay Haynes, however, the photographer of the party, with three companions, succeeded in surmounting all obstacles and made a complete tour of the Park, securing many fine views peculiar to its winter aspect. The difficulties of snowshoe travel in the Park are such, however, that it is not to be recommended as a winter diversion.

Although an unusually large quantity of snow fell throughout the elevated area of the Park, the quantity at the Mammoth Hot Springs was not excessive, nor could the winter, when the weather and temperature of the surrounding region is considered, be called a severe one, as may be seen by reference to the meteorological record, which is appended to the report.

During the month of April I had occasion to arrest and expel from the Park one William James, who was in the employ of the Yellowstone Park Association, for trapping beaver on the Gibbon River, near the Norris Hotel. My letter to the Department reporting this affair is appended to this report (marked B). The property found in the possession of James is still in my custody awaiting your instructions. Several other employes of the Park Association who were to some extent implicated in the unlawful acts of James were, at my request, discharged from the employ of the company and ceased to make their home in the Park.

BOUNDARIES OF THE PARK.

The following are the present boundaries of the Park as defined by law:

Commencing at the junction of Gardiner's River with the Yellowstone River and running east to the meridian passing ten miles to the eastward of the most eastern point of Yellowstone Lake; thence south along said meridian to the parrallel of latitude passing ten miles south of the most southern point of Yellowstone Lake; thence west along said parrallel to the meridian passing fifteen miles west of the most western point of Madison Lake; thence north along said meridian to the latitude of the junction of the Yellowstone and Gardiner's rivers; thence east to the place of beginning.

It has been proposed to rectify and change these boundaries as follows:

Beginning at a point on the forty-fifth parallel of north latitude where said parallel is intersected by the western boundary of the Territory of Wyoming; thence due east to its point of intersection with the meridian of 110° west longitude; thence due south five miles; thence due east to the meridian of 109° 30′ west longitude; thence due south along said meridian to the forty-fourth parallel of north latitude; thence due west along said parallel to its point of intersection with the west boundary of the Territory of Wyoming; thence due north along said boundary line to the place of beginning.

While there are some undoubted advantages to the Park in the proposed changes, there would be a very serious disadvantage in permitting a frontier town, with its saloons, gambling houses and disreputable resorts, to approach within two miles of this place, which is, and will of necessity continue to be, the headquarters of the Park and the principal resort of visitors.

The disorders of the neighboring town of Gardiner, five miles distant, which now overflow into the Park, are a constant and serious source of annoyance. Should the town approach to within the distance permitted by the proposed change of boundary and the present lawlessness with the unrestricted sale of liquor continue, it would be well nigh impossible by the present methods of government in the Park to preserve such a degree of order here as would make the place pleasant and desirable to visitors. The constant agitation of the subject of a change of the boundary lines of the Park has probably the effect of postponing the very different measure of an accurate survey of the present boundaries. I have embraced in my estimate of appropriations an amount sufficient to accomplish this purpose and cannot too strongly urge its importance. The present uncertainty is a constant invitation to lawless hunters and others to encroach upon the Park and adds greatly to the annoyance and labors of those charged with its protection.

THE PROTECTION OF THE PARK.

The Park has been protected during the past year by means of the employment of the military force under my command in the enforcement of the rules and regulations established by the Secretary of the Interior in accordance with law. The force at my disposal for this purpose has been one troop of cavalry, the maximum strength of which is three commissioned officers and sixty-four enlisted men, but by the casualties of service the ordinary strength of the command is much below this number. For the quartering and subsisting of this force the post of Camp Sheridan has been established at Mammoth Hot Springs, Wyoming.

A military post involves the maintenance of a sufficient garrison for the proper care and protection of buildings and supplies by military methods, which in this instance correspondingly reduces the number of men available for distribution through the Park.

Stations have been established within the Park and are occupied as follows: At Soda Butte during the whole year. At Norris Geyser Basin, the Grand Cañon, Lower Geyser Basin and Upper Geyser Basin from June 1 to Nov. 1. At Riverside, on the Madison River, from Aug. 1 to Nov. 1.

The men thus stationed made daily excursions in every direction from their several camps, and the protection thus afforded is supplemented by constant scouting operations, directed by an experienced scout and mountaineer acquainted with all of the trails, and indeed with every inch of ground within the Park. It is believed that the measures thus taken have been reasonably efficient in protecting the game of the Park, its various objects of wonder and beauty and its forests. I am, however, convinced that the force at my disposal is inadequate to the proper protection of the Park during the tourist season. If it should be increased by two additional scouts and by one company of infantry from June 1 to Oct. 15, it would probably be sufficient during the next year, but as travel to the Park increases and the game outside of its limits diminishes a much larger force will be necessary to give proper protection.

In my last report I alluded to the necessity which existed for an established form of government for the Park. That necessity still exists. It may be possible to give the Park sufficient protection by the employment of an adequate military force and a number of experienced scouts. But should this method be adopted it will be expedient to request such legislation as shall define the jurisdiction of the Territorial courts within the Park, so as to permit the same power which they now have with reference to other reservations, and the enactment of a stringent law for a protection of the game.

In connection with the subject of park protection I append to this report copy of an order issued for the guidance of the enlisted men of my command in the discharge of their duties (marked E), and for convenience of reference a copy of the rules and regulations of the Park (marked F).

THE GAME AND ITS PROTECTION.

I am gratified to be able to report that the rules for the protection of the game in the Park have been generally well observed and respected.

One or two isolated instances of unlawful killing have occurred, but immense herds of elk have passed the winter along the traveled road from Gardiner to Cook City with the same safety which herds of domestic range cattle enjoy in other localities. Several stacks of hay which had been placed along this road in anticipation of winter freighting, were appropriated and doubtless enjoyed by these animals. It is difficult to form any accurate estimate concerning the number of elk that passed the winter in the Park; certain it is that the number that wintered in the valley of Lamar River and on its tributaries have been estimated by all who saw them at several thousands. The elk are accustomed, when driven out of the mountains by the snows of winter, to follow down the course of the mountain streams into the lower valleys. For this reason but little efficient protection can be afforded to this species of large game in the Park except upon the Yellowstone River and its tributaries.

The elk which follow down the outward slopes of the mountains surrounding the Park along the tributaries of the Madison and the Gallatin on the west, or the Snake River on the south, pass beyond the Park limits before the hunting season permitted by the Territorial laws has closed, and fall an easy prey to the hunters who are in wait for them.

A small number of buffalo still remain in the Park, but after as careful and thorough an investigation as is practicable I am unable to state their numbers with any approach to accuracy. My impression is that they have been heretofore somewhat overestimated, and that at the present time they will not exceed 100 in number. They are divided into three separate herds. One of these ranges between Hell-Roaring and Slough creeks; in summer well up on these streams in the mountains, outside the Park limits, and in the winter lower down on small tributaries of the Yellowstone, within the Park. If the reports made several years ago can be relied on, this herd has rapidly diminished, and it is doubtful if it now exceeds some twenty or thirty in number. Whether or not this decrease has been due to illegal killing by hunters or to other causes I am unable to say, though I do not believe that many have been killed within the past two years. Another herd ranges on Specimen Mountain and the waters of Pelican Creek. The herd was seen by reliable parties several times last winter and was variously estimated at from forty to eighty. A traveler on the Cook City road claimed to have counted fifty-four near the base of Specimen Ridge. A scouting party which I sent out during the month of May found but twenty-seven head of this herd, with four young calves. It is possible that the herd at this time was broken up and that but one portion of it was found. The third herd ranges along the Continental Divide and is much scattered. A band of nine or ten from this herd was seen several times this spring in the vicinity of the Upper Geyser Basin. It will take close observation for several years to determine with any certainty the number of these animals, or whether or not they are diminishing in numbers. It is practically certain that none have been killed within the Park limits during the past two years, and yet there is an equal certainty that the present numbers do not approach those of past estimates.

Large numbers of antelope are found in the Park. A herd of some 200 passed the winter within a mile of the town of Gardiner, pasturing on the plain between the Yellowstone and Gardiner rivers, south of the town. They were unmolested, though it was found necessary to occasionally drive them back toward the hills, that they might not get beyond the Park limits.

The mountain sheep are found in all of the mountain ranges within the Park. A band of seven or eight spent a large portion of the winter in the cliffs along the traveled road between Mammoth Hot Springs and Gardiner, and they became so accustomed to the sight of travelers as to manifest but little more timidity or wildness than sheep of the domestic variety.

I have heard considerable anxiety expressed by those who profess interest in the Park lest the rule which protects equally all animals in the Park should work to the detriment of the game proper by causing an undue increase of the carnivora. But while it is true that there are some noxious animals that are not worthy of protection, chief among which is the skunk, or polecat, yet I am convinced that at the present time more injury would result to the game from the use of firearms or traps in the Park than from any ravages which may be feared from carnivorous animals.

SHOOTING NOTES.

HEAVY frosts in Canada and along the New England coast, started the woodcock moving, and a number of northern bred birds have resorted to the sidehill covers of Connecticut and New Jersey. The season for these birds opened in both these States on Saturday last. A farmer friend of mine, who resides near Wawayanda Lake, in Sussex county, N. J., tells me that for the last few days past he has started some eight or ten birds every evening when hunting for his cows in a swampy piece of ground near the lake; and that one of them "was all striped with white marks." It was probably an albino.

While albino woodcock are not every-day affairs, although I have seen at least a half a dozen, and shot two. One of these was killed near East Hampton, L. I., and the other in a vineyard on the mountains back of Bordighera, on the Cornice road, in Italy. Of course the latter was of the European variety. I have also seen two albino hens in the Iceland moss lands of northern Norway. There perhaps the most novel way of killing woodcock, of all the many methods, is resorted to. In the land of midnight sun, the birds nest and bring out their young in the Iceland moss. Dogs could have been used to flush the close-lying birds with advantage, but they were not available. The birds lie so hard that the sportsman might tramp through the thick under-cover for a long time but with poor success. He, however, hires two peasants whom he provides with a long rope. Each takes an end, and separating, they begin dragging the rope through the moss as they advance. The sportsman walks between them, just where the rope bags and shoots the birds which are flushed by the scraping of the rope. In this way the sportsman who dines at seven o'clock can go out and shoot until after midnight and kill from twenty to thirty brace of cock, and have as much light to shoot by as our hunters do at noon in the dense covers of our Yankee swamps.

There are now plenty of birds in the covers of Litchfield county, Conn., once the most famous fall woodcock grounds in America. Some forty years ago the grounds about Canaan, Salisbury and Mount Raggy were shot over exclusively by the late Colonel William DePeyster and the late Mr. William Aspinwall, both of this city. They were assisted in those days by Mr. Henry Lawson, of Halifax, N. S., who regularly made one of the party, and by Mr. Herman Bancroft, of Quaker Hill, Conn. The latter was a remarkable shot for those muzzleloading-small-bore-long-barrel days. These four gentlemen once on Oct. 8 shot 108 woodcock and some 40 odd partridges (ruffed grouse). Game was very abundant in those days in this section, grouse being especially so. In November, 1847, so I was told by Colonel De Peyster, Mr. Bancroft killed 382 partridges, his best bag being 39 in one day. To-day, these grounds are shot over by Mr. Chas. Barnum, of Lime Rock, and by his friend, Mr. Arthur Duane, of this city. It is also interesting to note that Mr. Barnum shoots over a pointer that is a descendant of the old Colonel De Peyster strain, which was the most famous breed of dogs in these parts some fifty years ago. Mr. Barnum got the parent or parents of this dog from Mr. Bancroft just prior to his death some seven or eight years ago.

On Saturday last, Oct. 1, duck shooting began on Long Island. William Foster, of Ponquogue, on Shinnecock Bay, tells me that there are a few wild broadbills, black ducks and teal at the head of the bay; just enough to tempt a city gunner to spend his money for an expensive outfit. Since the illegal netting of these ducks began (which the good folks who live near Shinnecock say is winked at by Grandfather Gamewarden Whittaker) the fowl shooting has been very slim on this once good killing water. In Connecticut the shooting season for quail, ruffed grouse and woodcock also began on Saturday. In Pennsylvania deer shooting.

I had a look the other day with my dogs over the Wawayanda Mountains, back of Vernon, for partridges, and knowing the lay of the land, managed to move a large number of birds. In fact, they are well distributed this year, and there is no better range than the mountain district from Greenwood Lake westward to Vernon Valley. The walking is hard, as the country is very rocky and rough, but there is game enough there to pay any one to go after it. Partridge shooting, however, does not begin in New Jersey, under the law, until Nov. 1, but the birds are now being shot as the game laws are a dead

letter in the northern part of the State, as far as grouse and woodcock are concerned.

I hear of several parties that have been to the Hackensack after the rail, but with poor success compared to the sport the rail shooters at the southern part of New Jersey have been enjoying. On the Maurice River the shooting has been good, and the abundance of rail in the Philadelphia markets last week shows some one has been having some fun with them.

From Canada I have several letters from shooting friends that the woodcock and snipe shooting to the west of Quebec has been very fair for some days past. The snipe are shot in the furrowed pasture lots and on the low flat lands, while the cock are found in the covers bordering the many in and lakes.

An old shooting companion who resides in southern Illinois writes me that there are plenty of quail this season in southern Missouri and Arkansas. A good shot with a trio of well-trained dogs can kill from thirty-five to sixty birds day in and day out. The big bags will be made immediately after heavy rains. Two dogs should be used and alternated with the fresh one left at home. The cool snap will hurry the mallards along, and when the West does begin to have rain, the protracted season of drought will be succeeded by some big flights of fowl. For those who like autumn mallard shooting, I would suggest the Illinois River above Liverpool for comfort and fair bags, and the ponds bordering the Wabash River for roughing it and sport. When an overflow occurs at this season there is no finer mallard shooting in the world than the locality I have mentioned.

Mr. Arthur L. Sewell went down to the meadows back of Mantoloking, N. J., on Sept. 20, and bagged six English snipe in two hours. Mr. Sewell is an ardent sportsman and one of the best all-round men with gun and rifle in America. He has had great experience in Canada, and is one of the finest caribou hunters in the Dominion. He is an admirable conversationalist, and camp life in his company is one of the pleasures to look forward to. I know of no one who can more graphically describe the winter pastimes of Canada more agreeably.

Charles F. Murphy, of Newark, famous as the inventor of the split-bamboo rod, is not happy. He has been out shooting twice recently, with poor success. He says that game has gotten so scarce in Essex county, on account of increasing the size of Newark, Orange, Bloomfield and other game destroyers, it is time for men to stop hunting and to sit down and cuss. He went the other day to where he had killed thirteen gray squirrels last year, and only saw one. Then he went English snipe shooting back of East Newark and saw two birds drop in. Just as he was going to do them up he saw a black duck coming along. The duck passed far out of shot over his head, but lowered over the base ball grounds, where an early gunner was standing on the home place, swiping his gun around and making phantom home runs in his mind. The duck came within 15ft. of the baseballist and was pulverized. Then the gunner spied out Mr. Murphy and went over and shot one of the snipe while the old veteran killed the other. Mr. Murphy says he never saw such a fool of a duck in all his life, and he will not go shooting there any more.

Up to the rain of last week Peter Langstaff and his son Henry, who are continually on the Newark and Elizabeth meadows, had only killed ten English snipe up to date this autumn. All the birds pitched inland this season.

On Sept. 30 a large migration of all kinds of birds passed down the New Jersey coast. Some friends who were on their steam yacht to see the "outside" Thistle and Volunteer race, said a number of big yellowlegs and a few grass plover could be heard away out to sea all day beating about in the fog.

The Big Piece at Pine Brook, N. J., has been too dry until the past rainstorm for birds, either woodcock or snipe. There is, however, some very fine ground between the Two bridges and Horseneck bridge in Norris county, along the north side of the Passaic River. It is four miles in length and is controlled by a company who send and receive cattle there to pasture. Until recently no objection was made to those who went there to shoot; but now no one is allowed to go hunting there. This change of affairs was caused by some gunners (said to hail from Paterson) who either shot the cattle because they chased their dogs, or did so accidentally, the stock not being seen in the brush. At all events the cows were badly peppered. Their owners sent for them and got them home to a place of safety, while the company who leases the land has forbidden all shooting in the future. Thus it is that every now and then something is coming up to prevent shooting in the Eastern States, and in the majority of cases the gunners have only themselves to blame.

THE WISE ACRE.

NEW YORK, Oct. 3.

AN ARKANSAS DEER DRIVE.

BEEBE, Ark., Sept. 18.—On Sept. 1 the season for deer killing begins in Arkansas, but owing to pressing business I was unable to participate in the opening hunt of the season. The day was hot and clear, but because of the long drouth the scent did not lie well, and as a consequence very few deer were killed, although from earliest daylight until dark the woods were filled with hunters; and all day long the air was filled with the music of running hounds and shouts of the drivers, the sharp report of the rifle or the louder boom of overcharged shotguns. So far I have heard of but two deer killed on the day of the opening hunt. In my last article I promised you an account of my first deer hunt. It was the drive of Sept. 15. There were four of us, Walt, Vall and Will Thandschey and myself, Walt and Vall carrying good double-barreled shotguns, Will and myself armed with rifles, all muzzle-loaders, and not high-priced ones either, but I think you will agree with me in saying that they proved as effective as the highest priced breechloading guns usually do in the hands of common hunters like myself and the boys who were with me on the 15th. We had three splendid deerhounds, Sailor, Buster and Bummer, perfect little beauties, and as true of scent and fleet of foot as ever struck a trail, and all thoroughly trained. I don't suppose that they would show to much advantage at a bench show, but as you will see they loomed up grandly on this occasion.

The day was all that could be asked, and before the sun rose above the horizon we were on our way to our day's sport. Will and myself took a stand at a regular crossing, while Vall and Walt followed the hounds. Will and myself were scarcely at our post at the crossing when we heard old Bummer open his mouth on a fresh track. Sailor and Buster soon took up the cry, and we stood and listened to the sound of the music of the running hounds coming closer and then receding as the deer doubled on his tracks. In a short time we heard the report of Vall's gun and the hounds suddenly became silent—sure sign of a dead deer. In about twenty minutes we again heard the hounds, this time closer than ever, and coming straight toward us. Nearer and nearer they come, and soon we hear the crashing of the brush as the deer plunges ahead straight to his death. Both rifles are cocked and held in readiness. I looked at Will and saw that he stood like a rock, not the slightest tremor visible in his frame; to judge from his appearance he was cool as a cucumber in January, while I must confess I felt slightly excited. The crashing of the brush grew louder every second, and at last the largest buck I ever saw broke cover within 50yds. of us, and stopped for a breathing spell. Like a flash our rifles came to our shoulders and the reports blended into one. The buck gave a convulsive bound, staggered a dozen paces and fell dead. Well, I will wager that there were two rifles loaded quicker than they had been for many a day; and striding forward we viewed our prize, just kicking his last, surrounded by the hounds. Vall and Walt came up, and we learned that Vall had shot and killed a large doe. Our buck had received both of the rifle balls in vital parts. We now had plenty of venison for our own use for several days, and I was in favor of going home; but after quite a spirited discussion we concluded to make another drive, as it was not later than 8 o'clock, in order to give Walt a chance for a shot, for he insisted that he could kill as many deer as any of us. We hung up our game, took a new stand and put the hounds at work. Deer tracks were plenty, and before an hour's time the dogs jumped a bunch of deer, a spike buck, a doe and two fawns.

We were all within 100yds. of each other when the dogs jumped the deer and took them past us at a 2,40 gait. Every gun in the crowd was emptied. The spike buck dropped in his tracks filled with buckshot. One fawn came down to Will's rifle, and the dogs pulled down the old doe 50yds. from the spot where I had shot her. The other fawn got away without a scratch. Walt now rode home for a wagon and soon came back. We loaded in our five deer and got home in time to eat venison steak for dinner.

I think that in the course of a month or two I shall have a wolf hunt to describe, as they are numerous in the forks and we are making arrangements to hunt them.

G. J. B.

CHAT WITH THE DOMINE.

AS I said before, not a day passes, as I drive through the village, that I don't catch sight of my old friend, The Domine was in his usual reflective mood when I stopped the other day, and asked, "What became of that fellow you called Birt?" "He fell out of a pear tree and died in consequence." "Was he the man that killed 52 birds in 51 shots?" "Yes." "Ever see him shoot?" "Oh yes, been out with him many a time in Connecticut." After another whiff or two, "Captain, do you believe that story?" "No, Domine, I do not, but I have made one rule, the results of long experience, I never contradict a man when he tells a story." "Spoils the story?" "Yes, and does the man no good. Why, here the other day I ran across an old whaleman, and he began to tell me how to catch whales in the Polar Sea, and about a man jumping into a whale boat and pulling a 26-foot oar. What, said I, 26ft.? 'Yes, sir, and you ought to have seen him pull.' I gave right up. When I asked the man to cut off about a foot from that oar I made him mad at once. See?" "Well, I believe you're right."

Knowing my old friend was a perfectly truthful man I said, "A good shot once told me he killed 22 woodcock straight, and that I am inclined to believe. Dan, you know, is a grand shot, few better; well, he killed 10 straight out of 12. I think the Governor got 12 out of 13, now what's your best; I heard 26. Is that so?" "Yes! round the Delamater Pond." "And you practiced a base deception on the Governor, didn't you?" "Ah me, Captain, that was long ago, and birds were very plenty," said the Domine, laughing quietly to himself in enjoyment of his joke, "you see the Governor had Buff and was up on a holiday, and nothing would do but he and I must go hunting. I had old black Ned, father to the celebrated dog I sold Mr. C., you know. I lived out at Union Corner and had my shop down by the cross road, south end of the pond, and I arranged with the Governor to come out, and we would go round the pond. After dinner we started. 'Now,' says I, 'I will tell you how we will get to the best of the birds. You go up on the east side of the pond, and I'll cross over on the dam and take up the west side, through the brush. When the birds get up they'll be sure to come over your way, and you can nail them as they come across.' My plan seemed natural enough, and away we went, I crossed over by the dam, and your brother went up on the east side."

"I know all that, but Domine, you laid a regular trap for him; he couldn't cross anyhow until he got up to the next bridge and you had all the best ground to yourself, you old scamp. How were the birds to cross over with one of the best shots in the country and one of the best dogs behind them?"

"Now, Captain, I'll tell you all about it. I got in and got to work. My gracious! talk about your birds, the woods were alive with them. Whang! bang! whang! load and fire, until my gun got so hot I could't hold it. Didn't a great many get over to the Governor? Not many! So by and by I heard a clattering across the bridge, and the first thing you know the Governor came running along mad enough to eat snakes. 'You thundering old humbug,' says he, 'served me right; I might have known better; birds cross over and you right behind them;' and curiously enough," added the old man, looking me in the eye with an expression of countenance that would have done honor to Jingle of Pickwick, "there wasn't one of them birds flew across, not one. 'How many have you got?' says he. 'Twenty-six,' says I, 'and the twenty-seventh fell out there by the pond; I think he's dead, but old Ned can't find him. However,' I says, 'Governor, there's more in here yet, go in and get them.' And he did, all he wanted—staving good shot," added the old man. "It was the best day's shooting I ever did."

The old hunter sighed, and knocked the ashes out of his pipe, and for a few minutes I smoked on in silence. His thoughts were far away. Memory was busy recalling from the long buried past, old faces, old scenes, hunts in the days when young and strong and lusty as an eagle, no day was too long for him; and now he must have felt as did old Pathfinder, the game all disappeared, the country all cleared up, and only one or two left who could in any way recall to him the days of his youth. I could well understand how he delighted to talk over with me the old time shoots and fight his battles over again.

"You got a little ahead of my brother," said I, "as I did with you in the Widow's Ash Swamp once. Do you mind the time, old man, I went in there and lost my shot pouch and went back and found it when least expected?"

"Well, Captain, I can tell you a singular circumstance that happened in that swamp. Lou Pritchard was out with me that day. He was down there by the old stone wall, and his dog was standing on a bird right between us, so was mine. I called out to him to look out, for the dogs were facing us. The bird got up and went right toward me and I struck at it with my gun. The bird turned and flew straight for Lou, and he poked at him with his gun. 'Hold on,' I cried, 'don't shoot, you'll hit me;' and he struck the bird and killed him dead on the spot, and it was an October bird, too."

As I clambered up into my cart and Old Blackey was about to walk off, I said: "Domine, you've killed some large birds."

"Oh, yes! Do you mind that one I showed you, I brought over from the Housatonic?"

"Yes! Most as large as a crow."

"Nearly. Well my friend in Po'keepsie has a stuffed woodcock, which he killed near the Po'keepsie Eastern Railroad track. The bird when shot fell on the track, and the flagman had to run back and signal the train to stop." "G'lang," and I waved my hand and drove off.

CAPT. CLAYTON.

GAME NOTES.

NARCOOSSEE, Fla., Sept. 26.—Snipe are beginning to return to our Florida marshes, and if they become as plentiful as in former seasons we shall have excellent sport. A few ducks also have been seen, and the other evening I heard the well known whir, as a flight passed over my head; but we cannot expect many till the cold weather sets in north. In the meanwhile we must content ourselves with the quail or an occasional shot at a cottontail as he skips through the palmettos.—GENERAL.

ROCHESTER, N. Y., Oct. 1.—The ruffed grouse shooting is very satisfactory in this quarter of the State this season. Woodcock are not very abundant, but some good bags have been secured. A few gray plover have been shot, and ducks are just coming in.—R.

OAKDALE, Long Island, Sept. 30.—The prospect for shooting on the Island this fall is very good, there being more quail than I have known before, and I have been shooting for the last twenty-one years. Every year brings more protection for the birds. Clubs are constantly forming; three-fourths of the land is posted, and the time is not far distant when Long Island will be one vast game preserve.—A. A. F.

ELIZABETH CITY, N. C., Sept. 26.—Quail shooting promises to be better this season than for several years. I regret that the crew of the Coot, an account of whose visitation to our little town appeared in a back number of FOREST AND STREAM, fell in with such a poor class of our citizens, and I think it rather unjust that he should form an opinion of us from the plebian few he met in a barroom. Let him come again and meet a better class and his bad impressions will remain no longer than a morning's mist.—M. R. G.

SPRINGFIELD, Mass., Oct. 3.—The ruffed grouse season opened here last Saturday, and though it was a bad, wet day, many shooters were out, and large numbers of birds (seen) were reported. Some fair bags were made. The cover is heavy yet, though the leaves are beginning to fall. It is generally complained that on grounds not posted the grouse broods have been broken up by woodcock shooters, the woodcock season having opened Aug. 1. On the other hand, on grounds that are protected the broods are unusually fine. The woodcock season has been a fair one. The grounds have been so wet that the birds were scattered. No large bags have been reported. The crop of shooters is a full one.—DAVY LEATHERSTOCKING.

LEXINGTON, Va., Oct. 1.—The open season for deer commenced in this State on Aug. 15, and soon thereafter a party was organized, which proceeded to a point some twenty miles from here, where deer are sufficiently abundant, but where the country is rough and stands are difficult of access. In this country we always "drive," as the topography of the country is such that still-hunting can be prosecuted successfully by the mountaineers alone. The hunt was fairly successful, three deer being killed. One of them was a complete loss, as the gentleman who shot took it for granted that he had missed and did not leave his stand to investigate. The carcass was found some days afterward within 50yds. of the stand, spoiled and much torn by dogs. Prospect for birds, quail and grouse good, for the former excellent. I hope to be able to report some good bags.—T. M. S.

GARYSBURG, N. C., Sept. 25.—This place is a beautiful village at the junction of the Atlantic Coast Line and the Seaboard & Roanoke railroads, sixty miles south of Petersburg, Va., seventy-two southwest of Norfolk, and two miles north of Weldon, N. C., on the Roanoke River. My friend, W. T. Kee, the proprietor of the hotel, is an expert hunter and well acquainted with the haunts of game. He has the control of over forty thousand acres of land abounding in many kinds of game, and he is fully prepared to furnish first-class accommodations to sportsmen and their families. This season we have in abundance deer, quail, woodcock, wild turkey, squirrels, sora, ducks and geese. In addition to this, rare sport can be had catching black bass and pike in the many ponds within the radius of a few miles. Our people will give our Northern brothers a cordial welcome to our mild and salubrious county.—J. H. P. L.

HORDES OF HAWKS.—Easton, Md., Sept. 28.—The recent invasion of hawks in Bay Hundred, Talbot county, causes much comment and not a little speculation as to the cause of the flight of the birds from some other region. Mr. Frank G. Wrightson, of Bay Hundred, a very conservative man, says: "I don't like to say it, but I honestly believe there were not only thousands, but a million and perhaps millions of these birds, flying in flocks northward up the eastern shore of the Chesapeake on Friday and Saturday." Mr. Wrightson remembers another but a much smaller flight of hawks, over the same section some twenty years ago. These hawks were somewhat smaller in body than the big hen-hawk that lives and thrives in this country, but the head, plumage and talons were like those of our native hawks. In their flight northward they met about the mouth of the Choptank River a strong north wind, which drove them shoreward. They did not come far into the interior, but hovered about the headlands and shores of the bay and the broad estuaries, and seemed to be ravenous for food. Forty hours covered the period of their visit from the coming of the advance guard to the leaving of the stragglers, and on Sunday not a hawk could be seen. Had the people been prepared for this incursion they could have killed in the various neighborhoods where the birds came afield at least 10,000 hawks. As it is, the number slain will not exceed 2,000, which, at the bounty of 50 cents per head, will take $1,000 in cash from the county treasury and distribute it among a large number of hawk hunters. Mr. Levin H. North, a constable in Tilghman's Island, did the biggest day's work reported thus far. In a few hours he killed 88 hawks, and got his $44 bounty for their heads from the county commissioners to-day. Mr. William F. May, a merchant, of Tilghman's Island, says he missed his opportunity in not having in store a supply of gunpowder. He sold out early in the day his limited stock at regular prices, and could have sold ten times the quantity at "corner" prices. Some people paid as high as twenty-five cents for a charge of powder to shoot a fifty-cent hawk. If the whole million of hawks had been killed the bounty payments would have seriously embarrassed the county. A movement will be made at the next session of the General Assembly to repeal or reduce the hawk's head bounty.—*Baltimore Sun, Sept. 29.*

WILD RICE.—In reply to the inquiries by Mr. H. Holgate, of the Northern and Northwestern Railways, in these columns, Mr. Chas. Gilchrist, of Rice Lake, Ont., writes: "The best time to sow the rice is late in the fall, just before the water freezes up. Sow in water from 6in. to 6ft. deep, in soft mud bottom, low marshy places, in drowned lands where the mud is covered with water the year round. If in lakes, in bays, if in river out of current as much as possible. There is a large river running into this lake called the Otonobee River, and there is a great deal of drowned land with mud bottom. The rice grows all along the river. The drowned land is full as it can stand on both sides of the river for ten or fifteen miles. Put the rice in coarse linen bags, sink it in the water and let it soak for three or four hours before sowing. Sow from a boat. It will sink to the bottom at once. I have experimented with the rice in several ponds. There is a pond about two miles below Port Hope, 300yds. in length and about 100yds. in width, with mud bottom. Three years ago I sowed a few bushels. It came up and seeded the next year. I sowed some more. It was put in on Nov. 20 each year. I passed the pond yesterday; it is an immense bed of rice, standing about four feet above the water and is full of seed. Lots of ducks are there. I sowed in all about twenty-five bushels."

PILLSBURY, MINN.—Several bears have been killed in town this fall; one of them weighed, after being dressed, 362lbs. Several more have been seen, three in one day, within gunshot of the village post-office. Ruffed grouse are very plenty and a wholesale slaughter has already commenced. The nut crop is abundant and consequently the gray and black squirrels are too numerous to mention. As yet comparatively few ducks are seen, owing perhaps to the exceptionally warm, dry weather. A cold northwest storm will doubtless bring them along. To my great disappointment business and sickness deprived me of the anticipated pleasure of joining Charles Hallock and friends in their fall hunt in the Roseau county.—J. F. LOCKE.

THE HORNELL GUN AND GAME CLUB, of Hornellsville, N. Y., are doing good work and will soon be a terror to violators of the game laws. Floyd Nicholson shot five black and gray squirrels June 28, 1886; the club had him arrested, but he appealed to the higher court; before Judge Rumsey he was fined $125, costs $138, total $263. At $52.60 apiece squirrels are dear, and they could not have been good eating at that season of the year. This same Nicholson is a notorious violator of the game laws; he paid $27.70 last fall for shooting a rabbit Oct. 26, but he said the gun club and the law could go to perdition. E. Morrisey and Parsons also paid $27.70 for illegal fishing.—J. OTIS FELLOWS.

PENNSYLVANIA LAW.

THE following provision of the Pennsylvania law relating to game are taken from the pamphlet compendium prepared and published by the secretary of the Commonwealth:

DEER AND ELK.—No person shall kill or pursue in any part of this State any elk or wild deer, save only from the first day of October in any year to the fifteenth day of December next following, and no person shall have in his or her possession, or offer for sale or transport any elk, wild deer, antelope, or fresh venison, save only from the first day of October in any year to the thirtieth day of November next following. No person shall, at any time, kill any fawn when in its spotted coat, or have the fresh skin of any such fawn in his or her possession. No person shall pursue any elk or wild deer with dogs in any part of this State, or shall kill in the water any elk or wild deer or fawn which has been driven thereto by dogs; any person offending against any of the provisions of this section shall be deemed guilty of a misdemeanor, and shall be liable to a penalty of $50 for each elk, wild deer, or fawn so killed, pursued or trapped, or fresh elk, wild deer, antelope, fawn skin had in his or her possession, and may be proceeded against in any county of the State wherein he may be arrested, having the same in his possession. And provided also, that any dogs pursuing elk or wild deer or fawn may be killed by any person, and constable or other town official may kill any dog that habitually pursue elk, wild deer or fawns, and the owners of such dogs shall be liable to a penalty of $10 for each elk, wild deer, or fawn killed by such dog. (June 27, 1883.)

WILD TURKEY.—No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any wild turkey, between the first day of January and the fifteenth day of October following in any year, under a penalty of ten dollars for each bird so killed, exposed for sale or had in possession. (June 3, 1878.)

WOODCOCK.—No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any woodcock, between the first day of January and the fourth day of July of any year, under a penalty of ten dollars for each bird so killed, exposed for sale or had in possession. (June 3, 1878.)

RUFFED AND PINNATED GROUSE.—No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any ruffed grouse, commonly called pheasant, or pinnated grouse, commonly called prairie chicken, between the first day of January and the first day of October in any year, under a penalty of ten dollars for each bird so killed, exposed for sale or had in possession; and it shall not be lawful to hunt pheasant or pinnated grouse during the night time in any manner whatever, under a penalty of ten dollars for each offense. (June 3, 1878.)

QUAIL.—No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any quail or Virginia partridge, between the fifteenth day of December in any year and the fifteenth day of October next following, under a penalty of ten dollars for each bird so killed, exposed for sale or had in possession. (May 23, 1887.)

HARE, RABBIT.—No person shall kill or expose for sale, or have in his possession after the same has been killed, any hare, commonly called rabbit, between the first day of January and the first day in November in any year, under a penalty of five dollars for each and every hare or rabbit so killed or exposed for sale or had in his possession. No person shall hunt or cause or permit the hunting of hares or rabbits with a ferret or ferrets, under a penalty of ten dollars for each and every hare and rabbit caught or killed by means of a ferret or ferrets. (June 10, 1881.)

SQUIRREL.—No person shall kill or expose for sale, or have in his or her possession after the same has been, killed any gray, black or fox squirrel, between the first day of January and the first day of September in each year, under a penalty of five dollars for each and every squirrel so killed, exposed for sale or had in possession. (June 3, 1878.)

WILDFOWL.—It shall be lawful to hunt, shoot, kill or destroy any web-footed wildfowl only from the first day of September to the first day of May in each year. It shall be unlawful to chase, hunt, shoot, kill or destroy any web-footed wildfowl upon or with any craft or boat propelled by steam or sails, and any person or persons using any said craft or boat for said purpose, or the captain, owner or other person in charge of any such craft or boat who shall allow the same to be used while he or they are on board, shall be liable to the penalties herein imposed [$25]. No person shall at any time kill any wild duck or goose with any device or instrument known as a swivel or punt gun, or with any gun other than such guns as habitually are raised at arm's length and fired from the shoulder, or shall use any net, device, instrument or gun, other than such gun as aforesaid, with intent to capture or kill any such wild duck or goose under a penalty of ten dollars. (Acts of June 3, 1878; May 17, 1883, and April 16, 1885.)

PLOVER.—No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any upland or grass plover between the first day of January and the fifteenth day of July in any one year, under a penalty of ten dollars for each bird so killed, exposed for sale or had in his possession. (June 3, 1878.)

RAIL AND REED BIRD.—No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any rail bird or reed bird, except in the months of September, October and November, under a penalty of five dollars for each and every rail or reed bird so killed, exposed for sale or had in possession. (June 3, 1878.)

WILD PIGEON.—No person shall kill or take any wild pigeon or squab while on its nesting or roosting ground, or break up or in any manner disturb such nesting or roosting ground, or the birds thereon, or kill or catch with gun, net, or trap, or otherwise take or destroy any such pigeon or pigeons, within one mile of any nesting or roosting ground, or discharge any fire-arms within one mile of any nesting or roosting ground, under a penalty of fifty dollars. Provided, that no person except citizens of this commonwealth shall trap or catch wild pigeons with nets in any of the counties of this commonwealth, unless he shall first have taken out a license from the county treasurer of the county in which said pigeons are found, for which license he shall pay the sum of fifty dollars for the use of said county, under a penalty of one hundred dollars. (June 10, 1881.)

TRAPPING.—No person shall at any time or place within this State kill or take any wild turkey or ruffed grouse commonly called pheasant, or quail or Virginia partridge, or woodcock, or rail or reed bird, any pinnated grouse, commonly called prairie chicken, with any net, trap, snare or torch-light, nor any such trap, snare or torch-light, for the purpose of taking or killing any of said birds, nor shall any person sell or expose for sale any of the said birds after the same shall have been so taken or killed, under a penalty of ten dollars for each bird; and it shall be lawful for any person to take and destroy any such nets, traps or snares, whenever found set. Provided, that nothing in this section shall be so construed as to prevent individuals or associations for protection, preservation or propagation of game, from gathering alive by nets or traps, with the written consent of the owner of the land, quails or Virginia partridges, from the 20th day of December in any year to the 1st day of February next following, for the sole purpose of preserving them alive over the winter. (June 3, 1878.)

SUNDAY.—There shall be no hunting or shooting or fishing on the first day of the week called Sunday, and any person offending against the provisions of this section shall be liable to a penalty of twenty-five dollars. (June 3, 1878.)

POSSESSION IN CLOSE SEASON.—Any person may sell or have in his or her possession any pinnated grouse, commonly called prairie chicken, ruffed grouse, commonly called pheasant, and quail or Virginia partridge, and woodcock, for a period of fifteen (15) days after the time limited for killing the same has expired, and shall not be liable to a penalty under this act.

POSSESSION PRIMA FACIE EVIDENCE.—In all cases of arrests made for the violation of each or any of the foregoing sections of this act, the possession of the game, fishes, birds, animals, fowls, nets or other devices provided for or so mentioned, shall be *prima facie* evidence of the violation of said act. Provided, that nothing in this act will prevent any person from killing any wild animal or bird when found destroying grain, fruit or vegetables on his or her premises.

THE "UTE WAR."

WASHINGTON, Sept. 30.—The Secretary of the Interior has received, through the War Department, a report from Brig.-Gen. George Crook, Commanding Department of the Platte, on the recent Ute Indian troubles in Garfield county, Colorado.

The report shows that the trouble arose from attempts made by Colorado officials to serve warrants on certain Ute Indians for the alleged stealing of horses and for violations of the State game laws. It is the custom of certain men living in Garfield county to buy horses of the Indians and then regain possession of the money by playing "monte," or some other gambling game. The horses alleged to have been stolen were either bought from the Indians or won in this way. While stoutly protesting their innocence of the theft, the Indians gave the parties two other horses in lieu of those which they had been obliged to surrender to the alleged rightful owners. Warrants were issued for the arrest of two of the Indians for horse stealing, and for twelve others for violations of the game laws. Of this last offense the Indians were undoubtedly guilty. Game Warden Burgett, to whom the warrants were issued, with a posse of seventeen men, went to the Ute camp on the north fork of White River, and without attempting to explain his object, suddenly seized several of the Indians, who broke away and ran for the cover of the brush. The posse fired, wounding three of the Indians. The posse then retired and united forces with Sheriff Kendall, who held warrants for the arrest of the two Indians for horse stealing. Hearing of an Indian camp on Coal Creek, Kendall sent a party to it. On approaching the camp the squaws and children who occupied it hurriedly left, leaving their tepees and a large quantity of buckskins, all of which the posse burned.

A few days later Colorow sent an urgent message to two prominent citizens of Meeker in whom he had confidence, asking them to come to Coal Creek. These gentlemen went to Colorow's camp, and found the Indians greatly alarmed by these attacks, and asked what it meant and why they were made. Colorow did not consent to give up the Indians against whom the warrants were issued, but said that he would leave the country as soon as possible. He required fifteen days for this purpose, as he had to gather in his herds of horses and sheep, and drive them to the reservation, which was over one hundred miles distant. He would be obliged to travel slowly on account of herds and his wounded. About Aug. 17 Kendall returned to Meeker and reinforced his posse to about fifty men, and again started out, disregarding the assurances that had been given Colorow that he would be allowed the fifteen days in which to reach the reservation. The Sheriff expressed the opinion that Colorow only wanted time in which to gather reinforcements.

On the 22d a force of Colorado militia arrived at Meeker with orders to assist Sheriff Kendall in the execution of his processes. On the same day the Sheriff requested the commanding officer at Meeker to send a hundred men down the White River to the Blue Mountains for the purpose of intercepting the Indians, who were en route to their reservation. The troops were dispatched as requested, and were joined on the 24th by Kendall and his posse, now numbering about eighty men. On this date an interview was had with a son of Colorow, in which it was agreed that matters should remain as they were until the "Big White Chief" should arrive. By this agreement the Indians understood that they would be allowed to continue their march unmolested to their reservation. During a heavy storm of rain and hail which came on during the night, the Indians moved down the river about twenty-five miles to a point, as they believed, on the Uncompahgre Reservation, and went into camp, turning out their ponies to graze on the neighboring hills. The whites started in pursuit and struck the Indian camp as they were preparing breakfast. They had believed themselves perfectly secure; no sentinel or runners were on the watch, and the whites attained a position on the bluffs without alarming the Indians.

Kendall's party at once opened fire. The surprise was complete. The Indians returned the fire from the brush, to which they had retreated, for about three and a half hours, thus covering the removal of their wounded and the women and children. Later in the day they fell back, and the whites soon after withdrew to Rangeley, eight or ten miles distant. In this affair the whites lost in killed a lieutenant of militia and a deputy sheriff. Another man who attempted to run off a small band of Indian ponies was shot and killed soon after the fight. Several others were wounded. The Indians lost one small boy killed; one buck and one squaw were wounded. The whites numbered 180 men; the Indians not more than twenty-five fighting men. The whites justify their attack on the grounds that the Indians broke faith with them in leaving their camp.

The Indians were finally induced by Lieut. Burnett, who had arrived on the scene accompanied by about 150 superbly armed and mounted warriors from the Ouray Agency, and who became wildly excited when they heard of the threatened invasion of their territory and urged him to go with them to learn the cause of the trouble, to go to the agency, although loth to do so without a large part of their stock, which had been seized. When the troubles began they had between 300 and 400 horses and about 2,500 head of sheep and goats. Of the horses, seventy-four were taken by the State to mount their troops. Many more were taken by Kendall and his posse. From the outset, with but one slight interruption, the Indians were pursued incessantly, and in every case the whites were the aggressors and fired first. Colorow has no desire to fight, and made use of his weapons in self-defense only—for the protection of his women and children and his herds.

During the whole time, including the fight of Aug. 25, five Indians died of wounds—one buck, two boys and two small girls. Seven others were wounded, one perhaps fatally. It was extremely fortunate that Lieut. Burnett arrived upon the scene of action as he did, as there can be no doubt that his presence saved the lives of Kendall's entire party and prevented a serious outbreak. There is no question that the warrants could have been served without difficulty had their service been properly undertaken. Up to Sept. 15, of all the stock lost by the Indians 125 horses have been returned to them. This number includes the seventy-five taken for the use of the State. The report concludes by calling attention to the highly meritorious conduct of Lieut. Burnett.

Sea and River Fishing.

THE BIG TROUT OF THE UPPER DAM.

Editor Forest and Stream:

In your issue of Sept. 28 there appeared an editorial headed "They Jigged Them," which unjustly reflects upon the good names of Mark Hollingsworth, a prosperous and honored citizen of Boston, and myself. It is founded upon a clipping from the Boston *Herald*, which, in turn, is based upon the statements of its Maine correspondent; so, it is a long arm that reaches the real author of the libel.

The gist of the charge is that we were guilty of taking fish at the Upper Dam in a manner prohibited by law, and disgraceful to a sportsman; that we were arrested by the fish warden, taken before a justice, and fined. I pronounce the charge absolutely false. We were not arrested; did not go before a magistrate, and were not fined; and, above all, we were not guilty of "jigging;" and in this I am corroborated by the following statement, signed by some of the reputable gentlemen who were at the Upper Dam:

We, the undersigned, were present with Messrs. T. B. Stewart, of New York, and Mark Hollingsworth, of Boston, at the Upper Dam, and saw them catch the trout alluded to in the FOREST AND STREAM of Sept. 28, 1887, and we certify on our personal knowledge that these fish were taken in a legitimate manner, and that no fish were taken in any other way.

(Signed) JNO. R. RAMSEY, Hackensack, N. J.
H. C. ANTHONY, Allendale, N. J.
G. L. COBB, Woburn, Mass.

The above, so far as it relates to Mr. Stewart, is signed by the following, the first two certifying to the trout exhibited in Appleton & Litchfield's window in Boston.

(Signed) SIMEON ADAMS, Waltham, Mass.
JNO. S. DOWDELL, Waltham, Mass.
J. C. BILLINGS, Bethel, Me.

NEW LONDON, Conn., Oct. 3, 1887.—We, the undersigned, were at Upper Dam Camp, Maine, with T. B. Stewart, of New York, and Mark Hollingsworth, of Boston, from Sept. 19 to 24, inclusive, and while there saw them constantly catching trout in the usual and perfectly legitimate manner. We have no knowledge of their taking trout in the manner alluded to in the FOREST AND STREAM'S issue of Sept. 28, 1887. (Signed) D. B. HEMPSTED.
F. H. CHAPPELL.

LEOMINSTER, Mass., Oct. 4, 1887.—This is to certify that I, the undersigned, was present with Messrs. T. B. Stewart, of New York, and Mark Hollingsworth, of Boston, at the Upper Dam at the time alluded to in the FOREST AND STREAM of Sept. 28, and saw their fishing tackle, and in no instance did I ever see but one hook used, nor did I during my stay see a single trout jigged.
(Signed) F. A. WHITNEY.

I never saw a "jigger," and never called in the "silent doctor," but from your description I infer it can only be useful in quiet waters and shallow streams; our fishing ground was the rapid and turbulent waters of the dam.

In order that those of your readers who seek the Upper Dam and its excellent fishing for genuine sport may profit by our experience, let me give you the facts.

The dam has recently been raised some 8ft., thereby backing the waters of the lake, so as practically to destroy the fishing in the upper lake, and above the dam. This has drawn to our locality all the real sportsmen, leaving only those who seek the solitude of the forest for other purposes than fishing to fan the flames of discontent and jealousy.

Rumors of illegal fishing, of false claims to skill, and of coming efforts to prohibit all fishing at the dam, were flying about our ears, and we were not surprised when the warden put in an appearance. But we were taken back when he accused us of "jigging."

Of the nine or ten fish in our possession three were scarred with the hook, and on this simple fact the warden claimed that we were liable to prosecution under the law of that State. Of course, every fisherman knows, and as we stated to the warden, you are liable to bring up a scarred fish, scarred by other fishermen and lost, an every day and common occurrence.

The warden was obdurate, but suggested that twenty-five dollars be deposited with him. I refused until advised to do so by a gentleman present, of larger experience with fish wardens. My adviser suggested that we

would have to travel twenty to forty miles to reach a place where we, strangers, would be unable to give bonds. So we deposited with the warden, but under protest, twenty-five dollars, on condition that he would go with us, at our expense, to the nearest magistrate and enter a complaint against us. I gave him the money and he gave me the following receipt:

UPPER DAM CAMP, Sept. 20, 1887.

Received 25 dollars of T. B. Stewart for violation of fishing. Received as a safety until he goes (Stuart goes) before a magistrate and plead[s] guilty.—GEORGE D. HUNTOON.

Whoever the magistrate may be, please send to me and the part belonging to you will be sent.—GEO. D. HUNTOON, Warden, Rangeley.

We then went to Andover, where the warden consulted with the justice; what advice was given him we do not know; at all events, though we strenuously insisted on being arrested, he refused to arrest us and refused to return to me the money. He still has it and I have his receipt, which I intend to handsomely frame and hang in my store as a picture of "A Fisherman's Luck."

Out of these simple facts the tale hangs.

As an old fisherman who loves the sport, the charge that I have been guilty of taking fish from their spawning beds to hang in show windows of the city, as evidence of superior skill, makes me restive.

Who the originators of the slander are, whether prompted thereto by ignorance or inspired by malice, I do not know, but I shall bait my hook to bring the slimy eels to the surface.

I have fished at the Upper Dam and vicinity for many years; its sport is dear to me. Rather than have it prohibited by law, I now offer to give bonds to the State of Maine to bear the expense of maintaining at that place for the next five years, during the month of September, a fish warden of intelligence and honesty; and I trust such of your readers as appreciate the wonderful advantages of the place, and wish to preserve, for legitimate sport, the finest trout fishing ground yet discovered in America, will aid the efforts of yours truly,

T. B. STEWART.

A STORY OF HORNED POUTS.—I.

DURING the late heated term a select party were comfortably seated in camp chatting, as many a like party have often been before, each telling of his many exploits with rod and gun during past seasons, and all regretting that those precious moments could never return; each vieing to make the present as pleasurable as possible while mapping out the coming week's sport, and each in rotation giving a part of his experience of sporting events, peculiar surroundings and miraculous incidents. All of these were embellished in true woodcraft style, provoking floods of merriment, greatly relieving the oppression of a high temperature and bringing out the sparkling wit of the ingenious narrator, and phraseology peculiar to such democratic gatherings. The evening was passing rapidly away when it was proposed that brother W. should contribute something in this line, and it was demanded much against the protest of our quiet friend from Connecticut. At length he agreed to give us the benefit of his experience at seine fishing for suckers and horned pouts, as bullheads were christened in the land of his birth; they are known only by this name among the oldest residents there. Brother W. was born and for years resided within a few miles of the "Wolf's Den," made famous by the youthful Putnam:

I know it was wicked, he began, to take advantage of fish with a great long seine. I have lived to learn this while associating with you gentlemen—knights of 4 and 5oz. split bamboo rods—but you understand, gentlemen, how willing a boy is to catch a fish as best he can, and I was only a boy then. The art of fly-casting was to me unknown; the nearest approach to it within my reach was the employment of a small sapling, a piece of stout cord, a penny fish hook, and a pocket full of grubs or ground worms for bait. This to me was the *ne plus ultra* of an outfit with which to put in a few hours of solid enjoyment.

Uncle Bill T. of our town was a character, and a real live one. His avoirdupois was, to make a rough guess, about 285lbs. He was short in stature, with a stomach that forbade anything like inspection of his legs by himself, except possibly in a sitting position, when by careful maneuver it was barely possible for him to behold both feet at once if brought well to the front, his legs at an angle of about forty-five degrees with his body. Uncle Bill was a whole-souled, kind-hearted man, liked by every boy for miles around. It afforded him great pleasure to see the town boys enjoy themselves, and many were the good meals of pouts, cooked and served to us lads by Uncle Bill at his own house, and many were the parties organized and conducted for us boys to have a day's fishing by Uncle Bill, to wind up with a feast at his own hospitable board.

It was one of these "spells" of his best nature that influenced him on a bright June day, twenty odd years ago, to harness his horses and hitch to his long wagon, already provided with several boards for seats, and then, with his seine loaded in, to come down the town's principal street, picking up the boys and stowing them away in his wagon, just as he found them; some in their shirt sleeves—having no coat with them—some bare-footed—having no boots—but all brimful of anticipation of a good time. Among these it happened to be my good luck to be numbered. "Now, boys, we will have a good frolic," said Uncle Bill, as he loaded in a fresh recruit; "we will drive to the pond at A. and get fish enough for the whole town, and when we get home we will have such a fry as you and I never had before, and such lots of fun as we will have"—his tongue running at a speed not less than that of the team, until we had covered several miles and the little village of A. was plainly in sight. A few moments more and we were there. The seine was out; and Uncle Bill, divested of his outer apparel, arrayed himself in a pair of overalls of prodigious proportions, much resembling late cuts I have seen of the *World's* balloon. As a matter of course the idle villagers were out, and we were the center of considerable attraction, we boys with pants rolled as high as human ingenuity could raise them, and Uncle Bill with boots off treading around with feet as large as flounders.

The pond lay at our feet, and being a little low, the dam showed well above the water, with the red muddy banks of the pond defining clearly the boundaries of the water, and showing the best favored places for drawing the seine ashore. After a little reconnoiter by our party a site was selected about 60yds. above the dam—the dam being about 50 or 60yds. long, and the pond in front of us to the point opposite about 40yds. wide; and at this point commences the exciting chapter of the day—and here with our wagon for a background stood our brave little band under command of Uncle Bill awaiting orders. At length, all things ready, another boy and myself were detailed to hold the shore end of the ropes; while another detail were to throw stones into the water above at the given signal from Uncle Bill. The moment came and the order "all ready" passed, Uncle Bill with arms full of seine and ropes over his shoulders gave the final "Now you boys hold tight to your ropes until I reach shore again, then walk slowly toward me, as I will tell you in time. At present hold fast to your ropes."

Thus saying, Uncle Bill partly walked and partly floundered through mud considerably above his knees, with water enough to make up a total to near his neck, and in this manner reached the channel of the pond and crossed safely to within a short distance of the opposite shore, when he struck out up stream, and circling to the north, swung in toward the muddy shore from which he started. Uncle Bill, now nearing the shore, begins to loom well up above the mud, to the great delight of the steadily growing crowd of visitors on the bank, which was being greatly augmented from the factory help wending its way to dinner, who could not go by when a seine was being drawn without first being able to number the catch. At length the seine, fish and quantities of mud were well drawn up to the shore, and Uncle Bill, with his kindest expression, calls to his boys, "Now hold tight to the ropes; we've got 'em. Now, boys, this way, slowly, now pull carefully on the ropes, keep the foot rope hard down and a leetle ahead."

These directions were given in true scientific and encouraging terms, until the fish, seine and mud were hard aground, and the difficult task of selecting one from the other was begun. This was soon over, after wallowing nearly knee deep in the mud and becoming well bespattered to the roots of our hair. Another haul was made, and still another, until about six bushels of suckers and pouts lay on the greensward, after throwing back all small fry and reserving only the best. After carefully filling our basket and putting it in the wagon, the balance were disposed of among the crowd on the banks by invitation of Uncle Bill, who invited all to take some of the fish. "Take a good mess," said Uncle Bill; and they did, many taking to them with a very strong liking for fish, if my youthful mind was a correct judge, and my memory has not failed me.

Now this pond lies over the line dividing Connecticut from Rhode Island, within the latter State. The fishing being over, Uncle Bill was busily engaged washing the seine, and washing and coiling the ropes and preparing to stow them in the wagon, when suddenly looking up a commotion in the crowd was noticed, where an animated discussion was going on, a few words of which were wafted on the winds to Uncle Bill's ears, and with his keen senses ever at his command he straightened up just in time to behold the constable of the village approaching and to hear his order, "Surrender to the law, for drawing a seine in the waters of Rhode Island." This, although surprising to our little band, was much short of a surrender, or a capture of our valiant leader. Uncle Bill could not recognize either justice or law in this, both of which he was a good judge of, and no novice with either, for next to serving a good meal of fish to the boys it was his best hold to fight law. To be arrested by word of mouth thus, he could not permit, or recognize any such proceeding without a warrant. As the squire of the village was away no warrant could be procured, as the last half hour of labor by several of the villagers had proven. During pending controversy the horses were attached to the wagon and all was in readiness to start so soon as the seine and Uncle Bill should be loaded in.

The officer not liking to be outdone, concluded to "hook on" to Uncle Bill, warrant or no warrant, so saying, "You must go with me at all hazard," he started to secure Uncle Bill, who waiting at the edge of the mud, retreated at the approach of the officer to the water, and partly by rolling and partly by wading, relieved by a little swimming, succeeded in gaining the opposite shore in safety, where he laid down to rest upon the grass and watch coming events. The officer not liking the complexion of the mud or water concluded to take to the dam and cross in that way to where the culprit lay at ease in defiance of his high authority. At length the dam was crossed and the would-be captor and culprit were near together, when with one long roll Uncle Bill was floating toward the home shore and fast widening the distance between himself and the officer. The home shore being reached a few moments were devoted to further preparing the seine for the wagon. Uncle Bill's weather eye carefully covered the officer on his return by the way of the dam. At length the dam was recrossed, and the officer, who meant business, gathered himself for the biggest effort of his life and with a burst of speed that raised the credit of official propulsion several points, he got just near enough to Uncle Bill to miss him, as he again floated clear of the mud upon the bosom of the water. This disappointment seemed to confuse the officer and much interested the audience gathering on the bank, who cheered the officer on his return trip across his chosen route—by way of the dam—to the opposite shore. He reached it just as Uncle Bill hauled in port sixty yards or more above and lay a few moments in peaceful rest watching the puffing form of the officer approach with a gait which plainly showed the terrible muscular strain upon him and the anxiety of an over-matched brain, which was fast becoming maddened by the tactics of Uncle Bill.

The officer paused a moment and wiped away a profusion of honest sweat, and after duly scanning the field before him, burst forth again at a more terrific speed upon his would-be captive, failing by about three lengths of getting the hand of the law upon Uncle Bill, who was again rolling over the mud and soon floating upon the water like a full rigged "sixty-four" under full sail, fast putting distance between himself and the officer. The officer, thus foiled, again turned to the dam, and if officials are ever supposed to swear, we may suppose that the gestures of this high official meant swear, and to the best of my honest belief I think he cursed his commission and those who gave it to him, in the highest style of the art. At length he gained the home base as Uncle Bill left it for another mud bath in the now well colored water, and again the officer led off to the dam, while Uncle Bill was floating over the waters with an eye covering the officer and this time not leaving the water but waiting until the officer wrs landed and well on his trip up the opposite shore. He then swam up the pond several hundred feet further before landing, much to the dismay of the official, who saw the distance from the base of his former operations becoming lengthened and more annoying. Then, to his dismay, Uncle Bill landed on the home shore near his starting point, and nothing was left for the officer to do but either to retrace his steps or arrest his man in the water, which he deemed imprudent. So back he climbed to the dam and pursued the path which to him was becoming quite familiar.

This crossing and recrossing was repeated several times, with an occasional variation of a swim up the pond, until Uncle Bill had gained time enough in port to get the seine into the wagon, we boys helping to the best of our ability; when, espying the Squire in the crowd, Uncle Bill thought it best to capitulate to the officer, as means were now at hand to produce the warrant. Under these circumstances he allowed himself to be captured with only a slight show of resistance, just enough to wipe off a little of the surplus coat of mud on the officer, who had consented to permit Uncle Bill to wash and change before being led before the justice to be tried for breaking the fish and game law of Rhode Island.

Not liking the situation myself, and having a much more limited knowledge of law than Uncle Bill, I concluded that I could get my person to a place of safety—which I argued myself into the belief was a becoming thing to do. Watching my chance, I was well on my way homeward, treading friendly cowpaths among the bushes, before my presence was missed by the crowd. Long before I reached home the team of Uncle Bill crossed the State line at a rattling pace and overtook me just as I was emerging from the lots to take the pike. He brought the rest of our party and a good lot of suckers and pouts, which we boys did ample justice to, as they were served that evening by Uncle Bill in lots to suit customers.

Having now arrived at home, I move we adjourn until further notice. You know I abhor a story that takes all night to tell.

After W. had agreed at some future time to give an account of that supper and the trial, the party sought repose for the night. SID BROMLEY.

ADIRONDACK EXTORTION.

BROOKLYN, N. Y., Sept. 30.—*Editor Forest and Stream:* I notice in this week's FOREST AND STREAM a letter from Mr. Orange Frazer, about Adirondack extortion. I think this is a timely warning, and I will therefore relate an experience of mine. The day before I started camping I wrote out a list of things I needed and handed it to the clerk, receiving a promise that everything would be ready the next morning at six.

The next morning we put all the groceries in a box and started for camp that night. We camped about 20 miles from Paul's, and when we unpacked our box to get dinner we found we were without both eggs and butter, thus making it impossible to make biscuit or fry trout, and rather than do without these I sent my guide back for them, which cost me his services and wages for two days.

I was obliged to return home immediately upon arriving at Paul Smith's, so I went to the head clerk and demanded that he take $5 from my bill (the wages of my guide for two days). He immediately blamed my guide for not checking off the goods. Arguments were of no account, for he just kept talking to pass away the time until the stage started, so I gave up in disgust and paid the bill. I should strongly advise those who intend to go into the woods from that point to have as little need of supplies from Paul Smith's as possible.

T. L. CRANFORD.

A QUESTION OF APPETITE.

Editor Forest and Stream:

Your columns contain many commendable reprimands from sportsmen throughout the country, directed against "pot-hunters," "skin hunters" and "trout hogs;" but by a strange obliquity of vision it seems to be considered that any man who claims to belong to the fraternity of sportsmen may slay and destroy *ad libitum* without entitling himself to those unsavory appellations.

I am led to these reflections by reading the narrative of your correspondent "Shoshone," published in your issue of Sept. 15.

It seems that "Shoshone's" party of five sportsmen camped on Goose Creek, in Nevada, during the latter part of August. "The third day out was devoted to fishing," and three of the party essayed to determine the comparative merits of grasshoppers and artificial flies as trout bait. By midday they had captured 100 trout, and "Shoshone" tells us that two-pounders were so plentiful that fish weighing a pound or less were "insignificant." One of the three went to camp for a "pack horse" to carry in the trout, while the other two continued to fish. The party had a "fat doe and a two-pronged buck" in their larder, killed the previous day, and "Shoshone" had also caught eleven trout, among which two-pounders were "plentiful."

What could these five sportsmen do with 150 to 200lbs. of trout out in the wilds of Nevada, having a larder already well stocked with game, in the month of August? Comment seems unnecessary. COAHOMA.

MEMPHIS, Tenn., Sept. 25.

LEXINGTON, Va., Oct. 1.—Bass have been unusually scarce this season, no really good catches having been made, due probably to the fact that the waters have been almost continuously muddy. A few fair catches were made.—T. M. S.

"A TWO WEEKS' OUTING."—For "Nahma Sebe" read Nahma Sepe, for "celebrated torrent stream" read celebrated trout stream, for "heavy ruin, not," read hoary ruin, nor.—KELPIE.

KEOKUK, Ia., Aug. 31, 1887.

J. F. Breitenstein, President of Keokuk Gun Club:

DEAR SIR—The two boxes of paper shells, "Climax," U. S. Cartridge Co., which you so kindly handed me, have been thoroughly tested, and I, after my long experience as an expert amateur, without hesitation pronounce them the best shells made, being perfection for wet and dry shooting. They cannot be excelled. Knowing perfectly well what I am writing about, I subscribe myself, yours truly, (Signed) H. A. KINNAMAN. *Adv.*

Fisheulture.

FOOD AND DIGESTION OF FISHES.

THE following article, by Dr. P. Pancritius, is from the Bulletin of the U. S. Fish Commission and originally appeared in the report of the Fishery Association of the Provinces of East and West Prussia, being translated for the Bulletin from the German by Herman Jacobson:

At the request of the Fishery Association of East and West Prussia I commenced a series of anatomical and physiological observations of the alimentary canal and the digestion of our fish which will not be finished for some time, but concerning which I am able to make a preliminary report. Any experiments in feeding made on the basis of my results will of course have to be made only in suitably arranged ponds, as in the narrow tanks at my disposal the fish live under too unnatural conditions to draw definite conclusions as to the influence of food and the increase of size and weight.

The alimentary canal of fish begins in the mouth, which is more or less furnished with teeth, to which is joined a wide throat with folds running lengthwise. The throat leads into a cylindrical tube, sometimes straight and sometimes more or less twisted, which opens at the arms. In the lampreys the entire alimentary canal is of an even cylindrical form and entirely straight; in some fish it is somewhat twisted, but no distinction can be recognized between the stomach and the intestinal canal, while in other fish the stomach may be easily recognized as bag-like, or at least as a considerably widened portion of that canal. A microscopic examination of the mucous membrane, which lines the entire alimentary canal, shows that in a large group of fish, to which among the rest the carp belong, the stomach is wanting, so that the intestinal canal commences at the throat. It is a characteristic feature of the stomach of fish as well as of warm-blooded animals, that its mucous membrane possesses pepsin glands. These glands secrete a ferment (pepsin), which, together with a free acid produced by the glands of the mucous membrane, digests albuminous matter; that is to say, dissolves it and makes it fit to be received in the organism of fish. The pepsin of fish is distinguished from that of the mammals by the circumstance that, even at a temperature far below 59deg. Fahr., it possesses an intensely digestive power, which is considerably increased by raising the temperature to 104deg. Fahr., while it is entirely destroyed if the temperature is lowered to 32deg. Fahr. In fish which possess a stomach the mucous membrane of the entire intestinal canal connected with it shows no digestive faculties, but serves only to absorb the albuminous matter dissolved by the gastric juice. The gall secreted from the liver, however, goes into the intestinal canal, as well as does a juice secreted by the pancreas and the appendages of the cæcum. Both the pancreas and the appendages of the cæcum are wanting in many fish. The appendages referred to, which in varying number are attached to the front part of the intestinal canal (3 in the perch, 19 to 150 in the salmonoids, and upward of 200 in the mackerel), are often connected into a glandular mass by a loose tissue.

The gall bladder does not digest albuminous matter, but contains a so-called "diastatic" ferment which transforms soaked starch to sugar, and thus renders it fit to be received in the organism. The liquids secreted by the pancreas and the appendages of the cæcum react in a neutral or alkalic manner, digest albumen, and to a limited extent possess the faculty of transforming soaked starch to sugar. Like the gall bladder, they also possess the faculty of changing fatty substances to an emulsion, and thus preparing them for absorption by the intestinal canal.

Matters are very different in those fish which have no stomach, for instance, in the carp and bleak. Here the entire intestinal canal, from the throat to the anus (though to a much greater extent in the front than in the back part) secretes a liquid which in its effect resembles that secreted by the pancreas, and which, therefore, digests both albuminous matter and soaked starch, as well as fatty substances. These fish have no appendages to the cæcum, but the liver pours a considerable quantity of gall into the intestinal canal, immediately back of the throat. These fish, therefore, are capable of digesting albuminous matter, carbohydrates and fatty substances.

It is well-known that fish do not masticate their food, as the teeth of predatory fish serve only to take hold of and to retain food. Even in those fish which possess strong teeth, worms and the larvæ of insects are only squeezed somewhat. Nor do fish envelop their food in saliva while in the mouth, as is done by mammals, as fish have no salivary glands.

Although the food, therefore, reaches the alimentary canal without any preparation favoring digestion, the alimentary canal in the majority of our fish is comparatively short. While in the cat, for instance, it is three times the length of the body, in man six times, in the horse twelve times, and in the goat even twenty-six times. We find that, according to numerous measurements, the proportion of the length of the body and the length of the alimentary canal is, in the pike, hake, whiting and tench, as 1 : 1; in the bass, perch and eel it is as 3 : 2; in the crucian carp as 2 : 3; and in the wels as 11 : 8. Only in a few species of fish does the length of the alimentary canal exceed that of the body to any great extent. A notable example is the lumpfish (*Cyclopterus lumpus*) of the Baltic, whose alimentary canal is from six to ten times as long as the body.

The rapidity of digestion depends very much on the quantity of food taken at one time. Small quantities are of course digested quicker than large ones. If a pike swallows a fish half its own size, so that in the beginning the tail protrudes from the mouth, the head is of course digested very soon; but gradually there is some delay, as the digestive liquids are only secreted in limited quantity, and the dissolved substances can be absorbed only gradually. Pike are not suitable for making observations relative to the time occupied by digestion, as they are in the habit of throwing up very soon some of the prey which they have swallowed; but I have made experiments with perch and hake which were fed on worms.

A number of perch, measuring each about 6in. in length, which had been kept on very short rations for some time previous, were fed on worms, which they swallowed so greedily that their bag-like stomachs were filled to their utmost capacity. In a perch killed two hours later the food was found only in the stomach, the gastric juices reacting in a strongly acid manner. After eight or ten hours a portion of the worms had reached the front part of the intestinal canal; but even after twenty-four hours the stomach was still very full, while at the end of the intestinal canal balls of feces were already forming; after sixty or seventy hours the stomach was empty; and after one hundred and ten hours the front and middle parts of the intestinal canal had likewise become empty, and only at the end of the canal were there feces, and digestion might therefore be considered as finished.

In hake, which had been well fed with worms, they evenly filled the intestinal canal from the throat to the anus after twelve or fifteen hours, but owing to the stronger secretion of gastric juice in the front part of the intestinal canal they had better digested there than in the lower part. This explains the observation that half-digested particles of food frequently protrude from the anus of fish, and from it the conclusion may be drawn that if fish are to be fed with the view to fatten them, it is better to give them moderate quantities of food at frequent intervals, than to give them large quantities at longer intervals.

The carp-like fish are frequently termed herbivorous fish, in contradistinction to predaceous fish. This term, as I have been taught by numerous investigations, is entirely erroneous. While young fish of all kinds examined by me were found to have eaten small crustaceans and infusorians, the intestinal canal of all fish of the carp kind measuring more than a finger's length, always contained at all seasons larvæ of gnats, dragon-flies, day-flies, beetles, etc. Large quantities of plants (green algæ) I found regularly only in the intestinal canal of *Chondrostoma nasus*, but it remains to be examined whether the algæ or the large quantities of infusorians and other diminutive animals adhering to them, form the principal food of this fish.

Uncooked starch flour was not digested by any of the fish which I examined. Even when, after being stirred with water, it was injected into the intestinal canal and remained there for days, the extracts of the digestive liquids produced in different ways did not in the slighest change it, but when it was boiled or roasted it was easily changed to sugar, and thus rendered soluble. It is therefore evident that of the seeds of some grasses growing in the water, and the young shoots of some aquatic plants which are occasionally found in the intestinal canal of carp, and of the grains of wheat, etc., which I discovered in some, and which Prof. Fric found in large quantities in the stomach of young salmon, it was not the starch which was digested, but the small quantity of albumen, fat and sugar contained in them.

PENNSYLVANIA FISHWAYS.—"Shad, rock bass, white and yellow perch, salmon and eels at the lowest market rates. Have a pound or two? Just caught off Market street!" This may be the cry of fish venders a year or two from now. About twelve months ago a previous fish commission adopted a fishway at the Columbia dam, the patent of Wm. N. Rogers, inspector of fisheries for the Canadian government. Satisfied with his invention, the result of thirty years' experience, he placed two of his simple, yet valuable contrivances in place. Last spring at Newport, Perry county, fifty miles above the dam shad were caught to a great extent. To-day there are eight fishways, six new ones having been constructed by the present active and progressive commission under the same patentee. Yesterday they were so far completed as to be open for inspection and acceptance by the commissioners. They proved satisfactory, and if the statement made in reference to fish is not fulfilled, it will be due to an ineffectual effort to curb the pirates below the dam. Yesterday three Commissioners, W. L. Powell, of this city, H. C. Demuth, of Lancaster, and H. C. Ford, of Philadelphia, accompanied by Eugene Snyder, Esq., of this city, and a *Call* reporter, were taken to the new fishways. They are located on the spot where the Worrall failures, in the same line, were built a number of years ago, and were open to a careful and minute inspection of not only the commissioners, but critics on matters of fish and fishculture who had gathered with the state representatives to fully investigate. The fishway is entirely of solid timber, six feet wide and 80 feet in length with a fall of one foot to every fifteen. The average grade of the fishway is one to every ten feet, but to make these an absolute test of their efficacy the present plan was adopted. In depth they are from two feet at the head to 6 feet at the mouth, which is on a level with low water mark and at that stage in several of the fishways there is a volume of water sufficient to allow the fish to pass up. The arms extend to within 2 feet 9 inches of the side, and form what is called a "bucket." To speak more plainly, it is a pool of dead water to which there is no current. The schute through which the fish pass is fifteen inches wide. The head of the fishway, through which the fish make their egress to the water above the dam, is fifteen inches wide and twenty inches high. As the water comes in it strikes the "rest," which forms a pool, and as it rounds the angle it has lost its force to such an extent that the insignificant fish can pass through. The pools or buckets from the point of the angle are twelve feet six inches, showing at once the quantity of fish that can rest in each on their way above the dam. The partitions that form the buckets, made of two-inch timber, are at an angle of thirty-seven degrees, and so check the force of the water in its downward course that by the time it reaches the last "bucket" it has but little power. Each fishway has eleven "buckets" at an average grade of little over a foot to each. The fishways into which the water was turned yesterday, are somewhat of an improvement over the two near the York county side of the river, because having added to them a horizontal break-water eight inches in length, the tendency of which is to reduce the swirl which would necessarily be occasioned if it were absent. The building of the new way was under the engineering skill of J. B. Kinney, who like Mr. Rogers, the patentee, is a resident of Yarmouth, Nova Scotia, and reflects great credit on him. Mr. Rogers was present yesterday. He has had thirty years experience in the fishway business. The commissioners were highly pleased with the fishways and they will be approved. They cost $1,000 each. Every effort will be made to see that the entrance is not obstructed, precaution having already been taken. As to the merits of the fishways, statistics show an increase of 50 per cent. in fish above dams where they have been placed.—*Harrisburg Morning Call, Sept. 22.*

LOBSTERS FOR THE PACIFIC.—Ottawa, Sept. 30.—The Fisheries Department has about completed arrangements for the transportation early in the month of November of a carload of live lobsters from the maritime Provinces to the Pacific coast. The car will be especially fitted up for this purpose. Experiments show that lobsters can be kept in a healthy condition for a sufficient length of time to insure their reaching Vancouver, barring accident, without losing life. As an outcome of this the department anticipates a successful propagation of the lobster in the Pacific waters, where none are now known to exist.

The Kennel.

FIXTURES.

DOG SHOWS.

Oct. 4 to 7.—Fifth Annual Dog Show of the Danbury Agricultural Society, Danbury, Conn. B. G. Lynes, Secretary.

Oct. 12 and 13.—Third Annual Show of the Stafford Kennel Club, Stafford Springs, Conn. R. S. Hicks, Secretary.

Feb. 21 to 24.—Twelfth Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Oct. 17 to 22.—Second Annual Meeting of the American Coursing Club, at Great Bend, Kan. G. I. Royce, Secretary, Topeka, Kan.

Nov. 7.—First Annual Field Trials of the Indiana Kennel Club at Bicknell, Ind. Open to dogs owned in Indiana. P. T. Madison, Secretary, Lock Box 4, Indianapolis, Ind. Entries close Oct. 25.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

Jan. 10, 1888.—Second Annual Field Trials of the Texas Field Trials Club, at Marshall, Tex. W. L. Thomas, Secretary, Marshall, Tex.

Jan. 16.—Fifth Annual Field Trials of the Pacific Coast Field Trial Club, near Kingsburgh, Cal. N. P. Shelden, Secretary, 320 Sansome street, San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5400.**

THE PATERSON DOG ORDINANCE.

THE Paterson, N. J., *Press* gives the following in relation to the movement against the dog ordinance referred to in our last number: "At a meeting of the Passaic County Fish and Game Protective Association held last night a resolution was introduced providing for the retaining of counsel to certiorari to the Supreme Court the ordinance of this city requiring every dog to be registered at the rate of two dollars. The resolution provoked some discussion. It was suggested by one member that dogs could hardly be considered fish and game, for the protection of which the association was organized and incorporated. On the other hand it was argued that the dog ordinance was an imposition on nearly every member of the club and that the association could not be engaged in better work than looking out for the interests of its members. When the association started into existence the fish and game laws were openly and persistently violated, and when the shooting season opened there was little game left for sportsmen who were anxious to live up to the law. In the first few months of its existence the association instituted about thirty prosecutions against offenders of the law. The result was that the violators saw that there was some authority in this county which enforced the law and further prosecutions were unnecessary. That the game laws are still being violated there is no doubt, but it is done in so quiet a way that the violators of the law escape; the wholesale violations of the law have been stopped and there is now better shooting in this county than there has been for years, and sportsmen who go out on the first day of the open season know that they are apt to find game. Occasionally it is necessary to prosecute some offender, but there is no doubt that the fish and game laws are better observed in Passaic county than any county in this State. The resolution introduced at last night's meeting of the association was finally passed without a dissenting voice.

"Ex-City Counsel Francis Scott was engaged this morning to carry up the case on the part of the association. Mr. Scott was City Counsel for a number of years, and it was thought best to obtain the services of one who had helped make city ordinances for the purpose of breaking them. Mr. Scott is thoroughly familiar with municipal law and the charter of the city, and he has no hesitation in saying that there is every probability that the association will win the suit. The city has the right to levy a tax on personal and real property for the purpose of raising money, but nowhere is the authority given to the city to levy a tax on dogs. The charter gives the city a right to regulate the running at large of dogs. Nevertheless the city some years ago passed an ordinance putting a tax of two dollars on every dog. The attention of the city was called to the manifest unconstitutionality of the ordinance, and so it was changed to read that the city required dogs to be registered and that the fee for registration should be two dollars. This was a mere subterfuge, and many lawyers considered the ordinance at present enforced as no better than the first one. How, it is asked, does registering dogs regulate their running at large? Still, admitting the city's right to require the registration of dogs, the city, it is claimed, would have no right to charge so high a fee as $2 for registration. Twenty-five cents would cover the expenses of registration, and $2 was rather in the shape of a tax. The dog ordinance has created a great deal of bitter feeling, dog owners consider it as an imposition on them; this was especially the case with men who raised kennels of dogs. Still nobody cared about fighting the case, as the money it would cost would pay the registration fees for a large number of years. The case is different with the association; the latter has a membership of seventy-five, and nearly all of these own dogs. Many of those have paid their fees for the present year, others have not. If the ordinance is set aside it will save ever dog owner $2 per year in the future. There are about 2,700 dogs in the city.

"It was at first thought best to await action on the part of the city. There is no doubt that in the course of events a complaint will be made against some member of the association, and it was thought that as soon as this was done the association might undertake the defense. An examination of the law showed that a certiorari might be taken even if the city did not attempt to enforce the ordinance, and advantage will be taken of this fact and Judge Dixon will be asked to grant a writ of certiorari on Tuesday of next week or within a day or two thereafter. If an agreement can be effected with the City Counsel the whole case can be argued before Judge Dixon and disposed of, but should the City Counsel prefer a different course the matter will come up for argument at the next term of the Supreme Court. The only difference will be that the latter course will result in more delay. The writ of course will act as supersedeas and the city cannot continue collecting the dog tax in the case appealed.

"The registering of dogs in this city has not tended to decrease the number of worthless curs, for the number of dogs killed annually by the police is ridiculously small, very few persons taking advantage of the ordinance in that respect. All it did was to make owners of dogs pay $2 per year. It in no way regulated the running of dogs at large. As a method of preventing this the old proclamations issued by the mayors were far more effective than the present arrangement."

ESSEX COUNTY KENNEL CLUB.—Lynn, Mass., Oct. 3.—*Editor Forest and Stream:* There was a meeting of the Essex County Kennel Club, Sept. 27, at the Revere House, Lynn, Mass. The resignation of Secretary Benjamin Phillips was accepted and Mr. Geo. H. Holtham was elected to fill that office. Twelve new members were elected. A committee of three was appointed to report at the next meeting of the club, on a room for the purpose of holding meetings and to be used as a club room for the members. The secretary was authorized to apply to the American Kennel Club for membership. A committee of three was appointed to select a tract of land for the purpose of holding field trials. The meeting then adjourned. The club was organized last May but owing to absence on vacation of members this has been our first meeting. The present officers are as follows: President, Robert Leslie; vice-president, Dr. O. P. Macalaster; secretary, Geo. H. Holtham; treasurer, E. L. Rogers. The objects of this club are to encourage the breeding of setters and pointers, to hold bench shows and competitive trials wherein may be demonstrated the merits of individual dogs of such breeds. Our club now is in excellent condition with a list of twenty-five members, and we intend to protect the game of this vicinity to the best of our ability.—GEO. H. HOLTHAM, Secretary.

WM. TALLMAN has resigned his position with Spalding Bros., and will devote his time to dogs and the selling of kennel goods of all descriptions, making specialties of the Blackstone dog food and a new crate invented by himself for the transportation of dogs. His address is 1203 Broadway, New York.

DOGS FOR LARGE GAME.

HUTCHINSON, Kas., Sept. 27.—*Editor Forest and Stream:* In your issue of July 7 "Leatherhead," in *Kennel Gazette*, gives us an interesting letter on how to breed dogs for big game. His idea of breeding for the best results in capturing the big game he mentions, deer, antelope, elk, wolves and the "feline tribe below the status of the lion and tiger," is amusing to the sportsmen of any experience. Speed, grit, endurance and size are what we want in a big-game dog, and if they are deficient in either point they are a partial, if not an entire failure. With twelve years experience in the West I have come to the conclusion that the greyhound contains more of these points than any other one breed of dogs. I have tried the cross between the staghound and greyhound, and gave them up, and I have tried the large foxhound crossed with the greyhound with the same dissatisfaction. I consider the deerhound on equal terms with the staghound, but both of them inferior to the greyhound in execution. Whenever the greyhound is crossed with any other breed you loose speed in a vain effort to gain grit, and I have always lost both. If the greyhound is bred pure, from stock that has well-known grit and experience, there is no dog on earth his equal for execution in the forest or field. They will run a hot trail equal to the staghound and if properly trained will catch and kill any game they come across. I may have been more fortunate with greyhounds than some others have that have tried them, but in my experience where greyhounds fail it would be useless to try anything else. It is generally believed that greyhounds are too timid, and I will admit it is often the case. If the same men that have seen them too timid could see my dogs kill a wolf, lynx, wildcat, or deer they would not doubt the grit and execution of the greyhound any longer. I would attack the largest elk in the mountains or the largest gray wolf that loafs on the plains with all the confidence in the world that they would kill it. Two years ago I had the satisfaction of seeing four of them catch and kill a black bear in the Indian Territory, and that too without any assistance from me, and it never even scratched a dog, the first bear they ever saw. It has been my ambition all my life to hunt large game and the distance I had to travel to find it never discouraged me. In the past few years I have used foxhounds in my pack to good advantage in starting the game, and I never owned a greyhound that would not fight his game as long as he could stand up after he saw and helped the pack in a few fights. I claim that a greyhound properly trained never knows fear and is the gamest dog on earth. I never carry a gun or anything to shoot with when I go on a chase and if my dogs can't catch it I let it get away.

M. E. ALLISON.

SPANIELS FOR BENCH AND FIELD.

Editor Forest and Stream:

Having just had my attention drawn to a letter in this week's issue of your paper by Mr. C. M. Nelles, it also revealed the fact that I had missed seeing a letter from Mr. Osborne in your issue of Aug. 25. The show season being over and my time very fully occupied I have for some weeks scarcely glanced at your paper, I am ashamed to say. However, I now have both issues before me, and as regards Mr. Osborne I have only to say that my sole reason for taking him to task in the first place was his ill-advised attack upon Mr. Kirk, whom we all know to be competent and conscientious, this carrying with it the insinuation that the dogs from Canada did not win on their merits certainly demanded some attention.

I have so repeatedly met men who "had dogs at home, far superior to any in the show room;" and many times have been induced to go some distance to see these wonderful dogs only to find the most wretched specimens, that I ventured the remark that Mr. Osborne's were probably of this stamp. However, I beg his pardon for so classing dogs I had not seen.

I am willing Mr. Osborne shall breed his type, and I want to be allowed to breed mine, without having them called hard names, as crocodiles, weasels, double-action Skyes, etc.

I think if Mr. Nelles will read Mr. Osborne's first letters again, he will see that he was the agressor, not I, condemning in strong language the style of dogs that won, their only claim, as he would have people believe, being that they came from Canada. However, in answer to a few points in Mr. Osborne's letter of Aug. 25, I would say that it is perfectly true that I have the blood of Beau in my kennels, and I am proud to have it; I have, however, many of precisely the same style without a trace of his blood. I am free to admit that in almost all of our cockers there is an admixture of field spaniel blood, which comes in through grandsires or dams, but this is what we are now seeking to avoid. We aim to retain the cocker as he is to-day, a distinct class; as to whether he is as useful a dog as the larger field spaniel, this must be proved by experience and judged by the particular work required. The cocker as recognized to-day is a handsome dog, hardy, plucky and intelligent, and I do insist that there is nothing in his conformation to prevent him doing hard service in the field.

For mixed work or retrieving from water we should use a different dog, although such work is simply the result of training, but work in field or brush is natural to the cocker and comes to him instinctively. I must decline the test named by Mr. Osborne, not because I would fear the result, but because I have not the time to work my dogs as they ought to be worked; and as I breed cockers purely from love of them, I regret exceedingly that I am so situated that I cannot give them the work they are so able to perform. Now, as to Mr. Nelles, it is quite clear he has no ideal, he is quite willing, he says, to breed any style that the majority decide upon. Well, this may do for one who has no ideas of his own, and only breeds what will sell the best, but it won't do for me, I have my idea of a type and I shall breed that type as long as I own a cocker, and when it ceases to be the type that wins on the show bench, then I shall be quite content to breed them for my own pleasure. I know that Mr. Nelles has two or three of these "crocodile," "double-action Skye" pattern, for I myself sold them to him, but I do regret that while they earned honors for him he has so little love or appreciation of them that he is ready to cast them aside and breed anything that people ask for. I am very much interested in his scheme for creating the new dog which is to be the "happy medium" and please everybody.

He is a reasonable man. "He will not ask them to fix the standard at either extreme," in other words he wants a compromise without a strong characteristic point. Who does he mean by "they," does he propose to direct the work of the Spaniel Club? I think he is not lacking in assurance at all events.

In conclusion I must take exception to this gentleman's statement that the English standard is so different from ours regarding amount of feather. We do not find one word, nor have we found one judge, that demands "profuse" feathering, they want plenty of feather of the right kind and in the right place; we do not believe our best judges, who understand the breed they are judging, will award the prize to the dog "having the largest and most abundant feathering." We believe that it is quite understood here as it is in England that while it is necessary that the feathering shall be full it is quite possible to have too much. After all, have not all our best dogs come from England? At least their sires or grandsires have. And right here I want to say a word to Mr. Osborne; he says the best of the Canadian dogs have been imported from the United States, which is not true; but it is true that their grandsires or sires and dams, both here and in the United States, came from England.

All I claimed in my first letter was that Canadians more than hold their own in the cocker class at every American show, where they are represented, and this cannot be denied. We have tried to breed the correct style, and having a good foundation in Old Tippo, Toronto Jet, and other direct importations, together with the valuable assistance of our friend Mr. J. P. Willey, and the services of his grand dog Obo II., also an English dog, we have to-day in Canada as fine a cocker as there is in the world, and I am not ready to see them abused or mutilated. I will not stand quietly by and see two or three inches taken from the length of body and added to the length of leg, and I am not ready, as my friend Nelles is, to breed to that pattern.

H. G. CHARLESWORTH.

TORONTO, Sept. 27.

Editor Forest and Stream:

Replying to Mr. Chas. M. Nelles in your issue of Sept. 23, I would say that nearly two years ago I sounded the alarm in regard to the breeding of the non-sporting cocker, and have until lately continued to agitate the subject literally single-handed.

My article in FOREST AND STREAM, May 5, was widely copied and commented on by the English sporting press. Mr. Osborne, of Detroit, after trying the non-sporting cockers denounces them, but because he told where he got working cockers a gentleman from Canada accused him of giving my stock a free "ad.", but it looks now as if Mr. Osborne's argument was too much for the Toronto man and that he is afraid to meet the dogs "that require a label" in the field, but I will do better than Mr. O., I will match a 14in. cocker against any brace in America that are under 12½in. The trial must be for three days, as I want to prove how worthless the show cocker is in the field.

The trouble is not in the present standard of the American Spaniel Club, but they are greatly to blame for not making judges adhere strictly to the standard, for a judge selects an exaggerated specimen for first place. Of course breeders who only breed for the show bench follow suit. Some one finds out how utterly worthless such dogs are in the field, but if he has the courage to say so some one is sure to "jump down his throat."

The boys think I am a crank on the subject of working cockers, and when I wrote a prominent judge about it he actually replied "he hoped I would win enough at New York to put me in better humor." But I knew I could not win and only got one second prize with a miserable little sausage-shaped duffer that has not "gumption" or ambition enough to flush a woodcock if it should alight in her kennel. Don't monkey with the standard, but get judges that know the work that the dog is required to do. J. OTIS FELLOWS.

HORNELLSVILLE, N. Y., Sept. 25.

DAYTON DOG SHOW.

Editor Forest and Stream:

The fifth annual dog show, held here last week under the auspices of the Southern Ohio Fair Association, was in many respects the best one they have held. There were 172 entries, with only 7 absentees. Many of the animals are well-known winners, and some of the newcomers were very good specimens. Messrs. John Davidson, of Monroe, Mich., and Geo. H. Hill, of Madeira, O., were the judges. Following is a list of the

AWARDS.

MASTIFFS.—1st, G. H. Wald's Rex; 2d, J. Hicks's Lancelot. Reserve, A. E. Pitt's Winning Card.

ST. BERNARDS.—1st, J. Gerstle's Peter; 2d and very high com., J. Hicks's Mark Antony and Yum Yum.

NEWFOUNDLANDS.—1st, C. Sanders's Rover; 2d, J. Holwager's Jumbo. Reserve, Pretsch & Kolker's Rover. Very high com., W. Neddermeyer's Prince.

GREYHOUNDS.—1st, J. F. Nicholson's Belle; 2d, A. Brechtel's King. Very high com., C. Rogge's Spring.

ENGLISH SETTERS.—CHAMPION—R. B. Morgan's Mandan.—OPEN—*Dogs:* 1st, J. S. Hudson's Dad Wilson; 2d, J. Moerlein's Bruce. Very high com., R. B. Morgan's Bishop Mandan. High com., C. Mack's Dick and A. W. Hitch's Dude. *Bitches:* 1st and 2d, R. B. Morgan's Rose Mandan and Pearl Mandan. Very high com., G. Volker's Lady V. Com., W. F. Mann's Lady Twilight. *Puppies:* 1st, A. J. Hussong's Lady H.; 2d, G. T. Grimme's Lady G. Very high com., C. Repp's Tit Willow and R. B. Morgan's Frank Mandan. High com., W. F. Mann's Bix and F. J. Buch's Sport.

BLACK AND TAN SETTERS.—1st and very high com., W. S. Hammet's Royal Duke and Rose; 2d, E. A. Coblitz's Dashing Count. Very high com., G. V. Neal's Prince G. and W. Neddermeyer's Sport Columbus. High com., M. Webber's Printz. Com., P. Collin's Hector. *Puppies:* 1st, M. Webber's Gus; 2d, A. O. Bonnet's Don.

IRISH SETTERS.—CHAMPION—Divided between I. H. Roberts's Bruce and H. E. Chubb's Zella Glenduff.—OPEN—*Dogs:* 1st, W. N. Kuhn's Mack N.; 2d, E. Maher's Larry S. Very high com., H. E. Chubb's Glenduff. High com., J. McCabe's Muggs and C. Bickham's York II. *Bitches:* 1st, W. W. Sweeny's Ruby Glenmore; 2d, I. H. Roberts's Jessie. Very high com., H. A. Bridge's Glenna and H. F. Carey's Beauty Belle. High com., C. Velten's Gypsy O'More. Com., H. Gebhart's Queen Bee. *Puppies:* 1st, H. A. Bridge's Glenna; 2d, C. Velten's Gypsy O'More. Very high com., A. Miller's Rudolph S.

POINTERS.—CHAMPION—T. Donoghue's Juno S.—OPEN—LARGE—*Dogs:* 1st, R. Schmidt's Bow Faust; 2d, Idstone Kennels' Patterson. Very high com., Dayton Kennel Club's King Shot. High com., L. Hunter's Bow's Boy and J. B. Smith's Quail. Com., T. McCabe's Echo.—SMALL—*Dogs:* 1st, C. G. Stoddard's Count; 2d, Dayton Kennel Club's Rumpty. Very high com., P. E. Snyder's Dick Lemon. High com., A. Hibsenan's Judge and Devonshire Kennels' Devonshire Drake. Com., G. V. Neal's Harrisburg and J. B. Smith's Snipe.—ANY WEIGHT—*Bitches:* 1st and high com., Idstone Kennels' Lilly Bang and Trinket II.; 2d, T. Donoghue's Queen. Very high com., A. W. Hitch's Queen, C. G. Stoddard's Lady Juno and W. Hoyt's My Nora. High com., C. G. Stoddard's Meteor's Maid and W. Neddermeyer's Corsicana Tode. Com., M. Webber's J. I. C. *Puppies:* 1st, Idstone Kennels' Idstone Prince; 2d, R. B. Morgan's Tom Croxteth. Very high com., Dr. W. R. Howe's Susie S. and L. Lang's N. Y. P. & O. High com., C. G. Stoddard's Marmaduke. Com., W. T. Davis's Bodine, Jr.

COCKER SPANIELS.—1st and 2d, P. A. Pickerell's Long and Short. Reserve, L. P. Saub's Bessie S. Very high com., L. Hunter's Daisy H. High com., G. Kling's Ponto and C. Sander's Bob S. Com., B. Kessler's Browny.

KING CHARLES SPANIELS.—1st, C. Sander's Nickey S.; 2d, Mrs. H. Gillespie's Felice.

FOXHOUNDS.—1st, 2d, very high com. and com., G. L. Wakely's Poke, Lead, Dick and Hunter. Very high com. and com., Doherty & Wagner's Bell and Trump and Dandy. High com., J. Marshall's Bessie. High com. and com., J. B. Ankeney's Bounce and Lead.

BEAGLES.—1st and 2d, Mrs. G. H. Hill's Banker and Marjory. Very high com., H. Hanitch's Beauty.

DACHSHUNDE.—1st, Idstone Kennels' Prince; 2d, Mrs. G. H. Hill's Wallexie.

BASSET HOUNDS.—1st and 2d, Idstone Kennels' Nimrod and Fanchon.

FOX-TERRIERS.—1st, J. H. Shepherd's Lady Winnie; 2d, E. Howlett's Fussy.

COLLIES.—1st, W. Neddermeyer's Muff; 2d, J. Hick's Sport.

BULLDOGS.—1st, W. W. Silvey's Duchess of Kent.

BULL-TERRIERS.—1st and 2d, F. F. Dole's Miss Nora and Countess. Reserve and very high com., P. H. Wheeler's Young Royal Princess and Gladiator. High com., C. J. Collins's Lady Pilot and Jack Napoleon.

BLACK AND TAN TERRIERS.—1st, E. Lever's Royal Agnes; equal 2d, W. Bott's Kid and Miss Lillie Weiffenbach's Daisy. Very high com., F. Buck's Tip.

HARD-HAIRED TERRIERS.—1st, 2d and very high com., C. T. Thompson's Geesela, Bread and Mollie. High com., J. Bartholomew's Tina.

YORKSHIRE TERRIERS.—1st, Mrs. G. H. Hill's Tiny; 2d, C. W. Schaefer's Tatters.

PUGS.—CHAMPION—G. Gillivan's Peggie.—OPEN—1st, J. Frondle's Kelpie; 2d, J. D. Smith's Dido. Reserve, G. W. Jackson's Cute. Very high com., E. Sander's Minnie. High com., G. Weisbroot's Topsy.

MISCELLANEOUS.—1st, W. Neddermeyer's Dan; 2d, H. J. Schulte's Elswick Lad II.; 3d, W. Hart's Jim. Reserve, B. McGrew's Beauty. Very high com., Mrs. Carrie S. M. Collins's Bird. Com., O. Wollenweber's Scottie.

SPECIAL PRIZES.

Best English setter dog, J. S. Hudson's Dad Wilson; bitch, R. B. Morgan's Rose Mandan; stud dog, same owner's Mandan; puppy (two), A. J. Hussong's Lady H. Irish setter dog, W. N. Kuhn's Mack N.; in open class, the same; bitch, H. E. Chubb's Zella Glenduff; in open class, W. W. Sweeney's Ruby Glenmore; puppy (two), H. A. Bridge's Glenna. Gordon setter dog, W. S. Hammet's Royal Duke; bitch, same owner's Rose; puppy, M. Webber's Gus. Pointer dog, R. Schmidt's Bow Faust; bitch, T. Donoghue's Juno S.; dog in large open, Bow Faust; small, C. G. Stoddard's Count; bitch in open class, Idstone Kennels' Lilly Bang; dog puppy, same owner's Idstone Prince; bitch, Dr. W. R. Howe's Susie S.; dog owned in Montgomery county (two), C. G. Stoddard's County kennel, Idstone Kennels; best in open classes, same owner's Lilly Bang. Largest display of foxhounds, G. L. Markley; brace, same owner's Poke and Lead. Greyhound, J. F. Nicholson's Belle. Deerhound, P. Kern's Sable. Beagle dog, Mrs. G. H. Hill's Banker; bitch, same owner's Marjory; owned in Montgomery, H. Hanitch's Beauty; dachshund (two), Idstone Kennels' Prince; basset hound, same owner's Nimrod; cocker spaniel (two), P. A. Pickerell's Long; bitch, same owner's Short; King Charles spaniel, dog, C. Sander's Nickey S.; bitch, Mrs. H. Gillespie's Felice; fox-terrier, J. H. Shepherd's Lady Winnie; wire-haired terrier, C. T. Thompson's Geesela; black and tan terrier, E. Lever's Royal Agnes; owned by lady in Dayton, Miss Lillie Weiffenbach's Daisy; Yorkshire terrier, Mrs. G. H. Hill's Tiny; owned by lady in Montgomery county, C. W. Schaefer's Tatters; bull-terrier, F. F. Doles's Miss Nora; pair puppies, P. H. Wheeler's Gladiator and Young Royal Princess; bulldog, W. W. Silvey's Duchess of Kent; Newfoundland, C. Sander's Rover; collie, W. Neddermeyer's Muff; pug, bitch, G. Gillivan's Peggie; dog in open class (two), J. Frondle's Kelpie; bitch puppy, G. W. Jackson's Cute; mastiff dog, G. H. Wald's Rex; St. Bernard, dog, J. Gerstle's Peter; bitch, J. Hicks's Yum Yum; smallest toy, Miss Lillie Weiffenbach's Daisy; stud pointer or setter owned in northern Ohio, R. B. Morgan's Mandan.

THE LINDEN BEAGLES.

LINDEN, Mass., Sept. 27.—*Editor Forest and Stream:* I give you a brief account of our first hunt of the season with the Linden beagles. The morning of Sept. 16 opened up clear and cool, and as my partner and myself had a day off, we concluded to take out the beagles and have a day's sport among the cottontails. The start was made at 6 o'clock A. M., with four of our best hounds. We arrived at the grounds at about 7 o'clock, and it was not long before the fun commenced. The dogs started off well bunched together, and gave him a pretty hard run for about ten minutes, and then he went to burrow without our getting a shot, as we did not see him at any time. It was not long before they had another one going, and such sport I never had before in all my life. It proved to be a young one, not bigger than your fist, and he would not go over 200yds. away. He was a puzzler to the dogs, as they could not seem to drive him; but they knew he was somewhere about all the time. We saw him half a dozen times and could have shot him, but he was altogether too young. After running around about a quarter of an hour he went into a hole in the rocks, and we called the dogs off and moved on.

We had quite a tramp before we started another one, but the dogs found one at last and had a splendid run for over fifteen minutes, and I can tell you the music was grand; I can't tell it as it ought to be told; any one to appreciate it must be there and hear for himself. The dogs brought him right by us, and Mr. Parry had a chance to try his skill with the gun. He made as pretty a shot as I ever saw; he "held ahead" and got his rabbit.

We had five more starts before the day was over and got two of them, and reached home before supper time, tired, but with the satisfaction that one has after having a good day's sport.

It is a little early yet to go out for all day, as it is hard getting through the bushes, for the leaves have not commenced to drop off yet, and you cannot see so much of what is going on as you can in another month.

I still think the little beagle of 15in. or under the best dog for rabbits there is going, but too many make the mistake of running a pack of beagles some 13½ or 14in. high with others 16 to 17in. and then come out and say the little ones can't stand it all day. Why, no wonder they can't, for they have to go at such a tremendous gait in order to keep anywhere near the large ones that they soon get all played out. I have done this same thing myself and know whereof I speak. But run a lot of from 13½ to 14½in. high together and you will find the little fellows are all right, and if well bred will last all day. I hope to see this little dog appreciated more in the future than he has been in the past.

W. S. CLARK.

THE STRYCHNINE FIEND.—*Editor Forest and Stream:* On Wednesday Sept. 28 Mr. T. S. Skilton, Colebrook, Conn., lost a very valuable setter bitch by poisoning. She was very promising, and bid fair to be one of the best of field dogs. On Friday following his other dog, Old Tommo, went the same way. This dog will be remembered by almost every sportsman in northwestern Connecticut as a most remarkable field dog, carrying for four years a standing challenge for $100 to any sportsman in the county to produce a dog that could bring more woodcock to bag than he. But he is gone, and we shall never see his steady point in the woodcock field again. He was an old dog, and his days of usefulness in the field were nearly over, but it is exceedingly sad that so good a dog should be brought to his end in so cruel a way He was the pet of the whole village, and the inquiry of every one is "who is there mean enough to do it?"

—COLEBROOK.

WESTERN FIELD TRIALS.—Kansas City, Mo., Oct. 1.—*Editor Forest and Stream:* The field trials of this association will be held this year at Carthage, Mo. There is an excellent hotel and good livery, special rates have been secured for each. Carthage is easy of access from all directions, being at the intersection of the Kansas City and Joplin branch of the Missouri Pacific and the St. Louis and San Francisco roads. There are plenty of birds and no sand burrs. Grounds ample in extent and including a great variety of ground. A variety of causes has prevented the selection being made earlier, but the association will doubtless allow more time for the closing of entries in the All-Aged Stake so that those who have held back waiting for a knowledge of the location will yet have time to make up their minds.—R. C. VAN HORN, Sec'y and Treas. Western Field Trials Association.

DEATH OF VICTORIA.—Providence, R. I., Sept. 30.—*Editor Forest and Stream:* I regret to inform you of the death of my champion bull-terrier bitch Victoria. She was the winner of one first prize in England, and three firsts, eleven champion and several special prizes in this country. At the last W. K. C. show she won a special for the best bull-terrier in the show of a $50 silver flask, and with my champion Jubilee a club medal for best pair in show.—W. J. COMSTOCK.

PACIFIC KENNEL CLUB.—The annual meeting of the Pacific Kennel Club was held in San Francisco Sept. 21. Following is the list of officers: Col. Stuart Taylor, president; R. E. Wilson, H. T. Payne, C. N. Post, M. E. C. Munday and J. M. Barney, vice-presidents; James E. Watson, secretary-treasurer; Dr. C. G. Toland, J. H. Fritch, S. C. Alexander, H. H. Briggs, E. I. Hutchinson, J. M. Adams and F. C. Zimmerman, executive committee.

MASTIFF TYPE.

NEW YORK, Sept. 30, 1887.—*Editor Forest and Stream:* The writer has no desire to enter the controversy between Messrs. Wade and Wynn on the subject of mastiff type, but merely to offer a suggestion with regard to one phase of that controversy.

Both Messrs. Wade and Wynn seem to agree on one point, that the type of the original mastiff is involved in great, if not total, obscurity. We are certainly safe in taking as a fundamental proposition a statement in which two such opposing and eminent authorities agree, and it seems to us that their prolonged controversy is of real value only in so far as it has laid down this proposition. And yet after all it is a proposition recognized for a long time past by mastiff breeders.

They have not been breeding back to the original mastiff but forward to an ideal dog, expressing to the mind's eye the uses, the moral characteristics and history of the mastiff. Mastiff breeding both in England and America has been and is not so much from a prototype as toward an antitype. This is the "improvement" in the breed.

The value of the long controversy to which we have been asked to give attention can well be determined by asking whether, if among the monuments of ancient England there was found a sculpture or a carving of a mastiff, together with a duly authenticated declaration that it represented the original mastiff, it would alter the present system of breeding or the effect of the accumulated decisions of the shows. In the Anglo-Saxon ring as in the Anglo-Saxon court the decision of the majority of the judges is the law.

It is a matter of deep regret that the discussion of Messrs. Wade and Wynn has run so much to the merits of one particular dog, Mr. Wade setting all his faults in exaggerated lines before the public and giving place to none of his good points, thus giving, we believe unintentionally, a false impression of that same dog to the general public. We refer to Mr. E. H. Moore's Ilford Caution.

Whatever may be a man's opinion of this dog, we submit that the expressions "disgusting-looking brute" and "snub-nosed beast" are not properly applicable, and savor more of violent prejudice than calm judgment. It must certainly be very discouraging to Mr. Moore to purchase and import a dog like Caution and then to have him assailed in the newspapers by a man who views him from one standpoint only. It must certainly be very depressing to intending importers to see Mr. Moore's efforts so inconsiderately dealt with.

Mr. Wade has given the impression that Caution is nothing save a "disgusting-looking beast." This seems hardly fair and is quite in contrast with the declaration of a well known judge who having placed Caution second remarked to the writer that whatever might be the dog's place on the bench he was, judging from his appearance, admirably calculated to correct the worst and most general faults in American mastiff bitches—an opinion subsequently verified, inasmuch as Caution, in several cases known to the writer, has produced square, broad-muzzled dogs with the staunchest of legs, out of bitches which prior to his importation would have been much reduced in value for the want of a proper stud dog in America. X.

INDIANA KENNEL CLUB.—Indianapolis, Ind., Oct. 1. —*Editor Forest and Stream:* At the annual meeting of the Indiana Kennel Club, held this day, the following officers were re-elected: D. C. Bergundthal, President; E. S. Shultz, J. E. Doherty, J. M. Freeman, First, Second and Third Vice Presidents; S. H. Socwell, Treasurer; P. T. Madison, Secretary. The reports of the treasurer and secretary showed the club to be in a very prosperous condition. The time for holding the first annual field trials at Bicknell, Ind., was changed from Oct. 31 to Nov. 7, and the time of closing entries extended to Oct. 25. The trials promise to be a great success, far exceeding our most sanguine expectations. Messrs. D. C. Bergundthal and P. T. Madison were invited to judge the trials, and the third judge will be selected on the ground. Should anything happen to prevent Mr. Bergundthal or Madison from being present, other competent judges will be selected. Our grounds at Bicknell are well stocked with quail, and are equal to those of the Eastern Field Trials Club at High Point.—P. T. Madison, Secy.

BUFFALO KENNEL CLUB.—Buffalo, N. Y., Oct. 3.—*Editor Forest and Stream:* I notice in your issue of Sept. 29, a report of a meeting of the Executive Committee of the A. K. C. held in New York Sept. 22, in which you state that "the application of the Buffalo Kennel Club for membership was refused." Will you please inform me when and from whom the application was received? I fail to find anything in the records of the club to show that it has ever applied for admission to the A. K. C., and there is no other kennel club in this city.—A. W. Smith, Sec'y Buffalo Kennel Club.

PEDIGREE WANTED.—St. Louis.—*Editor Forest and Stream:* Can you or any of your readers give pedigree of Gypsie, a black and tan Gordon setter bitch, by Col. Ainsworth's (Des Moines, Ia.) Luke Blackstone out of Gypsie Blackstone? I would like to get her full pedigree, if possible.—Ruby.

THE AMERICAN FIELD TRIALS.—Entries in the All-Aged Stakes of the American Field Trial Club close on Monday next, Oct. 10. The secretary's address is C. W. Paris, Cincinnati, Ohio.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Barry and Mettlehorn. By Contoocook Kennels, Peterborough, N. H., for orange tawny and white St. Bernard dogs, whelped Sept. 4, 1887, by Grimsell (Rex—Alma) out of Hermita (A.K.R. 3018).

Queen Naso. By Greenfield Kennels, New York, for liver and white ticked pointer bitch, whelped Sept. 3, 1887, by Naso of Kippen (Naso II.—Maggie) out of Rosalie (Bang Bang—Rose).

Goldenrod. By J. H. Winslow, Philadelphia, Pa., for lemon and white pointer dog, whelped May 16, 1885, by Beaufort (A.K.R. 694) out of Zuba (A.K.R. 1359).

Brunette. By J. H. Winslow, Philadelphia, Pa., for black and white pointer bitch, whelped June 10, 1886, by Graphic (A.K.R. 2411) out of Zitta (A.K.R. 1358).

Bangle. By J. H. Winslow, Philadelphia, Pa., for black and white pointer bitch, whelped May 10, 1887, by Naso of Kippen out of Della (A.K.R. 1247).

Peggie Bowley. By J. H. Winslow, Philadelphia, Pa., for black cocker spaniel bitch, whelped Oct. 6, 1886, by Kobo (A.K.R. 2514) out of Hilla (Obo II.—Clio).

King. By A. W. Smith, Buffalo, N. Y., for black and tan terrier dog, whelped May 14, 1887, by Lord George (Burke—Luce) out of Safety (King—Violet).

DEATHS.

Victoria. White bull-terrier bitch, whelped April, 1883 (A.K.R. 1893), owned by W. J. Comstock, Providence, R. I.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

T.—My beagle hound, three years old, has been troubled with red mange. Rubbing him with sulphur and lead relieves but does not cure. Shall I give him Fowler's solution of arsenic and how much? Ans. Give five drops night and morning in the food. Keep the bowels clear with castor oil in dessertspoonful doses and use the following ointment:

℞.	Ung. zinc oxid.
	Ung. diachylon ..... ää ʒi.
Mix.	Sig. External.

A. C. J., Mechanicsville, N. Y.—I am bothered to know what to do with my dog, an Irish setter 9 months old. In the morning a thick matter appears in the eyes. He has a peculiar cough, but it don't bother him, for he will hunt as well as ever. He eats but little and grows poor; he is very active. He has a very strong smell, so much so I don't like to let him into the house. Is there anything I can do for it? Ans. Wash with carbolic soap. Give 3 grains of quinine night and morning, and a teaspoonful of syrup of buckthorn every other day.

G. H. C., Boston.—My cocker spaniel, three years old, has a scurfy humor on his back; his coat is harsh and dry. A few days ago I commenced to give him Fowler's solution of arsenic, 5 drops twice a day. A local druggist told me that 10 drops a day was too powerful a dose for so small a dog, and recommended 3 drops twice a day. Will you kindly advise what you should think the proper dose, and also the length of time to continue treatment. Ans. Five drops is the best dose. Continue for 3 weeks, then omit a week and begin again. See answer to "T." this week.

Rifle and Trap Shooting.

The shooting by the honoraries and guests was as follows: Lieut. Bumstead 21, T. H. Day 21, Lieut. Hayden 19, Major Shumway 18, Lieut. James Earley 18, Sergt.-Major J. E. Lancaster 18, J. B. Cleveland and Lieut. Forbes B. Fay 17, A. E. Brown 16, Major Chaffee 15, Capt. Merrill 15, J. B. Willard 15, Col. Wellington 12, Capt. Hams 12, Capt. G. H. Cleveland 12, H. Mansfield 12. In the afternoon the two companies paraded as a battalion under Major Shumway, Lieut. F. S. Hoyt, of the City Guards, Adjutant, with Lieuts. Hayden and Bumstead as staff officers. The music was by the Worcester brass band. The parade closed with review and dress parade on Central Park. The reviewing party was His Honor, Samuel Winslow, Mayor of Worcester, Col. Wellington, Capt. Harris, Capt. Regan, Capt. Merrill, Capt. Levi Lincoln, Gen. A. B. R. Sprage, Gen. Josiah Piskett and Capt. E. A. Wood. In the evening there was a banquet, followed by speech-making and the presenting of prizes to the following: Sergt. A. D. Jefferson, Sergt. C. S. Perry, Sergt. E. G. Barrett, Priv. W. R. Jacobs, Priv. Fred Howland, Priv. E. W. Hinds, Priv. J. W. Lepier, Priv. W. E. Wilkins, Lieut. W. A. Condy, Priv. Earnest Stone, Corp. Fred Knight, Priv. Henry Tisdell, honorary member T. H. Day, honorary member Lieut. James Early, honorary member Lieut. Samuel Hathaway. Company prize for competition to a company team of 32 men, between the Heywood Guards and City Guards. Won by a score of 377 against 371. Capt. S. T. Chamberlain, of Gardner; Priv. G. C. Goodell, of Gardner; Priv. G. W. Bishop, of Gardner.

ROCHESTER, N. Y., Oct. 1.—*Editor Forest and Stream:* The Rochester Rifle Club is the name of a new organization recently formed in this city for the practice of off-hand rifle shooting. The officers are C. W. Briggs, president; C. R. Richards, vice-president; Daniel Wood, secretary and treasurer. It will practice out of doors during fair weather, and has a 50yd. range under roof for winter use. The first shoot was held this week, at 100yds., and the score was:

Mallory	10	10	7	10	9	9	9	9–72	
Redmond	9	10	6	9	10	9	9	7–69	
Richards	5	9	6	9	9	6	1	19	6–52
Graves	7	8	9	6	9	7	8	8–62	
Belding	8	7	8	7	7	6	10	9–62	
Luetchford	1	2	5	2	8	1	10	4–33	
Porter	5	4	6	9	9	6	10	6–56–406	
Green	9	9	9	9	8	9	8	9–70	
Angevine	7	7	7	9	8	8	7	7–60	
Boyd	9	8	8	8	7	6	7	5–58	
Briggs	10	7	9	10	8	9	9	9–71	
Drake	8	8	6	8	8	10	7	10–65	
Wood	9	8	8	8	10	7	8	0–58	
Miller	8	9	8	10	8	6	7	6–62–444	

The club intends to hold a weekly practice shoot and if it does not develop any phenomenal marksmen will at least afford the members some sport.—R.

CREEDMOOR.—New York, Oct. 3.—The tenth Marksman's Badge Match of the N. R. A. was shot at Creedmoor, Oct. 1. The attendance, owing to the rain, was very slim, but the scores were good. Private S. C. Pirie, Co. I, 23d Regiment, won the gold medal for the second time. Following are the scores, those marked * being the winners:

	200yds.	500yds.	Total.
*S C Pirie, Co I, 23d Regt	22	25	47
*F Stewart, Co C, 69th Regt	23	23	46
*J P M Richards, Co G, 7th Regt	21	24	45
*C E De La Vergne, Staff, 13th Regt	22	23	45

WHEELING, West Va., Sept. 24.—To-day the members of the Schuetzen Verein indulged in several practice and match scores, at which some fine scores were made. Quite a number of visitors were there. Among them was Lieut. Kerr, of the United States army, who is quite a good shot and an ardent lover of rifle shooting. Lieut. Kerr shot one score. Following are the scores of the practice matches:

First Score.

R S Stewart	7	6	8	8	6	9	10	8	8	5–75
Otto Jaeger	7	8	8	7	8	8	7	4	8	7–72
Wm Cox	8	6	6	5	4	8	7	8	6	6–64
Prof Scheufler	8	8	10	7	9	3	4	3	6	5–63

Second Score.

Otto Jaeger	6	10	9	8	9	7	9	7	7	7–79
Lieut Kerr	4	10	8	5	9	5	5	8	10	9–73
R S Stewart	8	10	4	7	5	6	7	5	7	8–67
W Cox	6	5	8	8	7	7	7	5	7	4–64
Theo Schreiber	6	7	6	7	7	10	5	7	6	7–62
Prof Scheufler	10	7	8	6	4	6	4	7	5	8–60

After this match was proposed, Messrs. Jaeger and Cox on one and Messrs. Schrieber and Stewart on the other team:

First Match.

Otto Jaeger	10	9	6	9	10	9	6	8	6	10–83
W Cox	8	8	5	5	7	9	5	7	4	8–66–149
R S Stewart	5	8	10	8	7	8	8	4	5	10–73
T Schrieber	8	9	5	7	5	8	5	5	6	6–65–138

Second Match.

R S Stewart	8	9	5	9	9	7	8	5	5	5–70
T Schrieber	10	8	3	6	7	10	4	5	3	8–64–134
Otto Jaeger	10	6	7	7	6	7	7	8	7	7–67
Wm Cox	7	7	6	5	6	5	9	6	7	6–65–134

The second match resulting in a tie, was shot off by shooting one shot each, which resulted again in favor of Messrs. Jaeger and Cox. The Washington Rifle Club has as yet been unable to get six men to shoot against Wheeling's second score in the series of three matches.

WILMINGTON, Del., Sept. 26.—There was a small turnout on Healdmoor range this afternoon. Two members of Troop B were present and took part in the military badge match, which was again won by J. W. Geyer. The members of Troop B used the company's new carbines, which are very accurate shooting weapons when in well trained hands, but as this was the first time either member had shot at 200yds. with any rifle their low scores are not surprising. The scores are as follows on standard American target at 200yds, out of possible 100 points:

First Match—Military Badge.

H Simpson	5	6	5	7	9	4	6	4	7	3–56
E M Clark	4	5	5	3	3	7	4	7	4	4–46
J W Geyer (mil)	4	3	6	6	5	6	5	2	4	4–45
G W Quinn (mil)	1	2	2	0	0	1	1	6	0	2–15
R E Francis (mil)	0	0	0	0	1	1	1	3	0	4–10

Second Match.

J W Geyer (mil)	10	2	6	3	8	9	10	8	9	4–69
E M Clark	9	2	2	7	2	2	3	10	7	4–48
H Simpson	2	3	3	5	4	0	7	3	3	5–35

Third Match.

J W Geyer	2	4	4	10	5	5	9	9	5	4–54
E M Clark	5	3	8	4	2	10	3	6	5	8–57
H Simpson	5	5	6	4	3	5	3	7	7	5–50

BALTIMORE, Sept. 22.—The State Troop have been enjoying a three-days' shoot, the scores standing at 200yds.:

Tuesday, Sept. 20.

Sergt H B Bell, NCS	4444544—29	Pvt Ford, G	4442433—24
Capt R P Brown	5442553—28	Sergt Weed, G	2334443—23
Pvt J O Scharf, G	4444444—28	Pvt Scott, C	3333433—22
Corp Starr, E	3543344—26		

Wednesday, Sept. 21.

Pvt Scharf, G	5444345—29	Lieut Pennington	3443443—25
Corp Starr, E	544 544—29	Pvt Scott, C	0443433—21
Sergt H B Bell, NCS	4444444—28	Pvt Higgins, G	3444242—23
Pvt Ehlen, H M	3444345—27		

Thursday, Sept. 22.

Pvt von Feldman, C	4545455—30	Pvt Scott, C	4443235—25
Sergt H B Bell, NCS	4544451—30	Sergt Kirk, H	3344334—24
Pvt Weaver, J S L M	4345544—29	Corp Starr, E	3534443—24
Pvt Higgins, G	4333545—27	Pvt Zipprian, G	3323343—21
Sergt Lullybridge, C	4445343—27		

MEDFORD, Sept. 26.—The Lawrence Light Guard, Co. E, 5th Regiment, M. V. M., annual target practice. It has rained on the day chosen by this company for its practice for the last four years.

Pvt Sullivan	35334—18	Musician Clark	45222—15
Capt Clark	54341—18	Sergt Lenox	03443—14
Lieut Mitchell	33444—18	Pvt Perkins	02434—13
Pvt Day	42433—16	Sergt Maguire	02434—13

The first prize, a silver medal, was awarded to Private Sullivan, his previous record being better than that of any of his competitors.

HARTFORD, Ct., Sept. 24.—The annual prize shoot of the Franklin Rifle Club came off to-day and was very successful. Over forty members took part in the shooting at 200yds., and a number of others were present but did not shoot. The Hon. Geo. G. Sumner and Col. Geo. P. Bissell were elected active members, Mr. Dudley Seymour was restored as an active and Mr. S. J. Lyons, of Collinsville, was put on the list of honorary members. The full list of marksmen and their scores, is appended: 10 shots each: T. H. Britten 42, C. F. Tucker 40, E. H. Williams 39, E. P. Whitney 38, Otto Klett 38, H. M. Pope 36, E. C. Henn 35, W. W. Tucker 34, Gen. J. R. Hawley 33, F. K. Rand 32, W. S. Loveland 31, E. J. Hale 30, D. J. Jordan 29, H. B. Woods 29, F. H. Williams 29, Cuno Helfricht 29, L. H. Robertson 26, D. S. Seymour 28, Samuel Hurlburt 27, H. O. Whitney 27, Henry Andrus 26, C. H. Case 25, R. P. Kenyon 24, C. A. Terry 24, O. M. Brown 24, T. C. Nacdele 24, Gen. J. B. Clapp 23, A. T. Leonard 23, Hezekiah Lord 23, E. E. Beach 23, H. M. Jacobs 22, Maj. J. C. Kinney 21, Maj. J. Warner 20, Ned. Lawrence 20, E. Dart 19, E. C. Billings 18, J. E. Duley 18, L. B. Merriam 16, Geo. Grou 16, W. R. Hopkins 14, J. S. Russell 13, Dr. H. C. Bullock 13, Theo. Studley 12, S. A. Hubbard 11. After the prizes were awarded Mr. Saml. A. Hurlburt, one of the original members of the club, recalling the fact that this was the twentieth anniversary, read a pleasant little poem bringing to mind reminiscences of the early days, which were greatly enjoyed.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE DUNELLEN TOURNAMENT.

THE second annual tournament of the Middlesex Gun Club was formally opened Monday, Oct. 3, by Mr. Fred Quinby, chairman of the Tournament Committee, who welcomed "friends, acquaintances and foes" in a pleasant speech. The day was damp and unpleasant until about noon, when the weather cleared. The morning was occupied in shooting sweepstakes until 2 P. M., when the first regular event commenced.

The grounds of the club at Dunellen, N. J., are nicely situated, about twenty minutes from Force's Hotel, Plainfield, the headquarters of the club during the shoot. Everything within the bounds of possibility was done for the comfort of visitors, and the arrangements were most satisfactory. A good dinner was served on the grounds by caterer Chas. Smith, of Plainfield, from 11 to 3.

Among the noted shots present were: C. W. Budd, Des Moines, Iowa; Major J. W. Taylor, of the Chamberlin Cartridge Co., Cleveland, Ohio; R. H. Brientnall, Newark, N. J.; Chas. Richards, of the Atlantic Ammunition Co., N. Y.; W. Fred Quinby, N. Y.; J. R. Stice, representing the Winchester Arms Co., New Haven, Conn.; O. Von Lengerke, Newark, N. J.; R. E. Sheldon, Cleveland, Ohio; Ben Tiepel, Cincinnati, Ohio; Ed Taylor, Cincinnati, Ohio; H. McMurchy, representing the L. C. Smith gun, Syracuse, N. Y.; Q. A. McClure, McKeesport, Pa.; Dan Lefever, of the Lefever Arms Co., Syracuse, N. Y.; H. W. Eager, Marlboro, Mass.; Chas. Wagner, Pultney, N. Y.; F. N. Evans, Bay Ridge, N. Y.; Enoch Miller, Springfield, N. J.; T. S. Hall, Fall River, Mass.; A. R. Bowdish, Oxford, Mass.; E. W. Yerrington, Norwich, Conn.; Gus. Manitz, Rockaway, N. J.; G. S. McAlpin, Mahlon Fox, Trenton, N. J.; Chas. H. Allen, Trenton, N. J., Richard Stevens, Scotch Plains, N. J.; Chas. Luther, Syracuse, N. Y.; W. E. Willis, Jersey City, N. J.; Wm. Hoey, N. Y. Over 4,500 blue rock pigeons were shot during the day. The first event, Monday, was expected to be the shoot off of ties for the Atlantic Ammunition Co. prizes, but as there were no ties the diamond badge went to H. W. Eager, Marlboro, Mass., score of 97 out of 100; second to Chas. Wagner, Pultney, N. Y., score of 95; third to Q. A. McClure, McKeesport, Pa., score of 94. The shooting is from three sets of traps, all going at the same time, professionals at one, amateurs at another, and impromptu sweep at the third.

Extra sweep No. 1, at 9 blue rocks, 3 traps, 10-gauge guns at 18yds. and 12-gauge at 16yds. rise; $1 entry fee:

Wagner	111111111–9	Cooper	011101101–6
Taylor	101110111–7	T Kay	100100001–3
McMurchy	111011111–8	Leigh	001000101–3
Budd	111101 01–7	Stice	011111111–8
Allen	101110101–6	Williams	110101011–6
McClure	011111111–8	Bowdish	101101111–7

Second and third divided.

Extra sweep No. 2, at 9 blue rocks, same as No. 1:

Stice	111001111–7	Tee Kay	001111101–6
Taylor	111111111–9	Leigh	110100110–5
McMurchy	101111111–8	Fox	110111111–8
McClure	111111111–9	Budd	111111111–9
Wagoner	111111111–9	Quinlan	111010011–6
Stevens	010010011–4	Bowdish	111110010–6
Brientnall	011100111–6	C Smith	101000010–3
Cooper	111101011–7	N Apgar	111111019–7
Allen	110111110–7	O Von Lengerke	001101001–4

First, third and fourth divided. Fox won second.

Extra sweep No. 3, at 9 blue rocks, same conditions:

J R Stice	111101011–7	Budd	111111110–8
Quinlan	101111000–5	Bowdish	111101111–8
Fox	10*110101–5	C Smith	110111101–7
McMurchy	111111101–8	Richards	101111101–7
Taylor	111011111–8	O von Lengerke	010011011–6
McClure	011011110–6	Cooper	101111011–7
T Kay	111110000–5	N Apgar	101101110–6
Wagner	111011101–7	Leigh	001010111–5
Brientnall	110011011–6	Allen	111111110–8

First divided, second divided, third divided, fourth won by Quinlan.

Extra sweep No. 4, at 5 pairs double blue rocks, 5 traps, at 15yds. rise:

Stice	10 11 11 11 11–9	Williams	10 11 11 11 11–9
Budd	10 11 11 11 11–9	Bowdish	11 11 10 10 10–7

R. H. Brientnall wins first with 19, second and third divided, and Maj. Taylor and Yerrington divided fourth.

Tuesday morning was bright and clear, with a moderate wind from the northwest, which during the day freshened up and hurried the rocks at a pace that made it difficult to stop. The shooters were early on the grounds to have a try at live birds. One sweep was shot which resulted in ties; they were not shot off, as the birds were poor, so we do not give the score. Better birds are promised for the regular events. The attendance was somewhat better than on Monday. Among the new comers were: F. W. Cooper, Mahanoy City, Pa.; M. Fox, Kingston, N. J.; C. Thorne, Poughkeepsie, N. Y.; F. M. Eames, Bay Ridge, L. I.; M. Williams, Elizabeth, N. J.; J. D. Voorhees, Bound Brook, N. J.; S. Riggott, Rockaway, N. J.; W. R. Hobart, Newark, N. J.; Dr. Conover, Springfield, N. J.; D. H. Terry, Plainfield, N. J.; T. S. Hall, Fall River, Mass.; E. Miller, Springfield, N. J.; R. Clayton, Luzerne, Pa.; Wm. Cannon, the champion one arm shot of Newark, N. J.; Tom Eley, Kingston, Pa.; Jim Eley, Plymouth, Pa.; J. C. Clark, Kingston, Pa.; W. Seigler, Montclair, N. J.; P. Fowler, Roselle, N. J.; J. R. Rust, Philadelphia, Pa.; T. A. Peacock, Westfield, N. Y.; Capt. Jones, Bordentown, N. J.; M. C. Smith, Syracuse, N. Y., and Al Heritage, of the Jersey City Heights Gun Club.

Few of the new-comers arrived until after noon, and the regular events were delayed until then, the morning being occupied with a series of sweepstakes The scores in many of the regular events are to count on merchandise in addition to a division of the entrance money or purse in each competition.

This week we give only the totals of the winners in the regular events, and will give full score next week.

Regular event No. 3, at 15 single blue rocks, sweepstake, $100 guaranteed purse, $3 entry, open to all. There were 83 entries in this event. Bowdish, Yerrington and Miller dividing first, each with a score of 15 straight; Stice, Brientnall, Thorne and Eley, with 14, divided second money; McMurchy, Sheldon, Cooper and Wagner, with 13, divided third money. There were seven ties for fourth, which were shot off, and Teiple and Budd divided it.

Regular event No. 4 at 15 single blue rocks, sweepstake $100, guaranteed purse, score to count on merchandise, $3 entry, for amateurs. Thirty-five shooters came to the score in this match, only one of whom, A. R. Bowdish, succeeded in making a clean score of 15. He thus took first money alone. Wm. Seigler and C. Thorne, with 14 each, divided second money. Third and fourth money also divided.

Regular event No. 5 at 10 single and 5 pairs blue rocks: $50 blue-rock trophy, a handsome gold watch charm, $2.50 entry, open to all. The trophy to go to winner of first money. Twenty-five contestants toed the mark, the highest score 19, being made by D. Lefever and F. W. Cooper, and in the shoot-off Cooper won the trophy. J. R. Stice, H. McMurchy, E. Miller, C. W. Budd and W. R. Hobart each with 18, divided second money. C. Wagner, E. Taylor, C. Thorn, R. E. Sheldon and T. A. Peacock with 17 each, divided third, and after a shoot-off Capt. Jones and Major Taylor divided fourth money.

Regular event No. 6, at 10 single blue rocks, sweepstake, $50 guaranteed purse, $2 entry, for amateurs; 24 entries. First money divided by A. R. Bowdish and Wm. Seigler each with clean score of 10. R. H. Brientnall, Tom Eley, A. R. Hobart, James and Morris, with 9 each, divided second money. The ties on 8 were shot off and C. Thorne and F. W. Cooper divided third. The 7 ties were also shot off and Dr. Conover, S. G. Smith and T. A. Peacock divided fourth money.

Event No. 7 was not finished at sundown and was shot off on Wednesday.

Regular event No. 8, at 10 single blue rocks, sweepstake, $1 entry for amateurs. Only 16 entered for this match. A. Manitz and Capt. Jones with 10 divided first, Wm. Seigler, D. Lefever and T. A. Peacock with 9, divided second, C. Thorne, W. R. Hobart and James with 8 divided third, and R. H. Brientnall, E. Miller, A. R. Bowdish and T. S. Hall with 7 divided fourth. There were a number of sweepstakes shot during the day, full scores of which will be given next week.

Wednesday, Oct. 5.—The first thing on the programme this morning was regular event No. 7, at 10 single blue rocks; sweepstake, $1 entry; open to all; 21 contestants: B. Teiple and C. Wagner, with 10 each, divided first money. J. H. Force, R. E.

Sheldon, J. R. Stice, Kay, A. Manitz, A. R. Bowdish and R. H. Brientnall, 9 each, divided second money. H. McMurchy, T. A. Peacock, C. W. Budd, James and S. G. Smith, with 8, divided third money. Tom Eley, C. Thorne, Woolsey and Morris, with 7, divided fourth.

NEW DORP, S. I., Sept. 28.—Emerald Gun Club, of New York city, match at live pigeons, 5 ground traps, 21, 25 and 30yds., 80yds. bound, club rules, 4 prizes:

W Glaccum (21)	1111111110—9	M McMunn (30)	1111011001— 7

Ties, miss and out, for second: W. Glaccum (25), 1, and won; J. H. Voss (30), 0; Dr. Dwyer (30), 0; T. P. Mackenna (25), 0. Ties, miss and out, for third: Dr. Hudson (25), 1, and won; H. Rubino (21), 0; P. Butz (21), ½; P. J. Keenan (21), 0; L. C. Gehering (25), ½. For Oseikel Trophy: R. Regan won.

Sweepstake at 5 live birds, 25yds., with the following result:

F Pfleander	11111—5	M McMunn	11111—5
G Remsen	11111—5	L C Gehering	11111—5
C M Grainger	11011—4		

First divided. Grainger received second money and was not pleased, as he considered himself entitled to a portion of third money, it being arranged that there should be first, second and third moneys.

PARKER GUN CLUB.—Meriden, Conn., Sept. 28.—Our season's work at the traps closes to-day. Our efforts to stop illegal shooting of birds out of season, by offering a reward of $25 for evidence that will convict, I am happy to say has had the good effect of saving the lives of many half-grown birds such as were killed every year by thieving scoundrels unworthy the name of sportsman. If other clubs throughout the country would follow suit, I know good results would follow; it would stop this contemptible Sunday shooting that is increasing, and we should have more birds. But to return to the subject of clays, for it may interest some of your many readers, though it is but tame sport compared with starting out upon a frosty October morning with dog and gun. We have, with as little noise as possible and no outside assistance, broken between ten and twelve thousand pigeons this summer. Thanks to the generosity of our manufacturers and merchants, particularly Parker Brothers, the untiring energy of Mr. Soper and the correct calculations of Mr. A. H. Merriman, we have had some valuable prizes, consisting of a Parker gun, ice pitcher, fruit dish, lamps, hunting suit, etc., awarded in the following order for the best average in 25 throughout the season in shooting at 200 or more pigeons each man, from 18 to 24yds., 3 traps and angles: J. Brogden 19, E. Ivery 17.64, F. Brown 17.35, A. Ives 16.90, A. H. Merriman 16.63, E. A. Birdsey 16.50, E. Soper 16.09, I. L. Baker 16, Dr. E. W. Smith 15.22, G. H. Hill 12.50. Many other members of the club shot well, but not enough times to average; while others that shot in good faith for prizes by rather peculiar technicalities had some of their scores thrown out, including your humble correspondent—J. F. I.

ALBANY, Sept. 22.—A large number of sportsmen witnessed the trap shooting tournament at Island Park to-day. The first event was called at 10 o'clock. The first event was 15 bats. Blake took first money in the shoot at the bats, Gardiner, Northrup and Buesser divided second, and Beckwith, Paul and Mills third. In shooting at clay-pigeons Paul captured first, Thorne second, Buesser third. First money in the third event was won by Thorne, second divided between Beckwith, Gardner and Lingenfelter, and Blake third. Thorne, out of a possible 45, scored 44 hits and took first money in the guaranteed purse of $100, Paul and Gardner scored 39 and divided second money, third money went to Beckwith with a score of 38, and fourth prize was captured by Blake, who made 37 hits. The individual match between Hally Gardner, of this city, and Oakley Thorne, of Dutchess county, was won by Thorne, who scored 44 hits out of a possible 50. Gardner made 39. The contestants shot at 25 bats and 25 clay-pigeons. In the live bird match Thorne, Northrup, Campbell, Dunn and Pluckrose killed 5 birds each. In shooting off the tie Pluckrose won, Selkirk took second money, and third money was divided between Paddock, James Patten and Blake. Lord took fourth.

A CHALLENGE FROM GRAHAM.—New York, Oct. 3, 1887.—*Editor Forest and Stream:* I hereby challenge the winner of the contest between Messrs. C. W. Budd, Des Moines, Iowa, and Smith, of Syracuse, which takes place at Dunellen on Saturday next, to shoot me a contest for the diamond badge and $100 a side, under the same terms as they are there contesting. In the event of Mr. Budd's winning I feel I have a claim that he should give my challenge preference over any others he might receive; inasmuch as our late contest on New Years Day for $1,000 resulted in a dead heat, each killing 87; and I want to find out who is the better man, he being the only man whom I have not defeated in America. I will be glad to meet either him or Mr. Smith at the office of the FOREST AND STREAM, N. Y., at 12 o'clock on Monday next, where we can post forfeit and arrange place to shoot, etc.—W. GRAHAM, Champion Wing Shot of the World.

BROOKLYN, Sept. 28.—The ground at Dexter Park looked very dreary this afternoon when the members of the Glenmore Rod and Gun Club met there to shoot for the diamond badge of the club. Few members put in an appearance, but those few made the biggest scores ever made, at 27yds. W. Selover, a well-known Long Island shot, won the badge, with a clean score of 25 straight. G. Forbell, D. Edgerton and R. McAvoy each killed 24 out of 25, making a remarkable total of 97 killed out of 100 shot at. In a subsequent sweepstake D. Edgerton won from the 30yd. mark with a score of 9 out of 10.

OMAHA, Sept. 20.—The Penrose and Hardin Rifle Club held their weekly shoot to-day, with the following scores, at live birds: Penrose 22, Brewer 16, Ellis 22, Brucker 16, Parmelee 20, Hethington 11, Petty 20, King 19, Cotter 13, Hughes 13.

CAMDEN GUN CLUB.—*Editor Forest and Stream:* As the dates originally determined upon conflict with those of the Dunellen tournament, it has been decided to postpone our shoot at Merchantville Driving Park until Oct. 13, 14 and 15.—W. S. FORTINER, Sec'y.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.
